Mr. McKENZIE. Well, I do not know how the gentleman from Delaware——

Mr. LAYTON. I want to say I do not know any colonel, lieutenant colonel, captain, or anybody else in the United States whom the amendment will affect.

Mr. McKENZIE. I realize we have to have some good men over there. I am not criticizing them in their position. Now, let me point out in the national defense act——

Mr. LAYTON. Would the gentleman advocate a proposition that the men in Congress with 25 or 30 years' service should have advanced pay over some man who came in last year?

Mr. McKENZIE. That is the point of my friend; I am not advocating it. The gentleman from Minnesota has stated the facts quite clearly in regard to the commissioned emergency men. We who were concerned in the writing of that law provided in section 24:

Not less than one-half of the total number of vacancies caused by this act, exclusive of those in the Medical Department and among chaplains, shall be filled by the appointment, to date from July 1, 1920, and subject to such examination as the President may prescribe, of persons other than officers of the Regular Army who served as officers of the United States Army at any time between April 6, 1917, and the date of the passage of this act.

Just get the point: We provided that 50 per cent of the men appointed should be from men who served in the great World War.

A suitable number of such officers shall be appointed in each of the grades below that of brigadier general, according to their qualifications for such grade as may be determined by the board of general officers provided for in this section; no such person above the age of 50 years shall be appointed in a combatant branch.

The CHAIRMAN. The time of the gentleman has expired.

Mr. McKENZIE. I ask for five minutes additional.

The CHAIRMAN. Is there objection? [After a pause] The Chair hears none.

Mr. McKENZIE (reading):

No such person above the age of 50 years shall be appointed in a combatant branch, or above the age of 58 in a noncombatant branch. No such person as below the age of 38 years shall be appointed to the grade of colonel, or below the age of 45 in the grade of lieutenant colonel, or below the age of 36 years in the grade of major. No less than three such persons shall be appointed to the grade of colonel in the Judge Advocate General's Department and no less than eight to the grade of lieutenant colonel in the Judge Advocate General's Department, provided a sufficient number of applicants for such appointments are legally eligible and are found by the board provided for in this section to be properly qualified.

Now, what happened under that, gentlemen? Under that we commissioned in the service of the United States 5,270 of the boys who came in to serve their country during that war—5,270 of them. Now, how were they commissioned? In that number there were six colonels commissioned. My friend criticizes that, but there was a reason for it. It was our contention that the Army should not be loaded up with old men. It is a mistake to put old men into the Army, and we provided that it should be filled up with commissioned men of younger years, although we did make some exceptions.

Mr. NEWTON of Minnesota. I was not criticizing the appointment of only this number. I was calling the attention to the small number of them as indicative of the great care that was taken in selecting men that were qualified.

Mr. McKENZIE. I agree with the gentleman. Twenty-one lieutenant colonels were appointed, 394 majors, 1,495 captains, 1,933 first lieutenants, and 1,401 second lieutenants, making 5,270. Out of that number of 6 colonels, 1 was commissioned in the Infantry, 4 in the Judge Advocate General's Department, and 1 in The Adjutant General's Department. Of the lieutenant colonels, three were commissioned in the Infantry and eight were commissioned in the Judge Advocate General's Department, and none of the other services at all. Of the majors commissioned

97 were commissioned in the Infantry and 44 in the Judge Advocate General's Department, and so on down through the list. So, my friends, in my judgment we took good care of these men, and under this bill, carrying out the wishes of the American people as I believe them to be, we have provided that these men, regardless of the fact that they only have 5 or 6 or 7 years' service, shall be permitted to remain in the pay period where we found them, in the period of lieutenant colonels and of colonel.

Now, what is the complaint? It is simply this, that the old Regular colonel who spent 25 years in the service, climbing up to that place, is drawing a little more longevity pay than this officer who came in from civil life and got a commission as colonel in the Judge Advocate General's office. It is the theory of this bill, and we have been trying to repeat it over and over again, the very fundamental principle underlying it, that officers in the Army shall give to this country so many years of their experience before they get an increase of pay, and we give them the longevity pay to induce them to remain in the service. Now, I want to ask you if you believe it is fair and right when a man from my town in Elizabeth, Ill., has practiced law for 23 years, and who has made some money, while another man from the same town went into the Army and spent part of his time in Alaska, with the long winter nights up there, spent part of it on the Mexican border, and part of it in Cuba, and a number of years in the Philippines, struggling along to make a livelihood for his wife and children out of the little competence that he received, we should say to him that we will give him this little increase of a very few dollars in his pay, while this other fellow who goes into the service in the Judge Advocate General's office now asks that he be given longevity pay by this Government for the time he did not serve?

The CHAIRMAN. The time of the gentleman has expired.

Mr. NEWTON of Minnesota. Mr. Chairman, I ask that the gentleman be given two more minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. NEWTON of Minnesota. Let us see if we understand each other. The gentleman admits, then, as I understand it, that under his bill an emergency colonel, for example, or an emergency lieutenant colonel, might very easily, and in most circumstances would, draw less money than what some captains and some Regular majors would draw?

Mr. McKENZIE. Absolutely. I think he should.

Mr. NEWTON of Minnesota. And the gentleman thinks that is just?

Mr. McKENZIE. Absolutely.

Mr. MURPHY. Will the gentleman yield?

Mr. McKENZIE. Yes.

Mr. MURPHY. Would anyone be hurt if the amendment offered by the gentleman from Minnesota [Mr. NEWTON] carried? Would anyone be hurt in the event that the amendment does not carry? Some one does lose, does he not?

Mr. McKENZIE. No.

Mr. MURPHY. Of course they do. They lose the difference in pay. No one is hurt but the feelings of the colonel who has been educated at the cost of this Government. No one is hurt, if this amendment carries, but the major who has been educated at the cost of this Government. You are content to do an injustice to those who pass all the boards and come into the service of this country, and your committee is asking this Congress to do just what American fair play does not stand for. [Applause.]

Mr. McKENZIE. I think the gentleman is entirely mistaken. If you call it fair play——

The CHAIRMAN. The time of the gentleman has expired.

Mr. McKENZIE. Mr. Chairman, I ask unanimous consent for one minute.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. McKENZIE. If the gentleman from Ohio considers it fair play to take money out of the Treasury of the United States and give it to a man who has rendered no service for it I might agree with him. But I can not understand the principle or policy of saying that you ought to pay a man for something which he has never rendered to the Government.

Mr. MURPHY. I will put it in this way: In the event of the passing of one member of the Supreme Court, on your theory the gentleman coming in and taking the appointment would be entitled to the same salary as the gentleman who just died. The same service is rendered by the gentleman that comes into the service of the United States in time of war as that rendered by the other one that you want to pay more money to.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. MURPHY. Mr. Chairman, I ask that the gentleman be given five minutes.

The CHAIRMAN. The gentleman from Ohio asks that the gentleman from Illinois be given five additional minutes. Is there objection?

There was no objection.

Mr. MURPHY. No one is hurt, is the point that I am making; no one is hurt if this amendment carries. There is an injustice done in the event that the amendment does not carry. You are only hurting the feelings and the pride of the man who is in the Army now. He can afford to have his feelings hurt when his pocket is not touched, but if you carry on as you are going here you are touching the pocket of a man of equal ability, perhaps of superior ability, because before going into the service he had the nerve to educate himself at his own expense and become big enough to pass prejudiced boards and get into the service of his country. I am surprised at the committee bringing in such a law as this, that is so unfair and un-American. That is what it is.

Mr. STEPHENS. Will the gentleman yield?

Mr. McKENZIE. I want to ask the gentleman from Ohio [Mr. MURPHY] a question. These gentlemen he is complaining about came into the service knowing the law; they understood the situation. They are not getting this longevity pay now. What does the gentleman think of the sportsmanship of those gentlemen now coming in?

Mr. MURPHY. The gentleman's question is perfectly proper and right. They understood, yes; but they did not know what was in the mind of the committee that was going to prepare and bring forth this bill. They had not any idea that the American spirit would be so overwhelmed and eclipsed in the committee as to bring in such a bill.

Mr. STEPHENS. Will the gentleman from Illinois yield for an observation?

Mr. McKENZIE. I will.

Mr. STEPHENS. Of these gentlemen who came in in the recent years the majority, I understand, are in the Judge Advocate General's office and in the Engineer's office, and so on. Is there any reason why they could not quit their jobs at any time if they did not like them?

Mr. McKENZIE. They have my permission.

Mr. STEPHENS. They do not, whether they get $6,000, $5,000, or $4,000.

Mr. NEWTON of Minnesota. I want to suggest to the gentleman this, that there is a wide discrepancy between the pay of the emergency officer and the old regular under the 1908 base pay, is there not?

Mr. McKENZIE. I suppose so.

Mr. NEWTON of Minnesota. Now, that discrepancy has been increased by the legislation proposed in this bill, has it not?

Mr. McKENZIE. No; it has been wiped out.

Mr. NEWTON of Minnesota. I mean longevity pay. You have increased the longevity pay from 40 per cent to 50 per cent, and he used to have a limit of $1,000, and there now is no limit to it, so that the difference now between the pay of the emergency officer and that of the regular has been increased, has it not, under the proposed bill, and the gentleman thinks that this bunch of new officers contemplated that a committee of Congress, headed by the distinguished gentleman from Illinois, who has always been known for his fairness to the emergency officer, contemplated anything of that kind?

Mr. McKENZIE. If that is what stirred the gentleman up, this provision as to the longevity pay, I will admit that we have made a mistake. [Laughter.]

Mr. NEWTON of Minnesota. You have made a mistake, and I am glad that the gentleman admits the possibility of having done that.

Mr. BYRNES of South Carolina. Mr. Chairman, I am glad at length to have secured my time. I do not expect to consume more than a few minutes.

Mr. GREENE of Vermont. Mr. Chairman, will the gentleman yield right there?

Mr. BYRNES of South Carolina. Yes; I will yield to the gentleman.

Mr. GREENE of Vermont. I just want to follow up the discussion with this one suggestion: We are under no compunction of duty or of obligation to make the pay of the man who comes into the Army as a second thought, after following a civilian occupation for 10 or 15 years, equal to that of the man who has remained in the service continuously and rendered faithful and valuable service to the Government.

Mr. VAILE. Mr. Chairman, will the gentleman yield? I want to ask the gentleman one question.

Mr. GREENE of Vermont. First listen to what I was going to say. You have thrown me off my gear, and I forget which side I was on. [Laughter.]

Mr. CARTER. Start in on low. [Laughter.]

Mr. BYRNES of South Carolina. Mr. Chairman, not having been thrown off my gear in what I have to say, I simply want to call the attention of the House to the situation as I see it in reference to this question. The House should understand that this is an attempt to correct what my friend from Minnesota [Mr. NEWTON] believes is an injustice to certain officers in the Judge Advocate's corps, more than anything else, that has precipitated this discussion. I think he will agree with me that that is the object sought to be accomplished.

Now, suppose I entered the Army from civil life. I have been a lawyer—at least I flatter myself that I was—but I believed when I came out of civil life into the service and came into the Judge Advocate General's office I could do better there than I could do outside. If I did not follow that policy I would not be doing justice to myself or to my family. I went there knowing what the law was and what I was to get. I entered into a contract. I did so only because I believed it was to my interest to do so. Now, I come before you gentlemen and I say that under this bill I will get as much money as I am getting to-day. The gentleman from Minnesota will not contradict that statement.

Mr. NEWTON of Minnesota. But the gentleman——

Mr. BYRNES of South Carolina. Pardon me a moment; otherwise you might get me off my gear. [Laughter.] My appeal to you is not that I should receive compensation equal to what I am getting to-day, but that you should give me more, because, forsooth, there is in the department some man who has been in the Army 26 years, and will get longevity for those 26 years, and therefore he will get more compensation than I; not that I shall lose a dollar from what I am getting to-day, with the bonus, but I complain because another fellow who has served 26 years in the service will get credit for that service and get more money than I do. No war was on; no patriotic appeal. I could have remained at home, but went into the Army and received a commission in the Judge Advocate General Corps at a certain salary. I shall continue to receive that salary, but I complain because somebody in the Judge Advocate General's office with long service gets more, and for that reason I want you to adopt this amendment.

Discuss it and disguise it as you will, that is the case. It gives 26 years' constructive service, imaginary service, to the colonel who entered the Army from civil life. It gives him the imaginary service for the time he was in his law office, as lawyers in this House have worked, building up a practice, making some money, perhaps, and investing it, possibly unwisely, and losing some of it, perhaps, but taking the chances in life, whereas the other man could take no chances, but was limited to his salary, and stayed there 26 years. If you give constructive service to the man for having served in the National Guard or elsewhere, there is more justice in that. That is service rendered in the military service, even if it was to the State and not the National Government. But this service was rendered in a law office.

Mr. LAYTON. I suggest to the gentleman that he should not look at me so much. [Laughter.]

Mr. BYRNES of South Carolina. My good friend from Delaware could not prevent anybody from looking at him. [Laughter.] Personally, I always love to look at him. What did we do for these gentlemen? My friend from Delaware [Mr. LAYTON] is evidently afraid that I will convert him to my way of thinking, but I assure him that I am not endeavoring to hypnotize him. We put in a special provision, because they had been emergency officers, that they should be put in the pay period where they are. We gave them an advantage over the officer who had been in the service. The major who was an emergency officer gets base pay under this bill of $3,000; he gets $300 longevity; he gets $1,200 for rental; and he gets $657 for subsistence—in all, $5,157. Now, how about the major who graduated at West Point, the man who served six years and was made a major? He gets base pay of $3,000. It is saved to him for the present by this saving clause. He gets $300 longevity and $960 rental and $438 subsistence, making in all $4,698, or $459 less than is received by the emergency officer who came in the regular service of the Government only in 1920.

The man who has been in the service six years gets $4,698, while your emergency officer gets $5,157, or $459 more.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BYRNES of South Carolina. I ask an extension of time, Mr. Chairman, because my time was occupied by interruptions.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that his time be extended five minutes. Is there objection?

There was no objection.

Mr. NEWTON of Minnesota. The gentleman has spoken about the Judge Advocate General's office. Does not the gentleman feel that the country gets far more service out of the civilian lawyer who is in the office than out of the six-year major who is in the office?

Mr. BYRNES of South Carolina. It may or may not, depending on the individual. But because his service in civil life should be of value we discriminated in his favor, and he is going to get $459 more a year, and that is one of the reasons why we justify our action.

Mr. NEWTON of Minnesota. But why ought not he to get the same money instead of $1,200 a year less, when he is doing the same work?

Mr. GREENE of Vermont. In other grades they do not get as much.

Mr. BYRNES of South Carolina. As already explained, in no other grade do they get as much. Not one dollar is taken from this emergency officer, this lawyer who has been given an appointment in the Judge Advocate's Department. His only complaint is that you should credit him with 26 years' imaginary service, when the other man was actually serving in the Army. The additional amount he gets comes to him because of his long service in the Army, while the other lawyer had in civil life a chance to make more. It is a principle that applies in every service in all the Governments of the world. Shall we take it from him? No. Then should we add to every civilian who has entered the service under the reorganization act an amount for longevity and let him imagine that he was in the service for 26 years when in fact he was not?

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. BYRNES of South Carolina. No; I want to call attention to another matter. The emergency officer who is a major receives $5,157 and every three years a 5 per cent increase. But the six-year West Pointer who is a major will get only $4,698 now and will get no increase until he has served 14 years, so that as the years go by there will be a greater difference than the $459 until he has served 14 years. This is due to the fact that the emergency officer was by a special provision placed in certain pay periods. As my good friend from Minnesota [Mr. NEWTON] says, we wanted to recognize his age and his experience, and all that, because of its value to the Government; but we can not give him imaginary longevity service for 26 years. No one has ever been given it. There is but one departure from the longevity principle in this bill where men are credited with constructive service, and I am sorry that it is there, because if it was not there we could stand up and say that no man is given any constructive service in this bill. That one departure is as to a few doctors in the Navy Department. It was unanimously agreed to, as I understood, with the exception of one gentleman on the committee, because of the manifest injustice that would be done them. When in 1912 Congress provided that in future service in the academies should not count for longevity, it excluded the classes to graduate in 1913, 1914, and 1915. No provision was made for the staff officers of the Navy who were the running mates of these officers. It affected only a few. With that exception, there is no imaginary service given to anybody. If you give it in the language of this amendment, you will add a tremendous amount to these officers by reason of constructive service, service never performed. You might as well realize that you will absolutely disrupt this bill.

Mr. NEWTON of Minnesota. Will the gentleman yield there?

Mr. FROTHINGHAM. Will the gentleman yield?

Mr. BYRNES of South Carolina. I yield first to Governor FROTHINGHAM.

Mr. FROTHINGHAM. I have listened to the gentleman with great attention, and he has absolutely persuaded me. I think he is entirely right, and I should like to ask him, where are we going to stop if we start in doing something like this?

Mr. BYRNES of South Carolina. I congratulate the gentleman, who is an emergency officer, but who is fair enough to appreciate that we have done our level best to be fair to the emergency officers, because the Lord knows I had no other desire, and I contend that there is a positive discrimination against others. I am glad my friend from Massachusetts agrees with me.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota [Mr. NEWTON].

The question being taken, on a division (demanded by Mr. NEWTON) there were—ayes 12, noes 71.

Accordingly the amendment was rejected.

Mr. BULWINKLE. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from North Carolina offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BULWINKLE: That section 2, on page 7, be amended——

The CHAIRMAN. The gentleman's amendment refers to section 2, which has not yet been reached.

Mr. JEFFERS of Alabama. I have an amendment to section 1.

The CHAIRMAN. The gentleman from Alabama offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. JEFFERS of Alabama: Page 6, line 5, after the period in line 5, insert: "*Provided*, That all officers now in the Regular service, or who shall hereafter be appointed, who have former commissioned service in the National Guard or Organized Militia, shall be given the same credit for service in the National Guard or Organized Militia as is given in this bill to officers of the National Guard when they are authorized by law to receive Federal pay: *Provided*, That in no case shall such longevity credit exceed 15 years.

Mr. STAFFORD. I reserve a point of order on the amendment.

The CHAIRMAN. The gentleman from Wisconsin reserves a point of order on the amendment.

Mr. HICKS. How does this amendment differ from the one offered by the gentleman a few minutes ago?

Mr. JEFFERS of Alabama. This amendment puts in a limiting clause.

Mr. HICKS. Is that the only difference between this amendment and the one offered a little while ago?

Mr. JEFFERS of Alabama. No; this will not only put in a limiting clause, but it makes it exactly the same as what is in section 3 of this bill provided for National Guard officers, only the amendment that was offered before was a little bit more liberal. Gentlemen of the committee, several ex-service men in the House, including men from both parties, appeared a short time ago at the request of the committee which had this measure in charge and discussed this bill. Ex-service men of the House on both sides were there at that time and have agreed since that this credit to the former National Guard officers for actual services rendered is only fair and just. You see that the committee has no objection to raise to the amendment. The committee did not have this put in the bill, because it was suggested to the committee after the bill was ready to report. But they have expressed no objection to this amendment. There is a fear in the mind of some that this amendment will run longevity credit back to the Spanish-American War and before that, so we put in a limitation providing that the longevity shall not exceed 15 years. There are men to-day in the Regular service who have put in many years of hard labor as officers in the National Guard. When they came into the World War they not only brought themselves but they brought the regiment, the battalion, or the company. We are not asking for any longevity pay except for services as an officer. We have gone through the register to show you that there is not a large percentage involved, only a small percentage—these ex-National Guard officers in the Regular Army who had former commission service in the National Guard.

Mr. GREENE of Vermont. Will the gentleman yield?

Mr. JEFFERS of Alabama. I will.

Mr. GREENE of Vermont. Is this going to affect anything but the pay; will it affect the promotion?

Mr. JEFFERS of Alabama. No.

Mr. GREENE of Vermont. How long before they will be here asking to change the promotion list on exactly the same basis?

Mr. JEFFERS of Alabama. I do not understand it that way. Now, I want to call attention to section 3 of the bill, which provides that when officers of the National Guard are authorized by law to receive Federal pay for any kind of service at all, even on special duty at Washington or otherwise, they shall receive credit in figuring the longevity of their former service in the National Guard. For instance, if a colonel in the National Guard is detailed on duty at Washington for 12 months, he comes here, draws his pay as a colonel, and rightfully draws longevity pay for his former service in the National Guard.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. JEFFERS of Alabama. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. JEFFERS of Alabama. When he is detailed on duty for any length of time and draws his pay he gets credit for his commissioned service in the National Guard.

Now, it does not run back to such a long time as you might think. The majors, for example, will average only about five years and eight months. The captain only about two years and six months on an average.

Section 3 provides for the National Guard officers in any of the Federal services, and all this amendment seeks to do is to ask the same thing as the bill now provides for the National Guard officers in the Federal service. The service men in the House on both sides were before the committee, as I have said, and suggested that this should go in, and they know it is right.

Any service man on either side of the House will tell you that they know that this proposition is a matter of right and justice. As I have said, section 3 provides that in computing the increase of pay in the Federal service officers shall be credited with full time for all periods they have held commissions as officers in the National Guard, and all we are asking is that this group of men, the National Guard officers now in the Regular Establishment, shall have the same credit.

Mr. FROTHINGHAM. Will the gentleman yield?

Mr. JEFFERS of Alabama. I will.

Mr. FROTHINGHAM. As I understand, the gentleman's idea is that these men shall get the same pay for the time they were in the National Guard that they would have had if they had been in the Regular Army?

Mr. JEFFERS of Alabama. It is limited.

Mr. FROTHINGHAM. In the National Guard they served only once or twice a week.

Mr. JEFFERS of Alabama. Oh, but they served more than that; they sometimes served every day, and they were subject to personal expenditures in building up the guard.

Mr. FROTHINGHAM. The officer of the National Guard does not give his life to it; he has other business. I have been in the National Guard, and I know what the service is, and you do not give your life to it.

Mr. McSWAIN. He does not give his life to it in the Regular Army; he is not tied to it; he can resign.

Mr. JEFFERS of Alabama. The gentleman knows that many an officer in the National Guard gave his time and very often his money.

Mr. FROTHINGHAM. Well, then, the State ought to pay him.

Mr. JEFFERS of Alabama. Oh, I beg the gentleman's pardon—they received no pay commensurate with the services rendered.

Mr. GREENE of Vermont. Does the gentleman expect the Federal Government is going to give a man a higher rate of pay when he goes into the service because, forsooth, in some employment he had in the past his other employer did not give him enough?

Mr. JEFFERS of Alabama. No; I am merely contending for the ex-National Guard officer now in the Regular service what section 3 provides for to-day.

Mr. GREENE of Vermont. That means that you would take a man who has adopted the profession as a life work and put him at a disadvantage.

Mr. JEFFERS of Alabama. Oh, no; it would not.

Mr. GREENE of Vermont. Yes; it would. You give one man credit for an imaginary time or service, while the other man has had to mark his time by actual physical existence in it.

Mr. JEFFERS of Alabama. This is limited to 15 years; so that he can not get over that.

Mr. BLAND of Indiana. Mr. Chairman, will the gentleman yield?

Mr. JEFFERS of Alabama. Yes.

Mr. BLAND of Indiana. There has been some objection to giving full credit for the time that a National Guard commissioned officer serves?

Mr. JEFFERS of Alabama. Yes.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. JEFFERS of Alabama. Mr. Chairman, I ask unanimous consent to proceed for three minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BLAND of Indiana. Would the gentleman have any objection to a modification of his amendment to say that he should have, say, credit for one-half the time served? I want to give them credit for some of the service.

Mr. JEFFERS of Alabama. A captain would get only two and a half years, approximately, and under the provision the gentleman suggested it would give the captain credit for one year and two and a quarter months. Seventy-five per cent of the time would be more nearly commensurate, and I would accept a modification of the amendment to that extent, and I think in doing that it is yielding a great deal.

Mr. BLAND of Indiana. I do not think he ought to have full credit, to the extent that an officer would if he is serving in the Army, but I do think that he ought to have some credit. I think there should be a fair compromise on that proposition.

Mr. JEFFERS of Alabama. Mr. Chairman, I ask unanimous consent to modify my amendment to have it provide for 75 per cent.

Mr. STAFFORD. Mr. Chairman, I withdraw the reservation of the point of order on the original amendment.

The CHAIRMAN. The Clerk will report the proposed modified amendment.

The Clerk read as follows:

Modified amendment by Mr. JEFFERS: Page 6, line 5, after the period, in line 5, insert: "*Provided*, That all officers now in the regular service or who shall hereafter be appointed, who have had former commissioned service in the National Guard or Organized Militia, shall be given the same credit for 75 per cent of such service in the National Guard or Organized Militia as is given in this bill to officers of the National Guard when they are authorized by law to receive Federal pay: *Provided*, That in no case shall such longevity credit exceed 15 years."

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama to so modify his amendment?

There was no objection.

Mr. OLIVER. Mr. Chairman, I wish to make just a short statement in connection with the pending amendment, and which was suggested by the question asked by the gentleman from Vermont [Mr. GREENE]. This bill in a subsequent section gives credit for certain service to National Guard officers when serving with a Federal recognized National Guard, but it fails to allow an officer commissioned from such National Guard in the Regular Army to further claim credit for the service that he was entitled to claim credit for while serving as an officer of such Federal National Guard. The amendment as modified claims less service for an officer in the Regular Army commissioned from the National Guard than this bill allows to the same officer when serving as an officer with the National Guard and drawing Federal pay.

Mr. GREENE of Vermont. What does the gentleman mean by Federal pay? Under the National Guard act they get Federal pay without Federal mobilization. They get the monthly Federal pay.

Mr. OLIVER. Yes; and they are entitled to increased pay by reason of certain service, as set out in section 3 of the pending bill.

Mr. GREENE of Vermont. Is that what the gentleman means by Federal pay?

Mr. OLIVER. Yes; it is the pay that they receive from the Federal Government while serving as officers of the National Guard when recognized by the War Department.

Mr. GREENE of Vermont. But they are not called into the national service.

Mr. OLIVER. The gentleman falls into the mistake of not remembering that this bill proposes to give these officers while serving with National Guard organization, when recognized for Federal pay, credit for certain service in the National Guard before and subsequent to 1916, as shown by section 3 of the bill. Now, when an officer thus draws Federal pay in the National Guard and has that Federal pay increased by service under section 3 of this bill as proposed, why should that same officer, if commissioned in the Regular Army, be denied credit for the same service that he was entitled to while serving with the National Guard under Federal recognition?

Mr. McSWAIN. Mr. Chairman and gentlemen of the committee, the reason for longevity pay, as I understand it, or at least one of the reasons, is to increase a man's pay upon the assumption that duration of service makes him more efficient. I submit that the officers of the National Guard have developed by their experience in the National Guard the indispensable qualities of leadership to an extent greater even than the officers in the Regular Army; and why? Because the man in the Regular Army has the enlisted men under him, and they are tied to him, and he can say, in the language of the Bible, "Go and do," and the men must; but the man who is an officer in the National Guard must have the quality of inspiring men, of leading, of inducing the civilians to come out to his drill once a week, to join his organization, to stay by the organization during all the dull, monotonous years of peace—to soldiers—in order that they may have an organization to serve their country in time of war. The gentleman from Vermont suggests that it is unfair to put the National Guard officer upon an equality of pay with the Regular officer, in respect to the matter of longevity pay, because the Regular officer, as the gentleman said, has made the Army his life's work, whereas the national guardsman goes into the Army as an afterthought.

Why is he here? Not as an "afterthought" but on account of the emergency of his Government. When the service was expanded, when they wanted more officers than the Regular Establishment could furnish, then what did the Regular Establishment do? Why, they had the pick, and they hand picked the men from the emergency officers who asked for commissions in the Regular outfit; and I submit to you, gentlemen, that the men in the Regular Establishment who were drafted as a result of this emergency, or at least who came in as a result of this emergency when the establishment was expanded, are among the very best men in the service. Now, why? Because they have got back of them a broad idea of the business of civil life. They have something more than a narrow-gauge idea. They know something more than the particular details of military routine that starts in the morning with reveille and ends with taps at night. They know something about our life from which the Army is drawn, for which the Army exists, for which the Army is paid; they know something about the people, about the people's homes from whom the boys come. They also know, too, the source from which the money comes upon which the Army lives and how to earn and save money. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. LINEBERGER. Mr. Chairman, I think the gentlemen who just preceded me, the two gentlemen from Alabama and the gentleman from South Carolina, particularly, have touched on the very crux of this situation. These men who are affected by the amendment of the gentleman from Alabama [Mr. JEFFERS] are undoubtedly the picked men of the National Guard. They are the men who for years past in this country have been associated with the rank and file of the young Americans who made up the fighting forces in the great World War, and who will make up the fighting forces in any future emergency that may arise. I do not think it is fair to penalize these men for the patriotic and efficient services which they have rendered in the past in the great scheme of national defense. I believe that there is perhaps at this time in the country just a little feeling that the citizen-soldier element of the Army, a part of which is composed of ex-National Guard and the reserve officers, is being somewhat discriminated against in Army legislation coming before Congress. I do not believe that the Congress and the country can afford to have this feeling spread throughout the great mass of patriotic young Americans who have been ever ready in the past, and will be ever ready in the future, to come to the defense of their country in an hour of emergency.

Mr. GREENE of Vermont. Will the gentleman yield?

Mr. LINEBERGER. I will.

Mr. GREENE of Vermont. The gentleman does not mean to look upon employment in the Regular Army as in any sense a reward for patriotic services?

Mr. LINEBERGER. I understand the views of the gentleman from Vermont thoroughly, I think, and, as he knows, I am in accord with him on the general proposition which he has stated. As I started to say, I have never been an officer in the National Guard. I never got beyond the grade of a buck private before the war, but I do know something of the services that the men affected by this amendment have rendered, both as officers of the National Guard organizations which served in the World War and as men who have had practical experience in dealing with men, and those who have gone into the Regular service, as very aptly stated by my friend from South Carolina [Mr. McSWAIN], were the pick of the National Guard officers. I think when the gentleman from Alabama [Mr. JEFFERS] amended his amendment to read three-fourths pay instead of full longevity pay he went a long way. I do not pretend nor claim to the House to have intimate knowledge of this subject, but I do believe if the amendment is passed that the millions of ex-citizen soldiers in this country would feel that those who have gone into the ranks of the Regular service after having served patriotically in the National Guard were at least getting a square deal. [Applause.]

Mr. GREENE of Vermont. Mr. Chairman, I do not believe it is a question of whether anybody gets a square deal in the Army any more than if he went into the plumbing business, or the jewelry trade, or anything else. We must not look upon the Regular Army as an institution that is particularly holding out rewards to people for something they did before they went into it. The Regular Army is an institution, an every-day, present-day service, an agency of the Government that assists to operate——

Mr. LINEBERGER. Will the gentleman yield?

Mr. GREENE of Vermont. Certainly.

Mr. LINEBERGER. Does not the gentleman think that morale is an element in the Regular Army the same as it is in any other walk of life?

Mr. GREENE of Vermont. Well, it should be carried into it by the individual, and not a grouch.

Mr. LINEBERGER. Does the gentleman feel morale would be maintained when men who form a certain element of the

force of the Regular Army feel they are not getting a square deal?

Mr. GREENE of Vermont. Why, if they have a just cause and not a propaganda.

Mr. LINEBERGER. Are they the ones to decide it or not?

Mr. GREENE of Vermont. No; the Government is to decide, and one of the troubles——

Mr. JEFFERS of Alabama. What does the gentleman have reference to when he speaks of men going into the Army with a grouch?

Mr. GREENE of Vermont. I was taking him at his word. The gentleman stated——

Mr. JEFFERS of Alabama. I think the gentleman from Vermont misunderstood the gentleman. These men coming into the service brought battalions and regiments with them, not grouches.

Mr. GREENE of Vermont. Oh, no. Nobody brought any regiment into the war with them. The regiment that got there came either voluntarily or by draft.

Mr. JEFFERS of Alabama. They did bring them in. Certainly National Guard outfits that came into the World War came in under the same old organizations from my State and other States, and the men who built them took them to France and fought with them there, and to them is due some credit for that former struggle to build that National Guard.

Mr. GREENE of Vermont. It is all right as to the National Guard. When you read over to-morrow morning what you said to-day, you will think twice about some of the sentences. The gentleman did not make the accurate statement he had in mind.

Mr. JEFFERS of Alabama. I know very well what I said, and I stand on my statements.

Mr. BLAND of Indiana. The gentleman will concede that the National Guard officers that came into the service and entered the Regular Army must be the pick and must have much merit to stick as against the Regular Army machine?

Mr. GREENE of Vermont. I do not concede any such thing, because, in the first place, I know something about the facts, and I know about the facts under conditions and circumstances that perhaps the gentleman from Indiana [Mr. BLAND], with his most excellent discretion, might not have had the same chance to learn as I have had.

Mr. BLAND of Indiana. It is your opinion that these men who are good enough to stick ought not to have any credit for their long years of service in the National Guard?

The CHAIRMAN. The time of the gentleman has expired.

Mr. LINEBERGER. Mr. Chairman, I ask that the gentleman have five minutes more.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. GREENE of Vermont. I want to say that we are in duty bound, as people who are intrusted with the Government of the United States, to regard its agencies as matter of fact, practical business institutions and not try to invest employment in them with any sentiment or any features of reward for something that somebody did at some other time. We must not confuse the nature and design and spirit of a war-time citizen army with the professional army maintained in both peace and war. Nor must we feel that we have an obligation to change the rules of an existing institution in order that somebody that wants to get into it or is in it already can have an advantage that he otherwise would not have and that those already in it before his time do not have. When people seek admission to an institution they should expect to meet the institution's demands for qualifications, not to have the order of the institution changed to suit their qualifications. These Regular, or professional, soldiers hire themselves out to us as guardians of the peace and other activities that the Army is instituted for. That is a cold-blooded business proposition, and these men adopted it as a profession and life occupation for hire. When you assemble the candidates that want these positions, then you take into consideration what every private concern does—their qualifications.

Mr. FROTHINGHAM. Will the gentleman yield?

Mr. GREENE of Vermont. I will.

Mr. FROTHINGHAM. The thing I can not understand is, provided it is an obligation, whether it is on the Federal Government or on the States.

Mr. GREENE of Vermont. I would like to get an opportunity to discuss some phase of it, but I find my time is slipping away.

Mr. FROTHINGHAM. I would be glad to give you some more time. I do not understand why it should not apply to the enlisted man as well as the other.

Mr. GREENE of Vermont. The time the gentleman is giving me is like getting me to put up a swing so that some other boy can swing in it. [Laughter.]

Now, I do not care how much exception anybody takes to the statement. When we come to consider just exactly what we are maintaining these agencies for, it resolves itself into a matter of men who are professional soldiers letting themselves out to us for hire and making a life-time occupation of it. It is their business and trade. We are talking of the professional standing Army of the United States in peace time as well as in war. When you come to canvass the candidates who present themselves for commissions in this Army, it is proper you should take into consideration the qualifications they possess, and consideration was given to those qualifications of these young men when they applied for admission to the Regular Army in 1920 by the grade they went into then. That is the point that you folks are not paying attention to here. They were canvassed at the time, and the boards who heard their qualifications and canvassed them put them into the grade they were thought best qualified to serve in.

Now, then, another thing. For the first time in the history of the country men were, by the Army organization act of 1920, taken into the Regular Army at a grade above second lieutenant. Now, mind you, all the old-time Regulars—using the word "old-time" in the sense of pre-war or during the war—began as "shave-tails," second lieutenants, every one of them. They developed from "shave-tails" into different grade or rank afterwards, during the war or since.

Their records are made up on actual time served in their profession, and in most instances, with the exception of some men that were taken in after the Spanish War some 24 years ago, these young men began their life at 21 or 22 years as commissioned officers in the United States Army, just the same as a man who goes out and practices law, or becomes a dentist, or follows any other business, starts it as his occupation when he has arrived at his manhood. Now, we see men who started out in life in this occupation or another one, engaged in that or the other one, and finally getting acquainted with military life in its different aspects by reason of the war, at the end of the war say, "I like the Army so well I would like to stay in it." It is all right, and the Army is glad to get such men if they are good men. But the question is whether the obligation on the part of the Government is to say to these men now as a second——

The CHAIRMAN. The time of the gentleman has expired.

Mr. GREENE of Vermont. Mr. Chairman, I would like to have three minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. GREENE of Vermont. This candidate says, "Now, as a second choice in my life"—keep that in mind, if you please, gentlemen—"as a second choice in my life, having been engaged heretofore in another occupation, having come by some accidental circumstances to make application and enter this one as a second choice in my life, I will go into the Regular Army; but the Government, to be fair to me, must make up to me the years I was not in its Army, because of the fact that I was following another choice."

That is what the effect of this thing is as a general principle. And I also realize that, if you come to apply that same idea and theory, you must not trust to the law of averages here, if you please, Mr. Chairman.

People can show what the "law of averages" does apparently to prove their point, because they can show you that from this extreme or that one the range is only a certain percentage, but they do not show you the high places that stick up in range and where the advantage is that comes to certain groups or classes of men who may be behind the legislation. Look out for it. You can not reduce this thing to a law of averages. The only thing to do is to take a fairly safe and reasonable general principle. In no other occupation in the world would you say to a man who came into it as a second choice that he should have laid up for him the longevity that represented all the time that he put in another business before he came into that one. It would not make any difference whether he had had some opportunity to acquire some experience or not.

Mr. OLIVER. Mr. Chairman, will the gentleman yield there?

Mr. GREENE of Vermont. I regret I can not. I do not mean to be discourteous.

That is true even if he had experience as a National Guard officer. I was a National Guard officer myself at one time and wound up by serving in the war with Spain. I am not against the citizen soldier. No. But we are dealing here with something besides sentiment and a spirit of gratitude. We are dealing with one of the agencies of our Government, one of the most highly specialized occupations in the Government service, and we can not fool around with special instances to arrange something so that some men who voluntarily came into this business will be satisfied after they have gotten in. If after they have

voluntarily come into this business they find they are not satisfied with the occupation they have chosen as a second resort, let them go voluntarily out.

Mr. LAYTON. But did they come in voluntarily?

Mr. GREENE of Vermont. Certainly.

Mr. LAYTON. Oh, no. They were driven away from their accustomed occupation by an emergency. [Applause.]

Mr. GREENE of Vermont. If that is true, the gentleman would have a hard time in demonstrating it. They preferred to go into the Regular Army after the war, and they expressed that choice. They never were under compulsion for one moment.

Mr. OLIVER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. The time of the gentleman from Vermont has again expired.

Mr. OLIVER. Mr. Chairman, I ask unanimous consent that the gentleman may proceed for one minute more.

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. OLIVER. Without expressing my own opinion one way or the other——

Mr. GREENE of Vermont. But the gentleman wants to get me to [laughter]——

Mr. OLIVER. I would like to know how the gentleman differentiates between the service proposed to be given by this bill to an officer while serving in the National Guard drawing Federal pay and not giving such service to him, if he is commissioned in the Regular service?

Mr. GREENE of Vermont. He is in two different institutions entirely.

Mr. OLIVER. In both he is drawing Federal pay.

Mr. GREENE of Vermont. That does not make any difference.

Mr. OLIVER. And the very service that counts on his Federal pay as a National Guard officer is asked to be counted when he is commissioned in the regular service.

Mr. GREENE of Vermont. In the one instance the Federal Government has to offer an inducement to the man who has a gainful occupation in peace times to occupy some of his spare time——

The CHAIRMAN. The time of the gentleman from Vermont has again expired.

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent that the gentleman may proceed for three minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. GREENE of Vermont. I do not care for more time. I have no desire to be vain and display myself out here.

The CHAIRMAN. The gentleman from Vermont has three minutes.

Mr. GREENE of Vermont. I will say that in the one instance the policy of the Government is to be generous enough in the maintenance of the National Guard, so that the right kind of men, who are otherwise following gainful occupations in their peace-time life as citizens, will be induced to give some part of their leisure and take some part of their other time in attempting to build up military instruction in civil life. The pay does not represent alone actual service in instructing or in training men. It means that the young citizen who undertakes to train as an officer has other things to do. But he can not bring that into the Regular Army as part of his service as a soldier. When he goes into the Regular Army, then his pay roll is made up not on the idea of any sacrifice he makes to serve the Government but by what he actually does to earn his living, because it is his duty to serve the Government night and day. There is no sacrifice about it. It is his occupation. It is a widely dissimilar thing.

You do not expect a National Guard officer to claim—and the best ones I ever saw never pretended—that they knew as much about the details of the military business as the Regular officers. They can not be expected to and nobody does expect it of them. But the qualities that make for leadership in the National Guard, under the conditions that obtain in the National Guard, are splendid qualifications for service in the Regular Army. I was a Volunteer officer once, but I was exceedingly glad to get back to my old job again when my service terminated.

Mr. LAYTON. That may be true, but then you were not in the Regular Army.

Mr. GREENE of Vermont. No. But these men, I say, were glad to get into the Regular Army.

Mr. CHALMERS. Mr. Chairman, will the gentleman yield?

Mr. GREENE of Vermont. Yes.

Mr. CHALMERS. I may mention the fact that in normal schools and similar institutions the board of education and superintendent have been appealed to sometimes to designate pupils in the senior class to act temporarily as substitutes in the absence of the regular teachers, but it is not the custom, when such seniors have rendered that service as substitutes, to credit them with that time in computing their record for the salary schedule afterwards as teachers.

Mr. GREENE of Vermont. No.

Gentlemen, in this matter we ought not to allow sentiment to get the better of our good judgment.

Mr. PARKER of New Jersey. Mr. Chairman, longevity pay as proposed in this bill is needed in the Regular Army. This amendment practically destroys the whole principle of longevity pay there. Longevity pay in needed in the Regular Army not merely because of the greater efficiency of an old officer but because of the injustice of fixing pay solely by rank when promotion is sometimes slow.

It was as long ago as 1896, 30 years after the Civil War had ended, that I had occasion to look into this subject, and found that because the Army had been filled with young men after the Civil War, and because few died and none resigned, it was true at that time that 11 lieutenants in the Artillery and 4 in the Infantry had served 30 years before in the Civil War and had never got any promotion. Nearly half of the captains were in the same position; about two-thirds of all the majors, including all who were in the line except two, were in the same plight. All the lieutenant colonels and all the colonels were also Civil War veterans.

In 1896 I reported the facts as follows:

> It suffices to say that of the 71 colonels appearing in the Army Register (p. 266), only 1, a staff officer, did not serve in the war. The same is true of the 91 lieutenant colonels. Of the 209 majors, 150 served in the Civil War, including all officers of the line, except 1 each in Cavalry and Infantry, the other exceptions being staff appointments. There are 29 veteran captains in the staff, 32 in the 10 regiments of Cavalry, 36 in the 5 regiments of Artillery, and 127 in the 25 regiments of Infantry, all of whom likewise served in the war. No less than 11 war veterans are still first lieutenants in the Artillery and 4 in the Infantry. Of the higher grades, about half were Volunteers in the war. Of the captains and lieutenants, almost all were taken for their merit from the Volunteer regiments of the Army, the few exceptions being in the Artillery, where the promotion appears to have been slower than in the other branches.

During those 30 years there had been almost no promotions.

Now we have had another great war and have officered our Army from top to bottom with young men. The number of officers is likely to be decreased rather than increased in the years to come. No promotion is in sight; and it is right that some arrangement should be made by which long service should be paid by longevity pay. I proposed this in 1907 and said that it was then, as I believed, right; that it should be introduced as the only mode of pay. It is now introduced as a part of the mode of pay.

Now a second reason lies in the differences between the various services. I found in 1907 that by reason of the greater proportion of higher ranks in the Navy and by reason of the different arrangement of the grades over 40 per cent of the naval officers received the pay of major, and less than 16 per cent of the Army officers received the same pay. Promotion was fast in the Navy, because there were more high officers in that service and low in the Army. Instead of giving officers the same pay for the same rank, this bill will give them pay for their length of service, which is right.

In 1907 I suggested that longevity pay might be the cure of the evil. It would likewise give an opportunity that was much needed by the Army. We have abolished promotion by regiment, which used to keep regiments together, so that a man stayed in the same regiment until he was a captain. We abolished that, because promotions were unequal in different regiments. If the pay were raised because of length of service, we could restore regimental promotion, because if officers got the same pay they would not need the extra rank.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. PARKER of New Jersey. I ask for five minutes more.

The CHAIRMAN. The gentleman from New Jersey asks unanimous consent that his time be extended five minutes. Is there objection?

Mr. STAFFORD. Mr. Chairman, reserving the right to object, I should like to inquire of the gentleman having charge of the bill whether we are going to read any line of the bill to-day?

Mr. McKENZIE. I should hope so.

Mr. STAFFORD. We have been in session three hours and a half and have not read one line. When may we expect to

vote on the amendment offered by the gentleman from Alabama, which had been virtually rejected earlier in the day?

Mr. McKENZIE. I will say to the gentleman from Wisconsin that I am ready to vote at any time. I should like to have about one minute.

The CHAIRMAN. The gentleman from New Jersey asks unanimous consent that his time be extended five minutes. Is there objection?

There was no objection.

Mr. PARKER of New Jersey. Mr. Chairman, I would not have taken time except that I think the principle upon which longevity pay is to be granted to officers of the Army has been forgotten. The principle is threefold; first, because experienced officers are the best; second, because promotion is so unequal and likely to be so unequal; third, because it is so unequal in the different branches of different services, and the pay ought to be according to length of service. Now, this amendment takes away all of that system. I was an officer of the National Guard for 10 years. It did not interfere with my practicing my profession. Many men are officers of the National Guard. Many men serve as privates in the National Guard. Unless they see service in the field they are not entitled to be considered in the service of the United States, and therefore to draw longevity pay. They get the glory of a place in the National Guard. It is considered by a great many people as a very pleasant thing to be an officer in the National Guard. They are put on governors' staffs. They go from place to place in the State. They wear uniforms. There are rewards of that sort that come from service in the National Guard, and it is not the regular, hard service which entitles a man to increase of pay whether he receives promotion or not; especially when in time of peace a man remains in the lower ranks of the Regular Army, as some officers did at one time for over 30 years. It was so bad then that at one time, in order to give them some chance, President McKinley adopted the plan of promoting a colonel to be a general and retiring him, and then another and then another, so as to provide pay on the retired list for the old colonels who had been officers in the Civil War. This bill will prevent the need of any such remedy as that, and will see that the officers of the Army and the Navy and the other corps mentioned in this bill are happy in their work and are properly rewarded for the service that they have performed in the Regular Army, not for service that they performed elsewhere.

The CHAIRMAN. Debate on this amendment has expired.

Mr. BLAND of Indiana. Mr. Chairman, in what manner has the debate on this amendment expired?

The CHAIRMAN. Because the Chair refuses to recognize anyone else.

Mr. BLAND of Indiana. A point of order, Mr. Chairman. I must insist on my rights. Until debate is closed by the committee I have a right to be recognized.

The CHAIRMAN. The Chair has been very liberal.

Mr. BLAND of Indiana. It is not in the province of the Chair to shut off debate until the committee does it.

The CHAIRMAN. Then the Chair is certainly unacquainted with the rule. The rule says that when an amendment is offered there is one speech allowed in favor of it and one against it. If debate is continued beyond that, it is because of the fact that the Chair thinks the debate ought to continue longer, and the Chair has allowed this debate to continue for a very long time. So the Chair does not recognize the gentleman. The question is on the amendment offered by the gentleman from Alabama [Mr. JEFFERS].

The question being taken, on a division (demanded by Mr. JEFFERS of Alabama) there were—ayes 21, noes 49.

Mr. BLAND of Indiana. Mr. Chairman, I object to the vote and make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Indiana makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and eleven Members present, a quorum.

Mr. STRONG of Kansas. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Kansas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. STRONG of Kansas: Page 7, line 3, strike out the period, insert a colon, and the following: "*Provided*, That no payment shall be made to any person under the provisions of this act which will increase the pay and allowances of such person to an amount greater than now provided by the act of May 11, 1908, with the addition thereto of the bonus pay provided by the act of May 18, 1920."

Mr. STRONG of Kansas. Mr. Chairman and gentlemen of the committee, the purpose of this amendment is to make sure that the provisions of this bill will not increase the pay of the officers of the Army beyond that to which it was raised by Congress in May, 1920, when we had the highest peak of the high prices on account of the war.

The various provisions of this bill regarding the pay of officers of the Army make it so complicated that unless one has been a member of the committee and given much study, not only to all the provisions of this bill but to all the provisions of existing law, it is impossible to determine what pay is given to the various officers of the Army by this bill.

It does seem to me that when we are trying to reduce expenses, when we are trying to get the salaries and prices down, when we are trying "to get back to normalcy," we should not increase the salaries of the officers of the Army beyond what the Congress determined they should be when the living costs in this country were the highest in its history. In May, 1920, we granted additional compensation to officers of the Army in view of the increased cost of living. It does seem to me now that we ought not to pass any legislation which would increase that salary or compensation.

Mr. LAYTON. Will the gentleman yield?

Mr. STRONG of Kansas. I will.

Mr. LAYTON. Do I understand the gentleman to assert without contradiction on the part of the committee that this does actually increase the pay of the Army officers over that of the act of 1920?

Mr. STRONG of Kansas. I am informed that it does increase the compensation of many in the Army beyond the act of 1920. We saw a schedule the other day presented by the gentleman from South Carolina [Mr. BYRNES] in which the salaries were shown to go far beyond what I think the Members of this House thought the officers of the Army could draw. I am not familiar enough with this bill; I am not expert enough in legislation concerning the Army to determine from its various phrases and paragraphs what salary will be paid, and I am introducing this amendment, which, if adopted, will make sure that the salaries of the officers of the Army are not increased beyond that provided by the act of 1920. I am not asking to reduce the salaries of anyone. I am only trying to make sure that they will not be increased.

Mr. McKENZIE. Mr. Chairman and gentlemen of the committee, I think you probably clearly understand the purport of the amendment offered by the gentleman from Kansas, my good friend Mr. STRONG. That amendment, I am inclined to think, in his mind is aimed at the colonels and lieutenant colonels in the Army. It is true that under this bill, constructed as it is, with the progressive raise in pay from the commission of the second lieutenant up to colonel, after 30 years' service will raise the pay of lieutenant colonel and colonel to some extent over the bonus. If you have examined the chart in the Speaker's lobby, you have noticed how the lines run indicating the pay provided by the bonus—that it jumps the majors way up out of all proportion whatsoever and drops down and hits the grade of lieutenant colonel and colonel. I understand something about the prejudice that rests in the minds of some against the higher officers, but I want you to think of this: That this does not only affect the colonels and lieutenant colonels in the Army; this amendment is more far-reaching than that. If that was all that it did, we might be willing to concede that the Army should be penalized, but this amendment strikes at the very heart of the one service that I think every man in this House loves, and that is the Coast Guard Service. It is up to you gentlemen now, if you want to vote for this amendment and say that the old boys that have been riding the Coast Guard ships on the stormy Atlantic, up in Alaska, and all over the world shall be limited to the pay that they are now receiving, because they are denied the right to be promoted beyond the grade of colonel, you can do it. They can not get up into the grade of brigadier general or admiral or rear admiral. They are limited to the grade of colonel, and this amendment not only hits the men in the Army but strikes the death blow to the old veterans of the Coast Guard, some of whom have been in the service for 40 years.

Now, how much will it save? There are only a few men who will reach the grade of colonel. I have contended from the beginning that the bill is founded on principles that are as solid as the eternal hills, and there is not one line in it that is intended to take advantage of the people of this country. It is simply to keep faith with the men who have made our country grand and glorious, the men upon whom we rely. I want to appeal to you to lay aside your prejudices and let this thing go on, and let these few men who will soon go out of the service get the benefit of it, and hereafter those men will have to serve 30 years as commissioned officers and attain the grade of colonel before they can get the maximum pay provided for in this bill.

Mr. KRAUS. Mr. Chairman, I want to take one minute to have the question presented here clearly defined. My friend from Illinois has appealed to you in the interest of the Coast Guard. The Coast Guard, the Army, and every one of these services receives the benefit of the act of May 18, 1920. Now, what is the question here? It is clear and well defined. The gentleman from Kansas stated that he wants the question settled—are you willing to increase the wages, the pay, above the peak of 1920? His amendment fixes as a maximum in every instance the pay provided by the act of 1908, together with the additional pay under the bonus act of 1920. Now, the question is, Does the House propose to have it possible that pay may be secured above the peak of 1920?

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. KRAUS. I will.

Mr. NEWTON of Minnesota. If I may suggest, the case of the Coast Guard is somewhat different from that of the Army and the Navy, for their rank has been much lower and consequently their pay has been much lower for years. Under this bill with the limit off they get the benefit of the bill, but under the gentleman's amendment they can draw no more money than under the old plan.

Mr. LINEBERGER. Mr. Chairman, I make the point that no quorum is present.

Mr. KRAUS. Will the gentleman wait until I get through?

Mr. LINEBERGER. I will withdraw the point.

Mr. KRAUS. The Coast Guard to-day gets the benefit of the act of 1920, and this amendment does not prevent them from getting the bonus. Promotion in the Coast Guard has been inordinately slow, unfair, as a matter of fact, but that is not a matter that should be corrected by pay legislation. It should be corrected by basic legislation. Further, it is not fair and just to either the taxpayer or to the members of the Coast Guard to place upon the shoulders of the Coast Guard the burden of carrying the advanced pay for all of these other services.

Mr. NEWTON of Minnesota. I am speaking about the gentleman's amendment, and a man in the Coast Guard ranking as lieutenant, senior grade, if he was in the Navy would be either a commander or be up on the list of lieutenant commanders, and this bill by going to the basis of years of service would correct that injustice, and along comes the amendment of the gentleman from Kansas [Mr. STRONG], sweeping in its nature, and not only the Army and the Navy but the Coast Guard is wiped out from getting the benefit of this act.

Mr. MADDEN. The gentleman from Kansas simply provides in his amendment that no person shall get more pay under this act than he is getting under the 1920 bonus act, and they are all getting that now, and does the gentleman from Minnesota realize that it costs $70,000,000 a year to carry that bonus? That is what we are doing.

Mr. NEWTON of Minnesota. The purpose of this committee is to correct some of the injustices growing out of the discrimination against the Coast Guard.

Mr. KRAUS. I understand the position of the gentleman from Minnesota, and in order to take care of slow promotion in the Coast Guard he is willing to saddle on the Treasury an enormous expense for all of these other services, instead of really undertaking to solve the particular problem by proper legislation. As a matter of fact, the Coast Guard to-day right on this floor is carrying on its back all these services, because it has been recognized that there is an inequitable situation there.

Mr. NEWTON of Minnesota. And the gentleman's committee has been trying to correct it by basing it upon years of service, but the amendment of the gentleman from Kansas destroys that principle.

Mr. STRONG of Kansas. Mr. Chairman, will the gentleman yield?

Mr. KRAUS. Yes.

Mr. STRONG of Kansas. Of course, my amendment was not directed to any special class of officers. My amendment is an attempt to have the House say that it does not intend to raise the pay of the officers of the Army beyond the peak of 1920. If there is any class of the service which is underpaid, it would be a good thing to bring in a bill to increase their pay. I think this amendment ought to pass. If my friend wants to offer an amendment to my amendment excluding the Coast Guard, I should be very glad to accept it. I think, however, that there ought to be a limitation now in respect to the salaries that we are going to pay.

Mr. MADDEN. Mr. Chairman, I move to strike out the last two words. The act of 1920 did this. It raised the compensation of captains, $840 a year, if I recollect correctly, and the pay of colonels $600 a year, and it raised other men with varying ranks in proportion. It cost the people of the United States $70,000,000 a year. That is what it costs. The amendment of the gentleman from Kansas does not attempt to reduce that cost, but by the amendment he desires to prevent a higher cost. Are you ready to go higher, or are you ready to limit the cost? There is a time coming when we must report our action to somebody other than the Members of the House. The amendment of the gentleman from Kansas [Mr. STRONG] is fair. It is fair to everyone. It does not take away from the men in the Coast Guard anything they are getting to-day—not a dollar. It does not increase their pay, regardless of rank, for the years to come, but it does give them what they are getting now. Because you think the Coast Guard is not getting what it ought to have, do you want now to give more pay to men who are getting more pay to-day than I believe they ought to have? We have to account to somebody. Shall we account to the Army and the Navy and to the Coast Guard and to the Public Health Service, or shall we account to the American people? This bill as it is written will cost the people $55,000,000 a year. There is a reduction under the 1920 act of $14,000,000 a year, but where is the reduction made? Not in the commissioned officers' pay. Oh, no. The reduction is made in the pay of the enlisted men. That is where it is made, and every dollar that this bill carries less than the current law, which, by the way, expires by limitation on the 30th of June, if you let it alone, is taken from the pay of the enlisted men.

Can you justify that? Can you say that you are willing to cut the man who is getting $20 or $30 a month and increase the man who is getting $6,000 a year? Where is the justice in that? Are you willing to say that you are going to do that or are you willing to admit the justice of the amendment offered by the gentleman from Kansas? We do not ask you to reduce the pay of these men below what the 1920 act gives them. We ask you to leave them where they are. It costs $70,000,000 a year to leave them where they are. What have you to complain about, and what have they to complain about? Have you any thought of those who can not go on anybody's pay roll? They are not employees of the Government, either in the Army, the Navy, or in any other branch of the Government service. They are tilling the soil and working the plow; they are digging the sewers; they are operating the coal mines; they are running the trains on the railroads, carrying the passengers from one section of the Nation to another, and the products in the same way, here and there and yonder. When the time comes for them to retire from active duty, whose pension roll do they go on? Is there anyone anywhere who will pension these men? No. There is no pension roll for them. They are needed only to pay the bills. When the hour comes that they are no longer able to function, their families may sit in the corner of a fireless room on a cold winter's night while we who are voting their money away by the millions continue to live in luxury. Gentlemen, you can not justify the defeat of the amendment offered by the gentleman from Kansas and then say that you are prompted by the justice of the cause, for there is no justice in the cause.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BYRNES of South Carolina. Mr. Chairman, I regret that I can not agree with my friend from Illinois [Mr. MADDEN]. The fact is, that under this bill there is a reduction in the total appropriation for the commissioned personnel below the current law, and the entire saving of $14,000,000, to which he has referred, will not come out of the reduction in the enlisted personnel.

Take the Army. Under the act of May 18, 1920, we will appropriate for 1926 for the commissioned personnel $53,309,748.08. Under this bill it is $48,768,507.40, and throughout the years to come, down to and including 1941, for which I have figures here, there is a reduction of the amount necessary to pay the commissioned personnel under this bill as compared with the present law. That being true, the question is, How the amount that is to be appropriated for the commissioned personnel shall be distributed. Out in the lobby there is a chart which shows you that fact. It shows you that this committee is attempting to distribute the total appropriation for the commissioned personnel in such a manner as to equitably distribute it, and in such a manner as to afford a gradual promotion during the years and offer to the young man who goes into the commissioned service the hope of a career. Now, let us see what happens. In the lower rank it is not a fact that every officer is going to receive as much under this bill as he is receiving to-day. Hundreds will receive less. If the gentleman from Kansas would say that no man shall receive more than he is receiving to-day under the bonus, and also that no man shall receive less than he is receiving to-day, then one would say that would be fair. The fact is many of the officers, where there has been a rapid promotion, as in the Army, by reason of the reorganiza-

tion act and by reason of the war, will lose in their compensation——

Mr. JOHNSON of Mississippi. Will the gentleman yield?

Mr. BYRNES of South Carolina. I can not yield to my friend.

Mr. JOHNSON of Mississippi. I would like to ask an important question.

Mr. BYRNES of South Carolina. I am sorry I can not yield. In the grades of the organization where there has been rapid promotion there will be a reduction in the compensation for those officers. Now, at the end of the line, as shown by the chart, there is an increase—for whom?

I want to tell you because gentlemen at times are apt to think that when colonels receive an increase over the present compensation that it means old West Pointers. Of the colonels who will receive a slight increase and who would be affected by this amendment, there are 121. Who are they? One hundred and five of them are volunteers who fought in the Spanish-American War, men who never saw West Point, and out of that 121 there is not one West Point graduate. They are the men who are to be affected by this amendment. Of the 704 lieutenant colonels, 603 were volunteers of the Spanish-American War——

Mr. McSWAIN. What became of the West Point volunteers? Have they all got to be generals already?

Mr. BYRNES of South Carolina. No; my good friend knows there are not enough generals for that. What became of them I do not know, but I know this, that they are not among those affected by this amendment. There are 704 lieutenant colonels, and of them 603 were volunteers of the Spanish-American War. Then there are 41 West Point graduates. And of 200 majors, 105 came from the Spanish-American War and only 95 came from West Point. These are the men whose service places them in the fifth pay period and who would be affected by this amendment. Down at the other end of the line man after man will receive less than he receives to-day. If we are going to say that no man receives one dollar more than he is now receiving, should we not say that no man shall receive one dollar less? The purpose of this bill is to take the total appropriation, which is $14,000,000 less next year than this year, and distribute it in such a manner as will be equitable and enable the officer who enters the service to have a gradual line of promotion through the years to come and induce him to stay, instead of having the pay scale in such an unscientific manner as it is to-day, where an officer at one stage of his career can look forward 14 years and see no hope for an increase greater than $200 or $300. Now, because this amendment will enable one man at the end of this line with 26 or 30 years of his life in the service to receive a few hundred dollars more, is it fair to destroy the whole principle of the bill, which provides a gradual promotion through the years to come? I submit it is not and that the principle of the bill is good and I hope will be adhered to and that this amendment will be defeated.

Mr. PADGETT. Will the gentleman yield?

Mr. BYRNES of South Carolina. I yield to the gentleman from Tennessee.

Mr. PADGETT. I wanted to suggest that the act of May 20 was not upon any scientific principle. It was irregular and it increases certain lower ranks out of all proportion to the others, and to make that the standard by which this is to be limited is to destroy the whole symmetry of the bill, as it is based upon scientific promotion.

Mr. BYRNES of South Carolina. Absolutely.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas [Mr. STRONG].

Mr. MAPES. Mr. Chairman——

The CHAIRMAN. For what purpose does the gentleman from Michigan rise?

Mr. MAPES. To move to strike out the last three words for the purpose of asking a question.

The CHAIRMAN. The gentleman from Michigan is recognized.

Mr. MAPES. May I ask the gentleman from Illinois a question? Would this amendment, if adopted, apply for all time no matter to what grade the man in the service might subsequently be promoted?

Mr. McKENZIE. I presume that is the intention. I so understand it.

Mr. MAPES. The language of the amendment is that no person shall receive any pay under the provisions of this act greater than that which the temporary pay law gives him, without any qualification at all. Is that the way the gentleman from Illinois interprets the amendment?

Mr. McKENZIE. I think it is fair to assume—I do not know how the amendment reads—but I think it is fair to assume that the gentleman from Kansas [Mr. STRONG] undoubtedly intended to have it apply only to the two or three grades that get some increase. He has those in mind, and I am sure my good friend from Kansas, if he realized how far his shot was going if it is fired, would not do it.

Mr. MAPES. If I read the language of the amendment correctly, it provides that a man who is a first lieutenant now can never receive any more pay than he is now receiving, no matter to what grade he may afterwards be advanced.

Mr. STRONG of Kansas. Will the gentleman yield?

Mr. MAPES. I will be glad to do so.

Mr. STRONG of Kansas. That is not the intention of the amendment.

Mr. MAPES. Is not that what the amendment provides?

Mr. STRONG of Kansas. Here is a bill by which no man on this floor, except, perhaps, the committee, is able to say what pay these officers shall receive, and I simply try to establish by this amendment that there shall be no increases in the different grades in the service beyond that now paid.

Mr. MAPES. But the language of the gentleman's amendment is this, that no payment shall be made to any person under the provisions of this act which will increase the pay or allowances of such person to an amount greater than that now provided by the act of May 11, 1908, plus the bonus that is added by the temporary pay law. I think I am in sympathy with what the gentleman is aiming at, but his amendment I do not believe will accomplish it.

Mr. McKENZIE. Is it not your purpose to hold down the pay of the contract surgeons, three in number, one of whom is a lady and held to be one of the finest physicians in this country? And I want to further ask my good friend if it is not a fact that he has not really investigated this matter before offering this amendment, but simply offers it without knowing what it means?

Mr. STRONG of Kansas. I offer it for the purpose of being assured that this bill will not increase the pay of any officer of that kind. I do not direct it to any lady or to any officer. I do not know of any person it will affect personally, except it affects the plain increase of pay of any officer of the Army now.

The CHAIRMAN. The question is on the amendment of the gentleman from Kansas [Mr. STRONG].

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. STRONG of Kansas and Mr. MADDEN demanded a division.

The committee divided; and there were—ayes 21, noes 64.

So the amendment was rejected.

Mr. BLAND of Indiana. Mr. Chairman, I object to the vote, and I make the point of order there is no quorum present.

The CHAIRMAN. The gentleman from Indiana makes the point of order there is no quorum present, and the Chair will count. [After counting.] One hundred and twenty-four gentlemen are present, a quorum.

Mr. NEWTON of Minnesota. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Minnesota offers an amendment, which the Clerk will report.

Mr. NEWTON of Minnesota. I move to amend, in line 5, page 6, by striking out the period after the word "computation" and inserting in lieu thereof a colon, and following that the following language:

Provided, That every officer whose first appointment in the Regular Army was in a grade above that of second lieutenant shall receive as much pay as the senior officer of the next lowest grade in the same pay period originally appointed in the Regular Army in the grade of second lieutenant.

The CHAIRMAN. The gentleman offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. NEWTON of Minnesota: Page 6, line 5, after the word "computation," strike out the period, insert a semicolon, and add the following: "*Provided*, That every officer whose first appointment in the Regular Army was in a grade above that of second lieutenant shall receive as much pay as the senior officer of the next lowest grade in the same pay period originally appointed in the Regular Army in the grade of second lieutenant."

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on that until the gentleman explains it.

Mr. NEWTON of Minnesota. Mr. Chairman, the amendment differs from the amendment previously offered in that the amendment previously offered gave the emergency officer the same pay as that of the junior officer of that rank in the same pay period. This amendment gives him the same pay as the senior officer of the next lowest grade.

Mr. McKENZIE. Will the gentleman please explain to the House just how that will occur?

Mr. NEWTON of Minnesota. Yes. For the purpose of saving time I shall refer to the proposed pay of the emergency colonel,

for example. The emergency colonel from the date of the war, with allowances, longevity, and so on, would get $6,072 under this bill. The old Regular Army lieutenant colonel under the proposed bill here would be entitled to draw pay amounting to $6,988—in other words, $900 more than the emergency colonel. So that under the bill as it is now drawn we have the anomaly of a colonel—just because he is drawn from civil life—a colonel who is doing all of the work of any other colonel, drawing less pay and less compensation in every way than not only a Regular Army man ranking as colonel but less pay than a Regular Army lieutenant colonel. This amendment seeks to correct that injustice. I offer it at the suggestion of some of those who could not vote, or did not feel that they could vote, for the previous amendment.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. NEWTON of Minnesota. I yield to the gentleman from Wisconsin.

Mr. STAFFORD. I understand that the proposed amendment is similar in principle but different in degree?

Mr. NEWTON of Minnesota. Yes.

Mr. STAFFORD. Although it may be subject to a point of order as not being germane, I will withdraw the reservation of the point of order, but I hope it will be defeated.

Mr. NEWTON of Minnesota. In offering this, I am keeping strictly in accord with the principles of this bill.

Now, I want to call the attention of the House to the second paragraph of page 2 of the bill. Take this provision:

The pay of the sixth period shall be paid to colonels of the Army, captains of the Navy, and officers of corresponding grade who have completed 26 years' service."

Now comes the first disjunctive "or":

Or whose first appointment in the permanent service was in a grade above that corresponding to captain in the Army.

In other words, to get some certain individuals into the sixth period, the highest-paying period, they say that a man shall put in 26 years in order to get some certain individuals into this highest-pay period. They say he does not have to have put in 26 years, because he commenced his service as a captain and not as a second lieutenant. This provision of the bill is a specific exception to years of service as sole basis of pay and is in line with my amendment.

That is all this does, to try and carry into effect the principles set forth in the second paragraph of the second page of the bill in so far as it applies to emergency officers, whether from the universities, the training camps, or the National Guard, who fought in the late war and then decided to remain in the service. [Applause.]

Mr. McKENZIE. Mr. Chairman, I simply wish to state that my good friend from Minnesota [Mr. NEWTON] has offered a proposition that has the same principle behind it as the other proposition.

Mr. BYRNES of South Carolina. Mr. Chairman, will the gentleman yield just there?

Mr. McKENZIE. Yes.

Mr. BYRNES of South Carolina. The former amendment gave him 26 years' service, and this would give him a service of 25 years and 364 days. [Laughter.]

Mr. NEWTON of Minnesota. The gentleman does not mean that.

Mr. McKENZIE. I know the gentleman from Minnesota is sincere, and I pay him the compliment of being sincere. I ask for a vote.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Minnesota [Mr. NEWTON].

The question was taken, and the Chairman announced that the "noes" appeared to have it.

Mr. NEWTON of Minnesota. Mr. Chairman, I ask for a division.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 5, noes 37.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 2. That every commissioned officer while on field or sea duty shall receive an increase of 5 per cent of his base pay. Field duty shall be defined for the purposes of this act as service in mobilization, concentration, instruction, or maneuver camps, service in campaign, in simulated campaign or on the march, and service under similar conditions. Such field service in each case shall be announced in orders published by the President. Sea duty shall be sea service as defined in section 1571, Revised Statutes.

Mr. BULWINKLE. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from North Carolina offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BULWINKLE: Amend section 2, page 7, by striking out lines 4 to 12, inclusive, and inserting in lieu thereof the following:

"SEC. 2. That from and after the 1st day of July, 1922, no commissioned officer of the Army, Navy, or any of the other services named herein shall receive any additional compensation or any increase in pay for field or sea duty."

Mr. BULWINKLE. Mr. Chairman, my understanding of this bill is that it was designed to equalize salaries in the various branches of the service; and yet here, right at the first dash out of the box, an increase is given to the Army and Navy officers for field and sea duty. I remember that the other day the chairman of the committee spoke in glowing terms of the Coast Guard; how those men were always on duty. Yet, under this section of the bill they would not get any increase in pay at all. It is unjust.

Again, it is wrong to pay men extra for just what you have hired them to do; to pay an extra amount in percentage. It creates cumbersome bookkeeping and it is absolutely unnecessary. If we ought to pay them more, let us pay them more.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. BULWINKLE. Yes.

Mr. MADDEN. Until recently no allowance was made to officers for family quarters when on field duty. Now an allowance is made to them for that. The family would not suffer any hardship while the husband was on field or sea duty, because quarters are now furnished, and there ought not to be any additional pay given to a man because he goes to the field.

Mr. BULWINKLE. No.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. BULWINKLE. Yes.

Mr. COOPER of Wisconsin. What the gentleman said, if I understood him correctly, amounts to a statement that there is discrimination in this bill against the Coast Guard.

Mr. BULWINKLE. It would be, if this bill passes.

Mr. COOPER of Wisconsin. That is a very important statement that has not been denied. Can the gentleman demonstrate the accuracy of his statement?

Mr. BULWINKLE. Yes; I can. If you will read section 2 you will see that for sea and field duty officers of the Army and of the Navy will receive 5 per cent increase in pay. You can not find any provision of that kind which will apply to the officers in the Coast Guard.

Mr. MERRITT. Mr. Chairman, will the gentleman yield?

Mr. BULWINKLE. Yes.

Mr. MERRITT. Is it not true that officers in the Army and Navy when on duty have to furnish their subsistence, whereas in the Coast Guard it is furnished by the United States? That is just the distinction. That is why there is no injustice here.

Mr. BULWINKLE. There is no provision under existing law at the present time for officers of the Army to get 5 per cent for field duty.

Mr. KRAUS. Mr. Chairman, will the gentleman yield?

Mr. BULWINKLE. Yes.

Mr. KRAUS. As I understand the gentleman, he means that the Coast Guard is discriminated against because the language of this section defines field duty for the Army, and then he refers to a place where sea duty is defined for the Navy, and therefore as a matter of construction there would be no allowance made for sea duty under this section for the Coast Guard. Because of the definition in two instances and the insertion of other definitions there I understand therefore the discrimination would exist?

Mr. BULWINKLE. That is correct.

Mr. BLAND of Indiana. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Indiana makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and two Members present—a quorum. The question is on the amendment.

Mr. McKENZIE. Mr. Chairman, I should like to make just a brief statement, and then I will move that the commititee rise.

The CHAIRMAN. The gentleman from Illinois is recognized.

Mr. McKENZIE. Gentlemen of the committee, I wish to state that when the question of pay for service at sea came up we felt that sea-service pay should be reduced. In a tentative statement that I have made I said I felt that the base pay should be raised, and these additions to the pay should be done away with. We found that in the Navy and the Coast Guard and the Marine Corps, as I remember—and I think I am right about it—they received 10 per cent additional pay for sea duty. Nothing of the kind has ever existed in the Army. About 70 per cent of the men in the Navy serve at sea and about 30 per cent on shore. It is estimated that about 5 per cent of the officers in the Army would perhaps have what would be known as field service.

In this bill we also provide for the repeal of all foreign-service pay, which heretofore has been 10 per cent. We felt that a reduction of 50 per cent in the sea pay of the Navy and the Coast Guard was a pretty fair reduction. We simply included the Army along with the Marine Corps and the Navy for the sake of parity and to comply with one of the policies in this bill to treat all services alike and put them all on a level.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman permit an interruption there?

Mr. McKENZIE. Yes.

Mr. COOPER of Wisconsin. I notice in line 6, page 7, section 2, the beginning of the definition of field duty, and then in lines 11 and 12 these words—

Sea duty shall be sea service as defined in section 1571 of the Revised Statutes.

Now, this whole controversy turns on the construction which the gentleman from North Carolina [Mr. BULWINKLE] gave to that section. What is the definition of sea duty in section 1571, and does it include the Coast Guard?

Mr. McKENZIE. Section 1571 is as follows:

No service shall be regarded as sea service except such as shall be performed at sea under the orders of a department and in vessels employed by authority of law.

Of course, that would take in the Coast Guard. That would be in vessels employed by authority of law.

Mr. COOPER of Wisconsin. I would like to ask the gentleman this question. Since I interrupted the gentleman from North Carolina [Mr. BULWINKLE] I have been told that this exact question was submitted to the comptroller, and that he decided that the Coast Guard was included within section 1571 of the Revised Statutes. Is that so?

Mr. McKENZIE. It was included. Of course, I have not talked with the comptroller; but I want to say this——

Mr. COOPER of Wisconsin. The gentleman from South Carolina [Mr. BYRNES] told me that.

Mr. BYRNES of South Carolina. When the bill was submitted to the comptroller it was submitted to him to have him pass on all the provisions of the bill, and my understanding is that he construed it as applying to all the services in the bill.

Mr. McKENZIE. If the gentleman will permit me, surely the committee never had any intention of discriminating against the Coast Guard.

Mr. COOPER of Wisconsin. I know that.

Mr. McKENZIE. We would not do that, and it was not our purpose; but we felt that if we reduced the sea pay 50 per cent, and if only 5 per cent of the officers in the Army were included in field service, it would not affect the Treasury very much as far as the Army was concerned.

Mr. COOPER of Wisconsin. I would like to say just one word in this connection. I never thought that the committee, of which the gentleman from Illinois is the honored head, had any purpose to discriminate against the Coast Guard.

Mr. McKENZIE. I understand that.

Mr. COOPER of Wisconsin. But I do not want the law to do it.

Mr. McKENZIE. Neither do I.

The CHAIRMAN. The time of the gentleman has expired.

Mr. STAFFORD. I ask unanimous consent that the time of the gentleman be extended five minutes.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent that the time of the gentleman from Illinois be extended five minutes. Is there objection?

There was no objection.

Mr. McKENZIE. I wish to say for the information of the members of the committee that this involves the Marine Corps; and the officers and men of the Marine Corps are, as you know, stationed in Santo Domingo, Haiti, and places of that sort. Now, with the repeal of all foreign-service pay, which I strenuously advocated, it will give to them 50 per cent of what they heretofore received by the way of foreign-service pay. I want to say, further, to gentlemen of the committee that, so far as I am personally concerned in this matter, I have no feeling one way or the other; if the Members of the House feel that the pay is sufficient without the additional sum, it is up to the House. But the committee felt that in writing the bill it was fair, and after abolishing all foreign-service pay and cutting down the amount 50 per cent, we felt that we had gone a long way in economizing.

Mr. STAFFORD. Will the gentleman yield?

Mr. McKENZIE. Yes.

Mr. STAFFORD. I wish to inquire what additional 5 per cent pay you intend to give the officers of the Army in the so-called service field duty? The gentleman stated that it will only apply to 5 per cent of the commissioned officers. I direct his attention to the definition of field duty:

Field duty shall be defined for the purposes of this act as service in mobilization, concentration, instruction, or maneuver camps, service in campaign, in simulated campaign or on the march, and service under similar conditions.

At Camp Benning, Camp Knox, and various other camps, where many officers are assigned for instruction, will they receive this additional pay?

Mr. McKENZIE. They would not.

Mr. STAFFORD. Why would they not?

Mr. McKENZIE. They are permanent service schools, and not field maneuvers. They are entirely different.

Mr. STAFFORD. But you say that field duty is defined as "service in mobilization, concentration, instruction, or maneuver camps." It is not "and," it is "or." The camp at Plattsburg is an instruction camp; Camp Benning is an instruction camp; Camp Knox is an instruction camp. Why would not the officers in performing service there be entitled to the 5 per cent?

Mr. GREENE of Vermont. Those are permanent posts, regular barracks, not field duty at all.

Mr. STAFFORD. But here is the definition of field duty.

Mr. McKENZIE. Take Camp Knox, in Kentucky, and suppose the National Guard of all that section of the country in the corps area was ordered to that post for maneuvers, and officers stationed at Fort Sheridan were ordered down there to give instruction in maneuvers. They would, in my judgment, get the 5 per cent.

Mr. STAFFORD. But it would not only apply to those officers, under the phraseology here, but it would apply to officers permanently stationed at Camp Benning, Camp Knox, Fort Sill, Fort Leavenworth, all engaged in instruction purposes. Do we propose by this to increase their salary 5 per cent more than what they are receiving to-day? We are going to a great degree in proposing permanent increases, but now you are proposing to increase it 5 per cent more.

Mr. PADGETT. They are getting 10 per cent increase now.

Mr. STAFFORD. Oh, I deny that; the gentleman may be an authority on naval matters.

Mr. PADGETT. I was not talking of the Army.

Mr. STAFFORD. I am directing my inquiry to the military arm of the Government.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FROTHINGHAM. Mr. Chairman, I ask that the gentleman have one minute more; I want to ask him a question.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. FROTHINGHAM. I want to find out, if this amendment prevails and section 2 is stricken out, does that do away with the field pay and sea pay for the Navy, the Marine Corps also, as well as the Army?

Mr. McKENZIE. Absolutely; we never had it in the Army.

Mr. OLIVER. Mr. Chairman, these facts may prove helpful to the House in the consideration of the pending amendment. Prior to 1899 there was a difference of 15 per cent in the pay of naval officers on shore and sea duty. In 1908 naval officers were given the same pay as officers of the Army, and in addition thereto 10 per cent of the base and longevity pay was given for sea service, but no commutation for quarters was allowed naval officers at sea. The 10 per cent was supposed to be in lieu of commutation. There was never any sound reason for denying to a naval officer with dependents commutation for heat, light, and quarters when on sea duty. This bill undertakes to give to the naval officer at sea who has dependents commutation for quarters. No pay has ever been provided for field service in the Army. The present bill undertakes to allow 5 per cent both for sea service in the Navy and for field duty in the Army, and provides commutation for officers at sea and on field duty in these services who have dependents not occupying public quarters. This bill undertakes to increase the commutation for quarters, and in view of that increase it is for the House to say whether it is proper to give additional pay for sea service and field duty.

Mr. GRIFFIN. Would not an instructor at Fort Leavenworth be entitled to 5 per cent under this provision?

Mr. OLIVER. I am not prepared to say what the comptroller would hold.

Mr. STAFFORD. There is no question about that under the phraseology of this bill.

Mr. OLIVER. When the committee came to consider that section it was first written as you now have it in the pending bill, but the joint committee, at the suggestion of some of the consulting officers, put in a provision that the decision of the President as to what constituted field service should be conclusive. The House committee struck out this clause which sought to take from the comptroller all authority to pass on the question of what constituted field duty.

Mr. GREENE of Vermont. If the gentleman will permit, I think the gentleman's explanation is clear. I do not see why a sailor should not go to sea when that is his duty, or why a soldier should not go into the field when that is his duty, but if they are granted commutation of quarters for their family while performing that service away from garrison, it does not seem to me there should be any extra allowance on top of the commutation.

Mr. OLIVER. I agree with the gentleman and feel that it is a matter for the House to determine what is a proper commutation allowance.

Mr. SWING. Mr. Chairman, it seems to me there ought to be some recognition of an acknowledged fact that there is marked difference between the service required of a man at sea and of that of a man on land. It is the difference between having a position which enables you to be at home with your family every night, and one which necessitates you to be away from your family for months at a time, leaving out entirely the question of increased cost. Every time an assignment comes up which involves the appointment of an officer to land duty there is a good deal of competition to see who gets it. Sometimes there is a great deal of feeling against the men who get the preference in the assignment of duties on land, on the part of those who have to go to sea and who have to break up their homes and leave their families. In some way there ought to be a proper recognition of this inequality of service, so that a man will say, "Yes; I would just as soon go to sea, because the extra pay will put me ahead a little at the end of the month, which I can use to pay on the little home that I am trying to buy." In this bill, it seem to me very properly, there has been a recognition of the inequality of service between land and sea.

Mr. OLIVER. Mr. Chairman, will the gentleman yield?

Mr. SWING. Yes.

Mr. OLIVER. If it be true, for the reason that the gentleman states, since even now in this bill we have given commutation for quarters to officers while at sea, why not give increased pay to every warrant officer and every apprentice and likewise to every private in the Army when serving in the field?

Mr. SWING. So far as the privates are concerned, as the gentleman well knows, there are very few of them who are married. They are mostly young men who have not yet taken on the responsibility of a home. What I was about to say about the Army is simply this: When an officer is maintaining his own home it costs no more to cook and prepare a meal for two than it does for one. Yet the officer when detached from his regular post and sent to some training camp, where he is temporarily assigned, has to pay out of his pocket an additional sum for his board. So there are these inequalities in the service which ought to be recognized and compensated for in pay. This would promote contentment and satisfaction among the men which in turn would contribute to increased efficiency in the service.

Mr. STAFFORD. These training camps, like Camp Benning, Fort Sill, Camp Knox, are not temporary assignments. The officers are there the year around and they get their commutation of quarters.

Mr. SWING. I agree with the gentleman that it ought not to cover permanent posts, but for emergency and temporary assignments there ought to be proper recognition.

Mr. PADGETT. Mr. Chairman, will the gentleman yield?

Mr. SWING. Yes.

Mr. PADGETT. It ought to be borne in mind that they are now receiving 10 per cent in the Navy, Marine Corps, and Coast Guard, and that this reduces it to 5 per cent.

Mr. SWING. Yes. That was pointed out by the chairman of the subcommittee, who showed that this provision of the bill would result in a substantial saving over the pay for sea service provided for by existing law.

Mr. PADGETT. And in addition to that, foreign-service pay is repealed by the bill.

Mr. GREENE of Vermont. If the gentleman will permit, I know when I ask my learned friend a question as to naval affairs I may be getting it wrong. It is true that they got 10 per cent, but they did not then get commutation of quarters. Now they are getting commutation of quarters and 5 per cent, and that 5 per cent is more than they used to be getting.

Mr. PADGETT. I do not know that it is; it depends upon the quarters he got.

Mr. STAFFORD. I ask unanimous consent that the amendment may be again reported.

The amendment was again reported.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Carolina.

The question was taken, and the Chair announced the noes seemed to have it.

On a division (demanded by Mr. BULWINKLE), there were—ayes 26, noes 46.

Mr. BLAND of Indiana. Mr. Chairman, I make the point of order there is no quorum present.

Mr. BULWINKLE. Mr. Chairman, I demand tellers.

Mr. BLAND of Indiana. Mr. Chairman, I object to the vote, because there is no quorum present.

Mr. McKENZIE. Is it the understanding that this bill will be taken up in the morning as unfinished business?

The CHAIRMAN. That is the understanding.

Mr. MADDEN. I do not know; we may have some conference reports.

Mr. McKENZIE. In view of that fact, I move that the committee do now rise.

Mr. MADDEN. Mr. Chairman, I object to the vote, because there is no quorum present.

Mr. HICKS. Mr. Chairman, I make the point of order that the point comes too late.

The CHAIRMAN. The gentleman from Illinois moves that the committee do now rise——

Mr. MADDEN. Do I understand the Chair recognizes the fact that I objected to the vote because there is no quorum present?

The CHAIRMAN. The Chair has not decided that question; he has not passed upon the question. The gentleman from Illinois can be recognized for the purpose of rising.

Mr. McKENZIE. Mr. Chairman, I will withdraw——

Mr. STAFFORD. Mr. Chairman, I demand tellers on the vote.

Mr. BULWINKLE. Mr. Chairman, I have demanded tellers.

Mr. KRAUS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. KRAUS. As I understood it, the gentleman from Illinois sought to withdraw the motion, and to that nobody made an objection.

The CHAIRMAN. Does the gentleman from Illinois desire to withdraw his motion? The Chair did not so understand.

Mr. MADDEN. Mr. Chairman, I wish to object to the vote, so as to have a vote to-morrow.

Mr. CONNALLY of Texas. Mr. Chairman, the gentleman from North Carolina demanded tellers on the vote, and that question is now up for decision.

Mr. SWING. And the point of order is made that that comes too late.

Mr. MADDEN. I make the point of order that there is no quorum present, and the vote can come up to-morrow.

The CHAIRMAN. The point of order that there is no quorum will carry the matter over. The Chair will recognize the gentleman from Illinois——

A MEMBER. Has the Chair decided there is no quorum present?

Mr. KNUTSON. Mr. Chairman, there are some Members who abstained from voting on the floor.

The CHAIRMAN. The Chair has not counted yet. [After counting.] One hundred and sixteen gentlemen are present, a quorum.

Mr. BULWINKLE. Mr. Chairman, I demand tellers.

The CHAIRMAN. Thirteen gentlemen have risen, not a sufficient number.

So the amendment was rejected.

Mr. McKENZIE. Mr. Chairman, I move the committee do now rise.

Mr. STAFFORD. Mr. Chairman, I offer the following amendment.

The motion to arise was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. TOWNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill H. R. 10972, had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. LAYTON. Mr. Speaker, I ask unanimous consent to extend and revise my remarks in the RECORD by inserting as a part thereof a recent opinion delivered by the attorney general of the State of Massachusetts upon the constitutionality of the Sheppard maternity bill.

The SPEAKER. The gentleman from Delaware asks unanimous consent to insert as a part of his remarks in the RECORD an opinion delivered by the attorney general of Massachusetts on the constitutionality of the maternity bill. Is there objection? [After a pause.] The Chair hears none.

Mr. LAYTON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include as a part thereof a recent opinion delivered by the attorney general of the State

of Massachusetts upon the constitutionality of the Sheppard maternity bill.

The opinion is as follows:

ACT IS UNCONSTITUTIONAL—RULING ON SHEPPARD-TOWNER BILL BY ATTORNEY GENERAL—ALLEN SAYS IT USURPS STATES' AUTHORITY—VIOLATES THE TENTH CONSTITUTIONAL AMENDMENT—DECLARES STATE HAS RIGHT TO RAISE QUESTION—SUGGESTS SUIT AGAINST FEDERAL OFFICERS—ADVISES AGAINST ACCEPTANCE OF THE MEASURE IF LEGISLATURE DESIRES TO BRING SUCH ACTION.

Attorney General J. Weston Allen holds the Sheppard-Towner Act to be unconstitutional in an opinion delivered to the house of representatives this afternoon, in reply to an order adopted by that body more than a month ago seeking his ruling upon several questions directly affecting the acceptance of the act by Massachusetts.

The Sheppard-Towner Act, which is entitled "An act for the promotion of the welfare and hygiene of maternity and infancy, and for other purposes," is described at length by the attorney general, who, in his opening, says it is a matter of considerable delicacy for a State official to venture to pass upon the validity of acts of Congress and the rights of sovereign States before the Supreme Court of the United States, but which apparently is within the statutory duty imposed upon him.

He was asked to answer four questions by the legislature: First, whether the act is constitutional; second, whether Massachusetts, as a sovereign State, has the right to question its constitutionality; third, whether the Commonwealth would waive its rights to question the constitutionality of the act if it accepts it; and finally, what procedure can be adopted in order to raise the question.

Nearly half of his long opinion deals with the first question, in which he finds that the act delegates to the Federal Government police powers specifically reserved to the sovereign States. He finds that: "If the United States possesses no police powers, as the Supreme Court of the United States has often held, it would seem that this act is an attempt to usurp an authority reserved to the States, and to exercise it at the expense of a minority of them, of which this Commonwealth is one."

He states emphatically that in his opinion the Sheppard-Towner Act is unconstitutional as it violates the tenth amendment to the Constitution of the United States, which specifically reserves to the sovereign States the police power. He finds that the act delegates these police powers to Federal officials, although "There is no grant of power to Congress to regulate the internal affairs of the State, excepting that given by the eighteenth amendment."

The Attorney General finds under the act that if Massachusetts accepts the benefits afforded it will be compelled to pay double the amount which will be received in such benefits. He states that if Massachusetts does not accept the act it will still be taxed to pay for the carrying into effect "of an unconstitutional law in other States," as all payments are to be made out of the Federal Treasury, which is replenished from internal revenue of which Massachusetts contributes 5.66 per cent of the whole.

In reply to the second question, Mr. Allen finds that Massachusetts has the right, as a sovereign State, to raise the question as to the constitutionality of the act. In reply to the third quesion he states that, while Massachusetts might not waive its rights as a sovereign State to raise the question if it accepts the act, it would certainly place itself in a most inconsistent position. He, therefore, advises against accepting the act if Massachusetts intends to proceed to raise the question.

In reply to the fourth question, as to what procedure should be followed if the State wishes to raise the question of constitutionality, Mr. Allen says the direct method, and possibly the only method, is by proceeding in equity in the Supreme Court against those officials of the Federal Government who are acting or preparing to act to carry the provisions of the act into effect.

The complete opinion, which is certain to attract country-wide attention, follows:

SHEPPARD-TOWNER ACT RULED UNCONSTITUTIONAL BY ALLEN—ATTORNEY GENERAL FINDS CONGRESS ATTEMPTS TO USURP POWERS RESERVED TO THE STATES—SAYS MASSACHUSETTS WILL BE TAXED WHETHER IT ACCEPTS ACT OR NOT—DECIDES LEGISLATURE HAS RIGHT TO RAISE QUESTION AND WOULD BRING EQUITY ACTION AGAINST FEDERAL OFFICERS.

To the honorable Senate and House of Representatives, State House:

GENTLEMEN: You have requested my opinion on the following questions:

"(1) Is the act of Congress, approved November 23, 1921, entitled 'An act for the promotion of the welfare and hygiene and maternity and infancy, and for other purposes,' within the constitutional powers of the Federal Government?

"(2) Has the Commonwealth of Massachusetts any right, as a sovereign State, to question the constitutionality of said act?

"(3) Would the Commonwealth of Massachusetts, by the acceptance of said act, waive its rights as a sovereign State, if such rights exist, to contest the constitutionality of said act before the courts of the United States?

"(4) If, in his opinion, said act is unconstitutional, what procedure can the Commonwealth adopt to raise the question of constitutionality?"

It is a matter of considerable delicacy for a State official to venture to pass upon the validity of acts of Congress and the rights of sovereign States before the Supreme Court of the United States, and it is with some hesitation that I undertake to comply with your request. It would seem, however, that it is within the statutory duty imposed upon me, as that duty has been construed by my predecessors in office, to give you an opinion upon questions of law when such opinion is requested in order that you may be informed as to your powers and duties with respect to pending matters of legislation.

I. The act of Congress, approved November 23, 1921, entitled "An act for the promotion of the welfare and hygiene of maternity and infancy, and for other purposes," commonly known as the Sheppard-Towner Act, authorizes annual appropriations "to be paid to the several States for the purpose of cooperating with them in promoting the welfare and hygiene of maternity and infancy." It contains provisions substantially as follows:

It authorizes the appropriation, for the purpose of the act, of $480,000 for the current year and $240,000 for subsequent years, for a period of five years, to be equally apportioned among the several States, and an additional sum of $1,000,000 a year, for a period of five years, to be apportioned $5,000 to each State, and the balance among the States in proportion to their population, with a proviso that no payment out of the additional appropriation shall be made in any year to any State until an equal sum has been appropriated by such State.

The act creates a "board of maternity and infant hygiene," with certain supervisory powers. It provides that the "Children's Bureau of Department of Labor" shall be charged with the administration of the act, and gives the Children's Bureau all necessary powers to cooperate with the States in such administration, for which purpose the Children's Bureau may deduct an amount not exceeding 5 per cent of the additional appropriation in any year.

HOW STATES SECURE ITS BENEFITS.

Every State is required, in order to secure the benefits of the appropriations authorized, through its legislature to accept the provisions of the act and to designate or authorize the creation of a State agency to cooperate with the Children's Bureau.

Any State desiring to receive the benefits of the act is required by its agency to submit to the Children's Bureau detailed plans for carrying out the provisions of the act within such State, such plans to be subject to the approval of the board.

Within 60 days after any appropriation under the act the Children's Bureau is directed to make the apportionment provided for, to certify to the Secretary of the Treasury the estimated expense of administration, and to certify to the Secretary of the Treasury and to the treasurers of the various States the amount apportioned to each State. Within the same period and from time to time thereafter the Children's Bureau is directed to ascertain the amounts appropriated by the several States and to certify to the Secretary of the Treasury the amount to which each State is entitled by reason of such appropriation.

AUTHORITY TO HOLD BACK PAYMENTS.

Each State agency cooperating with the Children's Bureau is required to make such reports concerning its operations and expenditures as shall be prescribed by the Children's Bureau, which may, subject to the supervision of the board, withhold the certificate authorizing payment to any State whenever it is determined that the agency thereof has not properly expended the money paid to it or the moneys required to be appropriated by the State for the purpose of the act, an appeal being given from such determination to the President of the United States.

Thus in effect a system is created by which appropriations are to be made by the Federal Government and the States which accept the provisions of the act; plans are to be submitted to Federal boards, the nature of which appears to be wholly undetermined, except that they must have some relation to the "welfare and hygiene of maternity and infancy" and are subject to certain restrictions stated in the act. Those plans are to be administered by officials, agents, and representatives of the Children's Bureau in cooperation with the different State agencies, and control over the conduct of the State agencies is vested in the Children's Bureau and the board by the provision authorizing the withholding of the Federal appropriation in cases where it is determined as to any State that Federal or State funds have not been properly expended.

The purpose and effect of the Federal Constitution was to secure a Federal Government with limited and enumerated powers, for national purposes, reserving all other powers to the States and the people. (McCulloch *v.* Maryland, 4 Wheat. 316, 405; United States *v.* Cruikshank, 92 U. S. 542, 549–551; Kansas *v.* Colorado, 206 U. S. 46, 81.) The powers expressly granted to Congress, including the power to make all laws necessary and proper for carrying the powers enumerated into execution, are all stated in Article I, section 8, of the Constitution. All powers not granted to the United States by the Constitution are reserved by the tenth amendment to the States or the people. (United States *v.* Cruikshank, 92 U. S. 542, 551.)

The powers given to the Federal Government are only those which are necessary to the existence and effective maintenance of the Nation. There is no grant of power to Congress to regulate the internal affairs of the States, excepting that given by the eighteenth amendment. The police power is a necessary part of the sovereign powers of the States, and was reserved to them by the tenth amendment. Each State has the right and duty to provide for the general welfare of its people, and in those respects the authority of the State is complete, unqualified, and exclusive. (New York *v.* Miln, 11 Pet. 102, 139; In re Rahrer, 140 U. S. 545, 554, 555; Keller *v.* United States, 213 U. S. 138; Hammer *v.* Dagenhart, 247 U. S. 251, 274–276; the Federalist, No. 45.)

"ATTEMPT TO USURP POWERS RESERVED TO THE STATES"—POWERS RELATING TO MATERNITY AND INFANCY CONSTRUED AS POLICE POWERS—ACT PLACES EXPENSE UPON SMALL MINORITY.

The present act vests in the Federal Government certain powers relating to maternity and infancy. These matters manifestly fall within the scope of the police power. Most of the expense will be borne by a small minority of the States, while a majority of the States will receive a corresponding benefit for which they do not pay. If the United States possesses no police power, as the Supreme Court of the United States has often held, it would seem that this act is an attempt to usurp an authority reserved to the States and to exercise it at the expense of a minority of them, of which this Commonwealth is one.

It appears from the debates in Congress that the proponents of this measure attempt to support it upon the ground that it is a provision for the general welfare of the people of the United States. The words "general welfare" occur twice in the Constitution, once in the preamble and once in Article I, section 8.

The preamble is as follows:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

PREAMBLE DELEGATES NO SUCH POWER.

The preamble, however, contains no grant of power. It is a mere statement of the purposes effected by the Constitution itself. Jacobson *v.* Massachusetts, 197 U. S. 11, 22; Story on the Constitution, sec. 462.)

I pass, therefore, to a consideration of Article I, section 8, of which the first clause is as follows:

"The Congress shall have power—to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States; * * *."

It is plain that the words "to pay the debts and provide for the common defense and general welfare of the United States" are not a substantive grant of power but a qualification of the first enumerated

power "to lay and collect taxes, duties, imposts, and excises." Argument is not needed to support this proposition, because the authority for it is conclusive.

The history of the adoption of this clause is given in George Ticknor Curtis's Constitutional History of the United States, volume 1, pages 518–521, as follows:

In the first draft of the Constitution the power to tax was stated in what was there Article VII, section 1, in the following words:

"The legislature of the United States shall have the power to lay and collect taxes, duties, imposts, and excises." (5 Elliot's Debates, p. 378.)

RESTRAINT OF REVENUE POWER.

It was thought that there should be some restraint on the revenue power, with a view to prevent perpetual taxes of any kind. The matter was referred to a committee of detail, which reported the following addition:

"For payment of the debts and necessary expenses of the United States, provided that no law for raising any branch of revenue, except what may be specially appropriated for the payment of interest on debts or loans, shall continue in force for more than —— years." (5 Elliott's Debates, p. 462.) This was referred to a grand committee, which introduced an amendment making the whole clause read as follows:

"The legislature shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general warfare of the United States." (5 Elliott's Debates, pp. 506, 507.) This amendment was unanimously adopted. The provision for uniformity was added later. (5 Elliot's Debates, p. 543.)

In Loughborough *v.* Blake (5 Wheat. 317, 318) Chief Justice Marshall said:

"The eighth section of the first article gives to Congress the 'power to lay and collect taxes, duties, imposts, and excises' for the purposes thereinafter mentioned."

Again in Dobbins *v.* Commissioners of Erie County (16 Pet. 435, 448, 449) the court said:

"The revenue of the United States is intended by the Constitution to pay the debts and provide for the common defense and general welfare of the United States, to be expended in particulars in carrying into effect the laws made to execute all the express powers 'and all other powers vested by the Constitution in the Government of the United States.'"

In Ward *v.* Maryland (12 Wall. 418, 428) the power to tax was referred to as existing "by virtue of an express grant for the purpose; among other things, of paying the debts and providing for the common defense and general welfare."

CONCLUSIONS ON "WELFARE" CLAUSE.

In United States *v.* Boyer (85 Fed. 425, it was held that the "general welfare clause" did not confer any distinct and substantial power on Congress to enact any legislation, but constituted a limitation upon the taxing power.

The text writers also are agreed that the words "to pay the debts and provide for the common defense and general welfare of the United States" are to be construed as if they were preceded by the words "in order," or similar words amounting to a declaration of purpose. (Story on the Constitution, secs. 906–911; Miller on the Constitution of the United States, pp. 229–231.)

The form of the Constitution lends strong support to this construction. The document in the rolls of the Department of State shows that in Article I, section 8, each of the enumerated powers is numbered, from 1 to 18, inclusive, the first being the power "to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States"; and the second the power "to borrow money on the credit of the United States"; and that each power is separated by a semicolon. (Curtis's Constitutional History of the United States, vol. 1, p. 728, note 731.)

OLD CONTROVERSY INVOLVED.

While it seems to be definitely settled that the words "to pay the debts and provide for the common defense and general welfare of the United States" are not a substantive grant of power, there has been from the time the Constitution was adopted a controverted question regarding the interpretation of those words and their bearing on the power of Congress to appropriate money. Hamilton held that Congress had a power to appropriate as broad as the power to tax, and that the revenues of the United States could be appropriated for any public purpose connected with the general welfare of the United States. This doctrine was stated by Hamilton in his Report on Manufactures in 1791. It was adopted and followed by Story (secs. 975–992) and by President Monroe in his message respecting the bill for the repairs of the Cumberland Road, May 4, 1822. On the other hand, Madison held that the general-welfare clause is merely descriptive of and limited by the specific grants of power to Congress contained in section 8, and that the power to appropriate money is also confined to the enumerated powers. Madison expressed this view in the Federalist, No. 41, and the statement there made must be presumed to have had some effect in obtaining the ratification of the Constitution by the States. He renewed the same statement in his message vetoing the bill for internal improvements, March 3, 1817, and in a letter to Speaker Stevenson, dated November 27, 1830, Madison's view was supported and emphasized by Jefferson, as stated in his opinion on the constitutionality of a national bank, February 15, 1791. (See Tucker's Constitution of the United States, secs. 222–231.)

The view that the general-welfare clause is merely descriptive of the substantive grants of power which follow it in section 8 is supported by the circumstance that provisions for the common defense are contained in the grants of power to declare war, to raise and support armies, to provide and maintain a navy, to make rules for the Government and regulation of the land and naval forces, to provide for calling forth the militia to execute the laws of the Union, suppress insurrection, and repel invasions, and to provide for organizing, arming, and disciplining the militia, while the other powers granted in that section are clearly provisions for the general welfare of the United States.

NO DEFINITE APPROPRIATION MADE.

The question as to the extent of the general welfare clause in its application to appropriations of money was expressly reserved by the Supreme Court in United States *v.* Realty Co., 163 U. S. 427, 440, where the court said:

"It is unnecessary to hold here that Congress has power to appropriate the public money in the Treasury to any purpose whatever which it may choose to say is in payment of a debt or for purposes of the general welfare. A decision of that question may be postponed until it arises."

But the question which I have to determine does not depend for its answer upon a solution of the controversy concerning the limits of the power of Congress to appropriate money. In fact, the Sheppard-Towner Act makes no appropriation of money. It merely purports to authorize sums to be appropriated, thereby announcing, it seems, an intention to appropriate at some future time. It does, however, establish a system by which States desiring to secure the benefits of promised appropriations are required to submit plans for carrying out the provisions of the act to designated Federal authorities for their approval, to make appropriations to match Federal appropriations, and to cooperate with the Federal authorities in the administration of the act, subject to the supervision of those authorities who, if they determine that either Federal or State funds have not been properly expended, may withhold the Federal appropriation.

This, in my judgment, is not an appropriation bill, but an attempted exercise of power over the subject of maternity and infancy, and thus an incursion into the field of the local police power, reserved to the States by the tenth amendment. The objections to the act go further in that the proposed appropriations are not general in their application, but are confined to those States which accept the act and appropriate their own funds to be used for its purposes. Hamilton, in his report on manufactures cited above, although contending for the broad power of appropriation, says that "the object to which an appropriation of money is to be made must be general and not local." For this reason the appropriations, if made, in my opinion would not be for the "general welfare of the United States," even if those words are given the broadest signification. Indeed, it is yet to be determined that Congress has the power to appropriate to the States, according to any method of apportionment, revenues raised from the people of the United States for national purposes.

STATE LEGISLATURES CAN NOT YIELD POWERS RESERVED TO THEM—SUCH POWERS CAN ONLY BE GRANTED TO CONGRESS BY AN AMENDMENT TO THE CONSTITUTION.

If the powers attempted to be exercised by the Sheppard-Towner Act are outside the powers conferred upon Congress by the Constitution and within the field of the powers reserved to the States, the act is not made constitutional and valid by the circumstance that those powers will only be exercised in or with respect to those States whose legislatures accept it; for Congress can not assume and the State legislatures can not yield the powers reserved to the States by the Constitution. They can only be granted to the Federal Government by an amendment to the Constitution. On this precise subject President Monroe, in his message vetoing the Cumberland Road bill, referred to above, holding that Congress had not the power, even with the consent of the States affected, to establish turnpikes with gates and tolls as internal improvements, said:

"I am of opinion that Congress does not possess this power; that the States, individually, can not grant it; for, although they may assent to the appropriation of money within their limits for such purposes they can grant no power of jurisdiction or sovereignty by special compacts with the United States. This power can be granted only by an amendment to the Constitution and in the mode prescribed by it."

THE ACT IS UNCONSTITUTIONAL.

In reply to your first question, I am therefore constrained to say that I am of opinion that the act referred to is not within the constitutional powers of the Federal Government.

II. Your second question, whether the Commonwealth of Massachusetts has any right as a sovereign State to question the constitutionality of the act, and your fourth question, what procedure can be adopted to raise the question of constitutionality, will be considered together.

It is well established that any person whose rights are directly affected by an act of Congress may question its constitutionality before the court, and that it is the court's duty in a proper case, where an act of Congress infringes upon the provisions of the Constitution, to declare that act unconstitutional and void. (Vanhorne's Lessee *v.* Dorrance, 2 Dall. 304, 308, 309; Marbury *v.* Madison, 1 Cranch, 137; McCulloch *v.* Maryland, 4 Wheat. 316, 400, 401.)

But the right to declare an act unconstitutional can be exercised only when proper parties are before the court in an actual controversy involving the constitutional question in the determination of the rights of litigants. (Steamship Co *v.* Emigration Commissioners, 113 U. S. 33, 39; Muskrat *v.* United States, 219 U. S. 346, 361; Fairchild *v.* Hughes, No. 148—October term, 1921.)

SUGGESTS EQUITY PROCEEDINGS AGAINST FEDERAL OFFICIALS—DIRECT METHOD OF CONTESTING CONSTITUTIONALITY OUTLINED BY ATTORNEY GENERAL.

The most direct method of testing the constitutionality of the Sheppard-Towner Act, if not the only method, is by proceedings in equity against those officials of the Federal Government who are acting or preparing to act to carry its provisions into effect. By United States Constitution, Article III, section 2, the Supreme Court has original jurisdiction of all cases in which a State shall be a party. The inquiry, therefore, is in the first instance whether the Commonwealth may maintain such a suit in the Supreme Court as party plaintiff, and, secondly, whether the suit will lie against Federal officials as parties defendant.

There are instances of suits brought by States which the Supreme Court has declined to entertain on the ground that they called upon the court to determine questions which were political and not judicial. The most noteworthy of these cases is Georgia *v.* Stanton (6 Wall. 50), where the State brought an original bill to restrain the Secretary of War and other officers of the Government from carrying into effect the so-called reconstruction acts. The court held that the rights for which protection was sought were rights of sovereignty, that no rights of persons or property were being infringed, and that the questions were political, and they dismissed the bill for want of jurisdiction. The decision, however, seems to go no further than Luther *v.* Borden (7 How. 1) and Pacific Telephone Co. *v.* Oregon (223 U. S. 118), holding that it is for Congress and not for the court to decide what is the established government in a State and to enforce the constitutional guaranty of a republican form of government, the questions involved being political and beyond the judicial power.

SUITS TO ENFORCE SOVEREIGN RIGHTS.

On the other hand, the court has from early times entertained suits to determine which of two States had political jurisdiction over disputed territory, since such a controversy is clearly justiciable. (Rhode

Island v. Massachusetts, 12 Pet. 657, 736–738; Virginia v. West Virginia, 11 Wall. 39.) More recently the jurisdiction has in many cases been sustained in suits by States to enforce their sovereign rights and as parens patriæ or representative of their citizens.

The question whether a State may sue as representative of its citizens was presented but not settled in Louisiana v. Texas (176 U. S. 1, 19). But in later decision this question has been answered in the affirmative, and the distinction made in Georgia v. Stanton (6 Wall. 50) between rights of property and rights of sovereignty has been disregarded. These decisions have made it plain that suits by States will lie for the protection both of their own sovereign rights and of the personal and property rights and welfare of their citizens generally. On these grounds suits have been sustained to restrain interference with the flow of rivers and water supply and pollution of the air. Jurisdiction is accepted broadly wherever the controversy is justiciable in its nature, in recognition of the fact that the States in joining the Union relinquished the right they would otherwise have had to seek remedies by negotiation or force, that there should be some remedy for the settlement of disputes, and that one may be found in the constitutional provisions giving the Supreme Court jurisdiction of suits by States. (Missouri v. Illinois & Chicago District, 180 U. S. 208, 241; Kansas v. Colorado, 185 U. S. 125, 206 U. S. 46, 83, 84, 99; Georgia v. Tennessee Copper Co., 206 U. S. 230, 237; Virginia v. West Virginia, 220 U. S. 1, 27; New York v. New Jersey, 256 U. S. 296, 301, 302.)

QUESTION "CLEARLY JUSTICIABLE."

The question whether an act of Congress is in violation of the reserved powers of the States and therefore unconstitutional seems clearly justiciable, and the Supreme Court has so decided in Hammer v. Dagenbert (247 U. S. 251). In that case the court held that a United States district attorney should be enjoined from enforcing an act of Congress prohibiting the transportation in interstate commerce of products of child labor, on the ground that the law was an invasion of the local police power, reserved to the States by the tenth amendment.

Where an act of Congress encroaches upon the rights reserved to the States by the tenth amendment any State affected thereby must have the right to resort to some tribunal for the protection of those rights or be without remedy. That the States themselves are entitled to such protection by the judicial power, and that it is the duty of the court, in a proper case, to hold such an act unconstitutional and to grant relief, has several times been declared. (Ableman v. Booth, 21 How. 506, 519, 520; Gordon v. United States, 117 U. S. 697, 700, 701, 705; Matter of Heff, 197 U. S. 488, 505; South Carolina v. United States, 199 U. S. 437, 448.)

STATE HAS RIGHT TO ACTION.

If, for the reasons stated, the Sheppard-Towner Act is unconstitutional as representing an attempt by Congress to exceed its constitutional powers and to usurp the rights reserved to the States by the tenth amendment, it follows that the Commonwealth in a proper case can raise the question of constitutionality by bringing suit in the Supreme Court, if and when it is affected by the act.

The act does not confer upon the Federal agencies created or designated by it any authority which operates in Massachusetts unless and until its legislature accepts the act and makes the required appropriation. If the legislature purports to accept the act, the right of the Commonwealth subsequently to complain that the act is unconstitutional, as hereafter stated in reply to your third question, will be open to serious question. If the act is not accepted and does not become operative within the Commonwealth, there would be no encroachment upon the police power of Massachusetts if the act should be put into effect in other States.

SEES TAX ON STATE WHETHER ACT IS ACCEPTED OR NOT—IF MASSACHUSETTS ACCEPTS ACT IT WILL RECEIVE LESS THAN HALF AMOUNT IT PAYS.

It does not follow, however, that the Commonwealth is not affected if the act is put into effect in other States. The grants to such States are to be paid out of the Federal Treasury. That Treasury is replenished by internal revenue taxes paid by the people of the several States. It has been estimated that 5.66 per cent of those taxes are paid by the citizens of Massachusetts. If Massachusetts can and does accept the act, it has been estimated that the return to it thereunder will be less than half the amount collected from its citizens. If Massachusetts does not accept the act, its citizens will be taxed in order to carry into effect an unconstitutional law in other States. Assuming that a Federal tax, otherwise lawful, imposed to raise revenues for lawful purposes does not become unconstitutional because it taps and diminishes a source of revenue available to the States (Knowlton v. Moore, 178 U. S. 41; New York Trust Co. v. Eisner, 41 Sup. Ct. Rep. 506), it does not follow that a State whose revenues are diminished by Federal taxation imposed in order to execute an unconstitutional law is not so affected thereby that it can not attack that expenditure in the Supreme Court of the United States. If the State is without remedy it is under the dilemma of consenting to be stripped of a power reserved by the tenth amendment in order to share in such unconstitutional benefits as Congress may choose to accord, or else of bearing unheard and without redress a part of the burden of conferring such alleged benefits on other States.

RIGHTS OF TAXPAYERS EVADED.

The right of Massachusetts to bring suit may be supported upon the further ground that the rights of its taxpaying citizens are invaded. It is doubtful whether taxpayers can maintain suits in their individual capacity to restrain an unconstitutional expenditure. (See Bradfield v. Roberts, 175 U. S. 291; Millard v. Roberts, 202 U. S. 427, 438.) There is, however, in my opinion, strong argument for the view that the State can present the question on their behalf as parens patriæ, following the analogy of the nuisance cases already cited. If neither the State nor the taxpayer can sue, then there can be no remedy against such an unconstitutional exercise of power by Congress, although the issue is plainly justiciable.

The novelty of the question prevents a more definite answer to your inquiry. It is for the legislature, in its wisdom, to determine whether a question of such vital importance to the State involving, as it does, a principle capable of indefinite application in the broad and paternalistic field of social welfare should not be submitted for adjudication to our highest court.

2. It remains to be considered whether suit may be brought against the Federal officials whose duty it is to administer the act.

In Mississippi v. Johnson (4 Wall. 475) the Supreme Court denied leave to file a bill against President Johnson to restrain him from putting the reconstruction acts into force. In Georgia v. Stanton (6 Wall. 50) the Supreme Court dismissed a similar bill, as already stated. The circumstances which led to the passage of these bills, which were designed to create a temporary government for the seceded States, and the effect of later decisions afford ground for belief that those decisions would not govern in the present case.

MAY ACT AGAINST OFFICIALS.

Later cases hold that suit will lie where rights of property are unlawfully invaded by Federal officers and where the United States is not a defendant or a necessary party. (United States v. Lee, 106 U. S. 196, 204–208; Noble v. Union River Logging R. R., 147 U. S. 165, 171, 172; Belknap v. Schild, 161 U. S. 10, 18; School of Magnetic Healing v. McAnnulty, 187 U. S. 94; Lane v. Watts, 234 U. S. 525, 540.) Furthermore, the court has frequently held broadly that State officers clothed with some duty in regard to the enforcement of the laws of the State may be enjoined from proceeding under an unconstitutional statute which they are about to enforce to the plaintiff's injury, and that a suit for such injunction can not be regarded as a suit against the State. (Osborn v. United States Bank, 9 Wheat. 738, 846, 857; Davis v. Gray, 16 Wall. 203; Pennoyer v. McConnaughy, 140 U. S. 1, 10; Smyth v. Ames, 169 U. S. 466, 518, 519; Ex parte Young, 209 U. S. 123, 149, 155, 156; Western Union Telegraph Co. v. Andrews, 216 U. S. 165; Truax v. Raich, 239 U. S. 33, 37; Greene v. Louisville & I. R. R. Co., 244 U. S. 499, 506, 507.) Recently this same principle has also been extended to suits against Federal officers seeking to restrain them from acting under statutes alleged to be unconstitutional. (Philadelphia Co. v. Stimson, 223 U. S. 605, 619, 620; Wilson v. New, 243 U. S. 332; Hammer v. Dagenhart, 247 U. S. 251.) Federal jurisdiction does not depend on diversity of citizenship, but exists because such suits arise under the Constitution or laws of the United States. (Ex parte Young, 209 U. S. 123, 143–145.)

CITES PROHIBITION RULING.

In the National Prohibition cases (253 U. S. 350) two of the cases were suits by the States of Rhode Island and New Jersey against the Attorney General and the Commissioner of Internal Revenue, seeking to have the eighteenth amendment and the Volstead Act declared unconstitutional and void and to enjoin the enforcement of the act. The main ground on which unconstitutionality was claimed was that the amendment and the act constituted an interference with the sovereign rights of the States to govern their internal affairs; that is, the local police power. Original bills in each of the two cases were permitted by the court to be filed (252 U. S. 570), and no question of jurisdiction was raised or reserved in the opinion by which all the suits were dismissed on the merits.

The opinion in the recent case of Texas v. Interstate Commerce Commission, No. 24 Original, October term, 1921, contains an intimation that the original jurisdiction of the court over suits where States are parties may be somewhat narrow, but the decision of the case goes on the ground that necessary parties were not before the court.

I conclude, therefore, that assuming that the Commonwealth may bring the suit as party plaintiff, the fact that the defendants would be Federal officials would not defeat it.

INCONSISTENT TO ACCEPT ACT.

III. Your third question is whether the Commonwealth by accepting the act would waive any right it may have to contest the constitutionality of the act before the courts of the United States.

The act provides that any State in order to secure the benefit of Federal appropriations must accept the provisions of the act, designate the State agency with which the Children's Bureau is to cooperate, and submit to the Children's Bureau detailed plans for carrying out the provisions of the act within the State. It contemplates also appropriations by the State to match Federal appropriations. These provisions, it seems to me, must be construed as a proposal for a contract with the several States which, when accepted by any State, would constitute an agreement by the State to be bound by the terms of the act, if such an agreement could be made. Whether the State, acting by its legislature alone, or in any manner other than that provided by the Constitution itself, can contract away its sovereign rights is a matter of grave doubt. But apart from any question of the validity of such a contract, there would appear to be an inconsistency in accepting the benefits of the act and then bringing suit to avoid its obligations and effect.

I am, therefore, of opinion that the passage of an act by the general court accepting the provisions of the Sheppard-Towner Act would place the Commonwealth in a less favorable position to contest its validity.

Very truly yours,

J. WESTON ALLEN,
Attorney General.

Mr. TUCKER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the Liberian bill.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

The extension of remarks referred to are here printed in full as follows:

Mr. TUCKER. Mr. Speaker, this resolution is before the House because it is recognized that no legal liability on the Government of the United States to grant this loan has arisen out of the negotiations between the two countries; but the initial principle upon which the advocates of this resolution ask for its passage is that the negotiations between the two countries constitute an equitable or moral obligation on the part of the United States to carry out the loan. If such a moral obligation exists, whether I approved the original proposition or not, I would feel bound to aid in carrying it out by my vote for this measure. To this question, therefore, I invite the attention of the House.

The second Liberty loan act, approved September 24, 1917, authorized the President to extend the credit of this Government to any country that was engaged in war with Germany. The language of the act is as follows:

That for the purpose of more effectually providing for the national security and defense and prosecuting the war the Secretary of the Treasury, with the approval of the President, is hereby authorized, on

behalf of the United States, to establish credits with the United States for any of the foreign Governments then engaged in war with the enemies of the United States.

But with this distinct limitation:

With the limitation that this authority should cease upon the termination of the war between the United States and the Imperial German Government.

The act was passed, as the above language indicates, to provide for our "national security and defense" and for the more vigorous prosecution of the war, and the extraordinary authority granted the President, which he could only possess by reason of the act, was limited to the duration of the war. This being so, if a moral obligation has been created by anything done or accomplished from the passage of this act, September 24, 1917, to the close of the war, it is our duty to carry it out. The act was passed as a war measure. Its object was to aid in its prosecution, and it was properly limited to the duration of the war. Now, there is no question about the fact that the Liberian Government was informed that a credit for $5,000,000 had been granted that country, for on September 19, 1918, the Liberian Government, through its President, expressed its most grateful sentiments of appreciation for the act; but it must not be forgotten that the United States gave the credit on conditions, and the President of Liberia accepted it without complying with the conditions. The minds of the two parties, therefore, never met. On September 12, 1918, Secretary Lansing sent the following telegram to the American Legation at Monrovia:

AMLEGATION, *Monrovia:*

The Treasury has established credit of $5,000,000 in favor of Liberia. Before any part of the money is available, however, department must have the following:

(a) Copy of portion of Liberian constitution providing for legislation authorizing the Liberian Government to borrow money.

(b) Copy of law authorizing loan enacted in accordance with said provision of constitution.

(c) Copy of proceedings on the part of the executive branch of the Liberian Government in accordance with said law.

(d) Copy of full powers given Liberian representative in United States authorizing him to sign such obligations as may be necessary and to receive the advances or take such other steps as the Liberian law may require.

You are instructed to inform the Liberian Government immediately of the establishment of this credit and the legal formalities this Government considers necessary.

LANSING.

Lansing's telegram admits that the United States had established a credit of $5,000,000 in favor of Liberia, but that same telegram, as you notice, declares, "before any part of this money is available, however, department must have the following," and so on, quoting the necessary conditions upon which the credit is to be available, and then, to leave the matter without doubt, he adds:

You are instructed to inform the Liberian Government immediately of the establishment of this credit and the legal formalities this Government considers necessary.

These conditions contained in the telegram announcing the establishment of the credit were never complied with until October, 1921, after the close of the war. Liberia needed money. If, as gentlemen say, the establishment of this credit was *fait accompli*, why did Liberia, urging and pleading for the loan, fail to draw the money which was to her credit in the Treasury of the United States? Clearly because these conditions had never been complied with, and were only complied with three years afterwards, in October, 1921. But to get the advantage of this loan that compliance had to be made before the close of the war, and it is admitted that such conditions were not complied with up to that date. How stands, then, the moral obligation? We may have agreed in order to get Liberia's influence against Germany to loan her this money in order to prosecute the war successfully. That was the principle laid down in the law; that was the object of the law which gave the President the right to create the loan. But it was clearly a war purpose, and the limitation in time under the law was the termination of the war with Germany. Suppose an agreement in which I agree to do a thing for a certain man for a certain purpose; the purpose fails, and the man attempts to hold me on an equitable or moral obligation to do the thing for another purpose which I do not approve of. Clearly no moral obligation attaches to me in such a case. I may agree to loan a friend $100 to take care of his family afflicted with smallpox; but suppose that friend, when his family have recovered from the disease, comes and demands that I loan him the $100 for business purposes that I failed to let him have though I had agreed to it. Is there any moral obligation on me to loan that man the money? My agreement was based on my sympathy for him and his family afflicted with a loathsome disease. The sickness is past, the children are well, the wife is out, and for some unexplained reason he never came to get the money. Why should I feel compelled to loan the man $100 for business purposes simply because I was willing to loan him $100 for humane purposes? Can there be any moral obligation there? My condition may have changed. My family may by that time have contracted smallpox themselves. And this proposition to-day is pressed to passage in this House, based on a supposed moral obligation on the part of the United States growing out of a conditional agreement to loan Liberia money for carrying on the war against Germany. But the war is over; so Liberia and her advocates on this floor say we must pay it for "the proper protection and promotion of American commercial interests on the west coast of Africa." (Secretary Hughes, p. 123 of hearings before the House Committee on Ways and Means.) The occasion which produced the need of the money, the war, is past. It was sought for war purposes, and now the aim is to hold the United States by a moral obligation to lend this money to Liberia for other purposes. Could an agreement by the United States to grant the loan to Liberia in order to prosecute the war *against* Germany be held by any sane man to constitute a moral obligation on the part of the United States to make a loan to Liberia now *in order to make war on Great Britain?* Is not the purpose of the loan the key that unlocks the door to the moral obligation? If that be changed, does not all obligation fade away?

Secretary Hughes says unequivocally he believes the United States is under a moral obligation to carry out this loan, but his opinion is weakened by his further statements—found in hearings before the Ways and Means Committee on pages 121, 122, and 123—on the subject in a letter to Senator Penrose of June 22, 1921, as follows:

In view of the time which has elapsed since the establishment of the credit and *the questions which might well be raised as to the propriety at this time of advancing money to Liberia as a war measure*, it is hoped that Congress will by joint resolution authorize specifically the proposed loan.

And further in a communication to the President, July 29, 1921:

The negotiations were had and proceeded to the point of an announced commitment at a time when the broad authority conferred in connection with the prosecution of the war was adequate to the consummation of the plan, and the fact that this authority may not be deemed longer to exist, while making it impossible to proceed without congressional sanction, does not, in my judgment, change the fact that assurances were given which should be made good.

And again in the same communication he says:

In view of these circumstances and the obligation to which they give rise, to which we can not fail to be sensitive, I need not dwell upon the facts that the extension of this loan is highly important from the standpoint *of the proper protection and promotion of American commercial interests on the west coast of Africa.*

In these statements the Secretary practically admits it is too late to claim authority for the loan under the Liberty loan act of September, 1917, as a war measure, for, as above quoted, he says:

In view of * * * the questions which might well be raised as to the propriety at this time of advancing money to Liberia as a war measure, it is hoped that Congress will by joint resolution authorize specifically the proposed loan.

Too late, thinks the Secretary, to carry out the loan as a war measure. The President no longer has power to act, as the war is over. So he pathetically appeals to Congress to "authorize specifically the proposed loan"; and for what purpose? To carry on the war against Germany? No; that is over, but for the "proper protection and promotion of American commercial interests on the West Coast of Africa." He wants Congress to start *de novo*, eliminating legal and moral obligations of the past, and with a clean slate asks us to go into a colonization scheme thousands of miles across the seas, with boundary disputes with every country of Europe, that must lead us into untold entanglements with them. Is not the slogan of the Republican Party "No entangling alliances abroad"?

This is the most remarkable proposition ever presented to the American Congress. It is an attempt under the guise of a moral obligation to do a certain thing, to give this money for an entirely different purpose, and thereby add to our possessions abroad, Liberia, when we are trying to get rid of some of those we have; to create another obstacle to international peace by extending our possessions instead of curtailing them. And all this, too, when to-day the immense debt of twenty-odd billions of dollars growing out of the war is upon us; with the majority on the Republican side of the House appealing day by day to us for economy; with the Secretary of the Treasury announcing the practical certainty of half a billion dollars deficiency next year, with its probable increase to a billion; with the necessity of sending a part of our already reduced Army and Navy to Liberia for police purposes.

The final agreement signed by the Secretary of State and the Liberian commissioner, October 28, 1921, in the city of Washington, as seen on page 124 of the hearings before the Committee on Ways and Means, "lets the cat out of the bag." I will not analyze it, but will content myself with making the simple

statement that it is an agreement for this country to take over Liberia, as we have taken over the Philippines; take charge of their revenues; providing for the appointment of a commission to control the country at enormous cost; the appointment of a financial commissioner, at a salary of $15,000 per annum; deputy commissioner, at $10,000 per annum; auditor, at $6,000 per annum; three administrative assistants of class 1, at $6,000 per annum; ten administrative assistants of class 2, at $4,000 per annum; two administrative assistants of class 3, at $3,000 per annum. These, of course, are to be appointed practically by the President of the United States. And we are to send our Army officers there to train their people to be soldiers, as they have none now. We are reducing our Army and Navy at home to lessen the chance of war, and we are to send the representatives of our Army to Liberia to increase the chances of war.

At this time, at any time, this proposition, should it pass, will receive, as it will deserve, the condemnation of the American people.

ENROLLED BILLS SIGNED.

Mr. RICKETTS, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bill of the following title, when the Speaker signed the same:

H. R. 4069. An act authorizing the Secretary of the Interior to sell certain lands on the Wind River Reservation, Wyo.

ANNOUNCEMENT.

Mr. GREENE of Vermont. Mr. Speaker, I am requested by the chairman of the Committee on Military Affairs to ask permission of the House to give notice that to-night at 8 o'clock, in the caucus room of the House Office Building, Colonel Davis, of the United States Cavalry, who was an observer on the staff of General Allenby during the campaign of the World War in Palestine, Syria, and so forth, will speak and give an illustrated lecture on his experiences in that part of the campaign.

ADJOURNMENT.

Mr. McKENZIE Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 56 minutes p. m.) the House adjourned until to-morrow, Friday, May 12, 1922, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. FOCHT: Committee on District of Columbia. H. R. 10390. A bill to amend the act entitled "An act to fix and regulate the salaries of teachers, school officers, and other employees of the Board of Education of the District of Columbia," approved June 20, 1906, and for other purposes; without amendment (Rept. No. 1002). Referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII the Committee on Interstate and Foreign Commerce was discharged from the consideration of the bill (H. R. 11335) for the relief of the widows of certain officers and enlisted men of the United States Navy, and the same was referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. WALSH (by request): A bill (H. R. 11623) incorporating the Veterans of Foreign Wars of the United States; to the Committee on the Judiciary.

By Mr. FOCHT: A bill (H. R. 11624) to tax motor-bus companies and other transportation companies operating in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

Also, a bill (H. R. 11625) to provide for the widening of Nichols Avenue between Good Hope Road and S Street SE.; to the Committee on the District of Columbia.

By Mr. FAVROT: A bill (H. R. 11626) to extend the time for constructing a bridge across the Mississippi River at or near the city of Baton Rouge, La.; to the Committee on Interstate and Foreign Commerce.

By Mr. LONDON: A bill (H. R. 11627) granting amnesty in certain cases; to the Committee on the Judiciary.

By Mr. GRIFFIN: A bill (H. R. 11628) granting amnesty in certain cases; to the Committee on the Judiciary.

By Mr. RYAN: A bill (H. R. 11629) to prevent open conflict between various State and Federal officers and to allay the present unrest of labor in every State of the Union, and to amend the national prohibition act; to the Committee on the Judiciary.

By Mr. WALSH: A resolution (H. Res. 346) for the immediate consideration of H. R. 11450, "A bill to provide for printing and distributing of the Supreme Court Reports, and amending sections 225, 226, 227, and 228 of the Judicial Code"; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. LAMPERT: A bill (H. R. 11630) granting a pension to Clara E. Cady; to the Committee on Invalid Pensions.

By Mr. NEWTON of Minnesota: A bill (H. R. 11631) granting a pension to Ella A. Record; to the Committee on Invalid Pensions.

By Mr. SMITHWICK: A bill (H. R. 11632) granting a pension to Angie Scanks; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5559. By Mr. APPLEBY: Affidavits to accompany House bill 11593, granting an increase of pension to Philip Hawk; to the Committee on Invalid Pensions.

5560. By Mr. BECK: Petition of Adolph Malmke and other residents of Wisconsin, urging the passage of House bill 8086 relative to filled milk and oleomargarine; to the Committee on Ways and Means.

5561. By Mr. BIXLER: Petition of residents of Warren, Pa., opposing the passage of Senate bill 3083, which threatens the best interest of Lucy Webb Hayes Training School and Sibley Memorial Hospital; to the Committee on the District of Columbia.

5562. By Mr. CULLEN: Resolution adopted by the New York Chapter, Military Order of the World War, relative to the Army appropriation bill; to the Committee on Appropriations.

5563. Also, resolution adopted by the members of Homestead Aerie, No. 769, Fraternal Order of Eagles, urging the modification of the existing prohibition laws; to the Committee on the Judiciary.

5564. By Mr. HAYS: Petition of Elmer Davis and eight other citizens of Ava, Mo., protesting against the passage of House bills 9753 and 4388 and Senate bill 1948; to the Committee on the District of Columbia.

5565. By Mr. KISSEL: Petition of Scarsdale Post, No. 52, Scarsdale, N. Y., relative to the personnel of the Navy; to the Committee on Appropriations.

5566. Also, petition of United Mine Workers Journal, Indianapolis, Ind., relative to coal miners; to the Committee on Labor.

5567. Also, petition of Mississippi Valley Association, St. Louis, urging the acceptance of Ford's offer for Muscle Shoals; to the Committee on Military Affairs.

5568. By Mr. RAKER: Petition of George Triantopoulos, San Francisco, Calif., relative to American assistance for the Greeks in their war with Turkey; to the Committee on Foreign Affairs.

5569. Also, petition of D. Ghiradelli Co., of San Francisco, Calif., relative to the tariff on cocoa and chocolate, and the Homer Knowles Pottery Co., of Santa Clara, Calif., indorsing the American valuation plan in the tariff bill; to the Committee on Ways and Means.

5570. Also, petition of the California Commandery, Naval and Military Order of the Spanish-American War, Los Angeles, Calif., protesting against any reduction of the naval and military forces of this country below the strength recommended by the War and Navy Departments; to the Committee on Appropriations.

5571. Also, petition of Chamber of Commerce of the State of New York, N. Y., relative to Federal legislation for the export trade; to the Committee on Interstate and Foreign Commerce.

5572. Also, petition of F. Louise Gianetti, president, American Women's Overseas League, of Pasadena, Calif., urging passage of House bill 7299, to incorporate the Women's Overseas Service League; to the Committee on the Judiciary.

5573. By Mr. SUMMERS of Washington: Petition of numerous voters of Yakima, Wash., protesting against the passage of House bill 9753 or Senate bill 1948; to the Committee on the District of Columbia.

5574. By Mr. WALSH: Petition of Priscilla S. Covington, of Bridgewater, Mass., opposing legislation to secure Sunday as a day of rest in the District of Columbia; to the Committee on the District of Columbia.

SENATE.

FRIDAY, *May 12, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

PETITIONS AND MEMORIALS.

Mr. McCUMBER. I ask to have printed in the RECORD and appropriately referred a telegram, in the nature of a memorial, signed by A. L. Martin, protesting against a certain amendment to the packers and stockyards act.

There being no objection, the telegram was referred to the Committee on Agriculture and Forestry and ordered to be printed in the RECORD, as follows:

SENTINEL BUTTE, N. DAK., *May 4, 1922.*

Hon. P. J. McCUMBER,
United States Senate, Washington, D. C.:

Stockgrowers of North Dakota object strenuously to Kellogg amendment to packers and stockyards act (S. 3298). Secretary of Agriculture should have complete control in all things at South St. Paul, putting that market on a par with other markets.

A. L. MARTIN.

Mr. McCUMBER presented resolutions adopted by members of the North Dakota Cooperative Marketing Agencies, favoring extension of the agricultural credit powers of the War Finance Corporation for one year, and also the imposition of an adequate tariff duty on linseed oil, which were referred to the Committee on Finance.

He also presented resolutions of the Devils Lake (N. Dak.) Rotary Club, favoring a 10-year holiday in the enactment of legislation adverse to the railroads, which was referred to the Committee on Interstate Commerce.

He also presented resolutions of the Kiwanis Club and the Rotary Club of Minot, both in the State of North Dakota, protesting against repeal or amendment of the transportation act of 1920, and in general against adverse railroad legislation, which were referred to the Committee on Interstate Commerce.

Mr. ROBINSON presented a letter, in the nature of a petition, from O. J. Hawkins, of Fort Smith, Ark., praying for more drastic restriction of immigration, which was referred to the Committee on Immigration.

He also presented an additional paper, to accompany the bill (S. 3183) granting renewal and extension of certain patents to I. H. Larr, which was referred to the Committee on Patents.

Mr. CAPPER presented a petition of sundry citizens of Kansas City, Kans., praying for the enactment of legislation creating a department of education, which was referred to the Committee on Education and Labor.

Mr. SHEPPARD presented a petition of sundry citizens of Dallas, Tex., praying for the enactment of legislation creating a department of education, which was referred to the Committee on Education and Labor.

Mr. WILLIS presented petitions of S. E. Brandenburg, of Latty, and sundry other citizens of Latty, Haviland, Payne, and Scott; Guy Yeagley and sundry other citizens of Ney, and Charles T. Dunn and sundry other citizens of Curtice, all in the State of Ohio, praying for the imposition of a tariff duty of $2 per hundred pounds on imported Cuban sugar, which were referred to the Committee on Finance.

Mr. TOWNSEND presented a resolution adopted by the Presbytery of Detroit, at Detroit, Mich., favoring an amendment to the Constitution prohibiting polygamy, which was referred to the Committee on the Judiciary.

He also presented a memorial of sundry wholesale grocers and food dealers in Detroit, Mich., remonstrating against the imposition of a tariff duty of 55 per cent ad valorem on mushrooms as being excessive and prohibitive, which was ordered to lie on the table.

He also presented a resolution adopted by the Presbytery of Detroit, at Detroit, Mich., favoring an amendment to the Constitution providing for uniform marriage and divorce laws, which was referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Mt. Pleasant, Shepherd, St. Louis, Detroit, Bay City, Highland Park, Saginaw, Freeland, Swan Creek, Hemlock, Gratiot, Clifford, Caro, Fairgrove, Vassar, Reese, Charlevoix, Ironton, Clio, Montrose, Marion, Owendale, Sebewaing, Bach, Gagetown, Colling, Alma, Edwell, Sandusky, Gilford, Coleman, Clare, Rosebush, Weidman, Cass City, Brown City, Yale, Melvin, and Carsonville, all in the State of Michigan, praying for the imposition of a tariff duty of $2 per hundred pounds on imported Cuban sugar, which were referred to the Committee on Finance.

Mr. JONES of Washington presented resolutions adopted by the Presbytery of Bellingham, at Anacortes; the Presbytery of Olympia, at Tacoma; the Presbytery of Columbia River, at South Bend; and the Presbytery of Spokane, at Spokane, all in the State of Washington, favoring an amendment to the Constitution prohibiting polygamy, which were referred to the Committee on the Judiciary.

He also presented resolutions adopted by the Presbytery of Bellingham, at Anacortes; the Presbytery of Olympia, at Tacoma; the Presbytery of Columbia River, at South Bend; and the Presbytery of Spokane, at Spokane, all in the State of Washington, favoring an amendment to the Constitution providing for uniform marriage and divorce laws, which were referred to the Committee on the Judiciary.

He also presented resolutions adopted by the Presbytery of Bellingham, at Anacortes; the Presbytery of Olympia, at Tacoma; the Presbytery of Columbia River, at South Bend; and the Presbytery of Spokane, at Spokane, all in the State of Washington, favoring the enactment of legislation to regulate Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. SHEPPARD. I ask to have inserted in the RECORD a memorial from Greek-American ex-service men of Houston, Tex., protesting against the violation of the allied nations' solemn pledges given to President Wilson in 1916, and asking for my "support to champion the cause of those unfortunate Greeks and Armenians who are sold to Turkey by the allied nations merely for commercial and political reasons." I will say that I join in the protest, and I ask that the memorial with the signatures be printed in the RECORD and referred to the Committee on Foreign Relations.

There being no objection, the memorial was referred to the Committee on Foreign Relations and ordered to be printed in the RECORD, with the names, as follows:

HOUSTON, TEX.

Senator MORRIS SHEPPARD,
Washington, D. C.

HONORABLE SIR: We, the undersigned Greek-American ex-service men, who fought in the World War under the colors of this our adopted land for the liberation of small nations, beg to inform your excellency that our mothers, fathers, brothers, and sisters in Asia Minor and Thrace are about to be turned over to Turkish misrule.

The bloody history of the invasion and conquest of the southwestern Europe by these Asiatic hordes several centuries ago is no doubt well known to you, the still bloody history of recent years, of the barbarities and massacres committed on all Christian races, left to their tender mercies has been shocking the entire world.

We, only a very small part of the 63,000 Greek-American veterans, strongly protest against the violation of the allied nations' solemn pledges given our former President Wilson in 1916, and ask for your support to champion the cause of those unfortunate Greeks and Armenians who are sold to Turkey by the allied nations merely for commercial and political reasons.

Shall America, the greatest champion and exponent of international justice, not even raise her powerful and just voice as a protest against this decision of the allied nations, which is tantamount to a "sentence to death," appointing Turkey executor?

After all, what was the use for America, who so generously spent several millions of dollars feeding and clothing those unfortunate Christian refugees of Asia Minor and Thrace, if this was going to be the outcome?

Will you, without protest, let Turkey return and execute the sentence to death? We can not believe.

Theo. D. Pappas, Fifty-third Ammunition Train, Coast Artillery Corps; Stergios Pappas; Mrs. Panagiota Vlachos, mother of Leonidas Vlachos, who was killed in action; Emanuel Vanveris; Aristitelis Grinjos; Alexandros Kanakis; Spiros Martylos; Panagiotis Mpaikuis; George Vallas; George Spillios; Evangelos Profitis; Guss Lazaros; Angelos Lambos; Sam Gianoukos; Sam Kourmadas; Panagiotis Vassiliou; George Kostas; John Sinathis; George Samios; Christ Catehis.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. McCUMBER:

A bill (S. 3587) granting a pension to Ole Anderson (with an accompanying paper); to the Committee on Pensions.

By Mr. KING:

A bill (S. 3588) granting certain lands to the city of Ogden, Utah, to protect the watershed of the water-supply system of said city; to the Committee on Public Lands and Surveys.

By Mr. BURSUM:

A bill (S. 3589) granting a pension to Nellie Thornton; to the Committee on Pensions.

By Mr. CALDER:

A bill (S. 3590) authorizing the erection of an addition to the Federal building, Brooklyn, N. Y.; to the Committee on Public Buildings and Grounds.

By Mr. McKELLAR:

A bill (S. 3591) for the relief of Katherine Southerland (with accompanying papers); to the Committee on Claims.

By Mr. MYERS:

A bill (S. 3592) to authorize repayment in certain cases; to the Committee on Public Lands and Surveys.

By Mr. McCUMBER:

A joint resolution (S. J. Res. 196) authorizing and directing the accounting officers of the General Accounting Office to allow credit to the disbursing clerk of the United States Veterans' Bureau in certain cases; to the Committee on Finance.

TARIFF BILL AMENDMENT.

Mr. BROUSSARD submitted an amendment intended to be proposed by him to House bill 7456, the tariff bill, which was referred to the Committee on Finance and ordered to be printed.

ADJUSTED COMPENSATION FOR WORLD WAR VETERANS.

Mr. BURSUM submitted an amendment, in the nature of a substitute, intended to be proposed by him to the bill (H. R. 10874) to provide adjusted compensation for veterans of the World War, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

AMENDMENT TO DEFICIENCY APPROPRIATION BILL.

Mr. McCUMBER submitted an amendment proposing to appropriate $65,000, or so much thereof as may be necessary, to be immediately available, for the purchase of additional land for the Wahpeton (N. Dak.) Indian School, intended to be proposed by him to the deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that the President had approved and signed the following acts and joint resolutions:

On May 8, 1922:

S. 2186. An act granting certain lands in Hot Springs, Ark., to the Leo N. Levi Memorial Hospital Association.

On May 9, 1922:

S. 2440. An act extending the period for homestead entries on the south half of the Diminished Colville Indian Reservation.

On May 11, 1922:

S. J. Res. 132. Joint resolution to authorize the printing of journals, magazines, periodicals, and similar publications, and for other purposes; and

S. J. Res. 186. Joint resolution authorizing the transfer to the jurisdiction of the Joint Committee on the Library certain reservations in the District of Columbia for use in connection with the Botanic Garden.

REPORT OF ALIEN PROPERTY CUSTODIAN.

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read:

To the Congress of the United States:

In accordance with the requirements of section 6 of the trading with the enemy act, I transmit herewith for the information of the Congress a communication from the Alien Property Custodian, and a copy of Senate Document No. 181, Sixty-seventh Congress, which document contains a report of all proceedings had under the trading with the enemy act by the office of the Alien Property Custodian during the present administration as well as proceedings under the previous administration from the passage of the trading with the enemy act October 6, 1917.

WARREN G. HARDING.

THE WHITE HOUSE,
May 12, 1922.

The VICE PRESIDENT. The Chair is in doubt as to the committee to which the message and accompanying papers should be referred. Unless the Senate has some suggestion to offer, the Chair will refer it to the Committee on Finance.

Mr. SMOOT. It should go to the Committee on Finance.

The VICE PRESIDENT. It will be so referred.

VISIT OF 1881 NAVAL CLASS TO JAPAN.

Mr. McCORMICK. Mr. President, I would like to invite the attention of the Senate to the report that the great transport *Henderson* is to proceed from the United States to Japan for the sole purpose of conveying thither the Annapolis classmates of Admiral Uriu.

It is an excellent idea that the classmates of the admiral, including the Secretary of War and the Secretary of the Navy of the United States, should go to Japan in the interest of comity between the nations, but inasmuch as the Navy complains of a shortage of fuel, I venture to suggest to the Committee on Commerce, the Committee on Naval Affairs, and the Committee on Appropriations that possibly there is a vessel operating under charter from the Shipping Board which could find 27 berths for the 27 classmates of Admiral Uriu, to carry them to Japan without the great expenditure involved in the navigation of the *Henderson* from this country across the Pacific.

Mr. ROBINSON. May I ask the Senator a question?

Mr. McCORMICK. Certainly.

Mr. ROBINSON. Does the Senator state that it is the purpose of the authorities of this Government to provide transportation and the expenses incidental to the same for the purpose of transporting students, who are Japanese, and citizens of the United States——

Mr. McCORMICK. Oh, no, Mr. President; these are American naval officers, retired or in active service, who were classmates of Admiral Uriu when he was at Annapolis in 1881. I note in the press that the *Henderson* is going to Japan for the purpose of affording that transportation, and in view of the shortage of coal available for the Navy, I merely suggest that, as vessels are crossing the Pacific under charter from the Shipping Board, they might travel comfortably as first-class passengers on a Shipping Board vessel.

Mr. ROBINSON. Has the Senator investigated the press report to ascertain its accuracy or reliability? I will say in connection with the question I have just submitted to him that it seems astonishing to a degree almost unreasonable if such a purpose is in the mind of any agency of the Government. I can not comprehend it.

Mr. McCORMICK. I have not made inquiry of the department, but let me say to the Senator that before I read the report in the press I had heard it remarked by Senators who know some of the officers who are likely to make the voyage that it was to be made under these conditions. I want the matter called to the attention of the committees responsible for the maintenance of the Navy and the merchant marine and the appropriations therefor.

Mr. ROBINSON. I am very glad the Senator has made the statement, and I may say, since he has done it, that the course which he says is in contemplation will not be taken.

Mr. WATSON of Georgia. Mr. President, I would like to say, in connection with what has been said by the Senator from Illinois, that this is no time to be extending a special courtesy to Japan. Japan broke her word with us and with Korea. Her course of perfidy in regard to Korea is unparalleled in history.

Japan broke her word with us, in that she has not taken her troops out of Siberia. She was under her word of honor to withdraw her troops when the American troops were withdrawn. The American troops were withdrawn some two years ago, and Japan has not only not withdrawn her troops but has recently reinforced them.

Japan has not abandoned to Russia that part of the island of Sakhalin which belongs to Russia. She is now exploiting the natural resources of that vast island. She stands before the world dishonored, and it is not a time for this Government to be going out of its way to pay a special compliment to Japan.

CALL OF THE ROLL.

Mr. ROBINSON. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gerry	McCumber	Shortridge
Ball	Hale	McKellar	Simmons
Borah	Harreld	McKinley	Smoot
Brandegee	Harris	McLean	Spencer
Bursum	Harrison	McNary	Sutherland
Calder	Hitchcock	Moses	Swanson
Capper	Johnson	Nelson	Townsend
Caraway	Jones, Wash.	Newberry	Underwood
Colt	Kellogg	Nicholson	Wadsworth
Culberson	Kendrick	Oddie	Walsh, Mass.
Curtis	Keyes	Overman	Watson, Ga.
Dial	King	Pittman	Watson, Ind.
Dillingham	Ladd	Rawson	Weller
Elkins	La Follette	Robinson	Willis
Fletcher	McCormick	Sheppard	

Mr. McKINLEY. I wish to announce that the Senator from Nebraska [Mr. NORRIS], the Senator from Kansas [Mr. CAPPER], and the Senator from South Dakota [Mr. NORBECK] are engaged in a hearing before the Committee on Agriculture and Forestry.

Mr. SHEPPARD. The Senator from Montana [Mr. WALSH] is detained on official business.

Mr. DIAL. I desire to state that my colleague [Mr. SMITH] is unavoidably detained. I ask that this announcement may continue through the day.

The VICE PRESIDENT. Fifty-nine Senators have answered to their names. A quorum is present.

MERGER OF STEEL COMPANIES.

Mr. LA FOLLETTE. Mr. President, on the 8th day of May I introduced Senate Resolution 286, which I now read:

Whereas definite reports in the daily press and in financial journals state that there is about to be consummated a merger of seven of the largest iron and steel corporations, namely, Midvale Steel & Ordnance Co., Republic Iron & Steel Co., Lackawanna Steel Co., Inland Steel Co., Youngstown Sheet & Tube Co., Steel & Tube Co. of America, and Brier

Hill Steel Co., having a total annual capacity of more than 10,000,000 tons of steel; and

Whereas it is also reported that the Bethlehem Steel Corporation, while not a part of the present merger, will join the combination when it has been successfully accomplished; and

Whereas the complete consummation of this plan will result in the creation of a billion dollar corporation, controlling substantially all of the steel-producing capacity of the country which is not now controlled by the United States Steel Corporation; and

Whereas this will create a complete monopoly of the steel industry in the hands of two gigantic corporations, resulting inevitably in the suppression of such competition as now exists in the manufacture and sale of this essential product and in the restraint of trade and commerce among the several States and the District of Columbia and with foreign nations; and

Whereas experience has shown the impossibility of dealing effectively with such combinations and mergers after they have been consummated, regardless of the damage which they may inflict upon competitors and of the injury to the public welfare; and

Whereas section 4 of the Sherman antitrust law (act of July 2, 1890) specifically provides:

"The several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act, and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney General, to institute proceedings in equity to prevent and restrain such violations";

Resolved, That the Attorney General of the United States and the Federal Trade Commission be requested to inform the Senate as soon as possible what steps they have taken or propose to take to ascertain the purposes and probable effects of the proposed merger; what have been the results of any investigations which they may have conducted; and what actions they have instituted to protect the public interest;

Resolved further, That the Attorney General be further requested to inform the Senate whether or not it is advisable, in his opinion, to proceed under the appropriate provisions of the Sherman law and the Clayton law to prevent and restrain this impending combination.

Mr. President, I am constrained to press this resolution for consideration at this time, for the reason that the impending merger of seven or more of the largest iron and steel corporations is now upon the point of being consummated. I should not ask the Senate to divert its attention from the pending legislation if I did not sincerely believe that only by prompt action at this ttime can the Nation be saved from irreparable injury. Immediate action is necessary.

The New York Times of Thursday, May 11, 1922, carries the following authoritative interview with the counsel for the merger, indicating that its consummation is now only a matter of days and hours:

STEEL MERGER NOW SEEN AS NEAR FACT—PLANS EXPECTED TO BE AGREED TO AT CONFERENCES THAT BEGIN HERE TUESDAY—RETURN FROM INSPECTION—OFFICERS OF SEVEN COMPANIES AND LEGAL ADVISER BACK AFTER TEN-DAY TRIP AMONG MILLS.

The chances for consummation of the plan calling for the consolidation of seven of the largest independent steel companies in the United States are now "2 to 1 in favor of," as against "10 to 1 against it" two months ago, according to Thomas L. Chadbourne, of the law firm of Chadbourne, Babbitt & Wallace. Mr. Chadbourne returned to this city yesterday on "the steel merger special," which left New York a week ago Sunday, carrying officials of the various companies on an inspection trip of the plants and properties in the proposed combination.

Mr. Chadbourne said he was almost sure the merger would be accomplished soon and that a company second in size only to the United States Steel Corporation would be formed. "Six months ago the chances were ten to one against us," Mr. Chadbourne said; "now I believe they are two to one in our favor. Do I think there is no doubt about it going through? No; but I am reasonably certain that it will go through."

A meeting will be held next Tuesday, Mr. Chadbourne said, at the offices of Kuhn, Loeb & Co., who have been acting in this deal in the capacity in which J. P. Morgan acted in the formation of the Steel Corporation. Officers of the various companies concerned will be present. Details of the arrangement will be gone over in preparation for a final settlement. After that, Mr. Chadbourne intimated, there would be little time lost in putting the merger into effect, although the legal formalities and physical labor of the task would take from 60 to 90 days.

In order that the Senate may be informed as to the details of the pending merger, I desire to read a brief summary published in the Christian Science Monitor of May 1, 1922, and to ask the permission of the Senate to insert at the end of my remarks, in 8-point type, a somewhat longer and more detailed account published in the New York World of April 28, 1922.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. LA FOLLETTE. The statement in the Christian Science Monitor, which is confirmed by numerous articles in various financial journals, is as follows:

BIG MERGER UNDER WAY.

The big development of the week was the apparent progress made toward the merger of the seven steel companies, namely, the Midvale Steel & Ordnance Co., the Lackawanna Steel Co., the Republic Iron & Steel Co., Brier Hill Steel Co., Inland Steel Co., Youngstown Sheet & Tube Co., and Steel & Tube Co. These companies produce in the aggregate about half the total of the output of the United States Steel Corporation. The annual production figures are 14,000,000 tons of ore, 10,000,000 tons of ingots, and 7,000,000 tons of finished products. They employ more than 100,000 workers. Officers of the companies, engineers, attorneys, and bankers are now making an inspection tour of the seven companies. Kuhn, Loeb & Co. are intrusted with the financing. Thomas L. Chadbourne, of Chadbourne, Babbitt & Wallace, New York, has direct supervision of the plans. Definite announcement is expected within the next fortnight. There has been talk of such a merger for the last 10 years. The war interrupted active negotiations, because each plant was concentrating on maximum production. The United States Steel Corporation produces half of the country's steel. These merging companies turn out one-quarter. It is hinted that the Bethlehem Steel Co. may join if the merger of the original seven companies goes through.

In this morning's Baltimore Sun I find the following dispatch, headed:

Lackawanna Co. and Bethlehem Steel to unite. Pennsylvania corporation soon will absorb New York concern. Cuts independent merger firms to six. Consolidation will create organization with nearly $300,000,000 capital.

I judge, Mr. President, that since the active movement for this merger was resumed some two weeks ago the plans have changed and that the merger is to be consummated on the installment plan, perhaps as tending to provoke or excite less opposition on the part of the public if made in that way than as though made by all of the independent steel companies at one time.

NEW YORK, May 11 (Special).—One step ahead of the "seven-company" steel merger that was to include the Lackawanna Steel Co., announcement was made to-night of the practical completion of a deal by which that property will be merged into the Bethlehem Steel Corporation. The official statement is as follows:

Mr. E. G. Grace, president of the Bethlehem Steel Corporation, Mr. Moses Taylor, chairman of the board of directors of the Lackawanna Steel Co., and the committee appointed by it to deal with the matter, have reached an agreement as to terms to recommend to their respective boards of directors and stockholders for the purchase by Bethlehem of the Lackawanna properties.

The transaction involves the use of Bethlehem 7 per cent preferred and class B common stocks in payment for the properties.

The details are being prepared for prompt presentation to the stockholders of the respective companies.

SIX LEFT TO MERGE.

This reduces to six the number of properties that are lined up for merger at this time as the result of the recent negotiations carried on through Kuhn, Loeb & Co. The list as it stands now includes the Midvale Steel and Ordnance Co., Yougstown Sheet and Tube Co., Republic Iron and Steel Co., Brier Hill Steel Co., Steel and Tube Co., America and Inland Steel Co.

The directors of both Bethlehem and Lackawanna will meet next Tuesday and are expected then to make definite statements for their respective companies, naming the exact terms agreed upon.

Controlling interests in the Lackawanna Steel Co., it is understood, include the estate of Cornelius Vanderbilt, Pickands, Mather & Co., and the Ogden Mills party. If any financing is carried out in connection with the merger it will be done through the Guaranty Co. of New York and the Bankers' Trust Co.

This financial institution is the clearing house for the big financial interests.

INGOT CAPACITY 5,000,000 TONS.

Mr. Grace, in commenting on the merger, stated that it will bring up the total ingot capacity of the Bethlehem plants to 5,000,000 tons, capacity supplied by the Lackawanna being 1,800,000. The United States Steel Corporation has a total ingot capacity of 22,000,000 tons.

The president of the Bethlehem Steel explained also that the deal will give that company certain lines which are supplementary to its present output. Lackawanna has a large business in what are known as "commercial ordinary bars" and certain special forms of steel plates.

There will still be lacking a wire-producing unit, and it is rumored that some property of this type may be taken over at a fairly early date.

It was stated emphatically that the deal between Bethlehem and Lackawanna has nothing to do with the seven-company or, at present, six-company merger under negotiation. There appears, however, to be nothing in the situation to prevent the enlarged Bethlehem Steel Corporation from joining forces with any other consolidation later on.

SCHWAB VISITED INLAND PLANT.

A development of interest in connection with to-day's announcement was the statement that Charles M. Schwab, chairman of Bethlehem Steel, some time ago looked over the Inland Steel plant, at Indiana Harbor, with a view to acquiring it, but owing to freight rates and geographical conditions, such a decision was not reached. The acquisition of Lackawanna is the outcome of eastern markets. The Lackawanna plant is near Buffalo and has an important business in New England.

The Bethlehem Steel Corporation has now outstanding $30,000,000 of 8 per cent cumulative nonvoting preferred stock, $14,908,000 class A 7 per cent noncumulative preferred, $14,862,000 voting common stock, and $45,000,000 class B common, which is nonvoting. There is also $30,000,000 of unissued class B common stock reserved for conversion of 8 per cent cumulative preferred.

ISSUES TO BE INCREASED.

The issues to be increased by the Lackawanna acquisition are the 7 per cent noncumulative preferred and the class B, or nonvoting, common. Funded debt of the company, at last report, is $137,508,000, making total outstanding capitalization $242,508,000.

Capital stock of the Lackawanna Steel Co. is outstanding to the amount of $35,108,000, all common, though the company has an authorized issue of $10,000,000 preferred. Bonded debt of the company and subsidiaries is $21,174,000, bringing total capitalization to $56,282,000.

In this connection, Mr. President, I read also a brief excerpt from a dispatch sent out by the International News Service:

NEW YORK, N. Y., May 12.—The stock of the Lackawanna Steel Co. leaped from $65 per share to $75 on the stock exchange early to-day, while Wall Street excitedly discussed the bomb-shell announcement of the merger of that great concern with the Bethlehem Steel Co., the young giant constructed through the force of Charles M. Schwab, following his retirement from the United States Steel Corporation 19 years ago.

It is seldom that Wall Street is called upon to absorb such important news as that of this merger without advance rumors, and the market was rather sensationally influenced.

Lackawanna had been supposed to be one of the prime movers in a merger of seven independent steel corporations.

Apprehension existed to-day in some quarters that the sudden absorption of the Lackawanna Co. by the Schwab interests would have an unfavorable effect on the proposed general independent merger. Thomas L. Chadbourne, organizer of the independent combine, however, was emphatic in his statement that the withdrawal of the Lackawanna—

That is, from his announced list of companies that would combine—

That the withdrawal of the Lackawanna would in no way affect the merger of the other companies, which would now be on a six-company basis.

But, Mr. President, I venture the prediction that after these two mergers are consummated, and the public has recovered from its first shock and is in a state of mind to be further imposed upon, these two new combinations will be united in one.

Mr. HITCHCOCK. Mr. President——

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from Wisconsin yield to the Senator from Nebraska?

Mr. LA FOLLETTE. I yield.

Mr. HITCHCOCK. A little while ago the Senator estimated that the proposed combination being engineered by Mr. Chadbourne represented an output of about one-quarter of the steel product of the United States. Did he include the Lackawanna in that estimate?

Mr. LA FOLLETTE. Yes; that included the Lackawanna, but did not include the Bethlehem.

Mr. HITCHCOCK. Can the Senator state what the Bethlehem output was?

Mr. LA FOLLETTE. With the Bethlehem included, the new combination would have an output of about 15,000,000 tons.

The total output of all the steel plants of the country is in round numbers 40,000,000 tons.

Of this amount, the United States Steel Corporation produces 20,000,000 tons.

The seven-company merger would produce, on the present basis of the output of the seven companies, 10,000,000 tons. Adding the output of the Bethlehem, which is 5,000,000 tons, would make a total output of the new merger 15,000,000 tons. And this 15,000,000 tons, added to the 20,000,000 tons produced by the United States Steel Corporation, would make a total of 35,000,000 tons which the two big monopolies would produce. This practically covers the entire field of the steel production of the country, there being but 5,000,000 additional steel tonnage, which is produced by the small plants scattered over the country.

Mr. HITCHCOCK. The Senator's view is that unless some effort is made in advance to stop this proposed consolidation, it will be too late after it is formed to act?

Mr. LA FOLLETTE. That is exactly my view, as I shall develop it in the few moments that I am going to speak to the Senate—that under the decision of the Supreme Court in the United States Steel Corporation case we shall be told, after this thing is done and this new merger is in operation, that it is too late to deal with it. What I am asking and what I am hoping is that the Department of Justice may be sufficiently aroused at this time, by the passage of this resolution calling upon it for information, to take speedy action under section 4 of the Sherman Act and enjoin this merger before it shall be consummated.

Mr. HITCHCOCK. May I ask the Senator whether he has been able to connect to any extent the existing effort to increase the tax upon the products of these companies by the pending tariff bill with this proposed effort substantially to create a monopoly in the production of steel and iron products in the United States?

Mr. LA FOLLETTE. I have not gone into that; but, Mr. President, in the consideration of the pending tariff bill, as we come to the metal schedule, special point may be made in the discussion of the activity of these great interests in bringing about such a combination of their various organizations as to altogether eliminate competition in the field of steel production.

Mr. HITCHCOCK. It certainly has been very significant in the past that as legislation has created a wall around the country to exclude foreign competition, the formation of trusts inside of the wall has accomplished the purpose of creating a monopoly under the protection of the tariff legislation.

Mr. LA FOLLETTE. Yes, Mr. President; and that is the fault, I find, with the excessive rates of the pending bill. They can not be defended on the basic principle laid down by Hamilton, Clay, and McKinley, that competition between protected industries will protect the consumer against monopoly. Trusts and combinations now destroy competition and leave the consumers at the mercy of monopoly. The situation has radically changed since McKinley said that "the spur of competition pricking the sides of the competing industries in the different States will always operate in the end to reduce the cost to the consumer and protect him against the effects of monopoly." But, Mr. President, I must confine myself strictly to the subject in hand.

Mr. HITCHCOCK. One more word. Certainly the political organization which steps forward and demands the exclusion of foreign competition ought to be the party to take the lead in insuring domestic competition.

Mr. LA FOLLETTE. I quite agree with that statement. I say now that the only way the protective system can be maintained and live is by equalizing the difference between the cost of producing here and abroad by maintaining domestic competition among the beneficiaries of the protective tariff.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from North Carolina?

Mr. LA FOLLETTE. I yield.

Mr. SIMMONS. May I supplement what has just been said with this thought: Of course, we all know, and it does not require any statement with reference to it, the extent to which the products of the country have come under the control of the trusts, and that these trusts do dominate the market, fix prices, and stifle competition. They are now proceeding unmolested in the accomplishment of that purpose. They have accomplished that purpose; and, in violation of the law of the land, in violation of the public policy of the land, they have stifled competition, destroyed the operation of the law of supply and demand in the domestic markets; and the people have no protection against this combination and this stifling of competition except through the importation of foreign competitive products. That is the only remedy the people have left to them.

This condition has been created by the trusts in violation of the statute law of the United States and in violation of the public policy of the country. If we shall, under those conditions, further aid these trusts—and I think it can be and has been shown that the pending tariff bill extends special favors to the trust-controlled products—if we shall, as provided in this bill, lend aid to the trusts in their scheme of suppressing competition by removing the only remaining obstacle in their way, namely, the importation of foreign competitive products, will we not, by that legislative act, by removing the only remaining competition, put the people absolutely at the mercy of the trusts, and will we not by that act aid these trusts in carrying out this conspiracy against the law of the land and against the public policy of the land? Are we, the representatives of the people, here for the purpose of helping these unlawful combinations to make effective and carry out their conspiracies in restraint of trade—in violation of the public policy and statute law of the land? I simply wanted to contribute that thought to this discussion.

Mr. LA FOLLETTE. Mr. President, I think it is sufficient for me to say upon that point at this time that the pending tariff bill furnishes another reason why action should be taken at once by the Senate upon the resolution which I have presented, the effect of which I trust will be to awaken the Department of Justice to prompt action, since the only action which can be taken for the protection of the public must be taken before this merger is consummated.

The press reports indicated that for diplomatic reasons the Bethlehem Steel Co. was not to be taken into the seven-company merger as first planned, but that it would come in later. The press reports of this morning inform us that this plan has been changed and that the Bethlehem and Lackawanna will first be merged and the other six corporations will then be taken in. The result is the same. The new merger will include the eight great corporations as finally consummated.

When this has been accomplished, every so-called independent steel corporation of any consequence in the United States will have been merged into one gigantic combination and almost the entire output of iron and steel products will then be under the control either of the United States Steel Corporation or of its twin brother, which is yet unnamed.

The purpose of this merger is clear. It is the elimination of whatever competition now exists in the steel industry and the creation of a situation where prices may be fixed on a monopoly basis without fear of detection. The Wall Street Journal of May 4, 1922, states:

I invite the attention of Senators to this paragraph, because it is the view of the organ of the Wall Street interests as to the effect of this merger. I quote:

The United States Steel Corporation, according to steel manufacturers, will not look with disfavor on a merger of seven or more independent steel companies. A combination would tend to stabilize the in-

dustry and benefit shareholders as well as employees. * * * Chairman Gary, of the United States Steel Corporation, has always adhered to his original policy of what he terms reasonable prices and reasonable wages. He realized that without fair prices there would be unemployment and low wages. When the depression began, certain of the independents entered into a cut-throat price war, and steel was sold far below cost of production. The industry needed a stabilizer, but with a dozen or more big companies competing against each other demoralization was in order, not only for the companies but for the employees as well. * * * With two big steel combinations in the field prices should be more uniform.

It would appear from this account that during the past year there has actually been some competition in the steel industry, and that this strange phenomenon, which had been unknown since the formation of the Steel Trust and the inauguration of the Gary dinners, has greatly discommoded the steel magnates. Believing that the Sherman Antitrust Act is a dead letter, they have determined to eliminate this competition by bringing all the so-called independents together in one great combination, where they will no longer be tempted to cut prices in order to keep their plants in operation.

Of course, the United States Steel Corporation does not object to this merger. Why should it? As a matter of fact, there are strong indications in what is already known about this proposed merger that the same financial forces which formed and now control the United States Steel Corporation are also in charge of the creation of this new merger. I call your attention to the fact that the financing of this new Steel Trust is in the hands of Kuhn, Loeb & Co. The Committee on the Concentration of Control of Money and Credit, generally known as the Pujo Committee, reported in 1913 that the most active agents in forwarding and bringing about the concentration of control of money, credit, and industry are J. P. Morgan & Co., First National Bank of New York, National City Bank of New York, Lee, Higginson & Co., of Boston and New York, Kidder, Peabody Co., of Boston and New York, and Kuhn, Loeb & Co.

The report showed that these great financial groups never acted alone on any large transaction, but invariably acted in combination and shared the spoils. This was admitted by Mr. George F. Baker in his testimony before the committee, under the examination of Mr. Samuel Untermyer, as shown by the following excerpt from the testimony:

Q. (Mr. UNTERMYER.) But among these banking houses that we have named, is there not a strong and continuous community of interest in the purchase and sale of securities?—A. (Mr. BAKER.) I think there is. We have always tried to deal with our friends rather than with people we do not know.

There is every reason to believe, therefore, that, while Kuhn, Loeb & Co. is the nominal financial agent in the creation of this consolidation, they are acting in concert with the financial interests which control the United States Steel Corporation. Reports in the financial journals demonstrate that the merger has already proceeded far enough to result in the elimination of competition and the fixing of prices upon a monopoly basis. The Wall Street Journal of April 28, 1922, says:

While actual business placed with steel companies has shown some falling off in the past 10 days, prices continue strong, with some companies getting higher prices daily. * * * Carnegie Steel advancing plates to $1.60 a hundred pounds will fix minimum price at this figure, compared with $1.50 a week ago. Other mills for the past week have not been willing to take new business under $1.60, not only on plates but on all other heavy rolled products as well.

Here we have concrete evidence of the fixing of prices on a monopoly basis. "Actual business," says the Wall Street Journal, "has shown some falling off in the past 10 days," but prices are advancing. Every business man, every child, in fact, knows that when business is falling off prices can not be advanced except by combination and conspiracy. Thus we see that even before the merger is completed a mere understanding between the different groups is sufficient to eliminate the competition which had been stimulated during the industrial depression and to bring about on a small scale the exploitation of the public through monopoly prices, which will be continued on a huge scale as soon as the merger is actually perfected.

Wall Street knows that this will be the result, for the prices of the stocks of the corporations which are to be absorbed have been steadily rising ever since the merger was announced. The New York Times of April 29, 1922, says:

The stocks traded in on the New York Stock Exchange of the independent steel companies which are to be included in the "seven-company merger" advanced sharply yesterday in connection with reports in Wall Street that the deal might be consummated by the middle of May. Republic Iron and Steel, which is expected to take a leading part in the merger, jumped 3¼ points net in yesterday's market on fairly active dealings and at 61¼ registered a new high price for the year. Lackawanna Steel rose 1¾ points and Midvale Steel 1¾. Stock of other steel companies not included in the proposed merger rose in sympathy.

The consummation of this merger must be prevented, I say to the Senate. This is the age of steel. Iron and steel to-day lie at the base of every human activity. Without steel our farms can not be cultivated, our railroads would cease to operate, our industries would be prostrated, and our very homes could not be built. The men who control this basic commodity control the Nation. A little more than 20 years ago they secured complete control of one-half the industry by the formation of a corporation so great that it staggered the Nation. They could control the other half of the industry only by agreements and understandings with the so-called independent companies. These agreements, arrived at through the medium of the Gary dinners, worked well during the periods of prosperity; but they were inconvenient and, like all these gentlemen's agreements, were apt to be broken when in periods of depression there was a scramble for business. To-day they are proposing to bring the other half of the industry under one consolidated control; so that in future, instead of operating through the medium of understandings to which there were a dozen or more parties, they will be able to make firm and binding agreements between the two great corporations which will dominate the industry. Gary dinners will no longer be necessary. Instead, the heads of the two great corporations will be able to sit down at a lunch table and without fear of detection fix the price of every pound of steel sold in the United States. On this point the New York Commercial of May 10, 1922, says:

The effect would be to place the steel business of the country in the hands of two large concerns in the ratio of about 60 and 40.

Mr. President, at this point I wish to read an extract from a letter received this morning from a prominent banker. I regret that I have not permission to use his name in that connection, at least not at this time, because I am certain that it would strongly impress the Senate and the country. In this letter, dated May 11, 1922, he says:

DEAR SENATOR LA FOLLETTE: I have read with much interest in the CONGRESSIONAL RECORD of May 8 the resolution offered by you in regard to proposed plans for the further consolidation of leading steel and iron corporations, and in the interest of the country I earnestly hope that ways and means may be found to prevent this further stride toward complete monopoly of the steel and iron interests of the United States.

In my opinion the object aimed at by the promoters of this consolidation is not the securing of a higher efficiency in the production of steel and iron through the use of more modern processes and improved machinery, but the prime object is, I believe, to place in the hands of a small executive committee or a few men the power, first, to control the selling price of these essentials of life, and, second, to control more effectively the wages to be paid to the workingman.

If this scheme goes through it will be very much easier for the head of the United States Steel Corporation and the head of a new trust about to be formed to control the prices of steel and iron and the wages of labor than it would be if the boards of directors and executive officers of half a dozen or more corporations had to be consulted. I have had practical experience with steel and iron manufacturers, and I know whereof I speak.

Mr. WATSON of Georgia. Mr. President——

Mr. LA FOLLETTE. I yield to the Senator from Georgia.

Mr. WATSON of Georgia. Has the Senator investigated the labor situation to ascertain whether or not the Steel Trust still works its men on Sunday?

Mr. LA FOLLETTE. I have no information on that subject of later date than the report of the interchurch investigation which was issued something like a year or a year and a half ago. At that time it is my recollection that they found that something more than one-third, possibly it was as much as one-half, of the total number of the employees of the corporation were required to work 12 hours a day, 7 days in the week, and at a wage which the investigators found to be below the standard fixed by the Labor Department of the Federal Government as necessary to maintain a family in health and decency.

Mr. BORAH. Mr. President——

Mr. LA FOLLETTE. I yield to the Senator from Idaho.

Mr. BORAH. In view of the question asked by the Senator from Georgia, I will say that within the last two or three days I have had a letter, in the form of a petition, from the employees of some of the steel companies, asking the Committee on Education and Labor to investigate conditions of working hours and of labor in steel plants. They stated in this letter or petition that they were now working 12 hours a day. I do not know what the real facts are. I only state what the petition or letter stated. I was greatly surprised to find they were working 12 hours a day. I never had understood it had been limited, but the letter stated that they are now required to work 12 hours a day.

Mr. LA FOLLETTE. I think the practice has been continued. I think if an investigation is conducted by the committee of which the distinguished Senator from Idaho is chairman it will be found that the United States Steel Corporation now enforces and for many years has required thousands of its employees to work 12 hours a day and 7 days a week. Where labor has been able to secure better conditions under which to work and a more near approach to a sufficient wage upon which to maintain a family in health and decency, it has

not been through the willing concessions of the employer but it has been secured in all cases by collective bargaining through organization which the employees have maintained that they have been able to force or exact these improved conditions and shorter hours.

I think I will say right at this time and in this connection that the same thing is true whether the employees are working in protected or nonprotected industries.

Mr. WATSON of Georgia. Mr. President——

Mr. LA FOLLETTE. I yield with pleasure to the Senator from Georgia.

Mr. WATSON of Georgia. I wish to ask the Senator if his investigation has developed this fact, which is alleged to be true, that under the administration of Judge Gary there has been from time to time something like a special reward offered for special efforts, for the purpose of seeing how much the men could do if they speeded up on a certain day, and after that extra exertion in the hope of that extra reward, when they had speeded up all day the product of that day was fixed as the standard of what they must produce thereafter, because of the fact that they had proven they could produce that much?

Mr. LA FOLLETTE. It is my recollection that the testimony taken in a number of investigations and the reports based thereon furnish ample confirmation of the suggestion made by the distinguished Senator from Georgia.

Mr. President, the formation of the United States Steel Corporation was illegal, and should have been prevented when it was first announced 20 years ago. This is not merely my opinion. It is an inescapable inference from the opinion which the Supreme Court of the United States rendered on March 1, 1920, dismissing the suit against the United States Steel Corporation, one of the most remarkable and, to my mind, indefensible decisions ever rendered by any judicial tribunal. The majority opinion of the court is too long to be quoted, but I ask leave to print in the RECORD, in 8-point type, as an appendix to my remarks, the majority and dissenting opinions in this case.

The PRESIDING OFFICER. Without objection, that order will be made.

(See Appendix B.)

Mr. LA FOLLETTE. It will be sufficient for present purposes to quote the summary of the majority decision contained in the dissenting opinion of Justice Day, concurred in by Justices Pitney and Clarke. Justices Brandeis and McReynolds did not participate in this case. Justice Day, in summing up the majority opinion, used the following words:

As I understand the conclusions of the court affirming the decree directing dismissal of the bill, they amount to this: That these combinations, both the holding company and the subsidiaries which comprise it, although organized in plain violation and bold defiance of the provisions of the act, nevertheless are immune from a decree effectually ending the combinations and putting it out of their power to attain the unlawful purposes sought, because of some reasons of public policy requiring such conclusion.

I digress just to say, parenthetically, Mr. President, that this is not my interpretation of the decision of the Supreme Court; it is the interpretation of the dissenting judges, and I am quoting the language of Mr. Justice Day. I quote further, and ask Senators to listen to this:

I know of no public policy which sanctions a violation of the law, nor of any inconvenience to trade, domestic or foreign, which should have the effect of placing combinations, which have been able to thus organize one of the greatest industries of the country in defiance of law, in an impregnable position above the control of the law forbidding such combinations. Such a conclusion does violence to the policy which the law was intended to enforce, runs counter to the decisions of the court, and necessarily results in a practical nullification of the act itself.

That is the end of the comment of Mr. Justice Day and his associates who concurred in the dissenting opinion as to the meaning of the decision of the court in the United States Steel Corporation case.

Justice Day, in this admirable summary of the majority decision, has omitted what is, to my mind, a most important and startling feature of the majority decision. As a matter of fact, the majority of the court not only held that the United States Steel Corporation was formed for the illegal purpose of achieving a monopoly but that it was operated in defiance of law and for the suppression of competition and the fixing of prices down almost to the very day when the suit for its dissolution was filed. I quote from page 7 of the opinion of the majority of the Supreme Court, delivered by Justice McKenna:

Monopoly, therefore, was not achieved, and competitors had to be persuaded by pools, associations, trade meetings, and through the social form of dinners, all of them, it may be, violations of the law, but transient in their purpose and effect. They were scattered through the years from 1901—the year of the formation of the corporation—until 1911, but after instances of success and failure were abandoned nine months before this suit was brought.

Mr. Justice McKenna had reference, of course, to the Gary dinners.

Combining this passage from the majority opinion with Justice Day's summarization, we find in substance that although the Supreme Court held that the United States Steel Corporation was "conceived in sin" and operated for the purpose of completely controlling prices down almost to the very day when it was dragged before the court, nevertheless the court held that it had grown so large and its ramifications were so extensive that its dissolution could not be contemplated.

I will not pause to comment upon this decision. No man can read it without being convinced that the remarkable doctrines which it advances, if consistently applied, would not only annihilate the Sherman Act, as Justice Day says in his dissenting opinion, but would destroy the very foundations of justice and reduce the Nation to a condition of anarchy, in which the only law would be the law of might.

I am quoting the decision now only to prove to you the necessity of acting to prevent the consummation of this new merger and to forestall the creation of an institution which the courts may be unwilling to dissolve on grounds of alleged public policy after the deed is accomplished.

For a generation the Department of Justice in its administration of the Sherman Antitrust Act has proceeded upon the theory of locking the barn door after the horse has been stolen. They have permitted great trusts and combinations to be formed and become a part of the commercial life of the Nation, and have then sought at rare intervals by ineffectual processes to secure their dissolution. Even where the courts have ordered dissolution, this method has been ineffective. Even if the processes of dissolution had been drastically applied by the courts, it would have been, in all probability, without avail, for when competition has once been suppressed in an industry it is almost impossible effectively to restore it.

I will digress for a moment to say, sir, that there never was a more perfect statute drawn by the hands of the statesmen of this Government than the Sherman antitrust law. I supplement that statement with this—and I invite contradiction—that since the law was written upon the statute books there never has been an honest attempt upon the part of any administration to enforce it.

Mr. KING. Mr. President, will the Senator yield?

Mr. LA FOLLETTE. I yield.

Mr. KING. There are records now in the Department of Justice, as I am advised, showing flagrant violations of the Sherman antitrust law, which call not only for civil suits but for criminal indictments. When those indictments will be brought, when injunction proceedings will be instituted for the purpose of dissolving these criminal organizations I can not say. I have offered a resolution asking the Attorney General to tell us how much money he has received for this purpose, whom he has employed, their names, what he is paying them, and what steps are being taken to enforce the Sherman antitrust law against criminal organizations that are throttling competition and imposing their dominant and cruel will upon the people.

Mr. LA FOLLETTE. Mr. President, I have gone into this matter heretofore in the Senate; I have laid before the Senate the list of prosecutions under each administration since the enactment of the law, and fully analyzed the proceedings taken in the several cases, and I arrived long ago at the conclusion, which I have previously asserted and now assert again, that there never has been an honest, sincere attempt on the part of any administration, Republican or Democratic, since the enactment of the Sherman antitrust law to enforce it.

I say now, Mr. President, the procedure intended by John Sherman and his colleagues in Congress when they enacted the Sherman Antitrust Act in an attempt to protect the Nation from the growing power of monopoly was that action should be taken in advance of the complete formation of trusts and combinations. At least, that was one of the strongest provisions of the law, and, from some familiarity with the debates which took place at the time that law was enacted, I assert that it was strongly in the minds of the statesmen who framed and wrote that law upon the statute books that section 4 would be probably the most useful section of the statute.

They prescribed a simple and effective method of procedure. They well knew that an ounce of prevention is worth a pound of cure, so they wrote into section 4 of the act a specific authorization and direction for the Department of Justice to prevent and restrain monopolies and restraints of trade. Let me read this section to you:

The several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney General, to institute proceedings in equity to prevent and restrain such violations.

It will be noted that this section of the law does not merely empower the district attorneys to institute proceedings to pre-

vent combinations in restraint of trade but specifically provides that it is their duty so to do.

In this connection it may be called to the attention of the Senate that it is not necessary for the Department of Justice in seeking the prevention of such a combination in restraint of trade to prove the commission of specific acts in violation of the statute. The Supreme Court itself has held in dealing with the packers' combination in Swift & Co. *v.* United States (196 U. S. 396) that where an intent to achieve monopoly exists it is not necessary to wait for the commission of specific illegal acts. In the words of the court—

> When that intent and the consequent dangerous probability exist, this statute—Sherman Act—like many others, and like the common law in some cases, directs itself against that dangerous probability as well as against the completed result.

The intent to suppress competition in this case is clear and the dangerous probability of irretrievable injury to the Nation through the restraint of trade and commerce is imminent.

It is with this sense of the dangerous probability of immense and inescapable injury to the Nation that I have drafted a resolution calling upon the Federal Trade Commission and the Department of Justice, the two branches of the Government which have jurisdiction in this field, to inform the Senate what action they have taken, or do now propose to take, with reference to this matter. I have been careful in drafting this resolution to avoid any encroachment by the Congress upon the functions of the executive department. The resolution calls merely for information and for the opinion of the Attorney General as to the preventive line of action which I have outlined above.

I feel that I can not too strongly urge the importance of the immediate passage of this resolution. The people of the United States are fast losing their faith in the efficacy of law and their confidence in our governmental institutions. If we fail to pass this resolution, it will be a notice to the people of the United States that their Representatives are not concerned to protect them from the encroachments of monopoly and are indifferent to their interests.

I ask, therefore, at this time, Mr. President, unanimous consent for the present consideration of the resolution. I am certain that it will not provoke debate and that it can be disposed of in a few moments.

Mr. McCUMBER. Mr. President, with that understanding I will make no objection. I hope the resolution will be passed, and passed immediately.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

The resolution was considered by unanimous consent and agreed to.

APPENDIX A.

[From New York World of April 28, 1922.]

MERGER OF SEVEN BIG STEEL COMPANIES NEAR COMPLETION—BILLION-DOLLAR COMBINE OF INDEPENDENTS EXPECTED WHEN 14 OFFICERS END INSPECTION TRIP—THEY AND ENGINEERS GO ON SPECIAL TRAIN SUNDAY—NEW COMPANY WOULD RIVAL UNITED STATES STEEL—KUHN, LOEB & CO. WILL DIRECT FINANCING OF IT.

Fourteen of the biggest independent steel manufacturers in the country, representing, through their companies, aggregate wealth of from $800,000,000 to $1,000,000,000, will leave here in a private train Sunday night for personal inspection of the plants and properties of seven companies.

When the "billion-dollar special" gets back to New York, 10 days later, it is practically certain that the formation of a steel-producing organization second only to the Steel Trust itself will be officially announced.

The financing of the operation, which is one of the most important in recent years, is being handled by Kuhn, Loeb & Co.

MERGER LONG CONSIDERED.

The movement toward the combination of independent companies, dictated by the "big-business" urge for efficiency and reduced overhead expense, has been under way in one form or another for a decade. Merger talk almost ceased during the prosperous war years, when the independents had as much business as could be handled, but revived with the coming of lean times.

This "seven-company" merger began to be considered seriously following the organization of the Midvale Steel & Ordnance Co., a combination of several properties. It remained for Thomas L. Chadbourne, however, to bring the idea to a successful issue.

Mr. Chadbourne is a member of the law firm of Chadbourne, Babbitt & Wallace, No. 14 Wall Street, and has been prominently identified with the formation of several successful industrial combinations. He was designated by the various steel independents interested in the combination to complete negotiations. The seven-company combination was his idea originally, and he has been responsible for putting it into execution.

THE SEVEN COMPANIES.

The companies whose properties will make a formidable rival for the United States Steel Corporation are Midvale Steel & Ordnance Co., Youngstown Sheet & Tube Co., Republic Iron & Steel Co., Brier Hill Steel Co., Lackawanna Steel Co., Steel & Tube Co. of America, and the Inland Steel Co.

The 14 executives who will make the trip, all of whom have made millions for themselves and their communities in the production of steel, are: William Ellis Corey, chairman, and A. C. Dinkey, president, of Midvale; John A. Topping, chairman, and Thomas Bray, president, of Republic; J. A. Campbell, president, and C. A. Robinson, vice president, of Youngstown Sheet & Tube; Moses Taylor, chairman, and George F. Downs, president, of Lackawanna; F. B. Kennedy, chairman, and James H. Grose, president, of Brier Hill; Clayton Mark, chairman, and Clarence Mark, vice president, of Steel & Tube; and L. E. Block, chairman, and P. D. Block, president, of Inland Steel.

ENGINEERS TO ACCOMPANY THEM.

The representatives of each of the seven companies will be accompanied by their own engineering staffs. Mr. Chadbourne, active sponsor of the entire plan, will also make the trip.

The special train will be made up of two compartment cars, a dining car and baggage car. The first stop will be at Buffalo, where the Lackawanna plant is. Then the party will go to Youngstown, Ohio, to look over the properties of the Republic Iron & Steel Co., Youngstown Steel & Tube Co., and Brier Hill Steel Co.

From Youngstown the special will go to Johnstown, Pa., and Coatesville, Pa., at both of which places the Midvale Co. has plants. Chicago will be the next stop, the plants of Inland Steel and Steel & Tube being there. Then will come along a jump to Birmingham, Ala., where the Republic Iron & Steel has a plant.

HITCH WAS OVER VALUATIONS.

The chief stumbling block in the way of effecting the combination heretofore has been difficulty in coming to agreement regarding the valuation of the various properties. It is understood that this obstacle has been practically surmounted. Valuation and financing have been considered at meetings held almost daily for several months. Although no official announcement has been made, it is known that Mortimer L. Schiff has been active in the plan.

No name has yet been selected for the new organization, although several have been suggested. It may be called the North American Steel Co. or the Federated Steel Companies. Organization is still far from complete and officers have not been selected. Headquarters will be in this city.

EMPLOY MORE THAN 100,000.

The companies making up the group produce 14,000,000 tons of ore annually, 10,000,000 tons of ingots, and 7,000,000 tons of finished products. More than 100,000 workers are employed in the various mills. Estimated annual business of the companies is more than $500,000,000, with estimated profits $50,000,000.

In recent conferences on the merger the name of the Bethlehem Steel Corporation has been mentioned. This corporation will not be a part of the combination at this time, but it is said that the way is open for Bethlehem to come in later, if the seven-company plan is carried through successfully. The Bethlehem valuation runs into several hundred millions. Should Bethlehem come in, the organization would closely approach the United States Steel Corporation in size and importance.

The combination is held in general favor, since it would undoubtedly increase production and sales efficiency. The United States Steel Corporation has the advantage of mills situated all over the country, while its independent competitors have had to confine themselves to territories within reasonable distance from their respective mills. In this way the United States Steel Corporation has been able to bid anywhere for business. The independents have had to take freight rates and problems of traffic into consideration in submitting estimates.

Supreme Court of the United States.

No. 6.—OCTOBER TERM, 1919.

The United States of America, appellant, *v.* United States Steel Corporation et al. Appeal from the District Court of the United States for the District of New Jersey.

[March 1, 1920.]

Mr. Justice McKenna delivered the opinion of the court.

Suit against the Steel Corporation and certain other companies which it directs and controls by reason of the ownership of their stock, it and they being separately and collectively charged as violators of the Sherman Antitrust Act.

It is prayed that it and they be dissolved because engaged in illegal restraint of trade and the exercise of monopoly.

Special charges of illegality and monopoly are made and special redresses and remedies are prayed, among others, that there be a prohibition of stock ownership and exercise of rights under such ownership, and that there shall be such orders and distribution of the stock and other properties as shall be in accordance with equity and good conscience and "shall effectuate the purpose of the antitrust act." General relief is also prayed.

The Steel Corporation is a holding company only; the other companies are the operating ones, manufacturers in the iron and steel industry, 12 in number. There are, besides, other corporations and individuals more or less connected in the activities of the other defendants that are alleged to be instruments or accomplices in their activities and offendings; and that these activities and offendings (speaking in general terms) extend from 1901 to 1911, when the bill was filed, and have illustrative periods of significant and demonstrated illegality.

Issue is taken upon all these charges, and we see at a glance what detail of circumstances may be demanded, and we may find ourselves puzzled to compress them into an opinion that will not be of fatiguing prolixity.

The case was heard in the district court by four judges. They agreed that the bill should be dismissed; they disagreed as to the reasons for it. (223 Fed. 55.) One opinion (written by Judge Buffington and concurred in by Judge McPherson) expressed the view that the Steel Corporation was not formed with the intention or purpose to monopolize or restrain trade and did not have the motive or effect "to prejudice the public interest by unduly restricting competition or unduly obstructing the course of trade." The corporation, in view of the opinion, was an evolution, a natural consummation of the tendencies of the industry on account of changing conditions, practically a compulsion from "the metallurgical method of making steel and the physical method of handling it," this method and the conditions consequent upon it tending to combinations of capital and energies rather than diffusion in independent action. And the concentration of powers (we are still representing the opinion) was only such as was deemed necessary, and immediately manifested itself in improved methods and products and in an increase of domestic and foreign trade. Indeed, an important purpose of the organization of the corporation was the building up of the export trade in steel and iron, which at that time was sporadic, the mere dumping of the products upon foreign markets.

Not monopoly, therefore, was the purpose of the organization of the corporation but concentration of efforts with resultant economies and benefits.

The tendency of the industry and the purpose of the corporation in yielding to it was expressed in comprehensive condensation by the word "integration," which signifies continuity in the processes of the industry from ore mines to the finished product.

All considerations deemed pertinent were expressed and their influence was attempted to be assigned, and, while conceding that the Steel Corporation after its formation in times of financial disturbance, entered into informal agreements or understandings with its competitors to maintain prices, they terminated with their occasions, and, as they had ceased to exist, the court was not justified in dissolving the corporation.

The other opinion (by Judge Woolley and concurred in by Judge Hunt, 223 Fed. 161) was in some particulars in antithesis to Judge Buffington's. The view was expressed that neither the Steel Corporation nor the preceding combinations, which were in a sense its antetypes, had the justification of industrial conditions, nor were they or it impelled by the necessity for integration, or compelled to unite in comprehensive enterprise because such had become a condition of success under the new order of things.

On the contrary, that the organizers of the corporation and the preceding companies had illegal purpose from the very beginning, and the corporation became "a combination of combinations by which, directly or indirectly, approximately 180 independent concerns were brought under one business control," which, measured by the amount of production, extended to 80 or 90 per cent of the entire output of the country, and that its purpose was to secure great profits which were thought possible in the light of the history of its constituent combinations, and to accomplish permanently what those combinations had demonstrated could be accomplished temporarily, and thereby monopolize and restrain trade.[1]

The organizers, however (we are still representing the opinion), underestimated the opposing conditions, and at the very beginning the corporation, instead of relying upon its own power, sought and obtained the assistance and the cooperation of its competitors (the independent companies). In other words, the view was expressed that the testimony did "not show that the corporation in and of itself ever possessed or exerted sufficient power when acting alone to control prices of the products of the industry." Its power was efficient only when in cooperation with its competitors, and hence it concerted with them in the expedients of pools, associations, trade meetings, and finally in a system of dinners inaugurated in 1907 by the president of the company, E. H. Gary, and called "the Gary dinners." The dinners were congregations of producers and "were nothing but trade meetings," successors of the other means of associated action and control through such action. They were instituted first in "stress of panic," but their potency being demonstrated, they were afterwards called to control prices "in periods of industrial calm." "They were pools without penalties" and more efficient in stabilizing prices. But it was the further declaration that "when joint action was either refused or withdrawn the corporation's prices were controlled by competition."

The corporation, it was said, did not at any time abuse the power or ascendency it possessed. It resorted to none of the brutalities or tyrannies that the cases illustrate of other combinations. It did not secure freight rebates; it did not increase its profits by reducing the wages of its employees—whatever it did was not at the expense of labor; it did not increase its profits by lowering the quality of its products, nor create an artificial scarcity of them; it did not oppress or coerce its competitors—its competition, though vigorous, was fair; it did not undersell its competitors in some localities by reducing its prices there below those maintained elsewhere, or require its customers to enter into contracts limiting their purchases or restricting them in resale prices; it did not obtain customers by secret rebates or departures from its published prices; there was no evidence that it attempted to crush its competitors or drive them out of the market, nor did it take customers from is competitors by unfair means, and in its competition it seemed to make no difference between large and small competitors. Indeed, it is said in many ways and illustrated that "instead of relying upon its own power to fix and maintain prices, the corporation, at its very beginning, sought and obtained the assistance of others." It combined its power with that of its competitors. It did not have power in and of itself, and the control it exerted was only in and by association with its competitors. Its offense, therefore, such as it was, was not different from theirs and was distinguished from "theirs only in the leadership it assumed in promulgating and perfecting the policy." This leadership it gave up and it had ceased to offend against the law before this suit was brought. It was hence concluded that it should be distinguished from its organizers and that their intent and unsuccessful attempt should not be attributed to it, that it "in and of itself is not now and has never been a monopoly or a combination in restraint of trade," and a decree of dissolution should not be entered against it.

This summary of the opinions, given necessarily in paraphrase, does not adequately represent their ability and strength, but it has value as indicating the contentions of the parties and

[1] As bearing upon the power obtained and what the corporation did we give other citations from Judge Woolley's opinion as follows:

"The ore reserves acquired by the corporation at and subsequent to its organization, the relation which such reserves bear to ore bodies then existing and subsequently discovered, and their bearing upon the question of monopoly of raw materials, are matters which have been discussed in the preceding opinion, and with the reasoning as well as with the conclusion that the corporation has not a monopoly of the raw materials of the steel industry, I am in entire accord.

"Further inquiring whether the corporation inherently possesses monopolistic power attention is next given to its proportion of the manufacture and sale of finished iron and steel products of the industry. Upon this subject there is a great volume of testimony, a detailed consideration of which in an opinion would be quite inexcusable. As a last analysis of this testimony, it is sufficient to say it shows that, large as was the corporation, and substantial as was its proportion of the business of the industry, the corporation was not able in the first 10 years of its history to maintain its position in the increase trade. During that period its proportion of the domestic business decreased from 50.1 per cent to 40.9 per cent, and its increase of business during that period was but 40.6 per cent of its original volume. Its increase of business, measured by percentage, was exceeded by eight of its competitors, whose increase of business, likewise measured by percentage, ranged from 63 to 3,779. This disparity in the increase of production indicates that the power of the corporation is not commensurate with its size, and that the size and the consequent power of the corporation are not sufficient to retard prosperous growth of efficient competitors.

"From the vast amount of testimony it is conclusively shown that the Steel Corporation did not attempt to exert a power, if such it possessed, to oppress and destroy its competitors, and it is likewise disclosed by the history of the industry subsequent to the organization of the corporation that if it had made such an attempt it would have failed. It is also shown by the testimony that, acting independently and relying alone upon its power and wealth, great as they were, the corporation has never been able to dominate the steel industry by controlling the supply of raw materials, restraining production of finished products, or enhancing and maintaining the prices of either."

the ultimate propositions to which the contentions are addressed. The opinions indicate that the evidence admits of different deductions as to the genesis of the corporation and the purpose of its organizers, but only of a single deduction as to the power it attained and could exercise. Both opinions were clear and confident that the power of the corporation never did and does not now reach to monopoly, and their review of the evidence and our independent examination of it enables us to elect between their respective estimates of it, and we concur in the main with that of Judges Woolley and Hunt. And we add no comment, except it may be that they underestimated the influence of the tendency and movement to integration, the appreciation of the necessity or value of the continuity of manufacture from the ore to the finished product. And there was such a tendency, and though it can not be asserted it had become a necessity, it had certainly become a facility of industrial progress. There was, therefore, much to urge it and give incentive to conduct that could accomplish it. From the nature and properties of the industry the processes of production were something more than the stage and setting of the human activities. They determined to an extent those activities, furnished their motives, and gave test of their quality, not, of course, that the activities could get any immunity from size or resources, or energies, whether exerted in integrated plants or diversified ones.

The contentions of the case, therefore, must be judged by the requirements of the law, not by accidental or adventitious circumstances. But what are such circumstances? We have seen that it was the view of the district court that size was such a circumstance and had no accusing or excusing influence. The contention of the Government is to the contrary. Its assertion is that the size of the corporation being the result of a "combination of powerful and able competitors" had become "substantially dominant" in the industry and illegal. And that this was determined. The companies combined, is the further assertion, had already reached a high degree of efficiency, and in their independence were factors in production and competition, ceased to be such when brought under the regulating control of the corporation, which by uniting them offended the law, and that the organizers of the corporation "had in mind the specific purposes of the restraint of trade and the enormous profits resulting from that restraint."

It is the contention of the corporation opposing those of the Government and denying the illegal purposes charged against it, that the industry demanded qualities and an enterprise that lesser industries do not demand, and must have a corresponding latitude and facility. Indeed, it is insisted that the industry had practically, to quote the words of Judge Buffington, he quoting those of a witness, "'reached the limit, or nearly, at which economies from a metallurgical or mechanical standpoint could be made effective,'" and "'that instead, as was then the practice, of having one mill make 10 or 20 or 50 products, the greatest economy would result from one mill making one product and making that product continuously.'" In other words, there was a necessity for integration and rescue from the old conditions—from their improvidence and waste of effort—and that in redress of the conditions the corporation was formed, its purpose and effect being "salvage, not monopoly," to quote the words of counsel. It was, is the insistence, the conception of ability, "a vision of a great business which should embrace all lines of steel and all processes of manufacture, from the ore to the finished product, and which by reason of the economies thus to be effected and the diversity of products it would be able to offer could successfully compete in all the markets of the world." It is urged further that to the discernment of that great possibility was added a courage that dared attempt its accomplishment, and the conception and the courage made the formation of the corporation notable but did not make it illegal.

We state the contentions; we do not have to discuss them or review the arguments advanced for their acceptance or repulsion. That is done, in the opinions of the district judges, and we may well despair to supplement the force of their representation of the conditions antecedent to the formation of the corporation and in what respect and extent its formation changed them.

Of course, in that representation and its details there is guidance to decision, but they must be rightly estimated to judge of what they persuade. Our present purpose is not retrospect for itself, however instructive, but practical decision upon existing conditions that we may not by their disturbance, produce, or even risk, consequences of a concern that can not now be computed. In other words, our consideration should be of not what the corporation had power to do or did, but what it has now power to do and is doing, and what judgment shall be now pronounced—whether its dissolution as the Government prays, or the dismissal of the suit as the corporation insists?

The alternatives are perplexing, involve conflicting considerations, which, regarded in isolation, have diverse tendencies. We have seen that the judges of the district court unanimously concurred in the view that the corporation did not achieve monopoly, and such is our deduction, and it is against monopoly that the statute is directed, not against an expectation of it, but against its realization, and it is certain that it was not realized. The opposing conditions were underestimated. The power attained was much greater than that possessed by any one competitor—it was not greater than that possessed by all of them. Monopoly, therefore, was not achieved, and competitors had to be persuaded by pools, associations, trade meetings, and through the social form of dinners, all of them, it may be, violations of the law, but transient in their purpose and effect. They were scattered through the years from 1901—the year of the formation of the corporation—until 1911, but, after instances of success and failure, were abandoned nine months before this suit was brought.

There is no evidence that the abandonment was in prophecy of or dread of suit; and the illegal practices have not been resumed, nor is there any evidence of an intention to resume them, and certainly no "dangerous probability" of their resumption, the test for which Swift & Co. *v.* United States (196 U. S. 396) is cited. It is our conclusion, therefore, as it was that of the judges below, that the practices were abandoned from a conviction of their futility, from the operation of forces that were not understood or were underestimated, and the case is not peculiar. And we may say in passing that the Government can not fear their resumption, for it did not avail itself of the offer of the district court to retain jurisdiction of the cause in order that if illegal acts should be attempted they could be restrained.

What, then, can now be urged against the corporation? Can comparisons in other regards be made with its competitors and by such comparisons, guilty or innocent, existence be assigned it? It is greater in size and productive power than any of its competitors, equal or nearly equal to them all, but its power over prices was not and is not commensurate with its power to produce.

It is true there is some testimony tending to show that the corporation had such power, but there was also testimony and a course of action tending strongly to the contrary. The conflict was by the judges of the district court unanimously resolved against the existence of that power, and in doing so they but gave effect to the greater weight of the evidence. It is certain that no such power was exerted. On the contrary, the only attempt at a fixation of prices was, as early said, through an appeal to and confederation with competitors, and the record shows, besides that, when competition occurred it was not in pretence, and the corporation declined in productive powers—the competitors growing either against or in consequence of the competition. If against the competition, we have an instance of movement against what the Government insists was an irresistible force; if in consequence of competition, we have an illustration of the adage that "competition is the life of trade" and is not easily repressed. The power of monopoly in the corporation under either illustration is an untenable accusation.

We may pause here for a moment to notice illustrations of the Government of the purpose of the corporation, instancing its acquisition after its formation of control over the Shelby Steel Tube Co., the Union Steel Co., and, subsequently, the Tennessee Co. There is dispute over the reasons for these acquisitions which we shall not detail. There is, however, an important circumstance in connection with that of the Tennessee Co., which is worthy to be noted. It was submitted to President Roosevelt and he gave it his approval. His approval, of course, did not make it legal, but it gives assurance of its legality, and we know from his earnestness in the public welfare he would have approved of nothing that had even a tendency to its detriment. And he testified he was not deceived and that he believed that "the Tennessee coal and iron people had a property which was almost worthless in their hands, nearly worthless to them, nearly worthless to the communities in which it was situated, and entirely worthless to any financial institution that had the securities the minute that any panic came, and that the only way to give value to it was to put it in the hands of people whose possession of it would be a guaranty that there was value to it." Such being the emergency it seems like an extreme accusation to say that the corporation which relieved it, and, perhaps, rescued the company and the communities dependent upon it from disaster, was urged by

unworthy motives. Did illegality attach afterwards and how? And what was the corporation to do with the property? Let it decay in desuetude or develop its capabilities and resources? In the development, of course, there would be profit to the corporation, but there would be profit as well to the world. For this reason President Roosevelt sanctioned the purchase, and it would seem a distempered view of purchase and result to regard them as violations of law.

From this digression we return to the consideration of the conduct of the corporation to its competitors. Besides the circumstances which we have mentioned there are others of probative strength. The company's officers, and, as well, its competitors and customers, testified that its competition was genuine, direct, and vigorous, and was reflected in prices and production. No practical witness was produced by the Government in opposition. Its contention is based on the asserted size and dominance of the corporation—alleged power for evil, not the exertion of the power in evil. Or, as counsel put it, "a combination may be illegal because of its purpose; it may be illegal because it acquires a dominating power, not as a result of normal growth and development, but as a result of a combination of competitors." Such composition and its resulting power constitute, in the view of the Government, the offense against the law, and yet it is admitted "no competitor came forward and said he had to accept the Steel Corporation's prices." But this absence of complaint counsel urge against the corporation. Competitors, it is said, followed the corporation's prices because they made money by the imitation. Indeed, the imitation is urged as an evidence of the corporation's power. "Universal imitation," counsel assert, "is an evidence of power." In this concord of action, the contention is, there is the sinister dominance of the corporation—"its extensive control of the industry is such that the others—independent companies—follow." Counsel, however, admit that there was "occasionally" some competition, but rejects the suggestion that it extended practically to a war between the corporation and the independents. Counsel say, "They—the corporation is made a plural—called a few; they called 200 witnesses out of some 40,000 customers, and they expect with that customer evidence to overcome the whole train of price movement shown since the corporation was formed." And by "movement of prices," counsel explained, "as shown by the published prices * * * they were the ones that the competitors were maintaining all during the interval."

It would seem that "200 witnesses" would be fairly representative. Besides, the balance of the "40,000 customers" was open to the Government to draw upon. Not having done so, is it not permissible to infer that none would testify to the existence of the influence that the Government asserts? At any rate, not one was called, but instead the opinion of an editor of a trade journal is adduced and that of an author and teacher of economics, whose philosophical deductions had, perhaps, fortification from experience as deputy commissioner of corporations and as an employee in the bureau of corporations. His deduction was that when prices are constant through a definite period an artificial influence is indicated; if they vary during such a period, it is a consequence of competitive conditions. It has become an aphorism that there is danger of deception in generalities, and in a case of this importance we should have something surer for judgment than speculation, something more than a deduction equivocal of itself even though the facts it rests on or asserts were not contradicted. If the phenomena of production and prices were as easily resolved as the witness implied much discussion and much literature have been wasted, and some of the problems that are now distracting the world would be given composing solution. Of course, competition affects prices, but it is only one among other influences and does not more than they, register itself in definite and legible effect.

We magnify the testimony by its consideration. Against it competitors, dealers, and customers of the corporation testify in multitude that no adventitious interference was employed to either fix or maintain prices, and that they were constant or varied according to natural conditions. Can this testimony be minimized or dismissed by inferring that, as intimated, it is an evidence of power not of weakness and power exerted not only to suppress competition but to compel testimony, is the necessary inference, shading into perjury to deny its exertion? The situation is indeed singular, and we may wonder at it, wonder that the despotism of the corporation, so baneful to the world in the representation of the Government, did not produce protesting victims.

But there are other paradoxes. The Government does not hesitate to present contradictions, though only one can be true, such being, we were told in our school books, the "principle of contradiction." In one competitors—the independents—are represented as oppressed by the superior power of the corporation; in the other they are represented as ascending to opulence by imitating that power's prices, which they could not do if at disadvantage from the other conditions of competition; and yet confederated action is not asserted. If it were this suit would take on another cast.

The competitors would cease to be the victims of the corporation and would become its accomplices. And there is no other alternative. The suggestion that lurks in the Government's contention that the acceptance of the corporation's prices is the submission of impotence to irresistible power is, in view of the testimony of the competitors, untenable. They, as we have seen, deny restraint in any measure or illegal influence of any kind. The Government, therefore, is reduced to the assertion that the size of the corporation, the power it may have—not the exertion of the power—is an abhorrence to the law, or, as the Government says, "The combination embodied in the corporation unduly restrains competition by its *necessary effect* [the italics is the emphasis of the Government], and therefore is unlawful regardless of purpose." "A wrongful purpose," the Government adds, "is matter of aggravation." The illegality is statical, purpose or movement of any kind only its emphasis. To assent to that, to what extremes would we be led? Competition consists of business activities and ability—they make its life; but there may be fatalities in it. Are the activities to be encouraged when militant and suppressed or regulated when triumphant because of the dominance attained? To such paternalism the Government's contention, which regards power rather than its use the determining consideration, seems to conduct. Certainly conducts, we may say, for it is the inevitable logic of the Government's contention that competition must not only be free but that it must not be pressed to the ascendency of a competitor, for in ascendency there is the menace of monopoly.

We have pointed out that there are several of the Government's contentions which are difficult to represent or measure, and the one we are now considering—that is, the power is "unlawful regardless of purpose"—is another of them. It seems to us that it has for its ultimate principle and justification that strength in any producer or seller is a menace to the public interest and illegal because there is potency in it for mischief. The regression is extreme, but short of it the Government can not stop. The fallacy it conveys is manifest.

The corporation was formed in 1901; no act of aggression upon its competitors is charged against it; it confederated with them at times in offense against the law, but abandoned that before this suit was brought, and since 1911 no act in violation of law can be established against it except its existence be such an act. This is urged, as we have seen, and that the interest of the public is involved and that such interest is paramount to corporation or competitors. Granted—though it is difficult to see how there can be restraint of trade when there is no restraint of competitors in the trade nor complaints by customers—how can it be worked out of the situation and through what proposition of law? Of course, it calls for nothing other than a right application of the law, and, to repeat what we have said above, shall we declare the law to be that size is an offense even though it minds its own business, because what it does is imitated? The corporation is undoubtedly of impressive size, and it takes an effort of resolution not to be affected by it or to exaggerate its influence. But we must adhere to the law, and the law does not make mere size an offense or the existence of unexerted power an offense. It, we repeat, requires overt acts and trusts to its prohibition of them and its power to repress or punish them. It does not compel competition nor require all that is possible.

Admitting, however, that there is pertinent strength in the propositions of the Government, and in connection with them, we recall the distinction we made in the Standard Oil case (221 U. S. 1, 77) between acts done in violation of the statute and a condition brought about which "in and of itself is not only a continued attempt to monopolize, but also a monopolization." In such case we declared, "The duty to enforce the statute" required "the application of broader and more controlling" remedies than the other. And the remedies applied conformed to the declaration; there was prohibition of future acts, and there was dissolution of "the combination found to exist in violation of the statute" in order to "neutralize the extension and continually operating force which the possession of the power unlawfully obtained" had "brought" and would "continue to bring about."

Are the case and its precepts applicable here? The Steel Corporation by its formation united under one control competing companies, and thus, it is urged, a condition was brought about in violation of the statute, and therefore illegal, and

became a "continually operating force" with the "possession of power unlawfully obtained."

But there are countervailing considerations. We have seen whatever there was of wrong intent could not be executed, whatever there was of evil effect was discontinued before this suit was brought, and this, we think, determines the decree. We say this in full realization of the requirements of the law.

It is clear in its denunciation of monopolies and equally clear in its direction that the courts of the Nation shall prevent and restrain them (its language is "to prevent and restrain violations of" the act), but the command is necessarily submissive to the conditions which may exist and the usual powers of a court of equity to adapt its remedies to those conditions. In other words, it is not expected to enforce abstractions and do injury thereby, it may be, to the purpose of the law. It is this flexibility of discretion—indeed, essential function—that makes its value in our jurisprudence—value in this case as in others. We do not mean to say that the law is not its own measure and that it can be disregarded, but only that the appropriate relief in each instance is remitted to a court of equity to determine, not—and let us be explicit in this—to advance a policy contrary to that of the law but in submission to the law and its policy and in execution of both. And it is certainly a matter for consideration that there was no legal attack on the corporation until 1911, 10 years after its formation and the commencement of its career. We do not, however, speak of the delay simply as to its time or that there is estoppel in it because of its time, but on account of what was done during that time—the many millions of dollars spent, the development made, and the enterprises undertaken, the investments by the public that had been invited and are not to be ignored. And what of the foreign trade that has been developed and exists? The Government, with some inconsistency, it seems to us, would remove this from the decree of dissolution. Indeed, it is pointed out that under congressional legislation in the Webb Act the foreign trade of the corporation is reserved to it. And, further, it is said that the corporation has constructed a company called the Products Co., which can be "very easily preserved as a medium through which the steel business might reach the balance of the world," and that in the decree of "dissolution that could be provided." This is supplemented by the suggestion that not only the Steel Corporation "but other steel makers of the country could function through an instrumentality created under the Webb Act."

The propositions and suggestions do not commend themselves. We do not see how the Steel Corporation can be such a beneficial instrumentality in the trade of the world and its beneficence preserved and yet be such an evil instrumentality in the trade of the United States that it must be destroyed. And by whom and how shall all the adjustments of preservation or destruction be made? How can the corporation be sustained and its power of control over its subsidiary companies be retained and exercised in the foreign trade and given up in the domestic trade? The Government presents no solution of the problem. Counsel realize the difficulty and seem to think that its solution or its evasion is in the suggestion that the Steel Corporation and "other steel makers could function through an instrumentality created under the Webb Act." But we are confronted with the necessity of immediate judicial action under existing laws, not action under laws that have not been and may not be enacted. We must now decide, and we see no guide to decision in the propositions of the Government.

The Government, however, tentatively presents a proposition which has some tangibility. It submits that certain of the subsidiary companies are so mechanically equipped and so officially directed as to be released and remitted to independent action and individual interests and the competition to which such interests prompt without any disturbance to business. The companies are enumerated. They are the Carnegie Steel Co. (a combination of the old Carnegie Co., the National Steel Co., and the American Steel Co.), the Federal Steel Co., the Tennessee Co., and the Union Steel Co. (a combination of the Union Steel Co., of Donora, Pa., Sharon Steel Co., of Sharon, Pa., and Sharon Tin Plate Co.). They are fully integrated, it is said, possess their own supplies, facilities of transportation, and distribution. They are subject only to the Steel Corporation, is in effect the declaration, in nothing but its control of their prices. We may say parenthetically that they are defendants in the suit and charged as offenders, and we have the strange circumstance of violators of the law being urged to be used as expedients of the law.

But let us see what guide to a procedure of dissolution of the corporation and the dispersion as well of its subsidiary companies—for they are asserted to be illegal combinations—is prayed. And the fact must not be overlooked or underestimated. The prayer of the Government calls for not only a disruption of present conditions but the restoration of the conditions of 20 years ago, if not literally, substantially. Is there guidance to this in the Standard Oil case and the Tobacco case? As an element in determining the answer we shall have to compare the cases with that at bar, but this can only be done in a general way. And the law necessarily must be kept in mind. No other comment of it is necessary. It has received so much exposition that it and all it prescribes and proscribes should be considered as a consciously directing presence.

The Standard Oil Co. had its origin in 1882, and through successive forms of combinations and agencies it progressed in illegal power to the day of the decree, even attempting to circumvent by one of its forms the decision of a court against it. And its methods in using its power was of the kind that Judge Woolley described as "brutal," and of which practices he said the Steel Corporation was absolutely guiltless. We have enumerated them, and this reference to them is enough. And of the practices this court said no disinterested mind could doubt that the purpose was "to drive others from the field and to exclude them from their right to trade and thus accomplish the mastery which was the end in view." It was further said that what was done and the final culmination "in the plan of the New Jersey corporation" made "manifest the continued existence of the intent * * * and impelled the expansion of the New Jersey corporation." It was to this corporation, which represented the power and purpose of all that preceded, that the suit was addressed and the decree of the court was to apply. What we have quoted contrasts that case with this. The contrast is further emphasized by pointing out how, in the case of the New Jersey corporation, the original wrong was reflected in and manifested by the acts which followed the organization, as described by the court. It said: "The exercise of the power which resulted from that organization fortifies the foregoing conclusions (as to monopoly, etc.), since the development which came, the acquisition here and there which ensued of every efficient means by which competition could have been asserted, the slow but resistless methods which followed by which means of transportation were absorbed and brought under control, the system of marketing which was adopted, by which the country was divided into districts and the trade in each district in oil was turned over to the designated corporation within the combination and all others were excluded, all lead the mind up to a conviction of a purpose and intent which we think is so certain as practically to cause the subject not to be within the domain of reasonable contention"

The Tobacco Co. case has the same bad distinctions as the Standard Oil case. The illegality in which it was formed [there were two American Tobacco Cos., but we use the name as designating the new company as representing the combinations of the suit] continued, indeed progressed in intensity and defiance to the moment of decree. And it is the intimation of the opinion, if not its direct assertion, that the formation of the company (the word "combination" is used) was preceded by the intimidation of a trade war "inspired by one or more of the minds which brought about and became parties to that combination." In other words the purpose of the combination was signaled to competitors and the choice presented to them was submission or ruin, to become parties to the illegal enterprise or be driven "out of the business." This was the purpose and the achievement, and the processes by which achieved this court enumerated to be the formation of new companies, taking stock in others to "obscure the result actually attained, but always to monopolize and retain power in the hands of the few and mastery of the trade; putting control in the hands of seemingly independent corporations as barriers to the entry of others into the trade; the expenditure of millions upon millions in buying out plants, not to utilize them, but to close them; by constantly recurring stipulations by which numbers of persons, whether manufacturers, stockholders, or employees, were required to bind themselves, generally for long periods, not to compete in the future. In the Tobacco case, therefore, as in the Standard Oil case, the court had to deal with a persistent and systematic lawbreaker masquerading under legal forms, and which not only had to be stripped of its disguises but arrested in its illegality. A decree of dissolution was the manifest instrumentality and inevitable. We think it would be a work of sheer supererogation to point out that a decree in that case or in the Standard Oil case furnishes no example for a decree in this.

In conclusion, we are unable to see that the public interest will be served by yielding to the contention of the Government

respecting the dissolution of the company or the separation from it of some of its subsidiaries, and we do see in a contrary conclusion a risk of injury to the public interest, including a material disturbance of, and it may be serious detriment to, the foreign trade. And in submission to the policy of the law and its fortifying prohibitions the public interest is of paramount regard.

We think, therefore, that the decree of the district court should be affirmed.

So ordered.

Mr. Justice McReynolds and Mr. Justice Brandeis took no part in the consideration or decision of the case.

APPENDIX B.

Supreme Court of the United States.

No. 6.—OCTOBER TERM, 1919.

The United States of America, appellant, *v.* United States Steel Corporation et al. Appeal from the District Court of the United States for the District of New Jersey.

[March 1, 1920.]

Mr. Justice Day, dissenting.

This record seems to me to leave no fair room for a doubt that the defendants, the United States Steel Corporation and the several subsidiary corporations which make up that organization, were formed in violation of the Sherman Act. I am unable to accept the conclusion which directs a dismissal of the bill instead of following the well-settled practice, sanctioned by previous decisions of this court, requiring the dissolution of combinations made in direct violation of the law.

It appears to be thoroughly established that the formation of the corporations here under consideration constituted combinations between competitors, in violation of law, and intended to remove competition and to directly restrain trade. I agree with the conclusions of Judges Woolley and Hunt, expressed in the court below (223 Fed. Rep. 161, et seq.), that the combinations were not submissions to business conditions but were designed to control them for illegal purposes, regardless of other consequences, and "were made upon a scale that was huge and in a manner that was wild," and "properties were assembled and combined with less regard to their importance as integral parts of an integrated whole than to the advantages expected from the elimination of the competition which theretofore existed between them." Those judges found that the constituent companies of the United States Steel Corporation, nine in number, were themselves combinations of steel manufacturers, and the effect of the organization of these combinations was to give a control over the industry at least equal to that theretofore possessed by the constituent companies and their subsidiaries. That the Steel Corporation was a combination of combinations by which directly or indirectly 180 independent concerns were brought under one control, and in the language of Judge Woolley (p. 167):

"Without referring to the great mass of figures which bears upon this aspect of the case, it is clear to me that combinations were created by acquiring competing producing concerns at figures not based upon their physical or business values, as independent and separate producers, but upon their values in combination; that is, upon their values as manufacturing plants and business concerns with competition eliminated. In many instances capital stock was issued for amounts vastly in excess of the values of the properties purchased, thereby capitalizing the anticipated fruits of combination. The control acquired over the branches of the industry to which the combinations particularly related, measured by the amount of production, extended in some instances from 80 per cent to 95 per cent of the entire output of the country, resulting in the immediate increase in prices, in some cases double and in others treble what they were before, yielding large dividends upon greatly inflated capital.

"The immediate, as well as the normal, effect of such combinations was in all instances a complete elimination of competition between the concerns absorbed and a corresponding restraint of trade."

The enormous overcapitalization of companies and the appropriation of $100,000,000 in stock to promotion expenses were represented in the stock issues of the new organizations thus formed, and were the basis upon which large dividends have been declared from the profits of the business. This record shows that the power obtained by the corporation brought under its control large competing companies which were of themselves illegal combinations, and succeeded to their power; that some of the organizers of the Steel Corporation were parties to the preceding combinations, participated in their illegality, and by uniting them under a common direction intended to augment and perpetuate their power. It is the irresistible conclusion from these premises that great profits to be derived from unified control were the object of these organizations.

The contention must be rejected that the combination was an inevitable evolution of industrial tendencies compelling union of endeavor. Nothing could add to the vivid accuracy with which Judge Woolley, speaking for himself and Judge Hunt, has stated the illegality of the organization, and its purpose to combine in one great corporation the previous combinations by a direct violation of the purposes and terms of the Sherman Act.

For many years, as the record discloses, this unlawful organization exerted its power to control and maintain prices by pools, associations, trade meetings, and as the result of discussion and agreements at the so-called Gary dinners, where the assembled trade opponents secured cooperation and joint action through the machinery of special committees of competing concerns, and by prudent prevision took into account the possibility of defection and the means of controlling and perpetuating that industrial harmony which arose from the control and maintenance of prices.

It inevitably follows that the corporation violated the law in its formation and by its immediate practices. The power, thus obtained from the combination of resources almost unlimited in the aggregation of competing organizations, had within its control the domination of the trade and the ability to fix prices and restrain the free flow of commerce upon a scale heretofore unapproached in the history of corporate organization in this country.

These facts established, as it seems to me they are by the record, it follows that if the Sherman Act is to be given efficacy, there must be a decree undoing so far as is possible that which has been achieved in open, notorious, and continued violation of its provisions.

I agree that the act offers no objection to the mere size of a corporation, nor to the continued exertion of its lawful power, when that size and power have been obtained by lawful means and developed by natural growth, although its resources, capital, and strength may give to such corporation a dominating place in the business and industry with which it is concerned. It is entitled to maintain its size and the power that legitimately goes with it, provided no law has been transgressed in obtaining it. But I understand the reiterated decisions of this court construing the Sherman Act to hold that this power may not legally be derived from conspiracies, combinations, or contracts in restraint of trade. To permit this would be to practically annul the Sherman law by judicial decree. This principle has been so often declared by the decisions that it is only necessary to refer to some of them. It is the scope of such combinations and their power to suppress and stifle competition and create or tend to create monopolies which, as we have declared so often as to make its reiteration monotonous, it was the purpose of the Sherman Act to condemn, including all combinations and conspiracies to restrain the free and natural flow of trade in the channels of interstate commerce. (Pearsall *v.* Great Northern Railway Co., 161 U. S. 646, 676, 677; Trans-Missouri Freight Association Case, 166 U. S. 290, 324; Northern Securities Case, 193 U. S. 197; Addyston Pipe Co. *v.* United States, 175 U. S. 211, 238; Harriman *v.* Northern Securities Co., 197 U. S. 244, 291; Union Pacific Case, 226 U. S. 61, 88.) While it was not the purpose of the act to condemn normal and usual contracts to lawfully expand business and further legitimate trade, it did intend to effectively reach and control all conspiracies and combinations or contracts of whatever form which unduly restrain competition and unduly obstruct the natural course of trade, or which from their nature or effect have proved effectual to restrain interstate commerce. (Standard Oil Co. *v.* United States, 221 U. S. 1; United States *v.* American Tobacco Co., 221 U. S. 106; United States *v.* Reading Co., 226 U. S. 324; Straus *v.* American Publishers' Association, 231 U. S. 222; Eastern States Lumber Association *v.* United States, 234 U. S. 600.)

This statute has been in force for nearly 30 years. It has been frequently before this court for consideration, and the nature and character of the relief to be granted against combinations found guilty of violations of it have been the subject of much consideration. Its interpretation has become a part of the law itself, and if changes are to be made now in its construction or operation, it seems to me that the exertion of such authority rests with Congress and not with the courts.

The fourth section is intended to give to courts of equity of the United States the power to effectively control and restrain violations of the act. In none of the cases which have been before the courts was the character of the relief to be granted, where organizations were found to be within the condemnation of the act, more thoroughly considered than in the Standard Oil and Tobacco Co. cases reported in Two hundred and twenty-

first United States. In the former case, considering the measure of relief to be granted in the case of a combination, certainly not more obnoxious to the Sherman Act than the court now finds the one under consideration to be, this court declared that it must be twofold in character (221 U. S. 78), "First, to forbid the doing in the future of acts like those which we have found to have been done in the past which would be violative of the statute; second, the exertion of such measure of relief as will effectually dissolve the combination found to exist in violation of the statute, and thus neutralize the extension and continually operating force which the possession of the power unlawfully obtained has brought and will continue to bring about."

In the American Tobacco Co. case the nature of the relief to be granted was again given consideration, and it was there concluded that the only effectual remedy was to dissolve the combination and the companies comprising it, and for that purpose the cause was remanded to the district court to hear the parties and determine a method of dissolution and of recreating from the elements composing it "a new condition which should be in honest harmony with and not repugnant to the law." In that case the corporations dissolved had long been in existence, and the offending companies were organized years before the suit was brought and before the decree of dissolution was finally made. Such facts were considered no valid objection to the dissolution of these powerful organizations as the only effective means of enforcing the purposes of the Sherman Antitrust Act. These cases have been frequently followed in this court and in the lower Federal courts in determining the nature of the relief to be granted, and I see no occasion to depart from them now.

As I understand the conclusions of the court, affirming the decree directing dismissal of the bill, they amount to this: That these combinations, both the holding company and the subsidiaries which comprise it, although organized in plain violation and bold defiance of the provisions of the act, nevertheless are immune from a decree effectually ending the combinations and putting it out of their power to attain the unlawful purposes sought, because of some reasons of public policy requiring such conclusion. I know of no public policy which sanctions a violation of the law, nor of any inconvenience to trade, domestic or foreign, which should have the effect of placing combinations, which have been able to thus organize one of the greatest industries of the country in defiance of law, in an impregnable position above the control of the law forbidding such combinations. Such a conclusion does violence to the policy which the law was intended to enforce, runs counter to the decisions of the court, and necessarily results in a practical nullification of the act itself.

There is no mistaking the terms of the act as they have hitherto been interpreted by this court. It was not intended to merely suppress unfair practices, but, as its history and terms amply show, it was intended to make it criminal to form combinations or engage in conspiracies or contracts in restraint of interstate trade. The remedy by injunction, at the instance of the Attorney General, was given for the purpose of enabling the courts, as the statute states, to prohibit such conspiracies, combinations, and contracts, and this court interpreting its provisions has held that the proper enforcement of the act requires decrees to end combinations by dissolving them and restoring as far as possible the competitive conditions which the combinations have destroyed. I am unable to see force in the suggestion that public policy, or the assumed disastrous effect upon foreign trade of dissolving the unlawful combination, is sufficient to entitle it to immunity from the enforcement of the statute.

Nor can I yield assent to the proposition that this combination has not acquired a dominant position in the trade which enables it to control prices and production when it sees fit to exert its power. Its total assets on December 31, 1913, were in excess of $1,800,000,000; its outstanding capital stock was $868,583,600; its surplus $151,798,428. Its cash on hand ordinarily was $75,000,000. This sum alone exceeded the total capitalization of any of its competitors, and, with a single exception, the total capitalization and surplus of any one of them. That such an organization thus fortified and equipped could if it saw fit dominate the trade and control competition would seem to be a business proposition too plain to require extended argument to support it. Its resources, strength, and comprehensive ownership of the means of production enable it to adopt measures to do again as it has done in the past—that is, to effectually dominate and control the steel business of the country. From the earliest decisions of this court it has been declared that it was the effective power of such organizations to control and restrain competition and the freedom of trade that Congress intended to limit and control. That the exercise of the power may be withheld, or exerted with forbearing benevolence, does not place such combinations beyond the authority of the statute which was intended to prohibit their formation, and when formed to deprive them of the power unlawfully attained.

It is said that a complete monopolization of the steel business was never attained by the offending combinations. To insist upon such result would be beyond the requirements of the statute and in most cases practically impossible.

As we said in dealing with the packers' combination in Swift & Co. *v.* United States (196 U. S. 396):

"When acts are not sufficient in themselves to produce a result which the law seeks to prevent—for instance, the monopoly—but require further acts in addition to the mere forces of nature to bring that result to pass, an intent to bring it to pass is necessary in order to produce a dangerous probability that it will happen. (Commonwealth *v.* Peachie, 177 Mass. 267, 272.) But when that intent and the consequent dangerous probability exist, this statute [Sherman Act] like many others, and like the common law in some cases, directs itself against that dangerous probability as well as against the completed result."

It is affirmed that to grant the Government's request for a remand to the district court for a decree of dissolution would not result in a change in the conditions of the steel trade. Such is not the theory of the Sherman Act. That act was framed in the belief that attempted or accomplished monopolization or combinations which suppress free competition were hurtful to the public interest, and that a restoration of competitive conditions would benefit the public. We have here a combination in control of one-half of the steel business of the country. If the plan were followed, as in the American Tobacco case, of remanding the case to the district court, a decree might be framed restoring competitive conditions as far as practicable. See United States *v.* American Tobacco Co. (191 Fed. 371). In that case the subject of reconstruction so as to restore such conditions was elaborated and carefully considered. In my judgment the principles there laid down if followed now would make a very material difference in the steel industry. Instead of one dominating corporation, with scattered competitors, there would be competitive conditions throughout the whole trade which would carry into effect the policy of the law.

It seems to me that if this act is to be given effect the bill, under the findings of fact made by the court, should not be dismissed, and the cause should be remanded to the district court, where a plan of effective and final dissolution of the corporations should be enforced by a decree framed for that purpose.

Mr. Justice Pitney and Mr. Justice Clarke concur in this dissent.

ADDRESS BY JUDGE ALTON B. PARKER.

Mr. SHORTRIDGE. Mr. President, on January 14, 1922, Judge Alton B. Parker, former chief justice of the Court of Appeals of New York and one-time candidate for President of the United States, delivered a masterly address at the opening of the Marshall-Wythe School of Government and Citizenship at the College of William and Mary, at Williamsburg, Va. The high purpose of that school and the reasons for its establishment are very clearly set forth in this masterly address by Judge Parker. The subject matter of his address was "American Constitutional Government." It had been called to my attention as a splendid defense of our form of government, and I had intended weeks ago to present it here in the Senate in order that it might be further distributed and preserved for future days. Hon. W. W. Morrow, of California, one of the circuit judges of the ninth circuit, writes me suggesting that this scholarly and patriotic address be printed in the RECORD and be also printed as a public document.

Mr. SMOOT. The Senator should request that either course be taken—whichever he desires—but not both.

Mr. SHORTRIDGE. I will adopt whichever course may seem to Senators best adapted for the wide distribution of this splendid address.

Mr. SMOOT. If the Senator desires to have extra copies of it printed for distribution by Senators themselves, it would be very much better to have it printed as a public document; but if the Senator only wants it to go into the RECORD, to be read by the readers of the RECORD, it should be printed in the RECORD.

Mr. SHORTRIDGE. For the moment, then, I suggest that this address be printed in the RECORD. Perhaps hereafter other disposition may be made of it. I ask that it be printed in the RECORD in the regular RECORD type.

The VICE PRESIDENT. Without objection, it is so ordered.

The address is as follows:

AMERICAN CONSTITUTIONAL GOVERNMENT.

[By Alton B. Parker, LL. D., former chief justice, Court of Appeals of New York.]

The Federal Constitution, the prize of every intelligent and patriotic American, and which Gladstone referred to as the greatest work ever struck off at a given time by the brain and purpose of man, had safe deliverance from the Philadelphia Convention of 1787. Over that convention the greatest American from the beginning of government to this day, George Washington, of Virginia, at one time a student of this college and later its chancellor, presided.

The Constitution was not popular with the majority of the people at its birth. Indeed, the Articles of Confederation, which constituted whatever of Federal Government there was in existence—a helpless apology for a government, which could not compel from any source the raising of money to support itself or pay the national debt—were in greater favor with the people than the proposed new Federal Government, which was given all needed power, as 134 years of experience under it demonstrates. The people, however, were suspicious of the Constitution before they ever saw it. For three months and a half the convention sat with locked doors. James Madison, afterwards President, kept the Journal, but agreeably to the wishes of the delegates it was not published until after his death, which occurred about 50 years later. Moreover, the resolution of Congress providing for a convention on the second Monday of May, 1787, recited that it was "for the sole and express purpose of revising the Articles of Confederation," whereas the convention in fact reported an entirely different plan of government, a government which could enforce the powers conferred upon it by the Constitution, whether the people of some State disliked the exercise of the power or not. That was alarming to the majority of the people of many, if not all, of the States that had been accustomed to raise moneys for Federal uses or not, as they chose, and quite frequently, it may be said, they did not choose. All that the Continental Congress could do was to make requisition for funds upon the thirteen members of the confederacy in proportion to the assessed value of their real estate, for it was without power to enforce these requisitions. Nor were these requisitions responded to as they should have been during the War of the Revolution, when the people of the States were struggling to secure their liberty. One of the results was that the troops who were fighting for the freedom of the country were poorly fed, ill clothed, and rarely paid the trifling compensation which was promised them. The shabby treatment of the Army was hard for General Washington to bear, who understood right well that their loyalty to him as well as to the cause induced them to suffer and still fight on.

The inability to finance the Government created by the Articles of Confederation was not the only illustration of its impotence to safeguard the interests of all the people. Most of the States issued at will paper currency, and the brokers and merchants of cities in other States charged such discount as they chose in receiving it for goods. The time came when the bills thus issued would be received, if at all, in other States at a very small percentage of their face value. In 1781, according to Jefferson, notes issued by Congress "fell to 1,000 for 1." The debts of the States and of the Confederation seemed large in that day, and, coupled with the chaotic financial condition, plus the indebtedness of individuals at home and abroad, led to demands by large numbers of the people for a repudiation of all debts, public and private. Moreover, the States passed tariff laws against one another as well as against foreign nations, and indeed, so far as commerce was concerned, each State treated the others as foreign nations.

It may be said in passing that the selfish spirit of that day, which prompted the people of one State to put up bars against the people of other States, still exists. As I write, there lies before me a paper of to-day's issue, referring to two contemporaneous decisions of the Supreme Court of the United States.

In the one the transportation of oil through an underground pipe line was taxed by West Virginia as a "privilege tax," thus attempting to impose a burden upon interstate commerce in oil and in gas going into other States, and for that reason it was held to be invalid under the interstate commerce clause of the Constitution. In the other a milling corporation made a contract with a citizen of Kentucky which he refused to perform. Being sued, his defense was that the milling company had not registered in Kentucky as required by the statute of that State, hence it could not sue the Kentuckian. The Kentucky court sustained his contention, but the Supreme Court of the United States reversed the judgment of the State court, holding in effect that the transaction was one in interstate commerce and the State statute as applied to it was void. Before the Federal Constitution came into existence, however, there was no redress. Now, the Federal courts can relieve the citizens of other States from attempted wrongful exactions by the people of sister States.

Fortunately, in the condition of public demoralization tending in the direction of dishonor and even anarchy in the year 1787, the 55 men who had been chosen to represent the several States assembled in Independence Hall. It was a wonderful body of men. Never since that day has a body of like numbers been their superiors in ability, courage, industry, and patriotism. I wish the occasion permitted a reference to each of them, and especially here where it would be most appropriate to speak of them. The convention adjourned on the 17th of September, 1787, and a draft of the new Constitution which it had created—the governmental masterpiece of the ages—was transmitted with a letter from Washington, the president of the convention, to the Continental Congress. Strong opposition was made to it by several of the members of the Continental Congress, but it was soon overborne, and eight days later Congress resolved that the new Constitution, together with a letter from Washington, should be "transmitted to the several legislatures in order that it might be submitted to a convention of delegates in each State chosen by the people thereof in conformity to the resolves of the convention."

Immediately there were born two parties, one supporting, the other opposing the adoption of the new Constitution by the conventions of the several States, and a fierce struggle was waged in several of the States, with brilliant men for the leaders of the antagonistic parties. Those opposing attacked the convention for holding its sessions in secret. Even the mighty press of that day was not permitted to have representatives present. Moreover, the members of the convention and each of them obligated themselves not to tell anyone what was going on within Independence Hall; and what is more, no one of them ever did tell. The question up for decision by the several State conventions, to be called after the Constitution was reported, was whether the proposed form of government was sound and therefore should be adopted—not who planned it, nor even how the votes stood in the first instance on the several propositions. Nevertheless, it is a fact that many of the demagogic orators of that day successfully aroused the passions of many of the people against the convention and all its works, because the secrecy of the deliberations was assumed to be due to an attempt to wrong the people and rob the States of their sovereignty.

The zeal of certain members of the Legislature of Pennsylvania in introducing a resolution for the election of delegates to a State convention to ratify the proposed Constitution before the Continental Congress had passed upon it, and thereafter seizing hostile absentee members and bringing them by force to the statehouse, thus creating a quorum, served, with the aid of eloquent debaters, to arouse public indignation and increase the popular tide which was running against the new plan of government. Nevertheless, the convention was called, and Pennsylvania ratified the Constitution on the 12th day of December, the State of Delaware having ratified six days earlier. New Jersey followed with ratification on the 18th, Georgia on the 2d day of January, 1788, and Connecticut one week later. The Massachusetts convention came next, and the outcome was very much feared by the constitutionalists, as those were called who favored the adoption of the Constitution. But those in charge of the effort to ratify comprised the strongest and most highly cultivated men of the State and they displayed tact throughout. One bit of evidence of that fact is to be found in the election of John Hancock, one of the most popular signers of the Declaration of Independence, for the presiding officer of the convention. And yet, out of 355 votes in the convention, the majority in favor of ratification was only 19. New Hampshire came next, and the constitutionalists, fearing the outcome, secured an adjournment until June.

Virginia's convention met June 2. No State was represented in its convention by so many delegates who had already achieved high station in the public service, nor by an equal number of delegates who were to serve the people in exalted positions in the future. But let Senator Beveridge speak of them, as he does in his masterly work entitled "The Life of John Marshall" (p. 322): "While the defense of the Constitution had been very able in Pennsylvania and Massachusetts, and later in New York was to be most brilliant, the attack upon it in the Virginia convention was nowhere equaled or approached in power, learning, and dignity. Extravagant as the assertion appears, it nevertheless is true that the Virginia contest was the only real debate over the whole Constitution. It far surpassed, especially in presenting the reasons against the Constitution, the discussion in the Federal convention itself,

in weight of argument and attractiveness of presentation, as well as in the ability and distinction of the debaters."

Virginia was in that day the greatest of the States. She had one-fifth of the population of all the States and at least one-fifth of the wealth. Moreover, only 18 years before her house of burgesses had passed an act prohibiting slavery, which failed to become a law only because of King George's direction to the colonial governor to withhold his signature from the enactment, which was obeyed. The letter of protest to the King from the house of burgesses was a brilliant paper, which at the same time bore a sad prophecy of that which later happened. I quote a single sentence from it: "We are sensible that some of Your Majesty's subjects in Great Britain may reap emoluments from this sort of traffic; but when we consider that it greatly retards the settlement of the colonies with more useful inhabitants, and may in time have the most destructive influence, we presume to hope that the interest of a few will be disregarded when placed in competition with the security and happiness of such numbers of Your Majesty's dutiful and loyal subjects." That letter in its entirety should be known to all men in our beloved country, to the end that they may realize that slavery in that State was not due to the majority of Virginians but to the King and the profiteers of that day, who were not at all different from our war profiteers.

Virginia's son, Thomas Jefferson, wrote the Declaration of Independence, and in it, as he first presented it to the convention, there was a stinging indictment of the King for enforcing slavery upon this country. That indictment was not accepted by the convention, and it was the only change of moment it made in the declaration as he proposed it. Jefferson was later to become governor of Virginia, minister to France, Vice President of the United States, and President for two terms. Another of Virginia's sons, George Washington, had been commander in chief of our armies. His great ability and popularity, plus the universal confidence in his ability to lead, commanded his selection as chairman of the Philadelphia convention. He was not a member of the Virginia convention chosen to pass upon the Constitution, for it was his act, in common with his associates, that was about to be considered by that convention. But his striking influence was there, for he had not hesitated to let people know how vital it was in his judgment that the new national government should be ratified by the several conventions.

In Virginia, as elsewhere, there were strong leaders of men and able debaters who were opposed to the new plan of government, and in considerable numbers they were present at the Virginia convention, for both parties strove with might and main to obtain mastery there. Let Senator Beveridge speak of the strength, ability, and character of members of the convention and their leaders. He said: "In Virginia's convention the array of ability, distinction, and character on both sides was notably brilliant and impressive. The strongest debaters in the land were there, the most powerful orators, and some of the most scholarly statesmen. Seldom in any land or age has so gifted and accomplished a group of men contended in argument and discussion at one time and place. And yet reasoning and eloquence were not the only or even the principal weapons used by those giant adversaries." (Vol. 1, p. 356.)

Patrick Henry, with his great eloquence, known to every schoolboy of the land from that day to this, was the leader in the mighty struggle against ratification. Edmund Randolph, then the governor of Virginia and afterwards President Washington's first Attorney General, a most popular man and an eloquent debater, was the flower of the speaking force favoring ratification. Chancellor Edmund Pendleton was chosen president of the convention and George Wythe, the first great teacher of law in this country, was made chairman of the committee of the whole. He, like many others in that convention of giants, was an alumnus of William and Mary, later her great law teacher and one-time chancellor of Virginia. James Madison, afterwards President of the United States, took a prominent part in the debate and in support of the Constitution. John Marshall was there, only 32 years of age, a former student and alumnus of the same college, and little dreaming that he was to be the greatest expounder of all time of the Constitution he was working to ratify, or that the thousands of great lawyers of this day, looking back over more than a century and a quarter, would all agree that his service to the country as Chief Justice of the Supreme Court of the United States has not been equaled by any other member of that wonderful court, of which every American citizen is justly proud. His participation in the debate came toward the close of the convention. But it was timely and, as we who have read his opinions would naturally expect, it was a clear and strong presentation of the merits of the proposed new plan of government. Indeed, his participation was especially strong on the judiciary feature.

But enough of the personnel of the convention, although it was so rich in master minds and the debate so strong on each side that it seems almost unfair not to mention all of the participants. The necessary brevity of this address makes that impossible. I should say in passing, however, that the constitutionalist leaders from other States, such as Hamilton, of New York, King, of Massachusetts, and others who believed that Virginia would settle the fate of the Constitution, were making appeals to their Virginia friends to save the day. And they did, but only by the narrow margin of 10 votes out of 168. Hamilton's assurance that a constitutionalist victory in Virginia would secure the adoption of the Constitution proved to be right. His brilliant arguments in that behalf were most persuasive in the New York convention, which gave a substantial majority in favor of the adoption of the Constitution.

The Continental Congress provided that presidential electors should be chosen the first Wednesday in January, 1789, and that the electors should meet and cast their votes for President on the first Wednesday in February, and that the Senate and House should assemble on the first Wednesday in March, which was in that year the 4th day of the month. Hence, Congress fixed upon the 4th of March for the beginning of each new administration thereafter.

The counting of the electoral votes took place on the 6th day of April, and each and every one of them was cast for George Washington, of Virginia. He wisely selected two great men of widely different political views to be the leaders of his Cabinet—Jefferson for Secretary of State and Hamilton for Secretary of the Treasury. The inauguration took place on the 30th day of April in Federal Hall, at the cornor of Wall and Nassau Streets, in New York City. The oath was administered by Chancellor Livingston, who, at the conclusion, shouted, "Long live George Washington, President of the United States!" Answering shouts came from all the vast assemblage. So, after a mighty travail, the National Government was born, amidst the execrations of the great uninformed majority of the people and the enthusiastic plaudits of the wiser minority.

No one, not even the wisest of the brilliant leaders among the constitutionalists, had the vision to see that before 134 years should pass away a fierce war would be fought between two sections of the country which should decide once for all that ours is a Union of States, one and inseparable; that the 13 States would be increased to 48; that our territory would be broadened so as to extend from the Atlantic to the Pacific and from the Great Lakes on the north to the Gulf of Mexico on the south; that the population of three and one-half millions would grow to over 100,000,000; that the wealth of the Nation at the outbreak of the World War in 1914 would exceed by far that of Great Britain and Germany put together; that we should enter that World War, raising 4,000,000 of troops, sending 2,000,000 of them across the ocean to fight Germany on French soil before the war was ended; that we should lend our allies in the war about ten and one-half billions of dollars in order to enable them successfully to prosecute the war; that during the war we should have a President who thought he saw at the close of the war an opportunity to bind the nations of the world together in a covenant to keep the peace of the world; that into that league, after it was drafted, would enter all the great States of the world with the exception of Russia, Germany, Mexico, and the United States, the Senate of the latter refusing to follow the President's leadership in that respect; further, that in this year of our Lord 1922 there would be gathered in our Capital City of Washington, upon the invitation of his successor President, delegates from several foreign States to consider ways and means of lightening the overpowering burdens of the people of the world by halting the building of warships of various kinds and striving incidentally for the ultimate peace of the world; nor that all the world would look longingly on this unique assemblage with hopeful hearts and prayerful lips. All that, and much more, we of this day know has happened. To the more our President hopes may be accomplished in the near future the people say "Amen," regardless of differing political beliefs and the less kindly treatment accorded by some people to his immediate predecessor, for, without regard to party, the people press on and on with him toward that day when international differences shall be settled as peacefully as are the differences between man and man in countries of high civilization.

Lord Bryce, at one time Great Britain's ambassador to the United States, and at all times our friend, as we were all his friends, nearly a century after the creation of the National Government, in his masterful work "The American Common-

wealth," paid this tribute to the Federal judiciary: "Few American institutions are better worth studying than this intricate judicial machinery, few deserve more admiration for the smoothness of their working, few have more contributed to the peace and well-being of the country." One of the serious objections made in several of the State conventions called to determine whether the requisite number of States would ratify the proposed Constitution was that it did not require the National Government to protect the people in the enjoyment of the great principles of English liberty, which had cost the people of England a struggle of nearly 500 years to secure. About 91 per cent of the population of the States were descended from Great Britain, and they treasured those principles of liberty and regarded them as essential to the comfort and happiness of the people. In their several State constitutions, therefore, the people had undertaken to protect themselves and those who should come after them in the enjoyment of those principles of liberty, together with the benefits of the English common law. To that end those States, and each subsequent State with one exception as it has come into the Union, have, through their several constitutions, made the common law of England the law of the State, subject to amendment by statute.

In the course of debate the assurance was given by more than one of the great leaders supporting the effort to adopt the proposed Constitution that appropriate amendments to accomplish that result should be promptly submitted to the people. At the very first session of Congress, in 1789, in pursuance of that promise, 12 proposed articles of amendment to the Constitution were submitted to the State legislatures by appropriate resolution of Congress. Only 10 of them were ratified by the requisite number of States. Thus was the fear entertained by many that the National Government might not regard itself as bound to follow the wishes of the people as expressed in their several State constitutions put at rest.

There were no precedents for the State and Federal Governments created. Each of the States had its own constitution, made it own laws, and provided for their due execution. Its powers within its boundaries were only limited by the new Federal Constitution. Should a State attempt to trespass upon the rights and powers which the States accorded to the Federal Government when they adopted the Constitution, the latter possessed the power to terminate the trespass, and exercised it.

The theory of the constitutional form of government which the fathers—of whom we are justly proud—created was that the National Constitution was created by the people and can be changed only by the people; that within that instrument must be found all the power that may be exercised by it, until and unless the people shall grant to that Government additional powers. And from time to time, since the adoption of the first 10 amendments, other amendments to the Constitution have been made, conferring powers upon the National Government which were not granted in the beginning. It is quite likely that other amendments may be made in the future, giving to the Federal Government still greater powers than it possesses to-day. But those powers can only be acquired by the Federal Government through the method the people have provided, which method finally results in having three-fourths of the States ratify the proposed amendment to the Constitution, either by the legislatures of such States or by a convention chosen by the people of those States.

But there are those in these later days who advocate the breaking down of the safeguards which the people secured by their constitutions. Some of them would strip the owners of property, secured by years and sometimes by generations of hard work, and divide it as the Soviet Government in Russia has attempted to do. One result of an effective attempt to take away from those who live economically, work hard, earn, and save, and divide it among people who do none of these things, is to be found in the starving millions in Russia, to whom we are sending free many millions of dollars' worth of food to save their lives. But that effort to serve the Russian people does not alter the ambition of the Soviet Government and of the hordes of sympathetic Russians who have come to this country for the purpose of helping to overthrow the best Government on earth from continuing their efforts. Nor does the fact of the great suffering and threatened death of many millions restrain the longings of those vast aggregations of enemies of work from seeking that which, according to their philosophy, is their proportionate share of the property, real and personal, of the world. A government which seeks to educate all of the youth of its country, stimulate all the people to work, and encourages thrift, is anathema to them.

As people of this class have been coming to us in large numbers from nearly every quarter of the globe, we must take up the task of so educating all classes of our vast population as that they shall fully understand the importance of maintaining in its integrity our constitutional plan of government. They should be taught in the first instance why it was that the people in the formative period of our Government were bound to have, and did at last secure, a Government which the people could control despite their legislatures, whether representing the States or the Federal Government. Vast powers are given to the executive, the legislative, and the judicial departments of the Government, but not all of the power possessed by the people, by any means. In that fact rests the ability of the people to hold in check each of the several departments of government which might on occasion wish to have it otherwise. Occasionally the legislative department of the State or Federal Government passes an act which upon its very face defies the Constitution which the people created and under which the legislative department of government acquires all the power it possesses. This has been done so often as to demonstrate that the legislative bodies can not always be trusted to obey the people's Constitution in times of popular stress. And, of course, at the same time it is proved that the plan of the fathers in saying in effect through a rigid Constitution, "Thus far and no farther can you go," is absolutely essential to the maintenance of our form of government.

Nevertheless in this time of selfishness, of agitation, and loose thinking, there are those who seek acclaim through a denunciation of the courts for judicially declaring that certain statutes offend against the people's Constitution. In other words, the courts say in such decisions that the legislative body has attempted to exercise a power denied to it by the people through their Constitution. Addresses have recently been made from purely selfish purposes with a view of creating the impression in the public mind that the courts have in the past and without warrant seized this power. The authors assert that such a thing as judgment of a court declaring an act void was unknown in Great Britain, from whence came our knowledge of the common law and of equity jurisprudence. But, as Lord Bryce points out with great clearness in his "American Commonwealth," the British constitution is not to be compared with ours. He says: "What are called in England constitutional statutes, such as Magna Charta, the Bill of Rights, the Act of Settlement, the Acts of Union with Scotland and Ireland, are mere ordinary laws, which could be repealed by Parliament at any moment in exactly the same way as it can repeal a highway act or lower the duty on tobacco."

Our National Constitution, on the contrary, was not created by Congress or by any legislative body, nor has Congress the power to amend or change a single word of it or to render its powers ineffective by either direct or indirect methods. A proposed amendment can only become effective to change the Constitution by the affirmative action of three-fourths of all the States.

The famous lawyers who drafted our Constitutions, State and National, knew that attempts by inferior magistrates to adjudicate upon matters over which authority had not been granted to them by statute were void, and if action was taken to enforce them, the courts would refuse their assistance to that end, because such adjudications, being without authority, were invalid. Again, municipal bodies having certain powers granted them by Parliament to enact local rules and regulations sometimes extended their attempts at making rules and regulations beyond the authority conferred upon them by the laws of Parliament, and they were in turn void, and so the courts held whenever attempt was made to enforce them against the protest of the citizen affected.

Such holdings were, as Lord Bryce points out, made by the courts in England, and the decisions of the courts there were followed here in the colonial days. Now, our acts of Congress are inferior in authority to that of the Constitution, and hence the draftsmen of the Constitution, as well as the people generally, knew that under the practice in England an act of Congress offending against a superior law would be void, and they further knew that in England it was the courts that held them to be invalid and unenforceable.

This general subject is very admirably discussed by William M. Meigs in his recently published book, "The Relation of the Judiciary to the Constitution." It appears from the instances which he cites that between the time of the adoption of the State constitutions and the National Constitution it was generally assumed that an enactment which violated the State consitution was not only void but that it was the duty of the courts in a proper case so to adjudicate. Among the cases was one in which Judge Wythe, chairman of the committee of the whole of the Virginia convention, which ratified the Federal Constitution (and whose name is to be coupled with that of Chief Justice Marshall in founding the chair of government in

this college), was a member of the court which considered a Virginia statute of 1776, which, it was claimed, though not so held by the court, infringed upon the State constitution of Virginia. Several members of the court announced their views upon the general question and were in agreement as to the power of the court and duty to hold a statute unconstitutional in a proper case. But Judge Wythe said in his opinion, among other things: "Nay, more, if the whole legislature, an event to be deprecated, did attempt to overleap the bounds prescribed to them by the people, I, in administering the public justice of the country, will meet the united powers at my seat in this tribunal, and, pointing to the Constitution, will say to them, 'Here is the limit of your authority, and hither shall you go, but no further.'"

After the close of the Revolutionary War States unmindful of the Central Government passed laws which offended against treaties with foreign nations. Countries thus wronged, and nearly all of them were, made protest which was indeed alarming, so much so as to lead Madison to say in the convention which drafted our National Constitution that unless it could be prevented it must involve us in the calamities of foreign wars. This situation contributed, doubtless, toward leading many of the strong men of the country to consider the method of getting rid in the future of these unfortunate State laws which were being passed without paying any heed to the Central Government or to the other State governments. Naturally, the fact that the judiciary was the instrument used in England to get rid of unauthorized acts of inferior municipal bodies and magistrates contributed in no small degree toward the plan ultimately adopted of making a central or national Constitution which should be the supreme law of the Nation with the executive, legislative, and judicial departments of government in subordination thereto. Following the precedents in England and in this country, so far as the State constitutions are concerned, there would devolve upon the judiciary the duty of declaring acts hostile to the commands of the Constitution, whether executive or legislative, to be void and of no effect.

In passing, let me say that the first decision of the Supreme Court of the United States holding an act of Congress to be unconstitutional was in Marbury *v.* Madison, although statements to the contrary by careful students may be found. The actual decision in that case is correctly stated in the syllabus as follows: "Congress have not power to give original jurisdiction to the Supreme Court in other cases than those described in the Constitution. An act of Congress repugnant to the Constitution can not become a law." It will thus be seen that the first decision of the Supreme Court of the United States declaring a statute unconstitutional concerned one which undertook to confer upon that court a larger original jurisdiction than it was authorized to enjoy by the language of the Constitution. Hence the effect of its decision was to refuse to exercise authority which the Congress without constitutional permit undertook to confer upon it. That opinion was written by a man who will be known as "the great Chief Justice Marshall, the expounder of the Constitution," as long as our Government shall live. It is fitting that the name of the foremost jurist in all our history shall stand at the head of the chair of governmental history in this college. It is most appropriate also that the name of another of William and Mary's students and jurists, the first great law teacher in this country, Judge Wythe, should be connected with that of Marshall in the naming of the chair.

The fact that assaults are being made upon the judiciary for deciding, as they are compelled to do now and then, that a statute is void because it violates either a State or the Federal Constitution, by an element of our population who are without roots in the revolutionary days and the formative period of our Government, makes it necessary that the colleges, and even the high schools, shall teach the youth of our land both to know and to cherish the history which inspired the fathers to build the most wonderful Government ever created by man—a Government of the people, by the people, and for the people. Such a Government, for continued success, must depend upon an educated electorate, who, because of their trained minds, can not be deceived by the ambitious and selfish leaders whose eloquent tongues seek to persuade the people to travel in dangerous paths. Never in the history of this country were there here so many descendants of non-English-speaking peoples, brought up to hate the Governments of which they were subjects, and who are wholly without knowledge of the principles upon which our Government was so wisely builded. If their children are made to understand by careful instruction the aims of the fathers, the principles which actuated them, and the wisdom which inspired their governmental building, they will come in time to be a helpful addition to our vast population. But if they are not thus educated it is quite likely that great numbers of them will be led by the anarchists, the I. W. W.'s, the Russian reds, and others of like character to join the forces which openly seek the overthrow of our Government that they may fatten upon the fruits of the people's labors.

Jefferson was the first, and through all generations down to now the foremost, of all our great statesmen in his efforts to bring about the education of all the people, to the end that they should intelligently perform their governmental duties. It is most fitting that William and Mary College is to found a school for that purpose, which is to bear the name, as I have already stated, of Marshall and Wythe. The purpose is to have the teaching of our governmental history so thoroughly done that the hundreds, and in a little while perhaps the thousands, who go out each year from this old college, famous for its long line of great Presidents and professors and its illustrious students, will in turn make the people understand the sources from which our leaders in the early days of our country's history drew the principles and the precedents which enabled them in their wisdom to build the best governmental system that the world ever saw.

AFFAIRS IN HAITI.

Mr. KING. Mr. President, reference was made by the Senator from North Dakota [Mr. McCUMBER] day before yesterday to our trade with the Latin American Republics, and he predicted with the great force and earnestness which characterizes his utterances that within a very short time we would be driven from the South American trade by Germany. I do not propose to discuss that matter at this time, but merely to impress the fact that our trade with South America will be strengthened and expanded if we pursue toward those nations a policy that will inspire confidence and good will. I apprehend that we are now dealing with Haiti and San Domingo, which do not belong to the United States, and with Porto Rico, which is a part of the territorial possessions of the United States, in a manner which tends to provoke misgiving, not to say resentment, on the part of those who would be our friends in those countries. On day before yesterday I offered a resolution, which is lying upon the table, by which I called attention to the committee which had been appointed by the Senate to investigate conditions in Haiti and in San Domingo. This committee, as recited in the resolution, has made an investigation and will soon make a report. I have suggested in that resolution that the Senate respectfully request the President of the United States to direct the financial adviser of the Haitian Government and the receiver of customs to withhold taking any action for the consummation of a new loan to the Haitian Government or the issue of Haitian bonds until the report of this committee shall have been submitted to the Senate.

Mr. President, I am not going to discuss the Haitian matter at this time, but shall offer some observations in regard to it. My investigations have led me to the conclusion that our treatment of San Domingo and Haiti has tended to cause suspicion in Latin America as to the ambitions and purposes of the United States in our Latin American relations.

We have declared that we entertain no designs for territorial conquest, that we are content with our national domain, that we have no desire to annex Haiti or Santo Domingo, or to take any territory of our neighbors, but unfortunately our position in Haiti and Santo Domingo is regarded as indicative of an imperialistic policy, and that view, which is widely entertained in South America, provokes suspicions which retard our trade and otherwise impair the relations of amity which should exist between ourselves and the southern Republics. If we want an expanding trade in South America, in Central America, and in Mexico, we must cultivate the good will of these countries.

I shall not inquire into the cause for our military occupation of Haiti and Santo Domingo, but I do aver that whatever excuse existed for our landing marines in those countries does not exist to-day, and can not justify the further military intervention in their affairs.

The United States should withdraw its marines from Haiti and from Santo Domingo. I do not regard it an excuse for the maintenance of our marines in those States that wrongs and cruelties may be perpetrated by revolutionary forces. That is their business, as it is the business of China and other nations to determine their own internal policy, and to make their own arrangement for public order.

We had a civil war in the United States. We resented, and many resent to this day, the suggestion that was made in Great Britain at that time, that there might be some intervention in the domestic affairs of the United States. We have not become the policemen of Latin America, nor can we assume to take care of these countries.

Only recently 24 of our marines came home as prisoners because of infractions either of the municipal law of Guatemala or of military or naval regulations.

Mr. President, the people of Haiti are opposed to our military occupation of the island. They are opposed to the authority exercised over them by those whom we have sent from the United States. They resent the President of the United States sending General Russell there, denominating him an ambassador extraordinary and minister plenipotentiary. They resent his assumption of power in respect to their internal and domestic affairs. They resent the efforts of the State Department and its representatives to impose a loan upon the Government the effect of which will be to perpetuate the control of Haiti for an indefinite period. It is true that Haiti owes a considerable sum of money, and that its bonds are outstanding for payment. The purpose is to refund some of the obligations of Haiti, including the French loan, and to use the residue of the loan for alleged internal improvements; but I repeat that the people of Haiti are opposed to this loan, and they resent the efforts of officials in Haiti to impose the loan upon the Government.

Recently President Dartiguenave refused to sanction the loan. Another man was elected President, and within a few days he will assume his office under the new constitution which was adopted after we occupied the country. The new President, as I have stated, has been elected under this new constitution, and I do not think he speaks the voice or the will of the people. It is represented that he will approve the loan; that it will be ratified by the de facto government, but that this Government does not represent the wishes of the majority of the Haitian people.

The Haitian newspapers are against the loan, the Haitian people are against it, and in mass meetings participated in by thousands of people resolutions have been adopted protesting against the loan and expressing disapproval of the policy adopted by the United States in dealing with Haiti.

In the testimony which was given before the Senate committee, the financial adviser stated that he had no authority to negotiate the loan, but my advices are that the new President has been placed there for the purpose of carrying through that loan.

I am advised, too, that the State Department is urging the Haitian Government to accept the loan, notwithstanding the protests of the people. They have already warned one or more banking houses of the United States that the loan is not desired, and that they will not recognize this loan which is being imposed upon them.

Mr. JONES of Washington. Has there been testimony before this committee showing that our State Department is urging this loan?

Mr. KING. I think the testimony is susceptible of that; but if it is not, I will state that, in my opinion, the State Department is advising the loan.

Mr. JONES of Washington. I asked that, having noted the Senator's statement, because I have been told that the testimony before the committee was clear and positive to the effect that the State Department is urging the loan, and I knew the Senator was a member of the committee.

Mr. KING. I am not a member now. I resigned from the committee because of press of duties.

Mr. JONES of Washington. I did not know that. Does the Senator know whether the committee has been taking testimony since he resigned?

Mr. KING. Oh, yes. I resigned early in the activities of the committee, but I have made some inquiry of the State Department, and I understand that the State Deparment is advising the loan, and that General Russell, who was sent there, is doing all he can to bring about the loan, and I know that Dartiguenave, the President, who was a candidate for reelection, opposed the loan, and for that reason, I have been advised, he was not reelected, and that Mr. Bobo, the new President, will put through the loan.

There is a council of state which claims to exercise the legislative functions of the Government, and that council of state and the President are largely in the hands of American representatives and do not express the will of the people.

Mr. President, I say that our conduct in Haiti and Santo Domingo is not consistent with the ideals of this Republic. We have no business in these countries. This island belongs to the people of Santo Domingo and to the people of Haiti. We have no right to keep our marines there, and I give notice now to the committee and to the Senate that when the naval appropriation bill comes before the Senate I shall offer an amendment that not one dollar of the appropriation shall be utilized for the purpose of maintaining our marines in Haiti or in Santo Domingo.

Mr. President, that is all I care to say at this time upon this matter, and I am now willing to permit the Senate to come to the subject which the Senator from North Dakota [Mr. MCCUMBER] desires to bring to our attention.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. MCCUMBER. I ask now that we may return to paragraph 4, on page 3.

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. On page 4, line 14, after the word "butyl," the committee proposes to strike out "isopropyl, and," and to insert "and propyl, 3 cents per pound," so as to read:

Alcohol: Amyl, butyl, and propyl, 3 cents per pound.

Mr. KING. Mr. President, does the Senator from North Dakota desire now to make a final disposition of this paragraph?

Mr. MCCUMBER. Yes; I should like to do so. I want to offer a further amendment a little farther down. We have reconsidered the matter this morning before the majority members of the committee and determined that we would make no change except to strike out the word "proof" in line 17.

Mr. KING. I shall be glad if the Senator will pass that for a few moments to give me a further opportunity to examine it. May I inquire what amendments the Senator desires to suggest to the text of the Senate bill?

Mr. MCCUMBER. The only amendment that I ask is, on line 17, to strike out the word "proof." It should be "10 cents per gallon," and not "10 cents per proof gallon." The effect, of course, would be to reduce the rate.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

Mr. KING. As I understand, the Senator desires to strike out the word "proof." Is that the only amendment?

The VICE PRESIDENT. That is not now the question.

Mr. MCCUMBER. The present question is on the amendment on line 14.

Mr. PITTMAN. Mr. President, a parliamentary inquiry. What is the pending amendment?

The VICE PRESIDENT. The amendment of the committee on lines 14 and 15, page 3.

Mr. KING. Will the Senator consent to laying this aside temporarily to give me a little further opportunity to examine it, and permit the consideration now of the cyanide schedule, to which I called the Senator's attention this morning?

Mr. MCCUMBER. I do not wish to have the cyanide schedule passed upon at this time.

Mr. KING. No; we do not, either; but there is to be some discussion of it.

Mr. MCCUMBER. There can be discussion, of course, on any feature of the bill at any time, and if the Senator desires to discuss cyanide further there is nothing in the rules that prevents his doing so; but I want this to be the pending amendment.

Mr. ODDIE. Mr. President, I should like to ask that the vote be not taken this week on the cyanide amendment. Is there any objection to that course being pursued?

Mr. KING. I will join with the Senator from Nevada in asking that if we should reach the cyanide amendment this week a vote on it be postponed until next Monday or Tuesday.

Mr. MCCUMBER. I will try to accommodate the Senators when we reach it. I do not know just what the condition may be at that time.

Mr. KING. There will be no trouble about it, I think I can assure the Senator.

Mr. MCCUMBER. We are some distance from cyanide now.

The VICE PRESIDENT. The question is on the amendment of the committee on line 14, page 3.

Mr. KING. I suggest that we temporarily lay that aside. The Senator from Nevada [Mr. PITTMAN], I understand, desires to discuss cyanide.

Mr. MCCUMBER. It is not necessary to lay it aside. The Senator can proceed.

Mr. PITTMAN obtained the floor.

Mr. KING. Mr. President, this cyanide matter is very important, and I suggest that we have a quorum in its discussion.

The VICE PRESIDENT. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Harris	McLean	Smoot
Borah	Heflin	McNary	Spencer
Broussard	Hitchcock	Moses	Sutherland
Bursum	Johnson	Nelson	Swanson
Calder	Jones, Wash.	Newberry	Townsend
Capper	Kellogg	Nicholson	Underwood
Caraway	Kendrick	Norbeck	Wadsworth
Colt	Keyes	Oddie	Walsh, Mont.
Culberson	King	Overman	Watson, Ga.
Curtis	Ladd	Page	Watson, Ind.
Dillingham	La Follette	Pittman	Weller
Elkins	Lenroot	Rawson	Williams
Fletcher	McCormick	Robinson	Willis
Gerry	McCumber	Sheppard	
Gooding	McKellar	Shortridge	
Harreld	McKinley	Simmons	

Mr. HEFLIN. I desire to announce that the Senator from Nebraska [Mr. NORRIS] is in attendance upon a hearing before the Committee on Agriculture and Forestry.

The VICE PRESIDENT. Sixty-one Senators have answered to their names. A quorum is present.

Mr. PITTMAN. Mr. President, my colleague [Mr. ODDIE] just stated that he would like to have the cyanide item not voted on this week. I agree with him that it would be advisable not to have it voted upon this week, although I am ready to vote on it now. In fact, I expected that it would be voted on to-day, but I understand there are a number of Senators who did not believe the item could be reached to-day; and, in fact, I doubt if it can be reached to-day if it is taken up in its regular order. I would like to know from my colleague if he has any idea with regard to a date next week when it would be satisfactory to vote on this matter, or to take it up for final determination?

Mr. ODDIE. Mr. President, I feel that some time in the early part of the following week would be satisfactory, and I would suggest Tuesday morning, if that is satisfactory to my colleague and to the committee.

Mr. PITTMAN. That would be entirely satisfactory to me.

Mr. ODDIE. Not before Tuesday morning, I would suggest.

Mr. McCUMBER. If we reach it before Tuesday morning, then, I will say to these Senators, I will ask to have it passed over for their accommodation.

Mr. PITTMAN. Suppose, acting on that suggestion, we ask unanimous consent that the item be voted on at the convening of the Senate on Tuesday morning, or as soon thereafter as the chairman of the committee desires to have it voted on.

Mr. McCUMBER. That is satisfactory, but it is not necessary to have unanimous consent. If we are prepared to take it up Tuesday morning, we can do so, and if not, we can fix a time which will be satisfactory to the Senate.

Mr. PITTMAN. I withdraw the request. I was just trying to get it definitely fixed.

Mr. McCUMBER. Very well.

Mr. PITTMAN. Mr. President, this matter was discussed the other day, and there seemed to be only one defense to the imposition of the duty on this article. That defense was brought forward by the senior Senator from Utah [Mr. SMOOT]. He admited that there was only one institution in this country which manufactured cyanide. There never has been more than one institution in this country which manufactures cyanide. The Senator from Utah admits, and all those defending this duty admit, that there is a monopoly in the manufacture and sale of cyanide in the United States by this one concern, the Roessler & Hasslacher Chemical Co. The Senator from Utah says that while this Roessler & Hasslacher Co. were robbers during the war, he is afraid that this single institution in this country will be driven out of business by German competition, and therefore that we will be at the mercy of the German trust.

That is perfectly absurd; and I hesitate to denominate anything the Senator from Utah presents as being absurd, because he is rarely in that position. But this monopoly in this country is the monopoly also in Germany. It is inconceivable that there can be competition between the same people. It is inconceivable that one company is going to drive its subsidiary, which it established here, out of existence.

The whole history of this thing is plain. There is no denial of it in the record. There never has been more than one concern in Germany which sold or manufactured cyanide, and that is the parent of the Roessler & Hasslacher Chemical Co. in this country.

The hearings disclose the fact that there are just four concerns in the world which supply any substantial amount of this product, and those four concerns have divided the world between them. There is the old German concern, which has been in existence for a great many years. In 1895 the German Cyanide Trust decided that they would establish an agency in the United States. They sent over Roessler, who was joined by Hasslacher. Both of those gentlemen had been agents in the German concern. They were given the exclusive selling agency in the United States and Mexico of the German product.

After they had been here a few years the German house realized that unless they established a manufacturing institution here in the United States some other institution might do it under a high-protective tariff. Consequently, they incorporated a subsidiary in this country known as the Roessler & Hasslacher Chemical Co., and they took unto themselves the control of the stock of that company. They started to manufacture a part of the cyanide used in this country and in Mexico at their subsidiary here, making up the demand, however, by exporting from Germany.

Sometimes they export a part of the raw material from Germany and have it refined here. Whenever the tariff was high enough to make it unprofitable to ship the German product in, having the whole market here, they sold from this factory and when it was not high enough they sold from their German factory. That is the situation which always existed, and there never was any competition in this country against that concern, although it was established here in 1895.

The Government tried to establish competition against it during the war under what was known as the Bucher patent for making cyanide, but it did not work. It is not a successful process, and the Government now knows it.

This concern is protected in the United States by its patent. It is protected against any competition from the outside by contracts. What are those contracts? There is a big English concern which makes cyanide, and this big German concern which makes cyanide, and its subsidiary in the United States, which makes cyanide. Those are the three great cyanide producers of the world. They entered into an agreement, so it is charged in these hearings—and not denied anywhere—that the British concern should not sell in the United States or Mexico and that the German concern could not sell in South America. Therefore, there is no competition between them.

That was not all the combination did which controlled the cyanide of the world. They went further. When the Roessler & Hasslacher Chemical Co. started to build its chemical plants in this country they went to Niagara Falls, where they could get cheaper power. There they manufactured cyanogen. Through electricity they take the nitrogen out of the air and fix it with some substance, either potash or common salt. If it is fixed in potash it is called potassium cyanide; if it is fixed in common salt it is called sodium cyanide; but the active solvent agent in it is cyanogen.

They went further in the monopoly of the world, and the British concern said, "There is one thing we will insist on. We must have a third interest in this plant at Niagara Falls." So it was granted to them. What was the result? The British concern has a third interest in the Niagara Falls company, which was a subsidiary of the Roessler & Hasslacher Chemical Co. The German concern had a third interest in it and the Roessler & Hasslacher Chemical Co. had the other third; but the Roessler & Hasslacher Chemical Co. was absolutely controlled by the German concern. So we find here an interlocking control winding up in the German hands. How on earth the senior Senator from Utah or anyone else could fear that the German trust would attempt to run out of business its own subsidiary, which it deliberately established in this country, is beyond my comprehension.

Why should they run it out of business? It only makes as much as the German trust wants it to make. It sells it only when the German trust wants it to sell it. It was established here so that the parent company in Germany could use it in case we put the tariff wall up or use the German product through the subsidiary, the sales agency, if we take the wall down. It is their own possession. They had it running here for 15 or 20 years without any competition.

The control of the stock of the Roessler & Hasslacher Co. has been in the hands of the Alien Property Custodian practically ever since we went into the war. It is true that about two weeks before we went into the war they tried to disguise the German control of it.

But the Alien Property Custodian has letters in his possession which he has set forth in his report, which is now in the hearings, showing that to-day they only lack probably 80 shares of still having control, and that just before we went into the war they fraudulently conveyed enough shares to give German-

American citizens a bare control of the proposition. As is stated by the Alien Property Custodian, the evidence is clear that it was a fictitious sale and absolutely fraudulent.

It is admitted that there is not a raiser of citrus fruit in this country, or one who mines gold and silver, or one who does electroplating or casehardening who can get a pound of cyanide from Germany. The hearings disclosed the fact that the users of cyanide in this country have corresponded directly with the parent company in Germany and have been referred back to the firm of Roessler & Hasslacher, with the statement that that concern was the exclusive agency in the United States for the sale of that product.

In 1920 the Roessler & Hasslacher Chemical Co. imported five or six million pounds of cyanide from the German concern, although at that time they testified that they had the capacity to supply the United States. Why did they do it? They did it because the export value placed on it was 10 cents a pound, and they turned around and sold that to the consumer in this country at from 21 to 23 cents a pound. Of course, the German concern got their part of the profit in the difference between the 10 cents and the 23 cents a pound. They got it through the stock in the Roessler & Hasslacher Chemical Co., and they will continue to do it.

The only competition that has arisen in the world against this world trust on cyanide is the little company started at Niagara Falls, in Canada, called the Cyanamid Co. The Cyanamid Co. has a different process of fixing the cyanamid. It is a cheaper process, it is a better process, and there is no doubt about that. It is a new process. They started in 1917. It is an American concern from top to bottom, not only an American corporation, but the stockholders are American citizens. All of the coal they use for making coke and all of the coke they use in this process comes from the United States. The other materials come from the United States.

It is true that their plant is just across Niagara Falls, in Ontario, but why? Because the British Government controls its monopolies better than we do in the United States. There is no question about that. Wherever there is Government control in Canada it is better than any Government control we have in the United States. I speak from experience because I have lived in both places quite awhile. Their criminal law is better enforced in Canada than it is ever enforced in the United States. They punish people up there no matter how important they may be or how wealthy they may be.

When the agent and treasurer of the Roessler & Hasslacher Chemical Co. was here and was asked about the difference in cost of manufacture in Canada and the United States, he said that it was practically impossible to compare the difference in cost. That was his answer. The only fact he gave was that they could get power cheaper on the Canada side than on the American side. In the House hearings this was answered by Congressman GARNER, who said it looked like a question of legislation with regard to power rather than legislation to protect against the difference in the cost of production. The cost of labor on each side is the same, the cost of material is the same, but in the testimony here Mr. Rigner, who was down here as an expert for the Roessler & Hasslacher Chemical Co., said: "Yes; but they are imposing upon the people of the United States a cheap product."

There is no difference in cyanogen one place and another. You may have 50 per cent of cyanogen or you may have 96 per cent of cyanogen in salts, but it is sold on the basis of its cyanogen content, and Mr. Rigner was compelled to admit that. Not only that, but 50 per cent of cyanogen has proved just as effective in fumigation, in the treatment of scales on fruit trees, and in the reduction of gold and silver ore, as the 96 per cent. It does not make any difference at all. What the people buy is cyanogen, and the price is based upon the amount of cyanogen content.

These same people were down here in 1913 when the Underwood-Simmons bill was being considered in the House. They came here with the same proposition, that they were about to be run out of business by the German concern. That was in 1913. They said if they did not have a tariff the German concern would run them out of business, and the House gave them a duty. They came over to the Senate, and some of us here who knew something about the subject and who had known something about the Roessler & Hasslacher Chemical Co. for years, who knew that they were selling cyanide in the United States in 1913 for 4 cents a pound more than they were selling it in Mexico, brought that to the attention of the Finance Committee of the Senate with the result that they put it on the free list. The concern did not go out of business, and the German concern did not run them out of business. Run them out of business? No.

Mr. Rigner, before the House committee, said:

When the Payne-Aldrich Tariff Act passed the industry was very much encouraged in this country, because of the fact under that act sodium cyanide was dutiable at 25 per cent ad valorem, and under that protection the industry forged ahead—

That is, under the Payne-Aldrich tariff law—

and was almost in a position to meet foreign competition—

Mind you, almost in a position to meet foreign competition on account of the Payne-Aldrich tariff law—

on an equal footing, but when the present tariff act was passed and this commodity put on the free list the industry received a very serious setback. Had it not been for the intervention of the war, it is very hard for us to say just what would have become of the cyanide industry in this country.

Now, mind you, when we placed it on the free list in 1913 it was almost in a position to meet foreign competition on an equal footing. They only had one year of free trade to interrupt that growth, and six years of war embargo, and yet that infant concern, which has paid as high as 900 per cent profit, is still too weak to meet foreign competition.

A distinguished Senator the other day came to me and said:

The thing that disheartens me is this: I am getting letters from a number of consumers of cyanide who want this duty put on the product which they buy, and there must be some reason for it. They must think that it would help them.

He was a Senator who on the floor showed me a number of letters of that character. Now, here is a letter which explains that proposition perfectly. Here is a letter from a man who worked for these people and knows them, and he is also in the business of using cyanide. This is from one of the agents of the Thomas Buchanan Co., polishing and grinding machinery, at Cincinnati, Ohio. Here is what he says in this letter to me:

Our firm has already addressed a communication to Hon. P. J. MCCUMBER, as well as other members of the Senate Finance Committee and the Senators from the State of Ohio, and attached hereto you will find a clipping from the Cincinnati Commercial Tribune of May 4 relative to the debate on the floor of the Senate.

The writer was connected with the Roessler & Hasslacher Chemical Co. for five years, severing his connections last November, and is rather familiar with the cyanide situation. As you know, the Roessler & Hasslacher Chemical Co. are selling agents for the German cartel, on cyanide, and it really makes little difference to them, so far as the sale of cyanide is concerned, whether there is a duty or not, since they will continue to practically hold the monopoly in this country. In fact, we understand that for some considerable time now they have been importing their cyanide from Germany and remelting the same at their Perth Amboy, N. J., plant and selling it to the trade as their own sodium cyanide, which they call cyanegg.

As far as citrus fruit growers and miners are concerned—

Here is the character of the propaganda. If Senators will grasp this point, they will see what happened.

As far as citrus fruit growers and miners are concerned, we understand that the company in question is selling their cyanide practically at cost, even at a slight loss, which they make up on the electroplating and casehardening industry, and they do this to fight the competition of the Canadian producers.

There is the way they get the propaganda. They are telling the electroplaters and casehardeners that the reason why they charge them so much for the product is because they have to sell it to the citrus fruit growers and miners at less than cost, and they say to them, "Just let us have a little duty on this proposition and we will be able to sell it to you cheaper." At the very time that they represented that state of facts to the electroplating people, they were selling to the miners at 23 cents a pound a product which was valued at 10 cents a pound when shipped from Germany to this agency. They were selling at 23 cents a pound a product which they then admitted only cost them 14½ cents a pound—that is, the imported product. They admitted they could make 6 cents a pound more by selling the imported stuff than they could by selling their own manufactured article, and did it. Yet they tell the electroplating people and the casehardeners that the reason why they had to charge them so much is that they are selling it to the miner and the fruit grower below cost.

The whole thing is a miserable, greedy, selfish fraud on the face of it. The company was conceived in fraud by the Germans a long time ago. The whole business is underlaid with fraud. It is not only a trust in the United States but it is a trust throughout the world, a combine between the British trust and the German trust. That is all there is to it.

They have made enormous profits, as is shown by the hearings, and has never been denied. Then they come in here and say that unless they get a tariff on this commodity they can not sell it at a profit. It is such a palpable fraud on its face that it is astonishing that Senators who know it is a fraud, who know the circumstances, are willing, for the purpose of helping two or three Senators who have these great trusts located in their States, boldly and deliberately to make a present of so much money to those trusts, and to take that money out of the pockets of the people who have got to buy the commodity.

I do not know whether or not the conditions surrounding this item also surround all of the other items in the chemical schedule. If they do, then all of those items should be placed on the free list. The Republican Members of the Senate will not dare to sustain the Finance Committee in the imposition of this duty.

The Republican members of the committee will have to vote for the duty, because they are pledged to vote for it, but there is no doubt that a majority of the Republican members of the committee were opposed to the imposition of the duty on this item. However, pressure was brought to bear. This concern is one of the great and powerful corporations in the State of New Jersey. There is not any doubt that it has been a very generous and patriotic contributor to the Republican Party in New Jersey. A Republican Senator will run for reelection in New Jersey in the approaching fall campaign, and, if reports may be believed, he will need help and will need it badly. So the majority of the Finance Committee, although they know the situation and understand the wrong which is involved in the proposed tariff duty on cyanide, have compromised with the minority of Republican members of the committee. They have stated, "This concern asks for a duty of 33⅓ per cent, but we only gave them 10 per cent." That is the whole influence which is back of the proposal.

Mr. WALSH of Montana. Let me inquire of the Senator from Nevada if he supposes a similar situation in the State of Pennsylvania induced the Committee on Finance to put manganese on the free list?

Mr. PITTMAN. It is very reasonable to suppose so. This is a year in which those who desire to elect Republican Senators have got to be very generous to those who elect them.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER (Mr. LENROOT in the chair). Does the Senator from Nevada yield to the Senator from Utah?

Mr. PITTMAN. I yield.

Mr. SMOOT. The Senator from Montana should not have stated that the Committee on Finance had put manganese on the free list, but that they had kept it on the free list.

Mr. WALSH of Montana. I meant to state that the committee had taken manganese off the dutiable list, where it was put by the other House, and had put it on the free list.

Mr. SMOOT. Manganese is now on the free list.

Mr. PITTMAN. Cyanide is a product which is used by the farmers, by the prospectors, and by the miners; it is used by people, particularly in the mining industry, who can not pass the duty on to the consumer, because there is a fixed price for their product. Cyanide is not used by the great steel corporations or by other great industrial institutions in Pennsylvania. However, manganese, which they do use, and which is the product of an industry that hardly existed in this country at all before the World War, but which was destroyed during that war for the purpose of meeting war conditions, goes on the free list.

Mr. SMOOT. Mr. President, I wish to say to the Senator from Montana [Mr. WALSH] and also to the Senator from Navada [Mr. PITTMAN] that they will have an opportunity to vote on the question of the imposition of a duty upon manganese before the pending bill shall have been concluded, and we shall then see how they will vote.

Mr. PITTMAN. It is very generous of the Senator from Utah to allow us an opportunity to vote. That is very much more generous than the treatment of the Democratic members of the Finance Committee by the majority members of that committee. The Democratic members of the Committee on Finance never had an opportunity to vote on anything.

Mr. SMOOT. In that action the majority members of the Committee on Finance merely followed the example which had been set in the past when the Democrats were in the majority.

Mr. PITTMAN. I am afraid that it will not do us any good to vote on the question anyway.

I admire the Republican organization on the other side of the Chamber. It is a wonderful thing. It is improving all the time, too. It is in such shape now that it not only controls a Senator's prejudices, his conservatism, or his radicalism, as the case may be, but it also dominates his morals, his social life, and everything else connected with him. I know Senators on the other side of the Chamber who do not agree with their Republican colleagues at all. They are good friends of mine, and I am sorry for them. There is one Senator on the other side of the Chamber who every time he votes, following the leadership of the Senator from Utah [Mr. SMOOT] or the Senator from Massachusetts [Mr. LODGE], nearly has a paralytic stroke, and he comes out and explains to me for an hour why he voted as he did, although I am not a member of his party and have no interest whatever in the matter.

Let me read just a few conclusions from a witness on behalf of the Cyanamid Co. The extract is very brief, but it is pretty good; and the thing which is good about it is that after the brief was filed on behalf of the Cyanamid Co. the Roessler & Hasslacher Chemical Co. had two opportunities to deny it, but they could not do so. The statement to which I refer reads as follows:

"Aero Brand" cyanide is manufactured by the American Cyanamid Co., at Niagara Falls, Ontario.

Per pound of content, "Aero Brand" cyanide is cheaper than the "R. & H."—

That is, the Roessler & Hasslacher Co.—

cyanide manufactured by the Roessler & Hasslacher Chemical Co., at Perth Amboy, N. J.

The cheapness of "Aero Brand" cyanide has saved in 1920 (1) more than $250,000 to the citrus growers of California; (2) more than $100,000 to the American gold industry; (3) more than $125,000 to the American silver industry; and (4) in the years to come competitive cyanide will save many times these sums to these industries, and also to the casehardening industry, the electroplating industry, the Florida citrus industry, the work of disinfection and sanitation of foreign ships arriving in American ports, the extermination of the pink boll weevil, and other activities.

The industries represented employ directly 50,000 people and indirectly many thousands more. The cheapness with which these workers produce their results benefits the whole country.

The Roessler & Hasslacher Chemical Co. demand a tariff of 33⅓ per cent ad valorem on cyanide. This company is the only manufacturer of cyanide in the United States, and what it asks is a monopoly.

The wages paid labor in cyanide production at Niagara Falls, Ontario, are as high and sometimes higher than those paid labor in comparable industries at Niagara Falls, N. Y. Not more than 250 men in the United States are employed in cyanide production.

I will interject at this point that that shows the tremendous profit of this industry, when the labor of 250 men can produce a product which sells for millions upon millions of dollars in the United States.

Cyanide manufacture is a matter of machines and methods. Men play but little part, and by a cut in the price of cyanide thousands gain for every one who loses. The total pay roll of all American cyanide workers is a mere fraction of the saving to American consumers through the use of "Aero Brand" cyanide.

"Aero Brand" cyanide is not inferior to other cyanides. It sells on the basis of actual cyanide content, and on that basis costs less and is just as efficient. There has never been the slightest misrepresentation of "Aero Brand" cyanide by its manufacturers.

The cyanide process of the American Cyanamid Co. is simpler and more modern than that of the Roessler & Hasslacher Chemical Co., and it is for these reasons that it underbids the latter.

The raw materials in "Aero Brand" cyanide are plentiful and come mostly from the United States.

No tariff is needed to protect the Roessler & Hasslacher Chemical Co. against German cyanide, for the German cyanide comes from its parent company, the Scheide-Anstalt. The United States Alien Property Custodian sequestered the stock of the former company because of this relationship, and yet the relationship still continues, for the Roessler & Hasslacher Chemical Co. in 1920 substituted under some of its contracts the German product and acts as agent of the German company.

The findings of the Alien Property Custodian of the United States were

1. That the Roessler & Hasslacher Chemical Co. was the American branch of the great German Scheide-Anstalt.

2. That prior to the war three-fourths of its stock was owned by the German company and its officers.

3. That two-thirds of its Niagara subsidiary, in which metallic sodium is made, was owned by the German-American parent.

4. That its subsidiary at Perth Amboy, in which sodium cyanide is made, was owned entirely by Germans and German-Americans.

5. That just before America entered the war, and in order to avoid the sequestration of the stocks of these companies as the property of alien enemies, a "not genuine" sale was consummated giving majority control to the German representatives in America, and that 47 per cent of the Roessler & Hasslacher Chemical Co. was admittedly still German owned.

And so the Alien Property Custodian took over both the 47 per cent "admittedly German owned" and also "the stock ostensibly transferred" but "in fact still German owned."

This relationship of the Roessler & Hasslacher interests to the German company is not mentioned because Germany was our enemy in the late war, but because of its bearing on the demand by the Roessler & Hasslacher Chemical Co. for a tariff on cyanide, on the ground that the company needs protection against German competition. (P. 58, Tariff Information, 1921, hearings Jan. 6, 1921.)

Under the rate of tariff proposed, practically all cyanide imports would cease and the former odious monopoly of the Roessler & Hasslacher Chemical Co. would reappear and cause the loss of hundreds of thousands of dollars each year to industry in America.

The game which this German company are playing is clear to everyone. If they can secure a tariff on this commodity, they will sell this product—a German product, too—for less than the Cyanamid Co. of Canada can sell it. They will continue to sell that product at lower and lower prices until they run the Cyanamid Co. out of business, and then they will bring the price up again. They simply desire this duty for the purpose of assisting them in crushing the Cyanamid Co. which a year ago came into competition with them. What has been the result of that competition? The testimony shows the result plainly. The German company were asking the miners of this country 24 cents a pound for cyanide.

They could always get any price that they wanted to until this year, and then what happened? The Cyanamid Co. came in and underbid them 4 cents a pound and got the contracts. Now what do they want to do? The Cyanamid Co. got these contracts under free trade. Now they want to place a duty on this material, so that this company that has cut the price

of cyanide 4 cents a pound will have to pay a duty that did not exist at the time it entered into the contract.

Of all the evidence here of the monopoly of this concern, of the monopoly throughout the world of the whole business, of the fact that the company here is simply a subsidiary of the German syndicate, the only argument we hear in favor of this duty is that this German concern is going to run the company here out of business—going to run its own child out of business; going to take its right hand and cut off its left hand; going to place itself in a weaker position than it has ever been. The thing is totally absurd; and the Senator from Utah is driven to the desperate position of being compelled to say: "While this concern in the United States is a robber, and robbed us during the war, I am afraid the German concern will run it out of business."

If there were 8 or 10 manufacturers of cyanide in Germany, then the Senator would have some excuse; but no one knows better than the Senator that there never has been more than one manufacturer of cyanide in Germany; that it is an absolute monopoly in Germany as well as in the United States. He knows that there is no competition with the British concern, because it already has a trade agreement with the German concern, and he knows that the German concern owns the American concern. That ends the whole thing. The record is plain and clear here. There is but one thing to it. The majority of the Republicans on the Finance Committee have been politically intimidated into placing on this article a duty that they themselves did not believe in; that is all.

They know that. They know that this concern has made 900 to 1,000 per cent per annum. The Senators say: "Yes; but they did not make it out of cyanide." Their plant at Niagara Falls, that made 900 per cent per annum, manufactured nothing but cyanide, and it was owned one-third by the British trust and one-third by the German trust and one-third by the German trust subsidiary in the United States. The very reason why they compromised with this matter is that this is a powerful institution in the State of New Jersey and a powerful institution in the State of New York, and there is a Senator from New Jersey who has fought strongly and appealingly for this duty, and something had to be given to him. It has been given to him, but it will never stand. There are enough Senators on the other side who will not vote to perpetuate a monopoly in this country even to elect a Republican Senator from New Jersey.

Mr. SIMMONS. Mr. President, I want to take a little of the time of the Senate this morning to keep the record straight in some particulars.

I have said, and I now repeat, that this bill is not a bill in the interest of the consumers or the legitimate industries of the United States. It is a bill in the interest of profiteering and in the interest of the monopolized industries of the country. The profiteers and the trusts are the beneficiaries of this bill, and they are its chief sponsors.

In discussing this question a few days ago I read to the Senate a letter stating that already the Wool Trust had marked up their goods an average of 10 per cent in anticipation of the passage of this measure. I now find, upon further investigation, that on many of the articles produced by that trust they have marked up their prices as much as 25 per cent; but the Wool Trust people are not the only people who have already increased their prices. The process of marking up and getting ready to mark up prices has gone steadily, if stealthily, along in anticipation of the passage of this bill, which the profiteers evidently believe is clearly a guaranty of present prices in this country of protected products and furnishes the opportunity for maintaining those prices at at least the present high and exorbitant level.

In confirmation of the statement that these protected industries, these industries that are to get ample protection in this bill to guarantee them against foreign competition at present or even higher prices, are getting ready for higher prices, I want to read from the Philadelphia Record. I have not the copy of the Record, but I quote this from another paper which credits it to the Philadelphia Record. It is as follows:

The Philadelphia Record says: "The woolen men, the cotton men, the steel and the aluminum men, every class that is eager for protection are already marking up prices, or awaiting a little further progress with the Fordney-McCumber bill before doing so. The sugar interests are using Congress in their project for a pool that shall suppress competition in sugar, and milk the American people $32,000,000 exclusive of the duties that go to the Government, and in due time the people will find they have got the increased cost of living for which they voted in 1920."

These present evidences of the protected industries' intention to avail themselves of the opportunity which this bill will afford if it becomes a law are everywhere to be found, but they will not reveal themselves to the full extent until the bill passes. Admonished that an election is about to occur, some of them as a matter of precaution will wait until after the election; but as soon as the political restraints are removed we shall see in this Nation a wholesale advancement in the prices of the articles protected in this bill, and the people will have an increase in the cost of living such as they never have had before, such as will weigh upon them much more heavily than the high prices of the cost of living during the war. Then every person was getting high prices for everything he had to sell; but in the conditions of artificially high prices that will grow out of the enactment of this legislation, and which will be foisted upon the people, a large class of our people, possibly more than half of them, will not derive and can not possibly derive any benefit whatever from these duties in the way of enhancement of their daily earnings.

Upon this very line I wish to read into the RECORD an editorial from the New York Tribune. It is short. It is to the point that I am now discussing.

The New York Tribune, I suppose everyone will admit, is one of the oldest and most steadfast Republican and protection organs in the United States. Whenever that great paper turns upon the proposed legislation of the Republication Party with reference to the tariff, you may be very certain that there is something radically and monstrously wrong with the bill.

This Tribune editorial is headed "Tariff rates and housing." The date of it is May 12, 1922. It says:

The appeal of the Lockwood committee for tariff legislation allowing building materials to enter the country on reasonable terms illustrates one of the weaknesses of the tariff-making methods followed in the Fordney and McCumber bills. If domestic prices, often artificially maintained, are taken as a basis to work on excessive protection may easily result.

The very thing I have been saying all during these discussions here, that the basis upon which these rates are fixed is the wholesale selling price of the American product in the American market, as compared with the selling price at the port of entry of the foreign product.

Housing construction, which is a nation-wide need—

Says this great protection organ—

is being held up by overhigh building material costs. Mr. Untermyer says that the price of brick is now from $24 to $25 a thousand, whereas the cost of manufacture is only $11.

Mr. President, it is this $24 or $25, the wholesale selling price of brick which now obtains, to which the foreign price, under the fixing of these rates, is to be brought, and not the $11, which represents the cost of manufacture of the product. We are to substantially guarantee, as far as legislation can do that—and protective legislation can go a long way toward doing it—we are to guarantee, by the method of fixing rates in this bill, that this great combination against which this commission was leveling its inquiry shall be protected from foreign competition up to the extent of the extortionate prices which it has been found to be charging upon this essential material, material out of which we build the houses in which the people live. I proceed:

Whether these figures are accurate or not, building material prices are abnormal enough to check the desired revival of home building. A tariff which would assist this holdup would injure nearly everybody for the benefit of a tiny group of manufacturers who have shown themselves more than able to protect themselves.

Mr. MCCUMBER, in his curious apology on reporting out the Senate tariff bill, said that its rates were high. He ingenuously asked American producers not to take full advantage of them. He appealed to the manufacturer to be self-denying, to accept narrow margins of profit, and to increase production so that the consumer should not feel the weight of increased duties.

The chairman of the Finance Committee has the patriotic citizen's point of view. He believes in protection as an instrument of general benefit. He deplores its use for private benefit. But is it safe to subject the domestic producer and manufacturer to overtemptation? The greedy spirit shown by the building materials industry challenges Mr. MCCUMBER'S touching faith. He preaches altruism. But why write into a tariff bill rates which may be an aid to profiteering on the part of the nonaltruistic?

Just as I said in this Chamber some time ago, Mr. President, the men to whom he is appealing will not be very likely to accept his advice to content themselves with small profits, when this bill is an invitation to them to charge excessive profits.

Mr. President, I have here a letter, printed as an advertisement in the New York Times by a great retail house, the house of James McCutcheon & Co., Fifth Avenue, Thirty-fourth and Thirty-third Streets, New York. It reads:

The Senate committee has reported to the Senate the new tariff bill. This bill would raise the duties on linens from 30 and 40 per cent to 50 and 60 per cent; or, in other words, would almost double them. This will, of course, mean that the prices of these goods will have to be advanced.

By way of illustration, a towel 18 by 32 inches, which now sells at $6 per dozen, would have to sell at $7.25 or $7.50 a dozen under the new tariff. Handkerchiefs, which to-day are selling around $3.85 a dozen, would have to sell for about $4.50 a dozen.

If this change was going to protect the American workingman and American manufacturer, we would have nothing to say. But it does not, for the simple reason that, except for the lower end huck towels and

crashes, there is practically no linen manufactured in the United States. More than 98 per cent of the linen you use comes from abroad.

We have been making strenuous efforts in the last year and a half to reduce the prices of all of our goods and are most distressed at the thought of having to advance them at a time like this. If you agree with us that such a change in the tariff on linens is unwise and that prices should not be forced up, won't you write to your Senators and Representative in Congress and protest against this uncalled-for advance in rates?

As I said in discussing the pongees and silks of China and the habutai silks of Japan, none of which are produced in this country, the high rates of duty levied on them are not for the purpose of aiding any American industry in their manufacture, but they are for the purpose of preventing these cheaper silks, which the common people of the country, persons of moderate means in the United States, must buy from coming in and taking the place of the higher-priced goods which are manufactured in this country. In other words, these pet industries do not want any obstacle in the way of making still further advances in their prices. They do not want any product brought in here which can take the place of their product. They want the entire market to themselves.

Mr. President, scarcely any linens are manufactured in this country, but these linen handkerchiefs which come into this country and these linen towels which come in will serve the same purpose as the goods of some big trust in this country, perhaps the Silk Trust in some instances, perhaps the Cotton Trust in other instances, but they take the place of the goods of certain favored interests, and persons who are engaged in the manufacture of other products than linen are here demanding that a tariff be put on linen in order that the high prices of their own products may be protected, which means that the people of this country shall not be permitted to buy linens, because linens are not produced in this country, and shall be forced to buy at high prices a substitute product which is produced in this country. That is carrying protection to the extreme, I think, and yet that very theory runs all through this bill.

Mr. WALSH of Massachusetts. Mr. President——

The VICE PRESIDENT. Does the Senator from North Carolina yield to the Senator from Massachusetts?

Mr. SIMMONS. I yield.

Mr. WALSH of Massachusetts. Will the Senator permit me, while he is reading clippings, to interrupt him to call attention to an interview by Arthur Balfour in regard to the effect of this tariff bill upon the payment to us of our foreign debts? May I ask the Senator if he has inserted anything in the RECORD to that effect?

Mr. SIMMONS. No; I have not.

Mr. WALSH of Massachusetts. This is very brief, and I would like to read it.

Mr. SIMMONS. If the Senator will pardon me, I shall now discuss something to which I think that would be more pertinent than to the subject I have just been discussing.

Mr. WALSH of Massachusetts. The Senator would prefer that I wait until a later time?

Mr. SIMMONS. I would.

Mr. WALSH of Massachusetts. I thought the Senator was introducing clippings, and that now was the appropriate time to read this one.

Mr. SIMMONS. I do hope that before we get through with the consideration of this bill we shall induce the newspapers of the country—not only the great metropolitan newspapers from which I have been reading, and from which I am going to read more, but the smaller papers throughout the States—to study this bill and understand it; and when we succeed in doing that we shall find the same protests welling up not only from New York and from Chicago and from the other big centers where the big dailies are published, and where they have experts who are examining these tariff schedules and finding out what they mean and exposing them, but also from the small cities and towns and the rural districts, where the editors of the newspapers of smaller circulation, not having the aid of experts, require a bit more time to fully recognize and realize what outrages and iniquities are embraced in the pending bill. I do hope that we may get all the papers of the country, both Democratic and Republican, to study this bill and understand what it means; and when they do that, Mr. President, we shall find that Republican and independent papers all over this country will be joining the Democratic papers, as they are in New York and as they are in Chicago, in denunciation of the unpardonable and indefensible rates in this bill.

Mr. President, with reference to the trusts, I think if Senators will examine and carefully study this bill they will find that it bestows its favors principally and most prodigally upon those industries in this country which are to-day trust controlled, which are to-day operating in violation of the antitrust laws of the United States.

These combinations are outlaws already. By their methods they have succeeded in defeating one of the fundamental public policies of this country, namely, that there shall be free competition, a policy which my good friend from Wisconsin said McKinley argued strongly would be in force under the protection he advocated. Major McKinley never meant that competition should be destroyed in the domestic market. But these trusts have come together in violation of the statute law of the land, in violation of the public policy of the land. They have combined. They control the prices. They stifle competition. They have absolute dominion of the domestic market. There is but one fly in the ointment. The only thing that restrains them from raising their prices to the utmost limit in the exploitation of the American consumer is the possibility of foreign competition. If we destroy foreign competition by tariff duties, then, of course, we shall leave these unlawful combinations without any restraint at all.

Senators, when we, the representatives of the people, we, who are supposed to protect the interests of the people, to protect them in their rights to a competitive market, by our votes here remove by our tariff duties that last competitor with the trusts of this country, do we not by that act become, morally, confederates with the trusts in their conspiracy in restraint of trade and in violations of the laws and of the policies of the land? Is it not a deliberate, premeditated lending of our aid to these unlawful combinations in carrying out and making effectual their conspiracy against the people? These trusts and monopolized industries are the chief beneficiaries of this bill. The newspapers even of New York and other great commercial centers are pointing that out, and they have begun to declare that fact and to denounce the bill as not only not helpful to labor and not helpful to the honest industries of the United States but as fraught with untold danger to American prosperity and to the happiness of the American people.

Mr. President, are we by our legislation here to build up a class of institutions in our country which can, by the domination of prices in trade, disregard all the fundamental laws of supply and demand, and exact from the people all the tribute that their greed may suggest or inspire? If such a system as that shall prevail and shall endure for a sufficient length of time, it can not mean anything but the commercial enslavement of the masses of the people. That conclusion is inescapable.

I wish to read another article from the New York Tribune of April 22, 1922, in which that great Republican newspaper pays its compliments to the bill. I am not reading now from a Democratic paper, not reading from an organ of the importers.

Mr. SMOOT. Oh, yes; it is.

Mr. SIMMONS. The Senator from Utah says it is. The Senator charges, then, in his desperation, that all the Republican newspapers of New York, the great newspapers which have formulated and advanced the thought of Republicanism in this country, are the mere emissaries of the importer. The Senator does not think there is any other interest that has its habitat in New York except the importer. I will say to the Senator that there are great exporters there, handling and exporting the products of American farms, factories, and mines that furnish work and wages for the American workingman, and you are about to destroy their business also, and when you destroy their business you destroy the prosperity of the country. You may, as the junior Senator from Alabama [Mr. HEFLIN] said to you the other day, "Put that in your pipe and smoke it." You have also the great captains of industry, who stand at the head of our great manufacturing industries in this country, located in New York, having their principal offices in New York. It is the greatest commercial center in the world.

The New York Tribune, driven by the sheer folly of this bill for once to remonstrate with you and to condemn a Republican measure, is speaking for the interests of New York and the interests of the whole country in a broad way, as it sees it, and not for the interests of any one group or class. Here is what it said:

[From the New York Tribune, Saturday, April 22, 1922.]

THE VERY WORST TIME.

Senator MCCUMBER dropped into apology when he presented the Finance Committee's revision of the Fordney tariff bill. He pleaded for sympathy and leniency of judgment, in view of the perplexities with which the Senate tariff makers have had to wrestle. In this he differed—for the better—from Mr. FORDNEY, who is never assailed by hesitations or doubts.

The North Dakota Senator said truly:

"Never before have the Finance Committees of Congress had presented to them such a difficult task as that involved in the framing of this bill. We have been often advised, and the advice is well founded, that of all times in our history this is the very worst time to formulate and put into effect a new tariff measure."

Why is this the very worst time to draft and pass a new permanent tariff? The answer is simple. A permanent tariff should respond to

relatively stable conditions in trade and industry both at home and abroad. But everyone knows that world trade conditions are abnormal—almost chaotic—and that the process of postwar readjustment is still far from finished in this country. Foreign exchange values and currencies are deranged. Foreign prices are variable. There are no fixed standards of production elsewhere to which American fixed standards of production may be intelligently related by a tariff differential.

A permanent tariff now is a leap in the dark—a rash discounting of the unknowable. The advice given to the Congress committees to hold off from permanent tariff making for the present was rudimentary common sense. The country knows as well as Mr. MCCUMBER does that this is the worst possible time for wholesale tariff revision. How is it to be persuaded that there is any real advantage in doing now a thing which it is most difficult to do well, even when the time is exceptionally favorable?

There was such an exceptionally favorable time in 1909. But the Payne-Aldrich bill was a ghastly political failure.

This bill apes the Payne-Aldrich law to some extent, but after it climbs the wall to the top of the Payne-Aldrich rates, then it undertakes to go to further and dizzier heights.

The editorial continues:

The country turned the Republicans out of power in the House the following year, and the House remained Democratic until 1919. Congress passed an emergency tariff bill last year to protect the industries disturbed by abnormal postwar foreign competition. That was the suitable remedy. Foreign competition is still an indeterminate, evasive factor. Why counter against it at this juncture by a long-term, full schedule tariff?

That is exactly what I have contended, Mr. President. We have a measure here for determining the amount of protection which should be accorded to an industry, and that measure is changing every day. We have a yardstick that has changed tremendously since it was employed. In August, 1921, the Reynolds Commission ascertained as best they could the prices of foreign imports coming to the United States, and they advised the Finance Committee as to prices as of last August. My information is that the committee acted upon those August, 1921, prices. My further information, obtained from the tariff experts who assisted the committee in the making of those rates, and I name them—Mr. Fix and Mr. Davis—is that since that time, and before those rates were fixed by the Finance Committee, those prices had advanced enormously, and yet the difference between those prices and the domestic wholesale prices was the yardstick by which the rates of duty are fixed in this bill.

Since that time what has happened with reference to our domestic prices? In some directions possibly they have gone down, but the tendency recently and the tendency to-day is to lift them higher and higher. The foreign prices have been lifted higher and the domestic prices have been lifted higher. The producers of the protected articles in this country saw that the foreign prices had advanced from the time when the rate was fixed, and that therefore under that theory of measurement they could with impunity advance their prices to the extent that the foreigner had advanced his prices.

These are some of the questions which confront a committee undertaking to measure tariff rates in this way. I submit to the common sense of this body and of the country that to frame a tariff upon this rule, with these constant changes going on in the prices here and prices abroad, prices which form the basis of the measurement, is not only a wrong to the people of the United States but is an outrage, and there is no theory under the sun, in logic or in morals or in law, by which a tariff based upon any such principle can be justified at a time like this.

Mr. President, I have here another editorial which I desire to read. I am reading these editorials, and I am going to continue to read them, because I want the newspapers of the country to begin to study this question. I want the people to begin to study this question. I have said this morning to some of the correspondents of the newspapers in my State that I hope the North Carolina dailies, which reach the people, will not take simply the Associated Press dispatches which are going out from Washington. I am not now criticizing the Associated Press. Of course, their dispatches have to be very brief and, of course, they have to avoid the appearance of taking sides in politics. The Associated Press report of what is happening here and of the information disclosed in the debates here is so meager that it furnishes no real information to the people of the United States.

What we want and all we want—and that is the sole purpose of the discussion which we are having now and the sole purpose for which I am reading these editorials from newspapers—is to try to stimulate a study on behalf of the people by the newspaper men and publishers of the country of all parties, my party as well as the Republican Party, and also the independent press, to the end that the people may be informed before we act, and therefore have an opportunity to advise their representatives what they think about this bill, whether of good or of evil. I do not want this bill to pass without the people knowing in advance just what is in it, without their having an opportunity to protest to their representatives in Congress, if they think their representatives are about to do a thing of which they disapprove. I am just as certain as that I live this minute that if the newspapers of the country, of all parties, could but understand the bill they would advise the people about it; and if they advise them in time, so that the people might know how their interest is jeopardized and menaced, there will be such an outpouring of indignation and wrath against the measure that the majority will not dare to enact it into law.

This editorial from the New York Tribune has the heading "McCumber's profiteers' tariff," and reads as follows:

To Senator MCCUMBER the opposition of the New York newspapers to his profiteers' tariff bill—Republican, Democratic, independent, and financial alike—admits of the simplest possible explanation. "The policy of the newspapers of New York," he says, "is dictated by the counting room and the big advertisers, especially the importers." Mayor Hylan himself could hardly have done it better.

In former days all protests against extortionate tariff schedules were presumably bought and paid for by the Cobden Club. Now the evil influence is exerted by American importers. In this connection it is worth while recording the fact that the importers have already begun to debauch the exporters.

While the Senator from North Dakota was disposing of the "loud-mouthed denunciations" of his tariff the president of the United States Steel Corporation was appealing to the National Foreign Trade Convention in Philadelphia for "greater prosperity through greater foreign trade." To make a bad matter worse the president of the National Bank of Commerce of New York warned the delegates not to be deceived by the argument that foreign trade was unimportant because it represented only 10 per cent or 15 per cent of the total trade of the country. "The difference between normal business conditions and depression is no more than 15 or 20 per cent in volume," he said.

Manufacturers know this, but how should a Senator be expected to recognize such sordid business considerations in framing a tariff bill? The thing to do with a tariff is to take care of all the responsible contributors to the campaign fund, and then placate the particular classes of voters who might make trouble for the framers of the bill. This is what Mr. FORDNEY and his committee did in the House, and it is what Mr. MCCUMBER and his committee did in the Senate. In consequence the country is threatened with the highest tariff it has ever known, regardless of the fact that the United States has become a creditor Nation and its prosperity is dependent on foreign commerce.

In order that all the evils may be adequately distributed the Fordneys and the McCumbers have produced schedules which will provide no needed protection for any legitimate industry, but which will play into the hands of speculators up and down the line and boost the cost of living everywhere.

If Senators will read this bill carefully and study it, they will find that it is written in the interest of speculators and exploiters of the people; in the interest of that class of manufacturers who, having got their grip upon the throat of the American market and stifled competition in the domestic market, want to make secure their monopoly and make it possible for them to continue the profiteering processes which they began during the World War and which they have not ceased since the war.

By the time they get through with it 90 per cent of the American people will be penalized to benefit 10 per cent, and the benefits even to the 10 per cent are dubious.

If the American consumer understood what this Fordney-McCumber tariff bill was letting him in for, no Congress would ever have the courage to enact it. The bill, if it passes, will slide through only because the country does not grasp its meaning.

That is the danger against which I wish to guard; and when I undertake to provide against it by insisting upon full and free discussion in the open here upon the floor of the Senate of the United States so that the true facts may be made plain to the American people I am charged with filibustering. I am making a filibuster, the majority leaders say, because I do not sit down meekly and quietly and permit Senators on the other side of the Chamber without reasonable discussion to pass these items one after another, forging one fetter after another upon the feet and hands of the American people.

The McCumbers in Congress are manipulating the tariff just as they are manipulating the bonus, in order to carry the next Congress. They have forgotten all about 1924. As neither bill will be fully in operation by the November elections of this year, they assume that the opposition will not have had time to organize, while all the beneficiaries will be duly grateful at the polls.

Mr. MCCUMBER. Mr. President, does the Senator agree with the expression in that editorial about the bonus?

Mr. SIMMONS. Oh, I am in favor of the bonus; but I do not want the bonus bill to be rushed through Congress without due discussion, and if a sales-tax provision shall be attached to it for the purpose of raising the money to pay it I shall fight such a tax to the end. I shall never consent to that method of raising the money.

Mr. MCCUMBER. Let me suggest to the Senator that the same interests that are opposing the "bonus," as they call it, are also furthering the enormous profits that are being made by the great importing houses.

Mr. SIMMONS. I suppose the Senator refers to the Secretary of the Treasury?

Mr. SMOOT. The Secretary of the Treasury is not importing goods.

Mr. SIMMONS. But he belongs to the class that we have been talking about, whether he is importing or exporting.

Mr. McCUMBER. I referred to the class from whose utterances the Senator has just been reading.

Mr. KING. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. ASHURST in the chair). Does the Senator from North Carolina yield to the Senator from Utah?

Mr. SIMMONS. I yield.

Mr. KING. I think in the interest of accuracy it should be stated that one of the strongest proponents of the bonus is Mr. Hearst, with his newspapers, and he is also advocating very earnestly the sales tax.

Mr. SIMMONS. The little statement about the bonus in the editorial from which I have read amounts to nothing in this discussion. Senators upon the other side are merely seizing upon that to divert attention from the sore subject under discussion. I am not to be diverted at this time by any such issue.

Mr. KING. The Senator knows that our friends upon the other side are always glad to divert attention from the pending bill.

Mr. SIMMONS. I understand that, and they have reason for such action.

Mr. McCUMBER. The point which I desired to make was that all such stuff is good doctrine so long as it agrees with the ideas of the Senator, but the moment it touches upon another subject in a manner contrary to the views of the Senator it ceases to be good doctrine.

Mr. SIMMONS. The Senator knows very well that when I read an editorial from a Republican paper or Democratic paper I do not vouch for everything it says; but the Senator from North Dakota and his party can not ignore the fact that these great organs of the Republican Party as well as of the Democratic Party located in the centers of commerce and trade and business in the United States are denouncing the Republican tariff bill as an iniquitous measure, and one of them went so far the other day as to pronounce it thievery. I do not agree with that designation, and I said so at the time.

Mr. McCUMBER. Let me suggest to the Senator that never since the great department stores became thoroughly established in this country have any of these great metropolitan papers ever been really Republican upon the tariff issue.

Mr. SIMMONS. The Senator from North Dakota made an argument the other day that, because Marshall Field & Co. happened to be located in Chicago and conducts a great store in that city, a great Republican newspaper there, which is accepted as being orthodox upon partisan subjects and which heretofore has been regarded as absolutely orthodox upon the tariff, should not be given credence. The Senator said that the reason that newspaper is to-day denouncing this tariff bill is that it is under the influence of that department store. The suggestion is too petty, Mr. President, it is too small to rise to the dignity of an answer or even a pretense of an answer to the indictment which these newspapers are making against this bill.

I read now from the New York Times an editorial headed, "Revolt against the tariff." The editorial is published in the issue of May 12, 1922.

Mr. SMOOT. That is also a Republican paper, is it?

Mr. SIMMONS. I do not think it is. It is a Democratic paper of much independence and sound sense, but may I say to the Senator that a Democratic paper can tell the truth about the tariff as well as can a Republican paper.

Mr. SMOOT. Sometimes.

Mr. SIMMONS. Then, Republican papers can also tell the truth about it sometimes. The Senator will admit that?

Mr. SMOOT. Yes.

Mr. SIMMONS. The newspaper from which I read a few moments ago, the New York Tribune, said that the revolt is not confined to the newspapers of one party. The editorial from the New York Times reads:

REVOLT AGAINST THE TARIFF.

It is little to say that the Senate tariff bill is not popular with the country. Many of its expected defenders are suspiciously lukewarm in approving it, while a large number of newspapers hitherto stanchly protectionist are openly in revolt against it.

Mr. President, can there be any question about that statement? Although the statement is made by a Democratic newspaper, can there be any question about the fact that in this country there are a "large number of newspapers hitherto stanchly protectionist," and to-day as strong in their Republicanism as they ever were, which are in revolt against this bill? Is it not true, as stated in this editorial, that a large number of newspapers which are to-day strong advocates of a tariff properly levied upon just and reasonable basis and imposing rates that are fair to the people as well as to industries—newspapers which are now advocating that sort of a tariff—are now denouncing the pending bill just as are the New York Tribune and the Chicago Tribune, from both of which I have read? Let me proceed:

They declare—

That is, these Republican papers that have hitherto stanchly stood for whatever protection the Republican Party prepared and offered—

They declare it at the best untimely, and at the worst a result of the demands of selfish interests. Senator SIMMONS on Wednesday read into the RECORD extracts from some of these erstwhile high-tariff newspapers, which are now attacking the Senate tariff bill. Included were the Chicago Tribune, that great Republican champion of the Middle West; the Journal of Commerce, of New York, and others.

The chairman of the Finance Committee, Senator McCUMBER, had a short and easy reply. He asserted that the department stores through their advertising control the policies of "metropolitan papers," which, he affirmed, had become "the mouthpieces of the department stores in favor of free trade." The innocent North Dakota Senator was blissfully unaware that at least one of the newspapers mentioned carries almost no advertisements of the kind he specifies. Moreover, the other Republican papers which are now urging the Senate to drop its tariff bill altogether, or radically to cut down its high protective duties, have had the department store advertising for many years. This did not prevent them from advocating a protective tariff when they thought it was good for the country. The present bill they consider out of date and harmful, and are frank to say so. In neither instance is there any evidence that they were in the slightest degree moved by department store advertising, or any other kind. Senator McCUMBER is as weak in his facts as he is in his logic.

There are other ominous forms of revolt against the Senate tariff bill. It is every day being assailed indirectly by men whose sympathies have always been Republican in politics, but who are now deeply concerned about the question of trade revival. To a man they agree that this depends largely upon the restoration of our foreign commerce. There lies the main hope of stimulus for American industry and agriculture. This is clearly the position taken by the president of the United States Steel Corporation. And in Philadelphia, on Wednesday, at the meeting of the National Foreign Trade Convention, bankers, business men, and manufacturers were of one mind in arguing the necessity of a return to "normal world trade conditions." As was declared by the president of the National Bank of Commerce, of New York, "without the foreign trade the domestic consumption would shrink and national prosperity wane."

It is true that none of these financial and business authorities alluded directly to the pending tariff bill. They did not need to do so. The whole spirit of what they said was openly in conflict with the spirit and tendency of the bill. The latter proceeds on a policy of national self-sufficiency and exclusiveness. It goes squarely against the manifest commercial and industrial needs of the country at the present time. That is the reason why so many Republican newspapers and influential members of the party are saying what they do in condemnation of a bill based upon theories which, whatever may have been said for them in years past, are as out of date to-day as is the Ptolemaic astronomy.

Mr. President, I have not up to this time spent one minute in the general discussion of this bill or in the discussion of any item in it that was intended by me to delay action. Such a thing has not been considered by me. On the contrary, I have advised Senators on this side that we ought to make our position clear and make the meaning of this bill clear to the people of the country, and as soon as we shall have done that, if these gentlemen persist, let them pass the bill, although we disapprove it and will register our disapproval by our votes against the schedules and the items and the bill itself when it shall be put upon its final passage. But, Mr. President, I can not too often repeat—for the fact must be driven home—that this is a measure in the interest of the profiteer and in the interest of monopoly in this country. It ignores the rights of the people, and is not framed upon any principle that could be or is demanded by legitimate industry or even orthodox protectionists in this country. I will make this prediction: If this bill shall be passed as it was written, it will lead the business of this country into a debacle from which it will take us a quarter of a century to rescue it, and the direful consequences of which to the American people can not be measured in words or in figures.

Mr. KING. Mr. President, may I inquire of the Senator from North Dakota whether it is his purpose now to return to the alcohol schedule? Before doing so I want to make just a few observations upon a matter somewhat cognate to the tariff question, if he will pardon me for a few minutes.

Mr. McCUMBER. Mr. President, I simply want to say, in answer to the question of the Senator, that it is my intention to ask for a vote whenever we reach it, and when we get through with the editorials, which, of course, will be presented daily and read into the RECORD, which are being furnished by a propaganda. When that matter is completed, I shall try to get a vote each day on one or two of these items.

Mr. KING. Let me say to my good friend that he ought not to be disturbed about a little propaganda consisting of a few editorials from Republican newspapers. I think he should be delighted to find such unmistakable evidences of clarity of judgment and of superior knowledge upon the part of Republican editorial writers and Republican newspapers. So many of our Republican newspapers have been in the dark upon so many

questions for so long a time that I confess to experiencing some pleasure to perceive occasionally an adumbration of light breaking through their colossal ignorance upon economic questions, so that they are discussing this question in an intelligent and in a rational way. I am sure the Senator from North Dakota ought not to try to stem the fountain of light and of inspiration coming from Republican newspapers.

Speaking of propaganda, though, if the Senator goes out into the lobbies here he will find the propagandists of the protected industries, consisting of lobbyists and their representatives, in large numbers. They grace the galleries from day to day, and look down upon us with approval or disapproval, according to the sentiments which we echo. I suppose it is their right. They are profoundly interested in these schedules. They are here demanding their pound of flesh—not of their own flesh, but the pound of flesh to be carved in strips from the bodies of the American people. These lobbyists are here now interviewing and hounding Senators and making the consideration of this bill more difficult for honest Republican Senators and honest Democratic Senators, as all are and try to be, because they are interrupted by these importunities, which do not facilitate the disposition of these questions upon rational and upon proper lines.

Mr. KING addressed the Senate on affairs in Haiti. His remarks appear elsewhere in to-day's proceedings. On concluding he said:

I understand the first amendment offered by the Senator from North Dakota is to strike out the word "proof," in line 17, page 3.

Mr. McCUMBER. It is not the first, but it is one of the amendments. I stated that it is the only change the committee, after further consideration, deemed it advisable to make.

Mr. KING. I understand the effect of the amendment is to reduce the rate fixed in the bill.

Mr. McCUMBER. The reason why I make the statement is that it was a mistake. It was intended to be so much per gallon and not per proof gallon, just the same is in the preceding line, where we fix a rate on the gallon and not on the proof gallon.

Mr. KING. The Senator knows there is a difference between gallon and proof gallon.

Mr. McCUMBER. Certainly; and that is the reason why I am moving to strike out the word "proof."

Mr. KING. I ask whether "proof gallon," according to the Senator's interpretation, is stronger than "gallon"?

Mr. McCUMBER. A proof gallon may be 50 per cent pure and still be a proof gallon.

Mr. KING. It must be 50 per cent pure or more.

Mr. McCUMBER. It may be 90 per cent, and the duty would be the same, although it was as high as 90 per cent; therefore it would be a reduction.

Mr. KING. Of course, striking out the word "proof" does affect the rate upon that particular item.

Mr. McCUMBER. Certainly; it reduces it.

Mr. KING. I have no objection to that amendment and am willing that pro forma it may be adopted.

The PRESIDING OFFICER (Mr. SHORTRIDGE in the chair). The pending amendment is to strike out the two words found in line 14, page 3, "isopropyl and" and to insert the words appearing in italics.

Mr. KING. We could adopt that pro forma. I have no objection.

The PRESIDING OFFICER. If there is no objection, the amendment is agreed to.

The READING CLERK. The next amendment is on page 3, line 15, following the words "fusel oil," to strike out "6" and insert "2," so that it will read:

Fusel oil, 2 cents per pound.

Mr. KING. I ask whether the preceding amendment, striking out "isopropyl and" and inserting the other words, has been acted on?

The PRESIDING OFFICER. The Chair so stated.

Mr. KING. I beg the Chair's pardon; I did not so understand. I understood that we inserted the words "and propyl," but I did not assent to inserting the words "3 cents per pound."

The PRESIDING OFFICER. The amendment was to strike out and insert, and the Chair understood that there was no objection to the amendment, and so stated.

Mr. KING. I think perhaps the Chair is right, but the amendment went further than I anticipated. I have no objection to striking out the words "isopropyl and" and inserting the words "and propyl." If I may segregate the entire amendment, then we can consider "3 cents per pound" as a separate amendment.

Mr. McCUMBER. It seems to me that what the Senator wants to do is to amend the Senate committee amendment by striking out the numeral "3" and inserting some other figure?

Mr. KING. Exactly.

Mr. McCUMBER. That is all that is necessary to accomplish the Senator's purpose.

Mr. KING. That is what I intended to do. I move to strike out "3 cents," in line 15, page 3, and insert in lieu thereof "one-fourth of 1 cent," so that it will read:

Amyl, butyl, and propyl, one-fourth of 1 cent per pound.

The PRESIDING OFFICER. Without objection, the vote on agreeing to the committee amendment will be reconsidered, and it will be open to amendment. The amendment to the amendment will be stated.

The READING CLERK. Amend the committee amendment, in line 15, page 3, by striking out "3 cents" and inserting in lieu thereof "one-fourth of 1 cent," so as to read:

Amyl, butyl, and propyl, one-fourth of 1 cent per pound.

Mr. KING. Mr. President, I am not able quite to understand the significance of the amendment which has been offered by the Senator from North Dakota. I wish to discuss briefly this entire paragraph 4, which deals with the alcohols, amyl, butyl, and propyl, fusel oil, methyl, or wood alcohol, commonly known now as methanol alcohol, and ethyl alcohol.

The most objectionable feature in this paragraph is found in the action of the Senate committee or of the House committee, for that matter, in putting this high tax upon ethyl alcohol. When we dispose of the present amendment and when we reach that item, I shall offer an amendment with respect to it.

Coming to the first item, amyl alcohol, I find that in the Underwood law the rate was one-fourth of 1 cent per pound, and the Payne-Aldrich law carried the same rate. The House bill carries a rate of 6 cents a pound, but upon the American valuation plan has a specific rate. The Senate committee bill lowers, as I concede, the rate fixed in the House bill to 3 cents per pound. I think the committee amendment is wise, but I think the rate is still entirely too high.

The survey shows that this product is manufactured from fusel oil and is of some importance in our industries. Fusel oil, which is the basis of the amyl alcohol, is obtained as a by-product in the fermentation processes chiefly of distilled liquors and industrial alcohol. The output as a by-product of the distilleries in 1918 was more than 800,000 pounds, and that supplied a very considerable proportion of the domestic requirements for this oil. The imports from 1910 to 1914, inclusive, averaged about 5,300,000 pounds annually, 75 per cent coming from Russia, the United Kingdom, and Germany in about equal proportions. The imports declined to about 1,600,000 pounds in 1917, accounted for by the cessation of imports from Russia. In 1918 Canada furnished a small quantity of this product.

The imports as shown by the Tariff Commission are as follows: 1918, 2,000,000 pounds plus; 1919, 3,000,000 pounds plus; 1920, 3,000,000 pounds plus; 1921, first nine months, 713,000 pounds.

The unit value in 1921—that is, the foreign export price—was 22 cents per pound. The domestic price on April 24 of this year of fusel oil was $1.45 to $1.50 per gallon, and amyl alcohol, or refined fusel oil, was $2.10 to $2.25 per gallon.

This product is made by the United States Industrial Chemical Co., which is a subsidiary of the acknowledged trust which we denominate the United States Industrial Alcohol Co. Now, we are increasing this rate and imposing this high duty in the interest of this trust. We are making a gift of hundreds of thousands of dollars annually to a trust, and, of course, the American people will be compelled to pay for it.

That this product is important in our economic or our industrial life is evidenced from a consideration of the purposes for which it is used. In its use it is converted into amyl esters, which are used as flavors and for perfume materials and as a solvent in the arts. Why there should be a tariff upon this I must leave to my friends upon the other side of the Chamber to explain. Probably it is for revenue. If it is for revenue, then I concede that they may obtain some little revenue from the duty. But it is obvious that the purpose of it is, as I read the facts in connection with this item, to meet the demands of the corporation to which I referred.

Mr. Warner, representing the Commercial Solvents Corporation, testified in regard to this item, and he wanted 20 cents per pound as a tariff rate. Think of it—20 cents per pound!

Mr. SMOOT. Mr. President, I want to say to my colleague that the Industrial Alcohol Co. wanted it free. They import more than they make, and they are on the opposite side of the question.

Mr. KING. They want fusel oil free.

Mr. SMOOT. They want fusel oil and also amyl alcohol free.

Mr. KING. They want fusel oil free?

Mr. SMOOT. Yes; they want both of them free. Of course, they are about the same.

Mr. KING. One is made from the other. Fusel oil is the base of the alcohol product.

Mr. SMOOT. But they want both free.

Mr. KING. The Senator may be right in regard to that. My understanding is that that organization wanted fusel oil free, but as to any of the products which might be manufactured from fusel oil either they or their subsidiary organizations desired a different policy.

Mr. SMOOT. The Industrial Alcohol Co. very much prefer to have both of them free. They do not want any duty on them at all.

Mr. KING. My understanding was that they wanted fusel oil free, but that it was not contemplated that they were to enter into the production of any of the esters of which fusel oil forms a base, and that therefore they wanted a tariff upon what might be denominated the intermediate or finished product.

Mr. WATSON of Indiana. Mr. President——

Mr. KING. I yield to my friend from Indiana.

Mr. WATSON of Indiana. I have not any desire to induce the Senator to speak any longer than he otherwise will, but I may say in passing that amyl alcohol is nothing in the world but refined fusel oil.

Mr. KING. I know. It passes through a sort of distillation process.

Mr. WATSON of Indiana. Yes. It is not an ester.

Mr. KING. It is an ester in the sense that it is a combination with alcohol.

Mr. WATSON of Indiana. It is an alcohol; it is not an ester.

Mr. KING. The Senator does not contend that it is fusel oil, but that it is a product of distillation?

Mr. WATSON of Indiana. It is refined fusel oil, and the Industrial Alcohol Co. want both free, of course, because they import far more than they make. That is why they want it free.

Mr. KING. Will the Senator explain why there should be this large tariff upon it, and why it should be increased from one-fourth cent per pound to 3 cents per pound?

Mr. WATSON of Indiana. In the first place, this is a small tariff duty, not a large one.

Mr. KING. But it is larger than one-quarter of a cent a pound. It is an increase above the Underwood-Simmons rate by more than 1,000 per cent.

Mr. WATSON of Indiana. I will answer the Senator's question, though I do not intend to be drawn into a discussion, for I want the Senator from Utah to occupy the floor wholly and alone. We manufacture in this country what is called "butyl alcohol"; fusel oil displaces butyl alcohol and is a by-product. Sometimes it comes in very large quantities and sometimes in very small quantities.

Mr. KING. Fusel oil is a product of our distilleries. It is a by-product, as the Senator from Indiana has stated.

Mr. WATSON of Indiana. Yes; and because of its displacement value as against butyl oil a tariff is levied. Butyl oil is made at one or two manufacturing establishments in the United States. During the World War there came a great need of this product and the British and American Governments united and erected a factory at which butyl oil is produced. That factory purchased very large quantities of corn, because butyl alcohol is made from corn. Fusel oil directly competes with it. Fusel oil, I repeat, is a by-product, and it is its displacement value that caused the committee to put the tariff on this article. We think it is entirely proper to do so. The duty is also imposed for revenue purposes.

Mr. KING. As I understand, the Senator from Indiana wants to put this tariff on the article to protect the Commercial Solvents Corporation, of Terre Haute, Ind.

Mr. WATSON of Indiana. Yes; because at present they are the only concern which produces it, though I understand that some other establishment in West Virginia is about to enter upon its production.

Mr. KING. The Senator does not mean that there was no production of this article in the United States anterior to the war, does he?

Mr. WATSON of Indiana. There was not the slightest production in the United States.

Mr. KING. But fusel oil was produced here?

Mr. WATSON of Indiana. But fusel oil was a by-product.

Mr. KING. And the production of fusel oil by distillation was rather a simple process.

Mr. WATSON of Indiana. Of course, fusel-oil production will almost cease in the United States on account of the enforcement of prohibition. That is all there is to the proposition.

Mr. KING. As I understand the Senator, it is desired to put a tariff on amyl alcohol, because it competes with butyl alcohol, and the corporation to which I have referred, the Chemical Solvents Corporation, of the Senator's State, is the manufacturer of amyl alcohol.

Mr. WATSON of Indiana. The Senator from Utah is entirely right.

Mr. KING. Mr. President, the Payne-Aldrich law provided a rate of one-fourth of 1 cent a pound upon both amyl and butyl alcohol. This bill proposes to increase the rate from a quarter of a cent to 3 cents, which would be equivalent to an increase of 1,000 or more per cent.

Mr. WATSON of Indiana. The Senator from Utah is in error in saying that the Payne-Aldrich law imposed a tariff on butyl alcohol. Except to chemists butyl alcohol then was not known at all. It never entered into commerce and none of it was ever made in the United States until its manufacture was introduced here because of war conditions. It is what we call in the Finance Committee a "war baby."

Mr. KING. It was recognized in the Payne-Aldrich law as a product of fusel oil, and carried a duty of a quarter of a cent a pound, as I have indicated; and the duty was the same under the Underwood-Simmons law. If it is simply a product of fusel oil by distillation, I do not quite see how the Senator from Indiana can say that I was in error in declaring that the tariff duty was a quarter of a cent a pound, because it was classified in the basket clause, as I recall, of the Payne-Aldrich law, or at least under the heading of fusel oil, at one-quarter of a cent a pound.

Mr. WATSON of Indiana. Of course, it would have gone under the basket clause if there had been any imported, but there was not a pound imported. However, I am not going to pursue the matter further. The Senator from Utah may make all the assertions he pleases.

Mr. KING. In the act of 1909 fusel oil, or amylic alcohol, bore a duty of one-fourth of 1 cent per pound. It was denominated amylic alcohol.

Mr. WATSON of Indiana. But that is not butyl alcohol.

Mr. KING. I am speaking of amylic alcohol.

Mr. WATSON of Indiana. And I was speaking about butyl alcohol.

Mr. KING. I am speaking about the two interchangeably.

Mr. WATSON of Indiana. But they are not the same.

Mr. KING. I know that they differ. Butyl came in as fusel oil under that paragraph because of its relationship to fusel oil, so that it would be classed under the heading "fusel oil" and would come in under the tariff at one-quarter of a cent a pound. I am sure the Senator from Indiana can not controvert the statement that both in the Payne-Aldrich law and the Underwood law it was classified as fusel oil and subject to a tariff of one-quarter of a cent per pound. It is now proposed to increase the duty from a quarter of a cent a pound to 3 cents per pound, or more than 1,000 per cent.

Mr. President, I have made a motion, and I am willing to take a vote upon the motion which I have submitted.

The PRESIDING OFFICER. The question is on the motion of the Senator from Utah to amend the committee amendment on page 3, line 15, by striking out "3 cents" and inserting in lieu thereof "one-fourth of 1 cent."

Mr. KING. I ask for the yeas and nays on the amendment.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. SHIELDS (when his name was called). I have a pair with the Senator from Maine [Mr. HALE], which I transfer to the Senator from Nevada [Mr. PITTMAN] and vote "yea."

Mr. STANLEY (when his name was called). I have a general pair with the junior Senator from Kentucky [Mr. ERNST], which I transfer to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. WATSON of Georgia (when his name was called). I have a general pair with the Senator from Arizona [Mr. CAMERON]. I transfer that pair to the junior Senator from Alabama [Mr. HEFLIN] and vote "yea."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Pennsylvania [Mr. CROW] and vote "nay."

The roll call was concluded.

Mr. COLT. I transfer my general pair with the junior Senator from Florida [Mr. TRAMMELL] to the junior Senator from Washington [Mr. POINDEXTER] and vote "nay."

Mr. OVERMAN. I inquire whether the Senator from Wyoming [Mr. WARREN] has voted?

The PRESIDING OFFICER. The Senator from Wyoming has not voted.

Mr. OVERMAN. I have a general pair with that Senator, and, not being able to secure a transfer, withhold my vote.

Mr. UNDERWOOD (after having voted in the affirmative). The senior Senator from Massachusetts [Mr. LODGE] is out of the city to-day. I have a general pair with him, which I transfer to the senior Senator from Ohio [Mr. POMERENE] and allow my vote to stand.

Mr. CURTIS. I desire to announce the absence of the Senator from Wyoming [Mr. WARREN] on account of a death in his family. I ask that this announcement may stand for the day.

I also desire to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. MCKELLAR]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

Mr. JONES of New Mexico (after having voted in the affirmative). I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED] and allow my vote to stand. I ask that this announcement may stand for the day.

Mr. WALSH of Montana. I transfer my pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

Mr. DIAL. I transfer my pair with the Senator from Colorado [Mr. PHIPPS] to the Senator from Georgia [Mr. HARRIS] and vote "yea."

Mr. DILLINGHAM. I have a general pair with the junior Senator from Virginia [Mr. GLASS]. In his absence I transfer that pair to the junior Senator from Pennsylvania [Mr. PEPPER] and vote "nay."

Mr. MCKINLEY (after having voted in the negative). I transfer my pair with the senior Senator from Arkansas [Mr. CARAWAY] to the junior Senator from Oregon [Mr. STANFIELD] and allow my vote to stand.

The result was announced—yeas 19, nays 41, as follows:

YEAS—19.

Ashurst	Jones, N. Mex.	Sheppard	Underwood
Dial	King	Shields	Walsh, Mass.
Fletcher	La Follette	Simmons	Walsh, Mont.
Gerry	Myers	Stanley	Watson, Ga.
Harrison	Robinson	Swanson	

NAYS—41.

Ball	Gooding	McNary	Smoot
Borah	Johnson	Moses	Spencer
Brandegee	Jones, Wash.	Nelson	Sutherland
Bursum	Kellogg	Newberry	Townsend
Calder	Kendrick	Nicholson	Wadsworth
Capper	Keyes	Norbeck	Watson, Ind.
Colt	Ladd	Norris	Weller
Curtis	Lenroot	Oddie	Willis
Dillingham	McCumber	Page	
Elkins	McKinley	Rawson	
France	McLean	Shortridge	

NOT VOTING—36.

Broussard	Fernald	McCormick	Pomerene
Cameron	Frelinghuysen	McKellar	Ransdell
Caraway	Glass	New	Reed
Crow	Hale	Overman	Smith
Culberson	Harreld	Owen	Stanfield
Cummins	Harris	Pepper	Sterling
du Pont	Heflin	Phipps	Trammell
Edge	Hitchcock	Pittman	Warren
Ernst	Lodge	Poindexter	Williams

So Mr. KING's amendment to the amendment reported by the committee was rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

Mr. KING. Mr. President, before the committee amendment is agreed to I want to call the attention of the Senate to the fact that by this vote they have indicated that they were willing to give an increase of 1,100 per cent instead of four or five hundred per cent, as I stated a moment ago, in the duty upon butyl alcohol and amyl alcohol—1,100 per cent!

Mr. WALSH of Massachusetts. Increase over what?

Mr. KING. Increase over the rates of the Payne-Aldrich bill and the Underwood bill.

Mr. MCCUMBER. Mr. President——

Mr. KING. I yield.

Mr. MCCUMBER. The Senator has made that statement so often, and has been corrected so often, that it seems to me he ought not to reiterate it. There was no duty whatever upon butyl alcohol. It did not come in. Therefore it bore no duty; and the Senator will not find that it came in either under any basket clause or under any other clause and bore any duty whatever. The Senator can just as well say that we have given a million per cent increase as he can say that we have given a thousand per cent increase or 1 per cent increase. We have simply given one that amounts to just about 15 per cent ad valorem duty now.

Mr. KING. I do not agree with the Senator there; but may I inquire of the Senator under what clause it was found in the Payne-Aldrich law?

Mr. MCCUMBER. It was not found under any clause in the Payne-Aldrich law. None was coming in, and it was not in a basket clause, and I can not find that any came in, and the experts of the Tariff Commission say that none came in.

Mr. UNDERWOOD. Mr. President, the Senator from North Dakota made a statement that surprised me about the Payne-Aldrich bill, as I was a member of the minority of the committee that wrote the bill. Everything that was not named in the free list fell into a basket clause in the Payne-Aldrich bill.

Mr. MCCUMBER. Yes; but none of this product came in under that law.

Mr. UNDERWOOD. Still, it would have been covered if it had come in.

Mr. MCCUMBER. If there was any such thing at that time; but I do not think there was.

Mr. UNDERWOOD. There was some basket clause that covered it.

Mr. MCCUMBER. But if none came in, it could not come in under a basket clause.

Mr. UNDERWOOD. It may not have come through the customhouse, but it was subject to a tax of some kind if it was not on the free list.

Mr. SMOOT. I will say to the Senator that when it did come in under the present law, the Underwood tariff law, it was held by the Treasury Department to be fusel oil, and came in as fusel oil.

Mr. KING. Exactly.

Mr. UNDERWOOD. That was simply because that was the nearest commodity to which it could be likened.

Mr. SMOOT. It is only refined fusel oil.

Mr. UNDERWOOD. To be sure; but that fixes the duty on it.

Mr. SMOOT. But, Mr. President, the tariff bills that have been enacted into law in the past have never put a protective duty on fusel oil or the products of fusel oil. It never has had a protective tariff. It never was intended to have. When the Payne-Aldrich bill passed it was given simply a revenue duty, and when the Underwood bill passed it was given a revenue duty at the same identical rate; but, of course, since the war this butyl alcohol has developed. Before the war, as the Tariff Commission reports, butyl alcohol was of scientific interest only and was not used for commercial purposes anywhere, but now it is used everywhere. It is produced in this country; it is produced in foreign countries; it came about through the necessities of the war, and, of course, it is an entirely different proposition now from what it was in 1909, when the Payne-Aldrich bill was passed, or in 1913, when the Underwood tariff bill was passed.

Mr. KING. Mr. President, I submit that the Senator from North Dakota was inaccurate in his statement, and, while not desiring to be unfair, was manifestly unfair in challenging my statement. The senior Senator from Utah [Mr. SMOOT] agrees, as I understood him, with the position which I took some time ago, that butyl alcohol came in either under a basket clause, or, if it came in, it came in as fusel oil, and would be subject to the tax imposed upon fusel oil.

Mr. MCCUMBER. But my statement was that it did not come in, and therefore it could not come in under a basket clause if it did not come in at all. In that I am correct.

Mr. KING. Mr. President, as the Senator from Alabama [Mr. UNDERWOOD] has just stated, all of those products were subject to an ad valorem duty, a specific duty, or they came in under some ad valorem basket clause. This came in, as I stated in the beginning, under the fusel-oil clause, if it came in at all, and if any had been tendered it would have been subject to the tax imposed upon fusel oil, to wit, one-fourth of a cent per pound.

Mr. MCCUMBER. If it came in, of course; but it did not.

Mr. KING. I stated that it was subject to that tax, and I repeat it; and now you have raised it from a quarter of a cent a pound to 3 cents per pound, or 1,100 per cent over the rate of the Payne-Aldrich law. You can not disguise it, and no amount of camouflage will hide the fact that you have increased the tariff upon this article 1,100 per cent as you have increased the tax upon amyl alcohol 1,100 per cent, and it is done because the Commercial Solvents Corporation, which has a plant in Indiana, demands it. The representative of the Commercial Solvents

Corporation, Mr. Warner, came before the committee, as you will find by reference to his testimony upon page 835, and asked for a tariff upon butyl alcohol.

Mr. SMOOT. Mr. President, I think my colleague ought to be perfectly fair in this matter. I think I stated the matter just exactly as it was. The company that he refers to now asked for 20 cents.

Mr. KING. That is what I read into the record.

Mr. SMOOT. The Senator knows that this item never was in commerce heretofore, but now it is in commerce and is worth about 21 cents a pound. All the world has fusel oil. We imported hundreds of millions of pounds of fusel oil, and it had a duty of virtually a quarter of a cent a pound for revenue purposes. Now a new product comes into the world, not known at all when the Payne-Aldrich bill was passed. Fusel oil could be purchased anywhere in the world as cheaply as it can be here, and now that prohibition is in force we will have to import all that we use. Fusel oil is the kick that was left in liquor. In other words, it is the poison. Now it is not taken out, and we will import all that we use, I suppose, outside of that that is made for simply medicinal purposes and legitimately made. That is the only thing from which we can get our fusel oil.

As to this item that we are talking about, the Senator is absolutely correct as to the increase of 1,100 per cent over the Payne-Aldrich bill, but the rate in that bill was not a protective rate.

Butyl alcohol was not known in the commerce of the world at the time. Now it is an item that takes the place of fusel oil, and it is manufactured not only here but in other parts of the world, and it is necessary to have about 14½ per cent duty to equalize the difference in the cost. We have to pay the freight rates upon all the fusel oil that we get in here, and under this bill we will pay 2 cents per pound if the Senate amendment is adopted. The House bill provides a duty of 6 cents per pound on fusel oil. The Senate committee cut it 200 per cent, down to 2 cents; and of course this rate means on to-day's price about 14½ per cent ad valorem duty upon a product that was not known and not made in the world, outside of a laboratory, in 1909, when the Payne-Aldrich bill passed, or 1913, when the Underwood bill passed; and they both carried a duty of a quarter of a cent for revenue purposes only.

Mr. KING. Mr. President, I am glad that my colleague has corroborated the statement I made that these two items, butyl and amyl alcohol, carry in the Senate bill a tariff duty of 1,100 per cent. I congratulate the Senate committee——

Mr. SMOOT. No; the Senator must not say that. They do not carry a rate of duty of 1,100 per cent.

Mr. KING. No; an increase of 1,100 per cent.

Mr. SMOOT. Oh, well, the Senator did not say that.

Mr. KING. The Senator alluded to my statement. I was connecting one with the other. I stated that the rate in this bill was an increase of 1,100 per cent over the rate of the Payne-Aldrich bill. That statement was challenged by the chairman of the committee, and my distinguished colleague corroborated what I said, and I was just thanking him and congratulating him upon reaching the right conclusion, in contradistinction to the position occupied by the chairman of the committee, and I was going to go further and congratulate the Senate committee upon their regard for the people.

The House, as the senior Senator from Utah states, levied a duty 2,300 per cent above the duty carried by the Payne-Aldrich tariff bill. That was too much for even the distinguished Senator from North Dakota [Mr. MCCUMBER] and the distinguished Senator from Indiana [Mr. WATSON], and generously and magnanimously they reduced it to 1,100 per cent above the rate of the Payne-Aldrich tariff bill. My colleague stated quite accurately that anterior to the war butyl alcohol was not known generally in commercial activities. Amyl alcohol was known. Amyl alcohol was of importance in the industrial world, and there is carried in this bill a duty 1,100 per cent above the duty carried by the Payne-Aldrich tariff bill.

Of course the Republicans will support it. The purpose is to maintain that industry, which seems to have taken refuge under the protecting wing of the distinguished Senator from Indiana. If you can put 1,100 per cent additional duty over the Payne-Aldrich bill upon butyl alcohol, you must have a high tariff rate upon ethyl alcohol and also upon fusel oil, I suppose, because we come next to that, with a rate of 2 cents per pound on it, although my distinguished friend, the senior Senator from Utah, has just admitted that we can not produce that here because of our devotion to prohibition and we will have to import it. If we have to import it, the only reason for a duty would be for revenue purposes only.

Mr. SMOOT. Not necessarily.

Mr. KING. What is the other reason?

Mr. SMOOT. There is no need of giving a protection on butyl alcohol and letting fusel oil come in free.

Mr. KING. I am speaking of fusel oil now.

Mr. SMOOT. That would be perfectly useless.

Mr. KING. That is what I am coming to.

Mr. SMOOT. That is exactly what the Senator from Indiana said in his answer to the Senator.

Mr. WATSON of Indiana. Exactly.

Mr. SMOOT. In the first place, they are interchangeable commodities. If you allow the fusel oil to come in free, it would not make any difference if you had a duty of a hundred dollars a pound on butyl alcohol. It would make no difference at all. Fusel oil would come here, but no butyl alcohol would ever come into the country. The Senator knows that in making a tariff bill there ought to be some relative duties imposed, or one or the other of the duties imposed would be perfectly useless.

Mr. KING. The Senator is right, and that is just what we are doing. We are going to take care of butyl alcohol because that is made in the State of Indiana, and in order to protect it and to make it profitable we raise the Payne-Aldrich rates 1,100 per cent, and then, in order to prevent any possible foreign competition, we are going to put a tariff rate of 2 cents a pound upon fusel oil, so that there can not be any competition with that industry which we are establishing in Indiana. There are some gains in Indiana. We lose a distinguished Republican, Senator NEW, whom we love, but we are going to take care of butyl alcohol even though it carry 1,100 per cent above the Payne-Aldrich Act and we will put a tax upon fusel oil of 2 cents, though we have to import it and there is no competition here, in order to protect Indiana.

Mr. President, I have said all I care to. Let us protect Indiana though the heavens fall.

Mr. SMOOT. We will protect the Treasury, too, and get more money into it.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

Mr. KING. Is that the committee amendment dealing with fusel oil?

The VICE PRESIDENT. It is on the committee amendment.

Mr. KING. Let it be stated for the record, so that when the vote is taken it will be indicated.

The VICE PRESIDENT. The Secretary will state the amendment.

The ASSISTANT SECRETARY. On page 3, line 14, the committee proposes to strike out "isopropyl, and" and to insert in lieu thereof the words "and propyl, 3 cents per pound," and a semicolon.

The amendment was agreed to.

The next amendment of the committee was, on page 3, line 15, after the words "fusel oil" and the comma, to strike out "6" and insert in lieu thereof "2," so as to read:

Fusel oil, 2 cents per pound.

Mr. KING. Mr. President, when we reach the free list, I shall move to transfer the item of fusel oil to the free list, but in the meantime I move to amend the committee amendment by striking out "2 cents" and inserting "one-half cent," so that it will read:

Fusel oil, one-half cent per pound.

On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement as before with regard to my pair and its transfer, I vote "nay."

Mr. MCKELLAR (when his name was called). I have a general pair with the senior Senator from Indiana [Mr. NEW], which I transfer to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as to my pair and its transfer as heretofore, I vote "nay."

The roll call was concluded.

Mr. MCKINLEY. Making the same announcement as before, I vote "nay."

Mr. DILLINGHAM. Making the same announcement as to my pair and its transfer as on the last vote, I vote "nay."

Mr. ELKINS. I have a general pair with the junior Senator from Mississippi [Mr. HARRISON], which I transfer to the junior Senator from Delaware [Mr. DU PONT], and vote "nay."

Mr. WALSH of Montana. I transfer my pair with the senior Senator from New Jersey [Mr. FRELINGHUYSEN] to the senior Senator from Nevada [Mr. PITTMAN] and vote "yea."

Mr. WATSON of Georgia. I transfer my pair with the junior Senator from Arizona [Mr. CAMERON] to the senior Senator from Arizona [Mr. ASHURST] and vote "yea."

Mr. DIAL. I have a general pair with the senior Senator from Colorado [Mr. PHIPPS]. I transfer that pair to the senior Senator from Ohio [Mr. POMERENE] and vote "yea."

Mr. ROBINSON (after having voted in the affirmative). I have a general pair with the Senator from West Virginia [Mr. SUTHERLAND]. I have just been informed that that Senator has not voted. I therefore withdraw my vote.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH];

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS];

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY]; and

The Senator from Massachusetts [Mr. LODGE] with the Senator from Alabama [Mr. UNDERWOOD].

The result was announced—yeas 17, nays 37—as follows:

YEAS—17.

Dial	Hitchcock	Myers	Walsh, Mont.
Fletcher	Jones, N. Mex.	Sheppard	Watson, Ga.
Gerry	King	Simmons	
Harris	La Follette	Swanson	
Heflin	McKellar	Walsh, Mass.	

NAYS—37.

Ball	Gooding	McLean	Smoot
Borah	Harreld	McNary	Spencer
Brandegee	Johnson	Moses	Townsend
Calder	Jones, Wash.	Nelson	Wadsworth
Capper	Kellogg	Newberry	Watson, Ind.
Colt	Keyes	Nicholson	Weller
Curtis	Ladd	Norbeck	Willis
Dillingham	Lenroot	Oddie	
Elkins	McCumber	Page	
France	McKinley	Shortridge	

NOT VOTING—42.

Ashurst	Fernald	Owen	Smith
Broussard	Frelinghuysen	Pepper	Stanfield
Bursum	Glass	Phipps	Stanley
Cameron	Hale	Pittman	Sterling
Caraway	Harrison	Poindexter	Sutherland
Crow	Kendrick	Pomerene	Trammell
Culberson	Lodge	Ransdell	Underwood
Cummins	McCormick	Rawson	Warren
du Pont	New	Reed	Williams
Edge	Norris	Robinson	
Ernst	Overman	Shields	

So Mr. KING's amendment to the committee amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the committee was on page 3, line 16, after the words "methyl or wood (or methanol)," to strike out "15" and insert in lieu thereof "10," so as to read:

Methyl or wood (or methanol), 10 cents per gallon.

Mr. KING. Mr. President, I feel so much solicitude for the poor, struggling trusts of the United States with respect to this item that I am tempted to join in the action of the Senate committee. But first let us see who are interested in this item. This morning I examined Moody's Manual, page 663, and I find the name of the National Wood Chemical Association, which comprises substantially 69 firms or corporations who seem to be profoundly interested in this particular item.

Among those who are directly interested are the Cleveland Cliffs Iron Co., a large corporation, and the Wood Products Co., which is owned by the Republic Distilling Co., which is a subsidiary of the United States Industrial Alcohol Co., and has a capital of $30,000,000, the common stock $24,000,000, and the preferred stock $6,000,000. Keep in mind the fact that the Wood Products Co. is owned by the Republic Distilling Co., and the Republic Distilling Co. is a subsidiary of the United States Industrial Alcohol Co.

All of these interlocking companies manifest themselves in this item as other interlocking trusts and combinations and corporations are interested in other items found in the tariff bill. Very seldom do we find the people interested, very seldom do we find an individual interested. We find some huge corporation, some trust, some combination backing these—I will not say infamous schedules, because the Senator from North Dakota seems to object to that term—these blessed schedules.

Next is the General Chemical Co., which is a part of the great Allied Chemical Corporation, which has a capital stock of approximately $300,000,000, and which has put its tentacles out and absorbed a large number of other independent corporations. So we find, next to the Du Pont Co., the largest chemical corporation in the United States, and perhaps the second largest in the world, unless it is the Carbide Trust, is interested here in this particular product, according to all that I can learn.

Mr. SHORTRIDGE. Mr. President——

Mr. KING. I yield to the Senator from California.

Mr. SHORTRIDGE. May I ask the Senator a question? All of the companies he is naming are American companies, are they not?

Mr. KING. I think so.

Mr. SHORTRIDGE. They are not Swiss companies or German companies or English companies?

Mr. KING. I think not.

Mr. SHORTRIDGE. They are all subject to the laws of our country, are they not?

Mr. KING. They are. I am not sure what the Senator means by that. Let us pause for a moment. "They are all subject to the laws of our country." The Standard Oil Trust is supposed to be subject to the laws of our country, but within the past one or two days it has increased the price of gasoline more than 1 cent per gallon. It is subject to the laws of our country. The Steel Trust is subject to the laws of our country, but it has gathered into its capacious hand practically the entire output of the steel products of the United States.

The Carbide Trust is subject to the laws of our country, let me say to the distinguished Senator from California, and it has a capital of $300,000,000. The Federal Trade Commission instituted an investigation more than a year and a half ago in regard to its pernicious and odious activities, and the former administration and the Department of Justice, as I am advised, made an investigation. The evidence conclusively established that it is a trust, and before we conclude the debate I shall convince Senators who are willing to accept the truth that it is a trust and is profoundly interested in the item of carbide which we have in the pending bill.

I suggest to the Senator these are all American corporations They are all American trusts. They and others in the United States would come within the category of predatory interests of which a former great Republican President spoke. I suppose the inference the Senator wished to convey was that if they are American corporations they were immune from prosecution if they defied the people and preyed upon them. If they are foreign corporations, then we prosecute them. That, of course, is the only inference that can be drawn from the remarks of the distinguished Senator from California.

Mr. SHORTRIDGE. Upon the contrary——

Mr. KING. We will prosecute the foreigner, but we will let our domestic corporations reign regnant and trample upon the interests of the people and write tariff bills with such schedules as their greed and their avarice may demand.

Mr. SHORTRIDGE. The Senator from Utah is so profound that I am sure he will be able to advise us just how he would proceed against the German cartel which has control of the dye industry in Germany. I can in my poor way see how the laws of this country could be made to apply to and be enforced against any American domestic monopoly or trust, so called, but I do not perceive how we could reach out to Switzerland or to Germany or to England and control the forming of monopolies there. Perhaps, however, we can get that information from Utah.

Mr. KING. I can assure the distinguished Senator from California that he can get a great deal of information from my State.

Mr. SHORTRIDGE. From the senior Senator or the junior Senator from Utah?

Mr. KING. From both. I pay tribute to my friend the distinguished senior Senator from Utah [Mr. SMOOT] upon the complex questions which are presented in this bill. I only regret the Senator from California does not know as much about it as the senior Senator from Utah.

Mr. SHORTRIDGE. Will the Senator indulge me this thought? The Senator from Utah has repeatedly, again and yet again, spoken about trusts, conveying the idea that a big company or a big corporation is a trust. The Senator is a lawyer and knows that corporations may or may not form a trust, or that they may combine so as to be violative of the law. But why say that each and every company is a "trust," attaching to that word an offensive or a criminal meaning? The Senator will be, I think, more helpful to the discussion if he will define what he means by the word "trust" when in the course of his argument he accuses various companies of being trusts.

I asked the question not to engage in controversy merely, but, recurring to the main question, I did ask the Senator how he expected us to control the foreign corporations. Of course we can control domestic corporations. They are subject to the law, and when they violate the law they should be prosecuted and punished. So I again ask the Senator to give us a definition of the word "trust" as he uses it in the course of his discussion.

Mr. KING. Mr. President, there will be no controversy upon the floor of the Senate or elsewhere between the distinguished junior Senator from California and the junior Senator from Utah if the Senator from Utah has his way. I do not like controversies.

When we come to discuss an amendment to the Sherman antitrust law or to the Clayton Act, to both of which I have given some little consideration—and may I say parenthetically I have a bill pending before the Senator's committee which in my opinion strengthens the Sherman antitrust law and more effectually clarifies its definition of what a trust is—when we come to the consideration of the Sherman antitrust law and the Clayton law and how to amend them and make them more potential and put stronger teeth into them, if I may be permitted the expression, I shall be very glad to discuss with the Senator, and I am sure we will nearly agree as to what is a trust, how to define it, and what limitation should be placed upon the power of corporations to acquire and to hold and to operate any business activities in the United States.

I use the word "trust" generally in the sense, may I say to the Senator, of a corporation that is controlling in the particular industry with which it is identified, either directly and alone or indirectly and connected with other organizations and corporations engaged in the same industry. Take the Standard Oil. I denominate that a trust. It was dissolved by the Supreme Court of the United States into its constituent parts, and yet we know now that if we touch one part we touch the other corporations. They are so bound together by a cord stronger than an umbilical cord that if we touch one we touch them all. They constitute a trust, and there are others in the United States.

I am not opposed to big business. If the Senator had done me the courtesy and the honor to listen to one or two of the speeches which I have made here in regard to business, he would have discovered that I have uniformly said that I had no objection to big business. I have stated repeatedly that in our industrial development we produce large industrial organizations, and I called attention only the other day to the fact that many of these large corporations may produce economies in their operations which warrant, for the common good, their coming together. Yet there is a stage beyond which those large corporations may not, in my opinion, efficiently operate, as was so conclusively shown by Mr. Justice Brandeis in an able argument which he presented before he went upon the Supreme Bench.

I am speaking of organizations or groups of organizations engaged in the same enterprise, having the same purpose in view, and so collaborating as that they do constitute a trust; that is, they dominate and control the industry, they fix the prices, they stifle, if they please, competition, or they permit, if they please, competition.

The Senator has adverted to foreign corporations. When we come to discuss the dye monopoly or the dye industry we may have occasion to talk about the German cartel and foreign corporations. The United States may deal with them, I have no doubt, of course in a different way than it would deal with a domestic corporation.

But to return—and the Senator will pardon me if I do not spend further time in a discussion of that question, because it is rather far afield from the matter before us—I had referred to the Du Pont Co., which is interested in this item. The Du Pont Co. has an enormous capital invested in the production of chemicals, dyes, powders, and a multitude of things. I shall show in a few minutes, when we come to the item of pyroxylin, that the huge Du Pont Co. is chiefly interested in that and is asking for a very high tariff upon that product.

The other companies are the Graeselli Chemical Co. and the Sherwin-Williams Co. The Republic Distilling Co., which owns all of these companies which I have named, owns them outright.

I wanted to call attention to the number of these corporations and to the fact that they were large going concerns, and that at least some of them have been engaged in business in the United States for many years, though some may have been more recent in their origin and have been absorbed by other concerns.

Now it is proposed to place a duty on wood alcohol or methanol of 10 cents per gallon. I congratulate the Senate Committee on Finance on reducing the rate from the rate fixed by the other House.

There may be reasons, Mr. President, for the imposition of this rate of duty. If so, I shall be very glad to receive them; but I want to call attention briefly to some information supplied by the Tariff Commission in order that we may learn the facts and determine whether or not there are sufficient reasons to warrant the imposition of the proposed duty:

Wood alcohol or methanol is one of the primary products of the hardwood distillation industry.

May I say here, Mr. President, that we have not too much hardwood in the United States? I wish we had more. I regret that we have not adopted a more scientific forestry system, both nationally and in the States, for the development of our forests, for if we do not pay more attention to our forests in a few years we may be in a condition something like existing in China. We need more timber in our mountains and hills and valleys.

Mr. SMOOT. Mr. President, I wish to say to my colleague that wood alcohol involves an economic question, because it is manufactured in this country out of the waste products of the mills, and it is about the only thing for which those waste products can be used. So, whatever wood alcohol may be made in this country is virtually that much gain commercially and economically.

Mr. KING. But unfortunately there is a disposition to convert some of our hardwoods into commercial uses before their maturity, to the disadvantage of our forests and ultimately to the disadvantage of the country.

The commercial grades vary from 82 per cent to pure methyl alcohol, acetone being the chief impurity. The largest uses of wood alcohol are in the manufacture of formaldehyde and of dimethylaniline, an important intermediate for coal-tar dyes, both uses requiring pure methanol. Next in importance is its use as a solvent in manufacturing pyroxylin plastics.

And we shall discuss them a little later and see how important they are to the people.

It has many other uses as a solvent and is used for denaturing grain alcohol.

Production: The distillation of wood produces a raw liquor containing acetic acid and alcohol; the acid is neutralized with lime and the alcohol distilled from the solution, and then purified by redistillation. The output of crude wood alcohol in 1909 and 1914 was slightly in excess of 9,000,000 gallons with a marketed output in 1914 of 7,197,000 gallons, valued at $1,605,900. The marketed production of refined wood alcohol in 1914 was 6,235,113 gallons, valued at $2,709,369. Production increased during the war because of the demands by the dye industry and a larger production of formaldehyde. Preliminary figures for 1919 indicate a marketed output practically equal to that of 1914; the value in 1919, however, was about three and one-half times that in 1914. Michigan, Pennsylvania, and New York have been the principal producers of wood-distillation products. During the war large plants were erected in the southern Appalachian Mountains.

Imports in 1914 and since the war have been less than 1 per cent of domestic production.

Mr. President, the imposition of this duty may be justified as a revenue provision. If the only reason for it is revenue, I concede support may be given to a reasonable tax upon this commodity.

Mr. HITCHCOCK. I should like to ask the Senator from Utah how we can possibly derive any revenue from the imposition of a duty if there are practically no imports?

Mr. KING. I was going to leave it to Senators on the other side of the aisle to explain that.

Mr. HITCHCOCK. Am I correct in assuming that this commodity is now on the free list?

Mr. KING. Yes.

Mr. HITCHCOCK. I should like to have some Senator explain what possible reason there is for putting on the dutiable list this article, which is now upon the free list, when there are practically no imports?

Mr. KING. Mr. President, I said that if it were done for revenue purposes it might be justified.

Mr. HITCHCOCK. But what justification can there be for imposing a tariff duty so that the local manufacturer may increase his price when he appears to have been doing a satisfactory business with the commodity on the free list and has held the market?

Mr. KING. Of course, no revenue will be derived from the imposition of the duty, if we are to judge the future by the past; so I am at a loss to determine the justification for it.

Exports of wood alcohol in 1909 were 11.8 per cent of domestic production and 16.6 per cent in 1914. Prior to the war, exports were about 1,500,000 gallons, chiefly to Germany, the United Kingdom, and the Netherlands.

Apparently Germany is not to be the specter that is to affright us with respect to this item.

Between 1914 and 1918 they decreased somewhat, due to the blockade of Germany. Later statistics for calendar year 1918 follows: Quantity (gallons), 2,624,312; value, $2,035,950.

Our exports have decreased. During the first nine months of 1921 we only exported 308,287 gallons.

In postwar years exports were chiefly to England, Switzerland, Japan, and the Netherlands.

There is no tariff upon this commodity imposed by the Underwood law. The Payne-Aldrich law, in paragraph 480, carried a duty of 20 per cent ad valorem. The House bill imposed a duty of 15 cents a gallon, as I have said, and the Senate committee proposes to reduce that to 10 cents a pound.

Mr. President, I can not understand the reason for this rate. We imported in 1921 only 1,030 gallons, and I presume that small quantity came from Canada or some contiguous country, and the importation was perhaps in the nature more or less of an accident.

Mr. President, unless some reason can be assigned by the committee I shall move to transfer this commodity to the free list, but in the meantime I shall move to reduce the tax from 10 cents a gallon to 1 cent a gallon.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Utah to the amendment reported by the committee, which the Secretary will state.

The ASSISTANT SECRETARY. On page 3, line 16, after the words "or methanol," it is proposed to strike out "10 cents" and in lieu thereof to insert "1 cent."

Mr. KING. I ask for the yeas and nays on the amendment.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. MCKELLAR (when his name was called). Making the same announcement as heretofore with regard to my pair and its transfer, I vote "yea."

Mr. UNDERWOOD (when his name was called). The senior Senator from Massachusetts [Mr. LODGE] is absent from the city to-day, and I have a general pair with him. I transfer that pair to the senior Senator from Ohio [Mr. POMERENE] and will vote. I vote "yea."

Mr. WALSH of Montana (when his name was called). I transfer my general pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] to the Senator from Nevada [Mr. PITTMAN] and will vote. I vote "yea."

Mr. WATSON of Georgia (when his name was called). Making the same transfer of my pair as before, I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. OVERMAN. I have a general pair with the senior Senator from Wyoming [Mr. WARREN]. I transfer that pair to the junior Senator from Rhode Island [Mr. GERRY] and will vote. I vote "yea."

Mr. COLT. I have a general pair with the junior Senator from Florida [Mr. TRAMMELL]. I transfer that pair to the junior Senator from Washington [Mr. POINDEXTER], and will vote. I vote "nay."

Mr. DILLINGHAM. Making the same announcement as before, I vote "nay."

Mr. ELKINS. Making the same announcement as before, I vote "nay."

Mr. DIAL. I have a pair with the Senator from Colorado [Mr. PHIPPS]. I am unable to get a transfer, and therefore withhold my vote.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from Kentucky [Mr. ERNST] with the Senator from Kentucky [Mr. STANLEY];

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS];

The Senator from Illinois [Mr. MCKINLEY] with the Senator from Arkansas [Mr. CARAWAY];

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. MCKELLAR]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

The result was announced—yeas 17, nays 37, as follows:

YEAS—17.

Fletcher	King	Sheppard	Walsh, Mont.
Harris	McKellar	Simmons	Watson, Ga.
Heflin	Myers	Swanson	
Hitchcock	Overman	Underwood	
Jones, N. Mex.	Robinson	Walsh, Mass.	

NAYS—37.

Ball	Capper	Elkins	Kellogg
Borah	Colt	France	Kendrick
Brandegee	Cummins	Gooding	Keyes
Bursum	Curtis	Johnson	Ladd
Calder	Dillingham	Jones, Wash.	Lenroot
McCormick	Nelson	Spencer	Weller
McCumber	Newberry	Sutherland	Willis
McLean	Page	Townsend	
McNary	Shortridge	Wadsworth	
Moses	Smoot	Watson, Ind.	

NOT VOTING—42.

Ashurst	Frelinghuysen	Norbeck	Reed
Broussard	Gerry	Norris	Shields
Cameron	Glass	Oddie	Smith
Caraway	Hale	Owen	Stanfield
Crow	Harreld	Pepper	Stanley
Culberson	Harrison	Phipps	Sterling
Dial	La Follette	Pittman	Trammell
du Pont	Lodge	Poindexter	Warren
Edge	McKinley	Pomerene	Williams
Ernst	New	Ransdell	
Fernald	Nicholson	Rawson	

So Mr. KING's amendment to the amendment of the committee was rejected.

Mr. HITCHCOCK. Mr. President, I should like to ask any one of the 37 Senators who voted against this amendment to attempt to explain to the Senate why he insists on putting a protective tariff on an article of which there are no importations.

It seems to me amazing that apparently Senators will vote here deliberately to promote trusts. Here is an article of which the United States is by all odds the greatest manufacturer. Here is an article of which there are no importations, practically speaking. Here is an article that we export to other countries. Here is an article that is on the free list, and has been on the free list for many years; and yet, in spite of being on the free list, no importations come from another country. To put it on the dutiable list, as is now proposed by the Senate, and charge a 10 per cent duty, can not possibly yield any revenue. All it can do is to give a license to the American manufacturers to unite and raise the price to the American consumer.

I think it is amazing that in a great bill of this sort no advocate of these schedules will even take the floor to defend them. Is the Republican Party without any defense? Is it a fact that Senators here have deliberately banded together to stand by each other's schedules without stating to the country why they cast these votes?

I challenge any Senator to deny the fact that a tax of 10 per cent on wood alcohol, as is now proposed, can have any other possible effect than to erect a barrier against any possible importation in order to permit the existing manufacturers in this country to combine and raise the price to the American consumers. No answer can be made to that assertion. If this article has been on the free list since 1913 and no imports have come into the country during that time, nobody can explain why it is necessary now to put on a tariff for protective purposes, and no Senator can explain how any revenue for the benefit of the Government can be derived by a tariff of 10 per cent; and yet Senators sit here and vote for it in silence, just as the members of a city council vote for a gas franchise after a majority has been secured for it, and leave the opposition, in the interest of the people, to do the discussing.

I can not understand how a party dare impose an outrage of this sort upon the country without even attempting to explain it or apologize for it.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On page 3, line 17, it is proposed to strike out "15" and insert "10," so that if amended it will read:

Ethyl for nonbeverage purposes only, 10 cents per proof gallon.

Mr. MCCUMBER. Mr. President, I preferred to have a vote while there was an opportunity of having a vote on this matter rather than to discuss it just at that time.

It is true that very little wood alcohol is now being imported. The growth of the industry in Canada, as I am informed, is very rapid, and a large industry is being built up in that country. It may startle some of the Senators to know that the Canadian duty on wood alcohol coming from the United States to Canada is $3 on an imperial gallon, which means $2.40 on the American gallon. In other words, if we export a gallon of wood alcohol to Canada we pay $2.40. If Canada desires to export a gallon of wood alcohol to the United States she can export it for 10 cents. There is the difference in the matter of protection. I have no doubt but that the time is near at hand when the Canadian output, growing as it now is, I am informed, will be such that they will be able to put their wood alcohol in the United States and sell it in competition with the

American wood alcohol. They certainly have a pretty good leeway.

Mr. President, I want to make just one little statement with reference to the attitude of some of these metropolitan papers whose editorials are being read into the RECORD every day. I expect that they will continue during the entire discussion of this bill. I expect that Senators will be enabled to delay the bill for many weeks just by reading those articles. I call attention to the fact that we opened our session at 11 o'clock this morning. It is now 20 minutes to 5. We have been on an amendment for 5 hours and 40 minutes and we have just succeeded in passing over five lines of this bill.

That the time is taken in the discussion of other matters, everyone fully understands. Senators on the other side disclaim any purpose whatever to delay the consideration of this bill, and they speak earnestly of their desire to facilitate its progress. They remind me of the poem of Kipling's bear, as they look at us and speak to us like a man in the attitude of prayer, professing their innocence of any intention to filibuster.

One of the most able speakers in the United States to-day is my good friend the junior Senator from Utah [Mr. KING]. Even though he speaks eloquently of general theories of government, and although he may understand thoroughly the Haitian question and speak of San Domingo with a great deal of learning, I am unable to connect up any of those arguments with butyl alcohol, the subject that was under consideration. I know the ability of the junior Senator from Utah. I know that there is no Senator who can present an objection to a bill more succinctly and clearly than can the junior Senator from Utah, and I pay him the compliment of saying that he could present in five minutes anything that he has ever said on any one of these subjects in an hour. He has the ability to do it, and if he so desired he could do it, and make his points as clearly as he is making them to-day.

I have listened to the criticisms of some of these New York papers. It is said that they are Republican papers. It is said that they believe in the principles of protection. They say that this is a monstrous bill. That does not mean anything. What we want to know is whether or not we have laid a duty that is more than reasonable as a protective duty.

I assume that those papers supported the candidacy of both Senators from New York, both of them believe in protection. I think those Senators, one of whom is a member of the Committee on Finance, are just as honest, just as sincere, as the editor of any one of these papers, who I do say, and say candidly, represent the views of the importers.

If these papers think that this bill is unjust in any particular, then let them point it out, but not by calling it names. Let them take one of their industries in the State of New York, the glove industry, for instance, of Gloversville, of Johnstown, and of half a dozen more of those cities in the northern part of New York. Let them show to their Senators and to the country that the duty we have placed upon gloves is more than necessary to protect the glove industry of the State of New York.

If it is more than necessary, then let them be honest and straightforward, and present to us what they believe it costs to produce those gloves in the State of New York, and what it costs to produce them in a foreign country and lay them down in the city of New York. Let them point out wherein the dufy is too heavy, and if they say that we can not produce them cheaply enough in this country, and that they are paying too high wages in Gloversville, then let them say what the wages should be. Let them be honest and say, "We want to cut down the laborer's wages in the manufacture of gloves in New York." If they think that the manufacturers' profits are too high, let them so state. Let them present the matter to us in such a form that we can with pencil and paper figure out whether or not we have made any duty so high that it will amount to an embargo or afford more than reasonable protection. We can assure them that if they will establish that to the satisfaction of the Finance Committee, the committee will be more than glad to revise its duty upon any schedule. But it is the facts that we want and not the mere charges against the bill that it is monstrous.

I believe that we want to pay the American laborer reasonable wages and at the same time not produce an article that must be sold at so high a price that the American public can not purchase it. We are pledged to the policy of protection. If these papers do not believe in protection, let them come out and say so honestly. If they do believe in it, and think that we have made a duty too high, let them find out what it costs to manufacture it in the United States, and give the manufacturer an honest hearing, as the committee gave him, and give the importer an honest hearing, as the committee gave him, and then inform us wherein we have made any error. If it can be established that we have done so, we will be more than glad, I repeat, to correct the error.

Ah, Mr. President, we know what is back of this fusillade against this tariff bill. I exhibited a watch here the other day, gold-filled, 10-jeweled, and with two adjusted movements, I think, guaranteed for 20 years, the invoice price of which was 60 cents apiece. I doubt if one could buy that watch at any department store in the city of Washington for $20, and yet it is invoiced for 60 cents. I repeated to the Senate what had been presented before the committee as to razors, invoiced and purchased at 59 cents a dozen, and marked to sell in the United States for $3 apiece, or $36 a dozen.

Of course they do not want to divide any of that enormous profit. Of course we are committing an offense against them if we say, "If you buy an article in the foreign country for 5 cents and sell it for $3 in the United States, as against the American workman, you ought to pay a reasonable duty."

Mr. President, my voice can not reach all the people, neither can I present these facts every day as the papers can present their condemnation, but I shall from time to time present to the Senate the awful spread between the purchase price of some of these foreign articles and the price for which they are sold in these department stores, and it will show a profit not ten but fifty and a hundred and five hundred times as great as any of these excess profits which it is claimed will be made under the rates of this bill.

We lay a duty of 10 cents a gallon on alcohol, and they say they think the public is being robbed because of that rate. Mr. President, I want the American manufacturer to continue in business. I do not want him to make an unreasonable profit. I know that he is not making an unreasonable profit at this time. If he were, the mills would be in operation and not idle.

I recall that the same people who are inveighing against what they call excessive tariff rates, the same department stores, in 1920 raised the retail prices of their commodities 500 per cent in many instances. I know that carpets and rugs sold on the average in 1920 on the western coast for just five times the price of what the same article sold for in 1914.

I say to these great metropolitan papers, find out just what the American price ought to be, if you will, and present the facts. Find out, if you will, what it costs to produce the articles in this country, and what it costs to lay the same article down at our ports of entry, and then criticize us if we have made a mistake upon any one of these items. But this mere condemnation means nothing except the attempt to sow poison.

The Senator from North Carolina [Mr. SIMMONS] has prophesied the dire results which are going to follow to the Republican Party if we put this bill through. Ah, Mr. President, that may be startling, but it is not a hundredth part as startling as the results which would befall this country if you were to continue your own tariff bill for another year. Then the whole country would suffer. It might be well for us to so legislate that we would allow that condition to be brought about before we threw out the life line, but we are going right ahead trying to give you a protective tariff. We expect to put a protective tariff bill upon the statute books, and we will take the consequences.

Mr. HITCHCOCK. Mr. President, I am delighted that my remarks seem to have elicited a statement from the chairman of the committee in defense of the proposed tax of 10 cents a gallon on wood alcohol. Before I come to consider that defense, however, let me refer to his criticism of this side of the Chamber because we have insisted on some discussion of the schedules of this bill.

Does the Senator from North Dakota or any other member of the committee criticize the Senate for a reasonable discussion of this bill when, as a matter of fact, the committee had that bill in its possession from July, 1921, until April of this year? What excuse does the committee present to the country for holding that bill from the 22d day of last July until the 10th of April of this year? The time was not taken up in hearings. The hearings were comparatively short, as far as they have been published. The time was largely taken up in secret meetings of the majority of the committee, and if there is any delay in the passage of this bill it is due to the unprecedented length of time consumed by the committee in considering it, and when it is brought in here, filled with several thousand amendments, and an amendment is read to the Senate, instead of some member of the committee rising in his place and explaining to the Senate the reasons for the amendment, it is left to a vote without any explanation, and because Senators on this side of the

Chamber then undertake to discuss it and to prod the majority to give their reasons for the proposed amendment, we are charged with filibustering and an undue delay of this bill.

Mr. President, as I recall it, when the Payne-Aldrich bill was before the Senate some courageous Republicans then stood upon the floor challenging its outrageous schedules—Senator Dolliver, Senator Beveridge, and the senior Senator from Iowa [Mr. CUMMINS]. It was charged that they were delaying the bill, and it was necessary for them to defend themselves among their own colleagues for objecting to the extortionate schedules proposed. But they made the fight and they convinced the country that the Payne-Aldrich bill meant extortion, that it meant the promotion of trusts, that it meant an inordinate increase in the cost of living to the people, that it meant a virtual tax upon the consumers of the country for the benefit of comparatively few manufacturers.

I will say to the members of the committee that if there is no Republican who will stand up and make that sort of a fight against the present bill the fight will be made at least on this side of the Chamber, and it will be made until the finish, until the bill is passed. We have not any idea of defeating the bill. We know you have arranged to vote for it. We know you have a combination on your side of the Chamber to put it through. We know that you do not even consider the schedules. But we propose, by the fight made from this side of the Chamber, to demonstrate to the country in a campaign of education that the schedules are without warrant and that the tariff rates are without excuse even from the Republican standpoint of protection. They are designed only to promote a few industries, designed only to enrich them at the expense of the people, and their inevitable effect is going to be to increase the cost of living to the people of this country without bringing into the Treasury of the United States any more money than the present tariff law brings.

What excuse does the chairman of the Committee on Finance, in answer to my challenge, offer for this tariff rate of 10 cents per gallon upon wood alcohol? Does he cite any hearings before the committee?

Mr. BORAH. Mr. President——

Mr. HITCHCOCK. I yield to the Senator from Idaho.

Mr. BORAH. There are a number of Senators in the Senate who labor under the embarrassment of not having any facts. We are not members of the committee which framed the bill.

Mr. HITCHCOCK. We all labor under that embarrassment. The committee refuses to give any facts.

Mr. BORAH. But if the item upon which we have just voted is such as is described by the Senator from Nebraska, and there ought not to be any duty upon it at all, then why does not the Senator offer to put it upon the free list?

Mr. HITCHCOCK. That is impossible at this time. The Senator from Utah [Mr. KING] did the next best thing by proposing to substitute a tariff of 1 cent per gallon instead of 10 cents, announcing that he would move to put it on the free list when the proper time comes. At the present parliamentary stage it is not possible to do that.

Mr. KING. The Chair has ruled against that motion at this particular parliamentary stage. I made the motion with reference to another item, and if I could have done so I would have made it as to this one.

Mr. BORAH. The difficulty is with those of us who believe in protection and want reasonable rates, that we are compelled either to take the rate, whether it is satisfactory or not, or to take the proposition which is based upon the opposite theory of free trade. If the Senator can present a reasonable reduction in these rates he is going to get some votes; but we are not going to vote for free trade, and we are not going to vote for anything near free trade. We do not believe in that doctrine. We want reasonable protection based upon the principles of protection as they have always been advocated by the true friends of protection.

Mr. HITCHCOCK. I think the Senator has voted for free trade on many articles.

Mr. BORAH. Oh, no.

Mr. HITCHCOCK. I believe I can demonstrate to the Senator from Idaho that there is just as much reason why he should vote to put wood alcohol upon the free list as to put other articles upon the free list.

Mr. BORAH. As to the particular item, the Senator may be correct, and I may have voted for free trade upon that proposition; but I am speaking of the drafting of the bill generally. In getting through with these items there are a number on which I think the rates are too high, but it is the most difficult thing in the world for one to get all the facts in regard to it. We are not on the committee. We have not been upon the committee. It is practically impossible to get the facts and we have to take to some extent the conclusions of the committee.

Mr. HITCHCOCK. Let me state to the Senator from Idaho that if he will use his great ability upon the floor of the Senate to compel members of the Finance Committee, who had the bill in the nursery for nearly a year, to give a reason for the schedules they have imposed here he will confer a great benefit upon the country. If he will make the same sort of fight that was waged here by a few courageous Republican Senators, and I think he was among the number, while the Payne-Aldrich bill was before the Senate, he will accomplish a great good. While they did not prevent Congress from passing that iniquity, they at least so educated the country as to the facts that it resulted in a change in the majority membership of the Senate.

Mr. BORAH. Let me say another thing while I am in this controversy. I do not think there are any facts to be had upon which to base an intelligent tariff bill at this time. That is my opinion.

Mr. HITCHCOCK. The answer to that is that they should not pass a bill.

Mr. BORAH. I would vote unhesitatingly to postpone consideration of the bill and to take care of the situation, as far as I think it needs to be taken care of, by a simple addition to the emergency tariff law. I do not know where we could get any facts as to the cost of production abroad. I have not been advised of any such facts. I do not see how it is possible to secure them. The facts which would be available to-day would be utterly swept away to-morrow by the conditions throughout the world. So there are no facts upon which we can base an intelligent opinion as to the cost of production of these articles abroad. I do not believe it is possible to make a tariff law of permanent worth under such conditions.

Mr. HITCHCOCK. The Senator does not think for a moment that the Committee on Finance is attempting to do that? They deny that they are attempting to do that.

Mr. BORAH. The Committee on Finance, I have no doubt, have worked earnestly and sincerely in regard to this matter. But the facts do not exist; they are not available.

Mr. HITCHCOCK. It was a well-known Republican doctrine. It was a doctrine preached here upon the floor of the Senate by the Senator from Idaho himself, by the Senator from Iowa [Mr. CUMMINS], by former Senators Dolliver and Beveridge, and others who made the fight against the Payne-Aldrich bill. Then they stood for the Republican idea of having a tariff to compensate for the difference in the cost of manufacture abroad and in the United States. But they have abandoned that principle. What they want now is a tariff which will so restrict importations as to enable manufacturers in this country to maintain excessive prices, whether they are right or whether they are wrong, or to raise those prices to any point they please.

That is the policy of the Committee on Finance at the present time. It is not attempting to bring in a bill which will compensate for the difference in the cost of manufacture at home and abroad. There is no pretense of that. There is no Senator who will go out before the people and argue that that is the basis of the pending bill.

Mr. BORAH. I do not think the facts are available.

Mr. HITCHCOCK. I want to call attention of the Senate to this particular schedule of wood alcohol. The United States manufactures one-half of all the wood alcohol made in the world, and Canada and Europe manufacture the other half. That competition has been open all the time. Canada has exported wood alcohol to us before. We have, however, as is shown from the statements, the most firmly established wood-alcohol industry in the world. The tariff survey contains this statement:

> The United States possesses by far a larger and more firmly established wood-distillation industry than any other country. It is stated that European and Canadian production of wood-distillation products is about equal to the total output of this country.

Think of it. Here we are manufacturing one-half of all the wood alcohol used in all the nations in the world and it has been on the free list for years. There is $50,000,000 invested in the industry, and it has developed to a great extent, and the product is on the free list. There are no imports and there have not been any imports for years, and yet a tariff rate of 10 per cent is proposed to be levied on imports. Why?

It is to give a license to the concerns in this country to raise the price, and shortly after the proposed tariff rate has been established we will see, as we have seen in the steel industry, as the Senator from Wisconsin [Mr. LA FOLLETTE] showed to-day, the inevitable tendency to unite these industries in this country and to put exorbitant prices on the American people, and grow rich. The 10-cent tariff rate on wood alcohol can not

have any other result, whatever the purpose is, than to induce the American concerns to get together and enjoy monopoly free from any possible restriction.

Mr. BORAH. I understand the Senator, then, is in favor of free trade as to this item?

Mr. HITCHCOCK. I am in favor of leaving it at least where it is until there is some danger of importations.

Mr. BORAH. On the free list?

Mr. HITCHCOCK. It is on the free list now, as it has been on the free list for years. There is not the slightest danger from imports. It seems to me one of the most brazen attempts to create a condition favorable to the nurturing of the trusts, and yet it was proposed to put that schedule through here without explanation. There has been no explanation offered before this time except that Canada, next door to us, might send some in. Canada has had the opportunity for years to send it in, but she has sent it to other markets of the world and has not attempted to enter this market to any extent.

I would like to see some courageous Republicans develop here, as were developed when the Payne-Aldrich bill was before the Senate, who would stand up and make a fight for the old style Republican protection based upon the difference in the cost of labor and production here and abroad.

Mr. BORAH. If we do that, will the Democrats vote with us?

Mr. HITCHCOCK. No; I do not believe in that.

Mr. BORAH. Then, there you are.

Mr. HITCHCOCK. But in order to be consistent with your Republicanism, as I am consistent with my Democracy, you ought to do it and not permit this headless and bastard character of Republicanism to be put upon the statute books. You ought to stand up and fight for the old style Republicanism which stood for a legitimate, definite tariff, based upon the difference in the cost of manufacture at home and abroad; but you admit that there is no difference in cost between the United States and abroad, or that you do not know what it is, and that you propose to raise these great schedules to exorbitant heights and simply give an opportunity for the developments of trusts in this country.

Mr. BORAH. I frankly confess that I do not know what the difference is in the cost at home and abroad, and I am in exactly the same boat as every other Senator in the Chamber, so far as being able to determine the question. There are no facts in regard to it. There are no facts presented, and there are no facts to present.

Mr. NELSON. Mr. President, I have noticed that a great many people who have not been able to get any liquor now drink wood alcohol. Will this duty repress the use of wood alcohol?

Mr. SMOOT. Mr. President, I am well aware that the Senator from Nebraska [Mr. HITCHCOCK] would like to see the Republicans on this side of the Chamber attack the tariff bill the same as Senator Dolliver did in 1909. Of course every one of the Democrats in this Chamber would be delighted if that would happen. That is what the Senator wants and that is what he is hoping for.

Mr. HITCHCOCK. I am wondering if the Republican Party is so decadent that it has not any live Republican in it.

Mr. SMOOT. Let me say right here that Senator Dolliver himself offered an amendment which carried the highest rate that was incorporated in the Payne-Aldrich law. The highest rate which that law carried was brought about through an amendment offered by Senator Dolliver, of Iowa. I am not going into a discussion of it at this time. I do not ask any Senator on this side of the Chamber to vote for any rate that is overprotective, but a fair protective rate under the conditions existing to-day.

I want to say that before this bill is disposed of we will recognize that there is a filibuster on here with reference to the chemical schedule. I will say to the Senator from Idaho that days and days, even weeks, have been spent here upon rates more than half of which did not contemplate a higher rate than 15 per cent ad valorem. A rate of 15 per cent is not what they are fighting. There is a filibuster on. I told the Senators on the other side of the Chamber the other day that if I were fighting the bill and was honest in the fight, I would take some of the rates which are high rates and fight them. Do Senators on the other side think that the American people are very much alarmed over a rate of 14 per cent ad valorem? Our attention was called to-day to a rate that was an increase of 1,100 per cent over the Payne-Aldrich law rate, and the inference was that that was what was taking place in rates on other items of the pending bill.

The commodity was one not known to commerce when the Payne-Aldrich bill was passed, nor was it known when the Underwood-Simmons law was enacted. What induced its production? It was a "war baby." The Committee on Finance have put a duty of about 12 per cent on it, and there is a howl now that the duty has been enormously increased. Under the Underwood tariff bill it would have had a duty imposed upon it of a quarter of a cent, and a similar duty would have been imposed under the Payne-Aldrich bill. For what? Not for protective purposes at all, for I repeat that it was not known at the time those bills were passed, but under a decision of the Treasury Department it would have fallen under that rate if it had been made at that time.

What is the rate of duty proposed on pure wood alcohol? The House passed the bill imposing a duty of 15 cents a gallon, but the Senate Finance Committee cut that duty of 15 cents a gallon to 10 cents a gallon. The price of pure wood alcohol to-day is 72 cents a gallon. A duty of 10 cents a gallon on wood alcohol at that price is 14 per cent ad valorem; and yet there is all this fuss made about it.

Mr. President, Canada, which produces wood alcohol, imposes a duty of $3.20 a gallon on it, and yet Canada is just as close and, indeed, closer to the center of consumption for wood alcohol than are the manufacturers of that article in this country. Canada has more wood than have we, and the article is made from the branches which are taken off the trees when the logs are hauled to the sawmill.

Mr. HITCHCOCK. Mr. President, can the Senator from Utah explain why Canada has a tariff on wood alcohol?

Mr. SMOOT. I am not trying to explain what Canada does.

Mr. HITCHCOCK. Is it not because she is afraid of the competition of the United States?

Mr. SMOOT. I do not know the reason why Canada has put a duty on wood alcohol.

Mr. HITCHCOCK. Is not the fact that she imposes such a tariff evidence that we do not need one?

Mr. SMOOT. No; that is no evidence whatever that we do not need one. I can point to 50 or 60 commodities on which Canada has placed a duty confronting goods shipped from the United States into Canada but as to which she has free access to the American market. Can the Senator from Nebraska tell me why, on harness, for instance, Canada places a duty, and that if we undertake to send any harness into Canada our manufacturers upon this side are met with a duty of, I think, about 35 per cent? Canada wants the entire American market open to her and her market closed to America.

Mr. BORAH. I should not think Canada would treat us in that way in view of our relationship with Great Britain.

Mr. SMOOT. If the Senator from Idaho will take the time to read the pending bill he will find, I think, at least 10 or 15 items as to which we have inserted a proviso to the effect that in case a foreign country imposes a higher rate of duty upon the items named than the duty which the United States imposes upon goods coming to the United States, then the higher duty shall apply to the goods coming to this country from such country.

Mr. SIMMONS. Mr. President, if the Senator from Utah will pardon me, I should like to say to the Senator from Idaho [Mr. BORAH] that we have put a prohibitive duty upon nearly all of the things which Canada exports to this country, and it is but natural that she should retaliate.

Mr. SMOOT. If the Senator from North Carolina will examine the Canadian tariff act and compare it with our tariff legislation he will not make that statement.

Mr. BORAH. I am not so much concerned about that tariff now, but I am afraid we are going to have trouble with our British friends.

Mr. SMOOT. No; I do not think so, Mr. President.

Mr. BORAH. I hope not. I should be very much disturbed to think so.

Mr. SMOOT. I do not think so. The Senator from North Carolina [Mr. SIMMONS] rose in his seat to-day and read editorials from metropolitan newspapers. Let the metropolitan newspapers answer the challenge which was made to them to-day by the chairman of the Finance Committee [Mr. MCCUMBER]. If they should, I predict now that they would start to attack, as they did attack in the first place, the duties that are placed upon farm products. The Senator from North Carolina does not rise in his seat when the New York papers and other metropolitan papers complain bitterly of the imposition of duties upon farm products. Why? Because he will vote for them.

Mr. SIMMONS. Mr. President, in view of my statement to the Senator from Utah the other day, he should not now make the statement which he has just made. I told the Senator the other day when he asserted that I would vote for the high rates which the bill carries on agricultural products that I would no sooner vote for an excessive duty upon an agricultural

product than I would vote for the imposition of an excessive duty upon a manufactured product; and if there were any duty on an agricultural product that was excessive or which would violate the principles of my party—not his party—that I would not vote for it. The Senator from Utah, therefore, has no right to make the assertion which he has just made.

Mr. SMOOT. We shall see how the Senator from North Carolina will vote.

Mr. SIMMONS. Oh, the Senator from Utah said the same thing the other day.

Mr. SMOOT. I have not any more doubt how the Senator will vote when the question arises than I have that I stand here upon the floor. The Senator is now bitterly complaining of the rate of 12 per cent ad valorem on a manufactured product, one which is made in Canada, and with the advantage which her producers have over the producers of wood alcohol in this country; but wait and see, Senators, when there are duties higher than 12 per cent proposed to be placed on farm products how the Senator from North Carolina will then vote. The Senator from North Carolina also referred to bricks, and made the statement that common bricks that enter into the construction of buildings in this country have advanced about $10 a thousand.

Mr. SIMMONS. Mr. President, I myself made no statement about bricks at all. I read a statement——

Mr. SMOOT. Yes.

Mr. SIMMONS. From a metropolitan paper of New York to the effect that it had been ascertained by a commission appointed to investigate the matter, that bricks are selling at $24 a thousand, when they can be manufactured for $11 a thousand. I myself did not make that statement.

Mr. SMOOT. But what did the Senator read the statement for? What idea did he have in his mind when he presented it to the Senate? It was so pleasing to him that he would not have it printed in the RECORD without reading, and he wanted to read it himself; and how he read it and what emphasis he placed upon it! Oh, if the American people could only have heard and followed the Senator they would have thought in their heart that he approved of every word that was written in that editorial. Now, what is the rate of duty on bricks? It is 10 per cent. Has that duty anything to do with the price of the commodity as set forth in the article which he read?

Mr. HITCHCOCK. Mr. President, I should like to ask the Senator if there is any tariff proposed on gold bricks? We are handing the farmers a great many such bricks in the agricultural tariff bill, and we ought to put a duty on gold bricks.

Mr. SMOOT. I have heard the Senator from Nebraska talk about gold bricks here every time the question of a duty upon farm products has been mentioned in this Chamber, but I do not know of anybody, Mr. President, who would draw dividends upon gold bricks sooner than would the Senator from Nebraska. He expects to draw dividends from the gold bricks he seems to think appear in the pending bill. I doubt whether he will do so.

Mr. HITCHCOCK. I will say to the Senator that it will not be the first time that I have been disappointed; I have lived on disappointment all my life.

Mr. SMOOT. We all have, I presume.

Mr. CUMMINS. Mr. President, the Senator from Utah probably forgets that the Senator from Nebraska has a newspaper from which he can draw his dividends. I do not say, however, that it is a gold brick.

Mr. SMOOT. I have heard that it is a very profitable investment, and I congratulate the Senator.

Mr. HITCHCOCK. It could only be profitable by the support of a large Republican constituency which does not like the way the Republican Party in the East is being operated.

Mr. SMOOT. Then the Senator ought to be thankful for that, if that is the case; but I want to say that the Republicans are open-minded enough to read Democratic papers. I never knew before in my life that a Democrat could only read a Democratic paper and a Republican could only read a Republican paper. That may be the case with the Democrats, but I assure Senators upon the other side that it is not the case with Republicans. I do not think that there has been a time since I began to read newspapers when I have not subscribed to a Democratic newspaper, and that very fact has made me a Republican.

Mr. ROBINSON. Mr. President, will the Senator yield?

Mr. SMOOT. Yes; I yield.

Mr. ROBINSON. The Senator by his assertion that he never knew before that a Democrat could not read a Republican newspaper has invited the assertion that many Republicans do not read any newspapers.

Mr. SMOOT. That may be the case; but I want to say to the Senator from Arkansas that, so far as ability to read newspapers is concerned, he ought not to refer to such a thing in view of conditions in the South.

Mr. HEFLIN. The Senator from Arkansas probably had reference to some of the members of the Republican Party down there.

Mr. SMOOT. I think the Senator takes it for granted then that Democrats are not expected to read newspapers.

Mr. ROBINSON. They do not read the Wall Street Journal.

Mr. SMOOT. I do not read the Wall Street Journal and I never mention the word Wall Street in the Senate, because the Senator from Alabama [Mr. HEFLIN] has an absolute monopoly on that word. Nobody ought to mention Wall Street in this Chamber in the presence of the Senator from Alabama.

Mr. HEFLIN. The Senator from Arkansas ought not to have mentioned Wall Street in the presence of the Senator from Utah. The Senator from Utah is all "fussed up" and excited now. Wall Street is a touchy subject with him.

Mr. SMOOT. The Senator from Utah is not "fussed up" in the least.

Mr. BORAH. What about wood alcohol, Mr. President?

Mr. WATSON of Georgia. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Georgia?

Mr. SMOOT. I yield.

Mr. WATSON of Georgia. It is only fair that the Senator from Utah should be given the facts as to the southern situation.

Mr. SMOOT. The Senator need not even take the time to make that suggestion. The Senator from Utah would never have thought of referring to it if it had not been for the Senator from Arkansas, and this is the first time in my life that I ever have referred to the educational situation in the South.

Mr. McCUMBER. Mr. President, I inquire what is the pending amendment?

Mr. SMOOT. Just a moment.

Mr. WATSON of Georgia. If the Senator will allow me, it is the colored Republicans in Georgia who can not read.

Mr. SMOOT. Mr. President, I only take the statistics as to literacy. I do not want to go any further into the matter, I will say to the Senator from Georgia, and if I were the Senator from Georgia I would not even invite it.

Mr. President, the act of 1913 imposed a duty of $2.60 per proof gallon on alcohol. What was that for? Of course, Senators on the other side can take a little item like the one now under consideration and talk about it and make all manner of assertions as to it; but I wish to say that if the conditions in this country were the same as the conditions in Canada, and if the markets were of equal accessibility, there would not be any need of 10 cents a gallon on wood alcohol. They are not equal, however, and if anyone has any idea that there is going to be any political gain to the party that criticizes a duty of 12 per cent ad valorem on a manufactured article, I think he will be woefully disappointed.

Mr. JONES of New Mexico. Mr. President, if anyone in the Chamber is to be singled out as a filibusterer, I suppose I am subject to that criticism as much as anyone else. During the discussion of this bill I have consumed a good deal of time. I had just about reached the conclusion that my efforts and the time I had spent would be of no avail; but if I ever doubted a republican form of government—a government by the people—that doubt has been removed by what has occurred here this afternoon.

During the discussion of this bill I have endeavored to point out the enormities which it contains. I have tried to discuss the terms of this bill as honestly and sincerely as I could, in the hope that Senators on the other side of the Chamber would realize what they were doing. I did not believe that they did. This discussion has at least resulted in this: The attention of the country is now being brought to this bill; the press of the country is studying this bill, and the result of that study is that Republicans are complaining against the bill and characterizing it in terms equally as expressive as any that I have been able to utter on this floor. My hope is that the words that came to us from the Senator from Idaho [Mr. BORAH] will make an impression upon this Chamber. No man yet has sized up the situation more clearly than it has been expressed by the distinguished Senator from Idaho.

From the first day of this discussion I have tried to find out the basis of this bill. It is at last becoming manifest; and I want to say to you good Republicans who have believed in the doctrine of protection for the purpose of building up this country that this bill is not founded upon any principle which you have ever advocated in the past. To me it is no wonder that the great metropolitan Republican papers are proclaiming against this measure.

This is not a Republican measure such as I have heard about in the past. The Senator from Idaho was quite right when he

told us that you could not ascertain the difference between the cost of production at home and abroad at this time.

He is eminently correct. I have made that statement on the floor I do not know how many times. I realized that coming from me it might have little effect upon the other side of the Chamber; and I want to say to you Senators—and I know you love your country—that this is a deviation from every principle for which you have stood in the past.

Those who framed this bill did not seek to ascertain the difference in the cost of production at home and abroad. We are told that that can not be done. We are told in the next breath that all they have sought to do is to ascertain the difference in prices.

Bear in mind that statement, and consider what it means—a difference in prices, not to protect the difference in the cost of production, but to protect the existing prices and whatever price the producer of the country may see fit to fix. That means nothing more nor less than that this bill is framed for the purpose of creating monopolies in this country. If you raise your duties high enough to protect these prices, it necessarily follows that the man who has the commodity for sale can absolutely control the American market.

It means that if you put your tariff duties up to what he says is a proper price now—and he is not at all modest, judging from the testimony presented to the committee, in saying what his profit should be—when you do that, there is no reason on earth why the American producer or the American seller for a short time can not reduce his prices a little, drive the foreign competitor entirely out of the American market, destroy his business arrangements, destroy his sales agencies, and leave to the American vendor the absolute monopoly of the American market.

I appeal to you Republicans here: Are you willing to stand for a tariff bill framed upon any such basis as that? The distinguished Senator from North Dakota this afternoon, in inveighing against these metropolitan Republican papers for criticizing this bill, invited them, if they had any proof, to bring it on.

Time and again I have asserted that he who proposes to levy a tax upon the consumers of his country ought first to assume the burden of proof; that he should be able to state the fact; but in a confession either of incompetency or of weakness in the framing of this bill, the distinguished chairman of the committee calls upon these papers to prove that this bill ought not to be passed; that these duties are too high.

I again assert that no man or set of men has any right to levy tribute upon the consumers of this great country unless he knows why it is done. It is for him to make out a case. It is not for us on this side of the Chamber to assume any such burden. No paper which through any examination reaches the idea that this bill is an enormity is called upon for proof. The burden is here, and nobody has a right quietly and complacently and serenely to impose these enormous burdens upon the American people without knowing what he is doing.

In an endeavor to demonstrate that I have labored during the days that we have been discussing this bill, I think now I have seen evidence of some fruition. I do not intend to engage in any filibuster. I never have done it in my life, and I do not intend to begin now; but if by this discussion we can bring the Senator from North Dakota to realize what he is doing, if we can bring the Senator from Utah to realize what he is doing—I am not at all misled by what I have said; I realize that I can not do it—if we can keep presenting facts here from day to day, if we can keep discussing this situation and let the Republican papers of the country take up the cause, then we will get under the hides of these Senators, of which we have had evidence here this afternoon.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. JONES of New Mexico. I gladly yield.

Mr. LENROOT. May I ask the Senator if it is the purpose of Senators on his side of the aisle to proceed throughout the consideration of the bill as they have proceeded thus far upon the bill?

Mr. JONES of New Mexico. Mr. President, I can state very frankly to the Senator that we do not expect to consume anything like as much time on the remaining items of the bill as we have consumed thus far in proportion to the number, and I will state very frankly to the Senator why. In the discussion of these items we have been trying to develop just what we have been talking about now. When the very first item in the bill was taken up, the Senator from North Dakota, the chairman of the Committee on Finance, when I asked him why they put that rate upon acetic acid, said, "For the same reason that the other items in the bill were given the rates which we have placed on them," and that the same principle permeated the bill. I do not use his exact language, but that is the substance of what he said. Upon that statement from him I tried to develop what the reason was which permeated the bill, and I have been trying ever since to find that out, and the statements have varied from day to day. They accepted the good old Republican doctrine that these rates should be levied in order to equalize the difference in the cost of production at home and abroad. When I asked them for the evidence they had on which these rates were based, they admitted that they did not have any evidence, that it could not be had.

In various cases I have tried to find out how they ascertained the rate on the particular item. At one time we were told that they took the prices at which the commodities were sold in this country and the prices at which they were sold abroad. Then I commenced trying to find out the dates of the prices which they took, and sometimes they would have one date and sometimes another. The last time any date was referred to the Senator from North Dakota stated that they took the prices which prevailed prior to the war. At other times they tried to get prices as nearly current as possible.

They took prices which prevailed prior to the war. Is it possible that this country has not moved since before the war? Is it possible that any Member of this great body has been asleep during the last few years and has failed to realize what has transpired in an economic way throughout the world? The picture has changed. You can not longer follow the old landmarks and have your country economically prosperous.

When you talk about fixing tariff rates based upon mere prices in a pre-war period you admit that you are out of touch, out of tune, with present-day conditions, and being so, and having that frame of mind, are you qualified, in all earnestness I ask, to levy taxes? These rates are increased, not by 10 per cent or 15 per cent, but in many cases more than a hundred per cent, and in some cases more than a thousand per cent. Awhile ago the Senator from Utah tried to minimize a small increase of taxes. If that small increase of taxes is levied to enable some concern to take the money out of the pockets of the people of this country, I do not care how small it is, it should be condemned. The most contemptible creature on earth is the man who commits petty larceny. I have heard some Senators here, especially the distinguished Senator from Utah, talk about some concern robbing the people. He himself called it robbery. I have more respect for the man who is entitled to be called a robber than I have for the petty thief.

Senators talk to me and talk to the people of this country about the small things, stating that they are not taking much away from them, and try to justify this bill because they are taking only a little here and a little there. Has it come to that, that we are going to justify petty larceny and justify becoming a small thief?

Mr. President, this great power of taxation which the American people have placed in this body ought to be considered a sacred trust. We are expected, as trustees of the people, to do these things conscientiously and in the interest of our country. We are not here to minimize the effect of what we do, but it is for us to face this situation as it is and feel that we are sacredly responsible to the great masses of the people who are trusting us.

Mr. President, on the next item I want to say just a word. The next item is in regard to industrial alcohol. It is true that the Senate committee amendment reduces the rate provided by the bill as it came from the House. The House put it at 15 cents per gallon. The Senate committee makes it 10 cents per gallon. I do not think there is any reason which can be given for such a duty as that. In fact, there should be no duty at all.

I want to read the figures as to the domestic production, the imports, and the domestic exports of that commodity. In the year 1910 we produced in this country 68,000,000 gallons. We imported 16,000 gallons. We exported 231,000 gallons. I am giving just the round figures.

In 1911 we produced 68,000,000 gallons; we imported 39,000 gallons, and we exported 35,000.

In 1912 we produced 73,000,000 gallons; we imported 42,000, and we exported 25,000.

In 1913 the production was 78,000,000 gallons, the imports 44,000, and the exports 151,000.

In 1914 the production was 78,000,000 gallons, the imports 41,000, and the exports 187,000.

I will skip the war period and begin with the year 1919, when the production was 98,000,000 gallons, the imports none, and the exports 20,000,000.

In 1920 the production was 98,000,000 gallons, the imports 17 gallons, and the exports 25,000,000 gallons.

For the first six months of 1921 we exported nearly 4,000,000 gallons. We have not the figures of the production for that year.

I could give a good deal more information upon the subject, but apparently the giving of information does not seem to impress it upon Members of the Senate. Therefore, in the absence of authority to move to put this item on the free list, I move to substitute for the figure "10" the figure "1," so that the duty shall be 1 cent per gallon, instead of 10 cents, as proposed by the Finance Committee, and 15 cents, as proposed by the bill as it came from the House.

Mr. SMOOT. Mr. President, I wish Senators were in the Chamber, because I notice there is not a spasm of revolt on the other side as to this item, as there was in regard to the item just passed.

I want to call the attention of the Senate to the fact that the Underwood tariff law rate on this item is 5,200 per cent increase over the rate which we imposed. Remember that, 5,200 per cent increase. Now, the Senator from New Mexico moves to strike out 10 and increase it to 1, which would be ten times more. In other words, he wants an increase of 52,000 per cent. That is all.

The Senator real a long list of importations and productions of ethyl alcohol. Why did they not have any importations? It was because the Democratic Party built up this great Alcohol Trust in the United States by putting a tariff of $5.20 per gallon on it. But now what a change of heart! They only want 1 cent now. Why? That is in order to criticize the 10-cent rates which we propose to put upon it instead of the $5.20 rate applied under the Underwood law.

Mr. President, I am ready to vote.

Mr. JONES of New Mexico. I merely wish to say, in answer to what the Senator from Utah has said, that my motion indicates that at least Senators on this side of the aisle are willing to deal with present conditions, that conditions have changed, and that is evidenced by the fact that the Finance Committee reduced this rate of duty from $5.60 per gallon to 10 cents per gallon. I am calling attention to the fact also that the importations of ethyl alcohol are prohibited.

Mr. SMOOT. Only for beverage purposes, and the Senator knows that.

Mr. JONES of New Mexico. I understand that, and that is what this is for.

Mr. SMOOT. There is alcohol used in all the industries of the United States——

Mr. JONES of New Mexico. We levy a tax on it for medicinal purposes after it gets in.

Mr. SMOOT. The Senator now says that conditions have changed. Have they not changed as to butyl alcohol? There is no butyl alcohol made in the world for commercial purposes. All that was made was in laboratories for laboratory use, but we were to be criticized for an 1,100 per cent increase there, yet here the Senator from New Mexico is talking about an item which carries a rate in the present law 5,200 per cent more than the rate we propose.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from New Mexico [Mr. JONES] to the committee amendment.

Mr. JONES of New Mexico. I ask for the yeas and nays.

The yeas and nays were ordered, and the principal legislative clerk proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement as before with regard to my pair and its transfer, I vote "nay."

Mr. DIAL (when his name was called). Making the same announcement as before with reference to my pair and my inability to obtain a transfer, I withhold my vote.

Mr. McKINLEY (when his name was called). Making the same announcement as before, I vote "nay."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from Wyoming [Mr. WARREN]. In his absence I withhold my vote.

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. McKELLAR. Making the same announcement as before as to my pair and its transfer, I vote "yea."

Mr. DILLINGHAM. Making the same announcement as on the previous vote with reference to my pair and its transfer, I vote "nay."

Mr. CURTIS. I wish to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY];

The Senator from New Jersey [Mr. FRELINGHUYSEN] with the Senator from Montana [Mr. WALSH];

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS];

The Senator from Massachusetts [Mr. LODGE] with the Senator from Alabama [Mr. UNDERWOOD]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

The result was announced—yeas 12, nays 39, as follows:

YEAS—12.

Ashurst	Harrison	Jones, N. Mex.	Robinson
Fletcher	Heflin	King	Simmons
Harris	Hitchcock	McKellar	Swanson

NAYS—39.

Ball	Gooding	McKinley	Shortridge
Borah	Johnson	McLean	Smoot
Brandegee	Kellogg	McNary	Spencer
Bursum	Kendrick	Moses	Sutherland
Calder	Keyes	Newberry	Townsend
Colt	Ladd	Norbeck	Wadsworth
Curtis	La Follette	Oddie	Watson, Ind.
Dillingham	Lenroot	Page	Weller
Elkins	McCormick	Rawson	Willis
France	McCumber	Sheppard	

NOT VOTING—45.

Broussard	Frelinghuysen	Overman	Stanley
Cameron	Gerry	Owen	Sterling
Capper	Glass	Pepper	Trammell
Caraway	Hale	Phipps	Underwood
Crow	Harreld	Pittman	Walsh, Mass.
Culberson	Jones, Wash.	Poindexter	Walsh, Mont.
Cummins	Lodge	Pomerene	Warren
Dial	Myers	Ransdell	Watson, Ga.
du Pont	Nelson	Reed	Williams
Edge	New	Shields	
Ernst	Nicholson	Smith	
Fernald	Norris	Stanfield	

So the amendment of Mr. JONES of New Mexico to the committee amendment was rejected.

Mr. SIMMONS. Mr. President, with reference to the suggestion made by the Senator from Utah [Mr. SMOOT] to the effect that there is now a duty upon this product, ethyl alcohol, as the present bill deals with it, of $5.20 a gallon, the Senator failed to differentiate properly.

Mr. SMOOT. Oh, no; I have not.

Mr. SIMMONS. Well, just let me explain. The section of the Underwood bill to which the Senator refers is section 237. That is Schedule 8 and is entitled "Spirits, wines, and other beverages," and it reads:

Brandy and other spirits, manufactured or distilled from grain and other materials, not specifically provided for in this section, $2.60 per proof gallon.

That was dealing with this subject just exactly as it deals with brandy and liquors of all kinds, to carry out the spirit of our law. It was in pursuance of our internal-revenue taxes upon spirits.

I understand the chemist says that the department has so construed this brief section, "brandy and other spirits manufactured or distilled from grain and other materials," as including ethyl alcohol. If so, then it was ethyl alcohol as an intoxicant, as compared with brandy and other spirits manufactured or distilled from grains and other materials not specifically provided for, and to carry out the intention of the revenue law with reference to the duties imposed upon spirituous liquor.

Mr. SMOOT. The revenue law imposes a tax upon this very item in addition to what the tariff law may impose, and I wish to assure the Senator that alcohol is a spirit distilled from grain and carried a rate of $5.20.

Mr. SIMMONS. I understand what the Senator says, and I am merely stating the fact that if ethyl alcohol comes under this provision of the tariff act of 1913 it is by the result of a departmental decision which I have never before heard anything about. I do not question that the department so decided, but when they rendered that decision they put this commodity upon a parity with brandy and other manufactured spirits. This provision of the Underwood law was merely for the object of carrying out the purposes of our internal-revenue laws with reference to the importation of intoxicants.

Mr. SMOOT. No; the Senator is wrong there.

Mr. SIMMONS. Just let me read the schedule in which the Senator says this is included:

SCHEDULE H. SPIRITS, WINES, AND OTHER BEVERAGES.

237. Brandy and other spirits manufactured or distilled—

Mr. SMOOT. "From grain."

Mr SIMMONS. Yes—

from grain or other materials, $2.60 per proof gallon.

That was provided in order to put into effect against those intoxicants and spirits our internal-revenue taxes, and for

the purpose of preventing the importation of these spirituous liquors.

Mr. SMOOT. No; the Senator is wrong. Internal-revenue taxes are imposed outside of that; and that was a tax that was imposed upon ethyl alcohol. Ethyl alcohol is a spirit which is distilled from grain, and the rate was $5.20.

Mr. SIMMONS. I have made my explanation and the Senator from Utah has made his. Mr. President, the article with which we are now dealing is ethyl alcohol for nonbeverage purposes.

Mr. SMOOT. The law so requires. It could not be included here.

Mr. SIMMONS. If that commodity were imported into this country to-day as a spirit—as a liquor—of course, it would carry the high duties which are imposed in the Underwood law.

Mr. SMOOT. We can not impose a duty upon it so long as we have prohibition in the United States. Therefore the words "for nonbeverage purposes only" were inserted because we could not have done otherwise.

Mr. TOWNSEND AND OTHER SENATORS. Vote!

Mr. KING. Mr. President, if I may make an observation at this juncture, I desire to say that it seems to me that the point which the Senator from North Carolina [Mr. SIMMONS] has made is one which ought to be patent to everyone. The Senator is attempting to make the point, as I understand him—but I have only just come into the Chamber—that there ought to be in all fairness a different rate upon alcohol which is made from grain and is imported for beverage purposes, because it then has a higher value than when it is imported for industrial or mechanical purposes, in which case it has a lower value. We all concede that alcohol for beverage purposes has a higher value than alcohol for mechanical purposes; so that the Senator from North Carolina is right. He is attempting to justify a differential between alcohol which is used for industrial and mechanical purposes and alcohol which is used for beverage purposes.

Mr. SMOOT. Mr. President, when the Underwood bill was passed there was no difference at all. The duty was $5.20 a gallon, whether the alcohol was for beverage purposes or for mechanical purposes.

Mr. SIMMONS. But, Mr. President, the Senator from Utah loses sight of the fact that the language of the act was leveled at spirituous liquors, but the department afterwards held that ethyl alcohol, so the chemist says, was a spirituous liquor.

Mr. SMOOT. The department did not have to hold that. If the Senator from North Carolina knew what was intended by his bill he knew that the paragraph to which I referred covered ethyl alcohol, because ethyl alcohol is a spirit which is distilled from grain. The department did not have to so hold it, for it was the fact. The article could not have fallen anywhere else in the law, and it was not intended to fall anywhere else. Besides the $5.20 a gallon, the alcohol had also to pay the internal revenue duty. It pays the revenue to-day. Under the pending bill it will also pay the revenue duty besides paying the 10 cents a gallon proposed to be levied by the bill.

Mr. SIMMONS. Mr. President, in the act of 1909 and the act of 1913 there are very high duties upon spirituous liquors, but if those liquors are denaturized, so that they are not usable for beverage purposes, then of course a different situation is presented.

Mr. SMOOT. No; no difference is made at all. On ethyl alcohol, the result of distillation from grain, the rate applies whether it is in any way changed by being denatured or not. The Treasury Department have so held, and they could not have held otherwise under the wording of the law.

Mr. KING. Mr. President, if I may be pardoned for the observation, I think my distinguished colleague, the senior Senator from Utah [Mr. SMOOT], is not presenting this proposition with that absolute frankness which ought to characterize our consideration of this matter. Technically speaking, he is correct that the rate under the Underwood law for alcohol, as he has stated, was $2.60.

Mr. SMOOT. Per proof gallon.

Mr. KING. Yes; per proof gallon; but I do not care whether it be called proof or otherwise.

Mr. SMOOT. There is twice the difference, however.

Mr. KING. The point I am trying to make is this: It seems to me it is clear as a pipestem that there ought to be a difference in the rate of duty imposed upon alcohol when it has a higher intrinsic value because of its use or possible use for beverage purposes than when, because of the prohibition law, that use is denied and it must be subjected to what might be denominated an inferior use. If a given article has a certain value because it may be used for certain purposes and a less value because it may be used for a different purpose, and the law prohibits its use for the more valuable purpose, but it is still imported, though only for the less valuable purpose, then, in all conscience and in all justice, the lower rate of duty ought to be imposed upon it when it is imported for that less valuable purpose only. We can indulge in all the casuistry we please, but when he comes to applying the principles of justice—and they ought to have some application, although they do not, in tariff legislation—it would seem to me that we should at once confess that if it is less valuable because it may not be used for the more valuable purpose the rate of taxation ought to be lower. That is all there is to this question.

When grain alcohol could be imported for beverage purposes it had a high value. When it may not be imported for that purpose, but may be used for some other purpose, when its value is less, then it ought to carry a less rate; but our Republican friends in this bill, because of the interest of corporations whose names I have given—and doubtless they were given by my associates during my absence—because the great corporations that are engaged in the manufacture of these alcohols desire it we are imposing this high rate of duty, which swells their illicit gains.

Mr. SMOOT. Mr. President, I wish to say that if my colleague and the Senator from North Carolina will turn to paragraph 802 they will find that the Finance Committee recognized that difference and provided different rates. Of course, the Alcohol Trust, to which reference has been made, was built up under a rate of $5.20, as I have suggested heretofore.

The PRESIDING OFFICER (Mr. ODDIE in the chair). The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The PRINCIPAL LEGISLATIVE CLERK. On page 7, line 11, after the word "forms," it is proposed to insert "including powders put in medicinal doses," so as to make the paragraph read:

PAR. 21. Chemicals, drugs, medicinal and similar substances, whether dutiable or free, when imported in capsules, pills, tablets, lozenges, troches, ampoules, jubes, or similar forms, including powders put up in medicinal doses, shall be dutiable at not less than 25 per cent ad valorem.

Mr. KING. May I inquire of the chairman of the committee whether he construes the words "including powders put up in medicinal doses" as embracing any drug or medicinal compound that is not included in the general terms of the paragraph?

Mr. McCUMBER. Those words are inserted there to make certain that they are included; that is all.

Mr. KING. Perhaps I did not make myself clear, if the Senator will pardon me. It was not for the purpose of importing into this section articles or commodities or compounds of a medicinal character, or what might be denominated drugs, that find a resting place under a lower schedule in some other part of the bill?

Mr. McCUMBER. If they do not fall under this paragraph, they would fall under another paragraph at the rate of 25 per cent ad valorem.

Mr. KING. That is what I am trying to get at. Will the Senator assure us that by transferring to this paragraph from some basket clause or from some other clause in this bill the items or commodities which may be included within the words which are italicized as an amendment a higher tax is not imposed?

Mr. McCUMBER. If the Senator will turn to paragraph 5, he will find that—

All chemical elements, all chemical salts and compounds, all medicinal preparations, and all combinations and mixtures of any of the foregoing, all the foregoing obtained naturally or artificially and not specially provided for, 25 per cent ad valorem.

In this instance a question might arise possibly whether a medicine put up in papers and folded would fall within the term "similar forms," and in order to make it certain that it would be included in the paragraph, whether in the form of a capsule or in the form of a dose which is prepared in folded paper, the amendment was proposed. But I want to say to the Senator that if it were not included, and if by any possibility it should be regarded as not falling within the paragraph, if we should leave it out here, it would fall in the basket clause and carry exactly the same rate.

Mr. KING. I think I know the purpose of it, as that purpose would be reflected in the mind of the Senator from North Dakota, but I want to watch, so far as I can, the amendments when they are not suggested directly by members of the committee, because I can easily perceive how an item which falls in some other schedule under, say, an ad valorem duty of 10 or 15 per cent, by these words might be imported into this sec-

tion or into some other paragraph and carry a higher rate of duty.

Mr. McCUMBER. That is a possibility, but it is not so intended.

Mr. KING. I know it is not so intended, but I want to be absolutely sure.

Mr. McCUMBER. Our experts have gone over it carefully, and we are sure that it can not happen.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

Mr. KING. Mr. President, may I inquire of the Senator if he is going to recur to the item of chalk?

Mr. McCUMBER. Why can we not dispose of paragraph 6, aluminum hydroxide or refined bauxite?

Mr. KING. I suppose we can.

Mr. SIMMONS. Mr. President, the controversy we have just had with reference to the basket clause becomes very interesting upon further investigation. I have been reading this bill. I find that section 802 of the present bill covers the very paragraph to which the Senator referred a little while ago in the Underwood law—paragraph 237. Let me read it, Mr. President. This shows conclusively that I was right in my statement a little while ago and that the Senator was wrong.

Here is what he has now as a substitute for the section of the Underwood law that he relied upon a little while ago:

Paragraph 802 of the present bill reads as follows:

Brandy and other spirits manufactured or distilled from grain or other materials, cordials, liqueurs, arrack, absinthe, kirschwasser, ratafia, and bitters of all kinds containing spirits, and compounds and preparations of which distilled spirits are the component material of chief value—

The word "part" in the House bill is changed to "material" in this bill—

and not specially provided for, $5 per proof gallon.

Instead of $2.60 per proof gallon in the Underwood bill.

Mr. SMOOT. If that is all the Senator wants to say—Oh, I thought the Senator was through.

Mr. SIMMONS. That is all I want to say.

Mr. SMOOT. Then, Mr. President——

Mr. SIMMONS. Just a minute.

Mr. SMOOT. The Senator's explanation does not explain.

Mr. SIMMONS. Here is the section of the Underwood law that the Senator read a little while ago and contended that it imposed a duty of $5 per proof gallon upon liquors, and that this section which we have acted upon with reference to liquors for nonbeverage purposes was to be construed as a substitute for that particular provision of the Underwood law.

The Underwood law says:

Brandy and other spirits manufactured or distilled from grain or other materials, and not specially provided for in this section, $2.60 per proof gallon.

This bill, as amended by the Senate, provides upon the very same things—brandy and other spirits manufactured or distilled from grain and other materials—$5 per proof gallon.

Mr. SMOOT. Mr. President, of course the Senator has not given any study to this matter, or else he would not have made that point. I know the Senator wants to be fair, and the Senator is not right.

Mr. SIMMONS. I am right, and the Senator from Utah is wrong; but that does not settle anything.

Mr. SMOOT. But the bill itself will settle it, Mr. President. This bill says, "material of chief value and not specially provided for"; but it is provided for here. In paragraph 4 ethyl alcohol is provided for, and therefore everything that I say is absolutely correct. Ethyl alcohol fell under paragraph 237 of the Underwood law, and ethyl alcohol was not provided for anywhere else in the Underwood law. The Senator ought to acknowledge now that he is wrong.

Mr. SIMMONS. That is exactly what I said—that in the imposition of the Underwood rates we were treating it as a brandy, as an intoxicant. In this bill you are treating it as a nonbeverage proposition, and when you treat it as an intoxicant you charge $5 a proof gallon.

Mr. SMOOT. Evidently the Senator does not want to know; but treating it, as I said, as a nonbeverage—and we could not treat it in any other way under the amendment to the Constitution and the prohibition law; that could not be done—notwithstanding that, Mr. President, there is not any question in the world but that the statement I made is correct.

Mr. McCUMBER. Mr. President, I do not think the Senate has yet passed upon my amendment to strike out the word "proof," on line 17 of paragraph 4, so that it will read "10 cents per gallon" and not "10 cents per proof gallon." It is generally understood that it was agreed to, but I do not think the record shows it.

Mr. KING. It was agreed to pro forma.

Mr. McCUMBER. I know it was.

The PRESIDING OFFICER. The Chair is advised that it has not been agreed to. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. KING. Mr. President, may I ask the Senator if he is willing to take up the item of chalk now, and pass over for a moment the aluminum paragraph?

Mr. McCUMBER. The Senator asks if I am willing to take up the paragraph which includes bleaching powder, and so forth?

Mr. KING. May I inquire whether chalk is in the same paragraph as bleaching powder?

Mr. SMOOT. Yes; that is the same paragraph.

Mr. KING. No; it is not the same paragraph.

Mr. McCUMBER. We will take up chalk now, if the Senator wishes.

The PRESIDING OFFICER. The amendment will be stated.

The READING CLERK. In paragraph 18, page 6, line 21, after the words "dry, ground, bolted, or precipitated," it is proposed to strike out "15" and insert ".35," so as to read:

Chalk or whiting or Paris white: Dry, ground, bolted, or precipitated, 35 per cent ad valorem.

Mr. McCUMBER. Mr. President, on behalf of the committee, I move to amend the committee amendment by striking out "35" and in lieu thereof inserting the figures "20," so that it will read "20 per cent ad valorem" instead of "35 per cent ad valorem."

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from North Dakota, on behalf of the committee, to the committee amendment.

Mr. JONES of New Mexico. Mr. President, I want to make just a very short statement regarding the items in this paragraph. I do not believe that we are justified in imposing any duty on these items, and I do not believe there is any evidence before the Senate or that there was any evidence before the committee which would justify these duties.

I want to make just a short statement.

There is no natural chalk in the United States. The crude material is not here. It is on the free list. We are rather large exporters of manufactured chalk. The crude material itself is brought in here from England, a great deal of it, and from France, and we manufacture this chalk and export a considerable quantity of the manufactured chalk back to England and France, from whence we get the crude material. The Tariff Commission tells us about this. The consumption in the United States is about 200,000 tons annually, and this comes from England and France. The Tariff Commission tells us that the United States exports considerable quantities of manufactured chalk, primarily to England and Canada. It gives us the value of these exports of chalk. We do not need to fear anything in the way of competition. It is a very common material, and, unless there is some reason for it, I can not understand why we should impose a duty upon it.

So far as I know, there was only one witness who wanted this duty on chalk, and that was one man up in New Jersey, who wanted to manufacture the crude material out of lime, a new industry, and if he can get a tariff upon this item large enough to give him a profit, of course he would like to do it, so that he can manufacture it out of his lime business. He is a great producer of lime and he wants to purify some of his lime production to take the place of this natural crude chalk which is imported into this country.

I can not see any necessity for it. The crude material comes in here, and we are able to ship the manufactured product abroad to the very place from whence we get very much of this material. I do not believe the duty is justified. I do not want to delay this vote at all, but if the Senate is willing to accept this duty I want it done in full knowledge of the conditions. It simply enables the manufacturers of chalk in this country to monopolize the American market, and not only to monopolize it—because they are doing that now; the importations amount to nothing—but it enables them to raise the price to the consumers of the country just to get more profit, that is all. They can compete with the world. They import the raw material from England and manufacture it and ship back the manufactured product; and to put a duty on this material simply enables these people to charge that additional price. I have not the slightest doubt that they sell what they ship abroad for less than they sell the commodity for at home. At any rate, putting this duty here will enable them to do that.

With that statement, I have nothing further to say. I do not think it wise to offer an amendment. Apparently it would do no good.

Mr. McCUMBER. Mr. President, here is another case where we have fixed a rate of duty less than that carried by the Underwood law. The equivalent ad valorem rate of duty under the Underwood law ranged from 15.82 per cent ad valorem up to 34.30 per cent ad valorem. These rates were between 1913 and 1916. The rate that we are giving is 20 per cent ad valorem, which is considerably less than the average equivalent ad valorem under the present law.

Why do we give 20 per cent ad valorem? All of the crude material must come from England or France, from the chalk cliffs. The material is brought over here in the raw state. It is manufactured here. There is considerable of a loss in the manufacture and in the freight rates in bringing over the crude material instead of the finished product. I think it can all be summed up in a single sentence in the testimony that was given before the committee, and I will quote that:

> The foreign manufacturer has his factory adjoining the chalk quarry. There is not extra handling of raw material. His freight to the United States is on his finished product, whereas the American manufacturer, in importing crude chalk, pays freight upon the full weight, although 75 per cent only can be used, the remaining 25 per cent being flint, sand, and moisture, which are absolutely worthless.

Taking into consideration the difference in the cost and wages in the United States, taking into consideration the fact of this waste of 25 per cent of the material on which the freight is to be paid, to put the American manufacturer on a substantial equality on the finished product with the foreign manufacturer, the committee came to the conclusion that about 20 per cent ad valorem, which is about the equivalent of the present law, would be fair and just.

Mr. JONES of New Mexico. Mr. President, just a word further. The statement made by the Senator as to these facts is unquestionably true. Those conditions arise out of the very nature of the situation. Nevertheless, our manufacturing processes are such that we are able to import that crude material with the wastage of which the Senator has spoken; and, by the way, that wastage is not much. We are able to manufacture it and stand the wastage and the cost of transportation, and then export right back to the same country from which we got it.

Mr. McCUMBER. I think if we exported it back at any time there certainly must have been some unique circumstances. Of course, we can not always account for certain small exports between countries, and we often export a very small quantity to a country from which we are generally importing. That sometimes happens; but there are some particular circumstances which govern it. The fact still remains that under the present law there is an equivalent duty averaging about 20 per cent, and I am fearful that if we take away that percentge of difference, then the foreign product—which, by the way, is not coming in in any serious quantities at the present time, we will admit—might seriously menace the American business and the manufacture of chalk in the United States.

Mr. JONES of New Mexico. I am presenting my information from the report of the Tariff Commission, which says:

> The United States exports considerable quantities of manufactured chalk, principally to England and Canada.

That is what the Tariff Commission reports to us, and I do not see how the Senator arrives at 20 per cent as a basis for a duty. He says that that was about the average duty imposed in the Underwood law, but I do not think the Senator is willing to accept the Underwood law as a proper basis for levying duties. If he is, there is no necessity for passing this bill, because the Underwood law is already on the statute books, and I have not heretofore understood that the Senator felt that the Underwood law was a very sacred document.

Mr. McCUMBER. I do not think it is yet, Mr. President, but it seemed to have given sufficient protection, and therefore we did not raise the protective duty.

Mr. KING. Mr. President, this duty, as I understand this discussion and as I understand the subject, throws a light on the attitude of the Republicans in drafting this bill. It is not tariff for protection, and it is not tariff for revenue; it is tariff for prohibition. We may, as the Senator says, import; we might in the future have some imports. Who ever dreamed of drafting tariff schedules in anticipation of the possibility, exceedingly remote, of having some imports, particularly where we were exporting the product? Mr. President, it can not be defended in morals, and I say that without any offense to my friends, and it can not be defended upon any principle of the scientific consideration of tariff rates or of political economy. If I were a protectionist, a high protectionist, I could not defend the imposition of tariff rates where there was no competition, and where we were exporting.

My friends on the other side may complain about our discursiveness as much as they please; we shall reiterate it. It reveals the animus back of this bill, namely, a determination to give the domestic market absolutely to the domestic producer and to so intrench and buttress it behind these schedules as that there will be no possible foreign competition, and if prices here become tolerable, so that the people can live under them, it will only be because of the force of public opinion driving like an irresistible tide against the intrenched ramparts of the vested and the protected interests. It is a dangerous power, Mr. President, to commit to people who in the past have shown so little conscience in dealing with the interests of the people.

American business men are no better and no worse than American statesmen or business men anywhere. Whenever they get a chance to combine and to confederate and to raise prices they will do it, and your pleas for charity and for justice and for righteousness and for ethics do not seem to cut much figure when business men have unrestricted opportunity to fix their own prices. That is what you are doing, my friends, in this bill. I say without any passion and without any feeling that I warn you gentlemen on the other side that you are doing a great injustice to the American people. You are putting it into the hands of manufacturers of the United States to exploit and to rob and to oppress the American people. The Senator from North Dakota may object to my adjectives, but those adjectives fail to describe the evils that are bound up in this bill.

When we are exporting they say, "Let us put a tariff on." When there is no evidence as to the price of labor here or abroad, when the question of protection even is not involved, when a home industry is not involved, they say, "Let us put a tariff up, because there may be in the future some competition." Yet they do it with respect to articles as to which the world can not compete with us because of our inexhaustible supplies of the primary products.

What is the good of talking, however? My friend did me the compliment to say that I had made some observations which perhaps were worthy of some consideration, but that we had talked too long upon some of these items. He will discover that most of our protracted talk was the result of interrogations from the other side. When we confine ourselves to this bill, as we are trying to, Mr. President, it does not mean that we stand up and simply say, "That rate is wrong." We are going to show why it is wrong, and we are going to show the inevitable consequences of it and the inevitable results, and if it requires nouns, and verbs, and adjectives, and exclamations, and pronouns, and interjections, we are going to employ them all until this bill shall be properly labeled and characterized, and if the newspapers will be just and do the fair thing by the American people, they will report to them the infamies of this bill as they are pointed out upon the floor of the Senate.

Mr. McCUMBER. Mr. President, of course, when the rate under the Underwood law was 63 per cent ad valorem in a part of 1913, and 26 per cent in 1914, and 34 per cent in 1915, it was not iniquitous, and the people were not being robbed at all; but when the Republican committee reports in favor of reducing that to an ad valorem, which amounts to 20 per cent, all of a sudden it becomes iniquitous and a robber tariff, and the Senator from Utah is mourning because he has not a sufficient number of adjectives to apply to it.

Mr. KING. I hope the Senator will give me a few more, because if he will, I shall use them in describing this bill.

Mr. McCUMBER. I think we ought to put up on a blackboard all that the Senator uses, so that they would be always ready for quick reference if some of us forget them.

Mr. KING. I think the adjectives I have used are so truthful that some Senators do not like them; but that is not what I rose to say. If the Underwood law contained a rate which permitted an injustice, I would denounce it more quickly than I would a rate in a Republican tariff bill, because we ought to have known better, but I do not expect the Republicans to know better on this matter. I can conceive that conditions 10 or 15 years ago might have warranted the imposition of such rates for revenue purposes, but I do not think this could be justified for revenue purposes from what I have heard. Schedules ought to change because of changing conditions, as the Senator knows, and I do not see that rates fixed 8 or 10 years ago ought to be perpetuated forever. Changes occur which call for great changes in schedules in tariff bills.

Mr. McCUMBER. Mr. President, I do not think that the people, about whom the Senator speaks so much, have really found out that they have been robbed on chalk for the last 10 years.

The PRESIDING OFFICER (Mr. HARRELD in the chair). The question is on agreeing to the amendment offered by the Senator from North Dakota [Mr. McCUMBER] to the committee amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The next amendment of the committee was, on page 6, line 22, to insert the words "one-half of 1 cent per pound," so as to read:

Ground in oil (putty), one-half of 1 cent per pound.

Mr. McCUMBER. For the committee I wish to offer the following amendment. I move to strike out "one-half," in line 22, and to insert in lieu thereof "three-fourths," so that it will read, "ground in oil (putty), three-fourths of 1 cent per pound."

My reason for moving this amendment is that we have raised the duty upon flax and upon linseed oil, and that difference of one-fourth of 1 cent per pound just equals the extra duty that is levied upon the linseed oil that goes into the manufacture of the putty, and is purely a compensatory duty.

Mr. KING. Mr. President, may I inquire of the Senator from North Dakota how much of an increase it is over the rate fixed by the bill?

Mr. McCUMBER. I propose to change it from one-half to three-fourths. Putty was 25 per cent ad valorem on the American valuation plan, which was equivalent to about 1 cent per pound, and we have reduced, therefore, one-fourth of 1 cent per pound from the House rates.

Mr. JONES of New Mexico. But may I remind the Senator that the Underwood law carries a rate of 15 per cent and that seemed to be the criterion for the fixing of the previous item?

Mr. McCUMBER. I answered the question of the Senator from Utah, if I understood it, as to what change is made in the House rate, not in the present law.

Mr. JONES of New Mexico. I thought he referred to the present law.

Mr. McCUMBER. In the Underwood law there was not as high a rate of duty upon the linseed oil.

Mr. KING. May I inquire of the Senator what would be the ad valorem rate, converting the specific into ad valorem, if the amendment just tendered shall be adopted?

Mr. McCUMBER. Putty is worth about 10 cents per pound at the present time. That would be three-fourths of 1 cent, which would be less than 10 per cent ad valorem.

Mr. KING. May I inquire of the Senator the pre-war price?

Mr. McCUMBER. It averaged about 3 cents a pound.

Mr. KING. I had some quotations showing 2½ cents a pound. I want the RECORD to show that the pre-war price of this product was a maximum of 3 cents a pound, and I think it was lower. We are now giving a specific rate of three-fourths of 1 cent per pound, which would be approximately 30 per cent or more tariff upon a product in which we ought to be and are supreme in its manufacture, because we have all of the constituent parts here.

Mr. McCUMBER. If the Senator will allow me, he must remember that is based upon the foreign selling price, and in the foreign selling price there is no extra duty upon the linseed oil that goes into it. Of course, if he gives a duty on the linseed oil, as he must, he necessarily must give a compensatory duty upon the putty into which the linseed oil goes in making the product, and the linseed oil rate is 3½ cents per pound.

Mr. KING. Of course, the quantity of linseed oil employed in the production of putty does not constitute the major ingredient. I do not know exactly the ratio that linseed oil would bear to all the component parts of putty.

Mr. McCUMBER. I will give it to the Senator. There is 84 per cent of whiting, and that carries a rate, remember, of 20 per cent ad valorem.

Mr. KING. We are protesting against that.

Mr. McCUMBER. But we have just adopted that rate. There are 16 pounds of linseed oil. I said 84 per cent of whiting. One hundred pounds of putty will be made up of 84 pounds of whiting and 16 pounds of linseed oil, and the 16 pounds of linseed oil at 3½ cents a pound would be 56 cents.

Mr. KING. Per hundred pounds?

Mr. McCUMBER. That would be in a hundred pounds. Then there is the 11 cents duty, which is 20 per cent upon the whiting, that must be added to it. We will then get a compensatory rate of about three-fourths of 1 cent additional for the linseed oil, without figuring the cost of conversion at all, and the extra duty of 20 per cent upon the whiting.

Mr. KING. Mr. President, that reveals what I regard as a very imperfect, not to say unfair, method of framing a tariff law. They give a duty on one commodity, and that becomes the pretext for a tariff on another and a tariff on another and a tariff upon a fourth or fifth or sixth, and those fourth or fifth or sixth or dozen commodities are brought into amalgamation and form a seventh or eighth product, and that has to bear all of these accumulated burdens which are passed on to the ultimate consumer. We have just fixed a tariff rate of 20 per cent on whiting, which constitutes, as the Senator said, 84 per cent of the product of putty. Then we have an increased tariff on linseed oil, as the Senator said, and there is a good deal of justice in his contention.

Mr. McCUMBER. May I ask the Senator if he would abandon that method? Suppose we take wool. Wool is made into yarn. We give a duty upon the wool. If we give a duty upon the wool, we must give a compensatory duty upon the yarn, otherwise the wool would come in as yarn. Then if we give a duty upon yarn we must give a compensatory duty upon the cloth into which the yarn enters, otherwise the yarn would enter in the form of cloth. I can not see how we are going to abandon the practice of giving a compensatory duty wherever there is any duty upon what constitutes the manufactured raw product.

Mr. KING. I think, perhaps, generally speaking, the Senator is inaccurate in that statement; but the thing of which I complain is that we make a tentative rate and then that tentative rate becomes the basis of a rate upon some other products of which the first article forms a constituent part. Then the tentative rate is added, and that then attaches to the second commodity, and that rate is increased. The trouble is that we do not sufficiently take into consideration the fact that these various rates have pyramided and finally culminate in a very high duty or rate in the aggregate upon the product which finally reaches the consumer.

Mr. McCUMBER. That must necessarily follow. We can not escape that. The only way to escape it is to levy no duty on the raw material.

Mr. KING. No; I would not go that far, but I will say that where various commodities form constituent parts of some very important commodity, which in its finished state passes to the consumer, there ought to be the utmost care in laying the rate upon what might be denominated primary or intermediate commodities. We ought to keep in mind the fact that these various rates carried to the finished product so pyramid that product as to become a burden to the people.

We will always have a tariff system. We will always obtain some revenue from tariff duties. We will always have selfish men and corporations who will insist upon the utilization of the tariff scheme to impose higher rates than are needed for adequate protection, if we believe in protection, but as a basis for inordinate charges upon their products.

I come back to the item of putty. It goes into our building operations. We have a shortage of houses in the United States. Building operations have been materially interfered with because of the enormous prices.

I called attention yesterday to the fact that in New York building operations have been suspended in part. In Washington there is a dearth of buildings, and prices here to-day exceed pre-war prices more than 100 per cent, though some say it is 160 per cent. Extortion is practiced here, as elsewhere, in building operations. What does that mean? A tariff on putty, a tariff on panes of glass, a tariff upon doors, upon shingles, and upon everything else that goes into the houses—what does it mean? It means an interruption of building operations. It means that thousands of people will go without homes and become tenants in cramped quarters, living under insanitary and unhygienic conditions. We ought to try to make these rates reasonable, if we are going to have tariff rates at all, and not make them an impediment to building, to home acquisition, to the getting of clothes, and food, and those things necessary for the preservation of life and the preservation of the health of the people.

I protest against the policy which my good friend, the able Senator from North Dakota, has advocated in the laying of the rates as we find them in this bill.

Mr. JONES of New Mexico. Mr. President, I merely want to call attention to one clause in the report of the Tariff Commission, where it is said that "the imports of putty have been sporadic and negligible."

Mr. KING. Does the record show that putty is a product of any of the paint and varnish concerns, like Sherwin-Williams or any of the big corporations which have a good deal of a monopoly in these products?

Mr. McCUMBER. I will say, to the credit of those who make paint, that I hope it is not true that they put chalk in it.

Mr. KING. I do not mean to imply that; but one big corporation may manufacture putty and it may manufacture paint and varnish. Linseed oil, as the Senator knows, is employed in the manufacture of paints, varnishes, shellac, and so on. So I imagine that putty is manufactured by some of the same organizations.

Mr. McCUMBER. It is such a very simple process that I imagine almost anyone could manufacture putty. Therefore it

would not be the exclusive product of any one company. All on earth there is to do is to mix some linseed oil with some chalk or whiting and you have putty.

Mr. KING. That is true, but I will say to the Senator——

Mr. McCUMBER. Anyone can make it.

Mr. KING. A great many now make their own putty. In my younger days I made it; but my information is that putty is made by some of these large establishments and shipped as they ship paint and other similar products in which they are interested.

Mr. McCUMBER. That is probably true.

The PRESIDING OFFICER. The question is on the amendment to the amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. McCUMBER. I send to the desk also another amendment which is a part of the same amendment. It is to strike out the word "or," which should not be in the paragraph.

The PRESIDING OFFICER. The amendment to the amendment proposed by the Senator from North Dakota to the committee amendment will be stated.

The READING CLERK. On page 6, line 22, it is proposed to strike out the word "or."

Mr. WILLIS. The word "or" does not occur in the print of the bill which I have before me.

Mr. McCUMBER. The word "or" was inadvertently dropped out in the printing, but in the original bill it does appear. As the original bill is the one on which the Senate acts, it will be necessary to make the amendment which I have suggested.

The PRESIDING OFFICER. The amendment proposed by the Senator from North Dakota will be stated.

The READING CLERK. On page 6, line 22, after the word "putty," it is proposed to strike out the word "or" and insert "three-fourths of 1 cent per pound."

Mr. JONES of New Mexico. That does not appear in the print of the bill which Senators have before them.

Mr. McCUMBER. But the printed bill as it passed the House of Representatives has the word "or" in it.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The PRESIDING OFFICER. The next amendment of the Committee on Finance will be stated.

The next amendment of the Committee on Finance was, on page 7, line 1, before the words "per centum," to strike out the numeral "25" and to insert in lieu thereof the numeral "35," so as to read:

put up in the form of cubes, blocks, sticks, or disks, or otherwise, including tailors', billiard, red, and manufactures of chalk not specially provided for, 35 per cent ad valorem.

Mr. McCUMBER. I ask that the committee amendment may be rejected.

Mr. WILLIS. Mr. President, I desire to ask the Senator from North Dakota for an explanation of this amendment, in which I am interested.

I call attention to the fact, if I am not misinformed as to the matter—and the Senator from North Dakota will correct me if I am—that we have just increased the rate of the present law on chalk or whiting or Paris white from 15 per cent ad valorem to 20 per cent ad valorem; in other words, we have increased the tariff on the raw material. Now, if the amendment be disagreed to, as requested by the Senator from North Dakota, it would fix the tariff on the finished product at the rate which it bears now—that is 25 per cent.

I happen to know that in some places, at least in the State which I have the honor in part to represent, the industry is in a pretty serious condition. I think the compensatory duty for which the Senator seeks to provide in the amendment is not sufficient.

Mr. McCUMBER. But the Senator from Ohio must all the time remember that the House bill is based upon an American valuation, while the Senate committee amendments are all based upon the foreign valuation. Therefore, what may appear to be the same rate will produce an entirely different duty. The Finance Committee at one time suggested an amendment raising the rate from 25 per cent to 35 per cent, but on a reconsideration of the matter it was decided that would be too high a rate, but we allowed a compensatory duty. We have just now adopted a rate of duty which is 20 per cent ad valorem upon the chalk itself, and a compensatory duty of three-fourths of 1 cent instead of one-half of 1 cent a pound upon the putty. Now, when it is put in the form of cubes, blocks, sticks, or disks, or otherwise, including tailors', billiard, red, and manufactures of chalk not specially provided for, there is an additional cost; and the committee felt that in allowing a differential of the 5 per cent over the precipitated chalk, on which the duty is 20 per cent, we had given about the proper differential.

Mr. WILLIS. Mr. President, I do not desire to take any time on the matter, but I call the attention of the Senator from North Dakota to the fact that the House, in the bill as passed by that body, thought there should be a differential of 10 per cent, so it fixed the rate at 15 per cent on the raw material and 25 per cent on the manufactured product. As I recall, the act of 1909 also provided substantially the same differential. It seems to me that the differential provided of 5 per cent is scarcely sufficient. However, I do not desire to delay the consideration of the matter, and am willing that a vote shall be taken.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was rejected.

The PRESIDING OFFICER. The next amendment proposed by the Committee on Finance will be stated.

The next amendment reported by the Committee on Finance was, on page 7, paragraph 22, line 14, after the word "distilled," to strike out "and" and to insert "or," so as to read:

PAR. 22. Chemical elements, and chemical and medicinal compounds, preparations, mixtures, and salts, distilled or essential oils——

Mr. JONES of New Mexico. Mr. President, the Senator from North Dakota has agreed temporarily to pass over bleaching powder. I think we might as well dispose of that matter now, which is dealt with in paragraph 13.

Mr. McCUMBER. I, too, think so, Mr. President.

Mr. JONES of New Mexico. There is an increase of 100 per cent over the present duty; but——

Mr. McCUMBER. Let me say to the Senator that my attention has just been called to the fact that the Senator from New York [Mr. WADSWORTH] asked that that paragraph might be passed over if it was reached during his absence.

Mr. JONES of New Mexico. Very well.

Mr. McCUMBER. I therefore prefer that it now be passed over.

Mr. KING. Does the Senator from North Dakota desire to take up paragraph 6?

Mr. McCUMBER. Let us go back to paragraph 6.

Mr. KING. Let me say to the Senator from North Dakota that he had better send for Republican Senators, as I shall ask for a record vote on that amendment in a moment.

Mr. McCUMBER. I think if the Senator will ask for a record vote we shall give it to him, and it will develop that a quorum is present without having two roll calls.

Mr. KING. Very well.

Mr. McCUMBER. Let me call the Senator's attention to the fact that on ammonia alum the amendment providing a rate of three-fourths of 1 cent per pound was agreed to.

Mr. KING. I did not so understand.

Mr. McCUMBER. I think it was agreed to when the Senator was not giving his attention, and I am disposed, therefore, to ask unanimous consent that the vote by which the amendment was agreed to may be reconsidered, with the hope that we can vote on it again right away.

Mr. KING. I have no objection.

The PRESIDING OFFICER. Is there objection to reconsidering the vote by which the amendment was agreed to? The Chair hears none, and the vote is reconsidered. The amendment will be stated.

The READING CLERK. On page 4, line 4, after the word "alum," it is proposed to insert "three-fourths of."

Mr. KING. Mr. President, this item I regard as of considerable importance. Paragraph 6 provides in part that aluminum hydroxide or refined bauxite shall bear a rate of one-half of 1 cent per pound, and potassium aluminum sulphate, or potash alum, and ammonium aluminum sulphate, or ammonia alum, shall bear a rate of three-fourths of 1 cent a pound. I shall move in a moment, Mr. President, to amend the rate fixed in the bill.

Paragraph 6, as it relates to these two items, provides eo nomine for potash alum and ammonia alum at a rate of duty of three-fourths of 1 cent per pound. The Underwood bill provides for these two commodities under the generic and unqualified designation of alum at 15 per cent ad valorem. I hope Senators will bear that in mind. These two items are dealt with under a generic term and given a duty of 15 per cent ad valorem in the Underwood bill.

Frequently where we transfer from an ad valorem to a specific rate and the ad valorem rate is 15 or 25 per cent and the specific rate is three-fourths of a cent or 1 cent per pound on per ounce, or what not, to the superficial observer it bears the

appearance of a reduction, whereas it may be a tremendous advance, and that is the case here.

During the fiscal year ending June 30, 1914, only 152,808 pounds of potash alum were imported into the United States, and the unit price—and this is the important aspect of this case—was 1 cent per pound. It is apparent now what we are doing by this transfer from the ad valorem Underwood rate of 15 per cent to the specific rate of three-quarters of a cent per pound. In other words, we take an item that now bears a rate of 15 per cent and by an innocent transposition we give it a rate of 75 per cent, or an increase of 60 per cent over the rates provided by the Underwood law.

During the same fiscal year—and I hope Senators will keep this in mind—less than $100 worth of ammonia alum was imported into the country, and yet we are giving this enormous tariff rate against a product the importations of which are so small as to be infinitesimal. The specific rate in the Senate bill of three-quarters of 1 cent a pound on potash alum is, as I have stated, the equivalent of an ad valorem rate of 75 per cent, based on the pre-war import price of 1 cent per pound. Inasmuch as the present domestic wholesale selling price of ammonia alum is the same as the domestic wholesale price of potash alum, it is logical to assume that the pre-war import price of ammonia alum was the same as of potash alum, namely, 1 cent per pound. If that conclusion is correct, the Senate committee rate of three-quarters of a cent per pound on ammonia alum is equivalent to 75 per cent ad valorem, based on the pre-war import price of the commodity. Since these commodities are provided for in the Underwood law at 15 per cent ad valorem it is to be noted that the Senate committee rate of three-quarters of 1 cent per pound represents an increase of 400 per cent.

The domestic production of ammonia and potash alum for 1915, no statistics of production for 1914 being available, were 24,915 tons. The total imports of these alums for the year 1914 were 75 tons, constituting less than one-half of 1 per cent of the domestic production for the year 1915.

There are no specific statistics available showing the importations of these two alums other than for the fiscal year 1914. It is evident that the import and production statistics of these two commodities do not justify any increase over the Underwood rate of duty, but they indicate that domestic manufacturers have a monopoly of the domestic market for these two commodities. Potash alum and ammonia alum, therefore, should be placed on the free list. All other aluminum salts and compounds not specifically provided for in this tariff act are assessed at a rate of duty of 35 per cent ad valorem in the Senate bill. Inasmuch as this same basket clause in the Underwood bill carried a rate of 15 per cent ad valorem, it is noted that this is an increase of 133⅓ per cent.

From an examination of the Miscellaneous Series Publication No. 82, to which I have alluded heretofore, published by the Department of Commerce, under the title of "Chemicals and Allied Products Used in the United States," it will appear that the only aluminum compounds other than those specifically provided for in the tariff bill imported into this country during the fiscal year ended June 30, 1914, in commercial quantities were aluminum chloride, aluminum nitrate, aluminum palmitate, and aluminum silicate. The largest quantity of any of these aluminum compounds imported into the United States during that last pre-war fiscal year was 17,238 pounds. This represents the total importations of aluminum palmitate. Upon an examination of the list of 4,000 commodities which were imported into this country in individual quantities having a value of less than $100 each, and listed in the series publication which I have exhibited to the Senate upon a number of occasions, it will be discovered that 28 aluminum compounds which will be provided for in this paragraph at an increased rate of 133⅓ per cent are found, which in the Underwood bill carried the rate of 15 per cent.

In other words, Mr. President, by the transfer from that basket clause to another basket clause this enormous increase takes place. Just think of the fact that out of the aluminum compounds embraced within the subject under consideration, directly or indirectly, 28 of them were imported in 1914 to the extent of $100 or less for each of the 28, and yet we increase the rate of duty 133⅓ per cent!

It is therefore evident that this increase on all other aluminum compounds could serve no protective purpose, for there are only four aluminum compounds of any commercial importance which would be provided for in this basket clause. Furthermore, this increase could not be for revenue purposes, for some 28 of these aluminum compounds were imported for the fiscal year ending June 30, 1914, in the insignificant quantities to which I have heretofore alluded.

Mr. President, I do not know who asked for this increase. The House hearings, on page 111, show that the Merrimac Chemical Co. made some sort of a presentation. I can find no evidence anywhere in the hearings upon which these increases could be justified. The chemical company referred to is a manufacturer of dyes. I do not know, and therefore I shall not state, the extent of the alliance of this organization with the huge Allied Chemical Co. and the Du Pont Co.; but it is manifest that these huge corporations engaged in the production of these aluminum compounds are determined to extort, by this tariff bill, unjust prices from the people.

Upon examination of the Oil, Paint, and Drug Reporter, and from information that I have been able to obtain, I discover that the Monsanto Chemical Works, of St. Louis, Mo., are interested in the production of these commodities; likewise the Powers, Weightman & Rosengarten Co., of Philadelphia; E. I. du Pont de Nemours & Co. (Inc.); the Grasselli Chemical Co., of Cleveland, Ohio; the Pennsylvania Salt Manufacturing Co., of Philadelphia. The Oil, Paint, and Drug Reporter, the green book for buyers, gives the names of these concerns, and the information which I have been able to obtain ties the corporations to which I have just referred to these products. They are engaged in their manufacture.

There is no testimony justifying this duty, Mr. President. We are increasing the rates upon these products far beyond what any reasonable protective theory would warrant.

Mr. McCUMBER. Mr. President, I have to leave the Chamber in just a moment.

Mr. KING. I yield.

Mr. McCUMBER. May I call the Senator's attention to the fact that while he says that the pre-war price of these commodities on the foreign basis was about 1 cent per pound, and they are all put in together under the old law, he did not mention the fact that the present importing value is 3 cents, or three times that. Of course, three-fourths of a cent a pound on a 1-cent basis would be equivalent to a 75 per cent ad valorem duty; but if the Senator will look in the information given in the Summary of Tariff Information for 1921, he will find that practically 92 per cent of this product comes from England. The Senator knows that wages have gone up on a percentage basis even higher in England than in the United States, and in all probability we never shall go back to the 1 cent per pound which we had prior to the war.

The Senator will find that the present quotations in the United States range from 3½ to 4½ cents per pound, while the import price of the nine months of 1921 was 3 cents per pound. Three-fourths of a cent per pound on a basis of 3 cents would give us 25 per cent ad valorem, which is a modest ad valorem rate; but on the basis of what they are selling for now on the American basis it would be an equivalent of 21 per cent ad valorem.

I do not think we shall go back again to the 1 cent per pound, taking into consideration the country from which we have had our imports, and the fact that the wages have so immensely increased, and that the cost of production has consequently increased in England. Therefore, if the Senator will also take into consideration the fact that while in 1919 we imported only 686,000 pounds, it jumped to nearly 3,000,000 pounds in 1920 and to 1,280,000 pounds in the first nine months of 1921——

Mr. KING. Mr. President, if the Senator will pardon me, the Senator is not now, as I understand, giving the importations of the two items which I am discussing. Is he not giving all aluminum compounds?

Mr. McCUMBER. It includes all, as all were included under the old law.

Mr. KING. The Senator is giving all of the aluminum compounds?

Mr. McCUMBER. I am giving all of the aluminum compounds. It does not seem to me that the Senator can claim, upon that basis, that three-fourths of 1 cent per pound is an excessive ad valorem duty. It is only 6 per cent higher than the present rate upon the prices which probably will prevail for the next few years.

Mr. KING. Mr. President, the Senator has confirmed what has been so eloquently and forcefully stated by my distinguished leader, the senior Senator from North Carolina [Mr. SIMMONS], namely, that this bill is for the purpose of confirming the title of our manufacturing institutions to continue their present level of prices. It is to perpetuate high prices. It is to act as a scaffold to maintain existing prices, unless there shall be possible competition at home that may lower them. At any rate, however, the Senator has given warning that there is going to be no return to pre-war prices, certainly not for many years to come.

What does that mean? The selfish interests, the manufacturing corporations that are seeking pretexts for the maintenance of these high levels, will read with great joy and gratification the statement which is made by the able Senator, the chairman of the committee. They do not want to return to legitimate and reasonable profits or to pre-war profits.

A good many Democrats—and I did not join in that criticism—found fault with President Harding because he spoke about a return to "normalcy." I attempted to interpret that statement of his as a desire to get back to fair prices—to pre-war prices—so far as that was possible. In that regard I think President Harding was right, and he sought to get away from the inflated and superficial conditions that prevailed in the country. My good friend the chairman of the committee is opposed to President Harding's sane policy, as I interpret the meaning of that statement of his. He wants to keep up these prices, maintain them, strike down any possible competition from abroad, turn over the domestic market to the domestic producers, and guarantee to them by these tariff rates the license, the free and unrestricted opportunity, to continue their high prices, even if in so doing there is an exploitation of the American people.

I am opposed to that policy. I think that no tariff bill should be framed upon that theory, and I warn the Republican Party that that theory of framing a tariff bill will not meet with the approval of the thinking people of the United States.

The evidence shows that this particular product of which I have been speaking was sold for 1 cent per pound before the war, and the imports of these two articles before the war were less than $100 each, and the price, as I said, was 1 cent per pound. The rate fixed by the Underwood law was 15 per cent, and, as I recall, the Payne-Aldrich rate was one-quarter of a cent a pound, which would be, as I figure it, 25 per cent ad valorem. But we are now proposing to raise the rate from 15 per cent ad valorem, the rate of the present law, to a rate of 75 per cent ad valorem, and it would constitute an increase in the tariff rate above the present rate of more than 300 per cent. It can not be justified, and the Senator, in replying to me, said, "Oh, well, we are not going to get down to pre-war prices." Of course we will not get down to pre-war prices, Mr. President, if we pursue that policy, if we announce to the manufacturers, "We have given you a rate now which guarantees you high prices, buttressed by a tariff rate giving you 300 per cent more than the rates in existing law." How are you going to get down to normal conditions? How can you expect a reasonable reduction in the prices of commodities which the people of the United States require?

Mr. President, our manufacturers ought to realize that they are killing the goose that lays the golden egg. They will arouse indignation at home, they will diminish purchases, they will provoke buyers' strikes, they will shut mills instead of opening them, and close mines instead of making them operate. They will pave our streets with sorrow and with tears instead of with joy and gladness.

I protest against these rates as absolutely indefensible. The rates on these two items are higher than the basket-clause rate, but, all in all, as I have indicated, they can not be sustained.

Mr. SIMMONS. Mr. President, in commenting upon an editorial which appeared in the New York Journal of Commerce a few days ago, I made a statement to which the editor of that paper takes exception. The statement which I made was that "this paper," meaning the New York Journal of Commerce, "represents chiefly the great moneyed interests of the country and the great industrial interests of the country."

Taking exception to that, the editor of the Journal of Commerce states:

> The Journal of Commerce, as its habitual readers well know, serves no "interests" whatever and is absolutely independent. It has invariably made national welfare its first aim in all economic, social, and political discussions. The open market, fair competition, and just dealing are its first principles. Class legislation and legislation seeking Government aid it deems unsound—bad business as well as bad politics. Monopoly, whether of capital or labor, it regards as destructive of American ideals.

I accept what the Journal of Commerce says about its aims. If anything I said in referring to it as representing the moneyed interests and the industrial interests of the country implied that I thought the Journal of Commerce was improperly representing those interests, I did not so intend it and I regret it. I read the editorial of the Journal with approval and commendation. I did not understand it was defending gratuities or subsidies to capital or to the industries. On the contrary, I understood the Journal as condemning that and as denouncing such benefactions, and my remarks were intended to be not derogatory but complimentary to the attitude of the Journal in respect to the excessive and indefensible rates of the pending bill.

If what I then said was even by implication unjust to the Journal or its editor, I am glad of this opportunity to make this acknowledgment.

Mr. KING. Mr. President, I move to strike out, in line 4, page 4, the language "three-fourths of 1 cent per pound," and to insert in lieu thereof "15 per cent ad valorem."

That would apply the Underwood law rate to those compounds. I will say frankly that they ought to be on the free list, in view of the fact that there are no importations. The Senator from North Dakota referred to some importations of alum products, but my information is that the products of which he spoke do not embrace the products as to which I am offering the amendment. My amendment relates only to potash alum and ammonium alum, and not to the other alums, of which there were slight importations; but these two items to which I am directing my amendment were imported into the United States before the war in quantities of less than $100, and my information is that the imports of these two items have been inconsequential, not exceeding that amount since the war. Yet these two items, important to the people, without any reason in the world except that the du Ponts want it, and the Allied Chemical Co. wants it, and a few others of these great chemical organizations want it to swell their profit, is raised from the rate of the Underwood law 300 per cent, and the rate is increased above that of the Payne-Aldrich law in the neighborhood of from 100 to 200 per cent.

I suppose, though, that these appeals will be in vain, but I wish the people could know that upon these two important items we propose to help the trusts by increasing these rates 300 per cent above the present tariff rates. I ask for the yeas and nays on my amendment.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. DILLINGHAM (when his name was called). Making the same announcement as before, I vote "nay."

Mr. JONES of New Mexico (when his name was called). I transfer my pair from the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED] and vote "yea."

Mr. McKELLAR (when his name was called). I have a general pair with the senior Senator from Indiana [Mr. NEW], which I transfer to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. OVERMAN (when his name was called). Transferring my pair with the senior Senator from Wyoming [Mr. WARREN] to the junior Senator from Massachusetts [Mr. WALSH], I vote "yea."

Mr. SHIELDS (when his name was called). I am paired with the junior Senator from Maine [Mr. HALE]. I transfer that pair to the Senator from Nevada [Mr. PITTMAN] and vote "yea."

Mr. UNDERWOOD (when his name was called). The senior Senator from Massachusetts [Mr. LODGE] is out of the city. I have a general pair with him. I transfer that pair to the Senator from Rhode Island [Mr. GERRY] and vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. COLT. Making the same announcement as before, I vote "nay."

Mr. McKINLEY. Making the same announcement as before, I vote "nay."

Mr. BALL. Has the senior Senator from Florida [Mr. FLETCHER] voted?

The PRESIDING OFFICER (Mr. BROUSSARD in the chair). That Senator has not voted.

Mr. BALL. I transfer my pair with the senior Senator from Florida to the junior Senator from Delaware, my colleague [Mr. DU PONT], and vote "nay."

Mr. DIAL. I transfer my pair with the Senator from Colorado [Mr. PHIPPS] to the Senator from Ohio [Mr. POMERENE], and vote "yea."

Mr. CURTIS. I wish to announce the following pairs:

The Senator from New Jersey [Mr. FRELINGHUYSEN] with the Senator from Montana [Mr. WALSH];

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY];

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH]; and

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN].

The result was announced—yeas 16, nays 37, as follows:

YEAS—16.

Ashurst	Heflin	McKellar	Shields
Dial	Jones, N. Mex.	Overman	Simmons
Harris	King	Robinson	Swanson
Harrison	La Follette	Sheppard	Underwood

NAYS—37.

Ball	Harreld	McLean	Smoot
Brandegee	Johnson	McNary	Sutherland
Broussard	Jones, Wash.	Moses	Townsend
Bursum	Kellogg	Newberry	Wadsworth
Calder	Keyes	Nicholson	Watson, Ind.
Colt	Ladd	Norbeck	Weller
Curtis	Lenroot	Oddie	Willis
Dillingham	McCormick	Page	
Elkins	McCumber	Rawson	
France	McKinley	Shortridge	

NOT VOTING—43.

Borah	Fletcher	New	Spencer
Cameron	Frelinghuysen	Norris	Stanfield
Capper	Gerry	Owen	Stanley
Caraway	Glass	Pepper	Sterling
Crow	Gooding	Phipps	Trammell
Culberson	Hale	Pittman	Walsh, Mass.
Cummins	Hitchcock	Poindexter	Walsh, Mont.
du Pont	Kendrick	Pomerene	Warren
Edge	Lodge	Ransdell	Watson, Ga.
Ernst	Myers	Reed	Williams
Fernald	Nelson	Smith	

So Mr. KING's amendment to the committee amendment was rejected.

The PRESIDING OFFICER. The question now recurs on the amendment of the committee.

The amendment was agreed to.

Mr. SMOOT. Mr. President, on line 19, page 6, I move to strike out "50" and insert in lieu thereof "35."

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. On page 6, line 19, after the word "trichloroethylene," in lieu of the numeral "50" insert "35," so that it will read:

Trichloroethylene, 35 per cent ad valorem.

Mr. JONES of New Mexico. Will the Senator please give us a reason for that high rate?

Mr. SMOOT. I can tell the Senator why I think the rate should be reduced. I thought, in the first place, the rate was too high when it was fixed at 50 per cent, and I have the same opinion now that I had about it then. In the reconsideration of it the committee decided that that was too high a rate.

Mr. JONES of New Mexico. Were there any reasons given?

Mr. SMOOT. Oh, yes. The Senator knows this is a new industry in the country. Perhaps I may be mistaken in claiming that they can get along with 35 per cent, but I think they can. I will say that if the Senator will take the Reynolds report and consider it he will concede that there should be a great deal higher rate than 50 per cent imposed.

Mr. JONES of New Mexico. I must confess we have not very much information about it that I know of.

Mr. SMOOT. Is the Senator objecting to the reduction?

Mr. JONES of New Mexico. I simply do not know about it. I was asking the Senator from Utah.

Mr. SMOOT. I have not any doubt at all that they can get along with 35 per cent. I never had any doubt, although it is a new industry in the country. It was a question in the House as to whether they could get along with that rate. The House fixed the rate at 25 per cent on the American valuation, and the Senate committee fixed it at 50 per cent on the foreign valuation, but I think 35 per cent on the foreign valuation is sufficient, and it is a lower rate than 25 per cent on the American valuation plan.

Mr. JONES of New Mexico. I believe the Senator will probably agree that it is more or less a personal estimate as to what the rate should be.

Mr. SMOOT. We have had no industry of this kind in the past. We do not know to what extent it is going to go. We have nothing in the past on which to judge this item. I will frankly say to the Senator that I think it is rather an experimental rate.

Mr. JONES of New Mexico. That is what I supposed it was.

Mr. SMOOT. I have not any doubt of it at all.

Mr. JONES of New Mexico. It was my idea about it that it was experimental.

Mr. SMOOT. Does the Senator feel that he could do any better?

Mr. JONES of New Mexico. I have not expressed any such idea. I simply wanted to know what we are acting on. In this matter I am inclined to think the judgment of the Senator from Utah is as good as that of anybody. He is a pretty good guesser, I think, and as long as we are guessing about this matter I think we might as well let him guess as some one else.

Mr. WILLIS. Mr. President, as a basis for the remarks which I wish to make at this time, I ask permission to have inserted in the RECORD a letter, without reading. I think I can give the substance of it, which will answer the purpose at this time.

The PRESIDING OFFICER. Without objection, the letter will be printed in the RECORD.

The letter is as follows:

CLEVELAND, *August 31, 1921.*

Senator FRANK P. WILLIS,
Senate Office Building, Washington, D. C.

DEAR SIR: The proposed tariff bill, known as H. R. 7456, paragraph 17, page 3, provides an increase tax of 10 per cent on trichloroethylene.

We use this product in our decaffeinization of coffee and in the refining of caffeine. If there is a further increase in this duty, as contemplated at the present time, it only amounts to increasing the price which one must pay to the English manufacturer or a European manufacturer for this chemical, because there is not one American chemical company which makes trichloroethylene.

The writer personally is interested in the Grasselli Chemical Co. of Cleveland, and Dow Chemical Co. of Michigan, and even with their cooperation he has not been able to find one manufacturer of this chemical. Therefore it seems a great injustice to have any duty on this article.

The Kaffee Hag Corporation erected a large 3-story plant in Cleveland, within the city limits, based on the use of this chemical because it does not explode like benzol. It already costs us five times what benzol does, but, of course, there is no danger in its use and no fire regulations are necessary. But if there is an increased duty on this article it will work a serious hardship with our plant.

The writer appreciates the fact that Congress is now in recess, but if after you return you can give us the opportunity to appear before the Senate Finance Committee, it will be greatly appreciated.

Yours very truly,

KAFFEE HAG CORPORATION,
GEORGE G———, *President.*

Mr. WILLIS. Mr. President, this item is perhaps not of very great importance to the country, and yet it is of great importance, too. It is of very great importance to an industry in my State. As Senators will observe, if they will look in the Summary of Tariff Information, this article, trichloroethylene, is used principally in the decaffeinization of coffee. So far as I know, we have in Ohio the largest and perhaps the only plant of that kind in the world. I invite the attention of the Senators to the fact that, up to date at least, there is no protection upon the finished product of the company. They use this material in the decaffeinization of coffee. Since it is not produced in this country at all, so far as I am able to ascertain——

Mr. SMOOT. Oh, yes; I will say to the Senator it is produced in this country.

Mr. WILLIS. Does the Senator have information to that effect? My information is to the contrary.

Mr. SMOOT. Oh, yes; the Senator from Utah has definite information.

Mr. WILLIS. I will give the Senator my information, and then I want to hear what his information is.

Mr. SMOOT. The Madison Chemical Works are making these products in the United States, I will say to the Senator, and have been for some time.

Mr. WILLIS. Of course I accept the Senator's statement on a matter of fact, only I want him to hear my statement of fact.

Mr. SMOOT. They are shut down right at this time on account of the present situation. The Senator has stated exactly what the items are for. They are used to take the caffeine out of coffee, and I think it is called by the German name of Kaffee Hag.

Mr. WILLIS. That is correct. I did not use the name, because I did not want to advertise our products, although we are very proud of them.

Although I accept the Senator's statement of fact and do not mean the Senate to be misled, the statement I have is from the Grasselli Chemical Co., which is one of the largest in the country, to the effect that they have not been able to find anywhere in the country that the product is manufactured. I accept the Senator's statement. If it is manufactured, all well and good. At all events, there was not very much imported last year, only some $4,300 worth.

There is another angle to this matter. The plant of this company has been constructed within the corporate limits of the city of Cleveland, Ohio. If they use this material, trichloroethylene, they can continue to operate their plant there. If they use another material, namely, benzol, which can be used as a solvent, they must destroy their plant at that place, because it is within the fire limits. In other words, this would be a very great hardship upon the company.

Without going into a general discussion of the product, I think it is a desirable sort of product. It does not seem to me that we ought to put this additional burden upon the company. I hope the amendment offered by the Senator from Utah will be agreed to, and then that the amendment, as amended, will be rejected. In other words, inasmuch as the present law pro-

vides 15 per cent ad valorem, and the House raises that to 25 per cent ad valorem, it seems to me under the present conditions that is sufficient protection.

Mr. SMOOT. The Senator understands that the 25 per cent rate in the House bill is on the American valuation, while my amendment of 35 per cent is on the foreign valuation.

Mr. WILLIS. But if the Senate will follow the advice I have just given and agree to the Senator's amendment and then reject the amendment as amended, it will be 25 per cent on the foreign valuation, which I think would be about right.

Mr. SMOOT. If the Senator will advise the Grasselli Chemical Co. to write to the Madison Chemical Co., Niagara Falls, N. Y., they will get an answer no doubt as to whether the product is made in this country. I will say, however, as I said before, that to-day on account of importations they are closed down. The rate placed in the bill by the House was for the very purpose of seeing if they would not resurrect the manufacture of these items in this country.

Mr. WILLIS. My plea, of course, is for 25 per cent, which I think would be sufficient protection. I am ready to vote.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Utah to the committee amendment.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question is on the committee amendment as amended.

Mr. JONES of New Mexico. Mr. President, I rise to make a parliamentary inquiry. Can not the Senator from Ohio now move to substitute such rate as he sees fit?

Mr. WILLIS. That undoubtedly would be in order. I am inclined to the view, however, that the rate which will be had in the bill if we now defeat the Senate committee amendment as amended will be about fair. That would be 25 per cent on the foreign valuation.

Mr. JONES of New Mexico. In other words, the Senator from Ohio is content to have a duty of 25 per cent?

Mr. WILLIS. Yes; I think we can stand that. I think 35 per cent is too high. I think 25 per cent on the foreign valuation would not be unreasonable. So if we can now defeat the Senate committee amendment as amended we shall have accomplished what we wish to accomplish.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as amended. [Putting the question.] The Chair is in doubt. Those opposed to the amendment as amended will rise.

Mr. SMOOT. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ball	Heflin	McKinley	Shields
Brandegee	Johnson	McLean	Shortridge
Broussard	Jones, N. Mex.	McNary	Smoot
Calder	Jones, Wash.	Moses	Spencer
Colt	Kellogg	Myers	Sutherland
Curtis	Kendrick	Nicholson	Swanson
Dial	Keyes	Norbeck	Townsend
Dillingham	Ladd	Oddie	Underwood
Elkins	La Follette	Overman	Wadsworth
Fletcher	Lenroot	Page	Watson, Ind.
Gooding	McCormick	Rawson	Weller
Harris	McCumber	Robinson	Willis
Harrison	McKellar	Sheppard	

The PRESIDING OFFICER (Mr. SPENCER in the chair). Fifty-one Senators have answered to their names. A quorum is present. The question is on agreeing to the amendment of the committee as amended.

Mr. JONES of New Mexico. Mr. President, I observe that quite a number of Senators are now present who were not present when this matter was being discussed a few moments ago, and I am quite sure that they would like to understand just what the question is. These are new items. The Secretary even seems to have some difficulty in pronouncing the names, but they are "tetrachloroethane" and "trichloroethylene." The House put a duty upon these items of 25 per cent ad valorem. The Finance Committee increased it to 50 per cent in the first instance. I think the reason why that was done was merely on the general assumption that the House rates are based upon the American valuation plan, and the committee thought, in view of the change from that plan to the foreign valuation plan, the rate ought to be doubled. So the rate is the result of a mere guess.

The Senator from Utah says that the Finance Committee had a second guess about it and thought the rate ought to be 35 per cent instead of 50 per cent. The Senator from Ohio seems to have a constituent who is personally interested in the matter and he wants an opportunity to guess. He wants us to guess that the House rate is just about right. Inasmuch as we have been relying so often on the guessing of the Senator from Utah, I am inclined to think we had better change this time and guess with the Senator from Ohio. That is all there is to it. The 35 per cent guess now becomes an amendment proposed by the committee. The question is on agreeing to the committee amendment. The Senator from Ohio wants us to disagree to that amendment, which would leave the House rate of 25 per cent. I believe we had better take a chance on guessing with the Senator from Ohio.

Mr. WILLIS. Mr. President, I greatly appreciate the compliment implied in the statement by my friend from New Mexico; but I wish to add this to his statement: The present law provides a rate of 15 per cent. At that rate only $4,300 worth of this material—trichloroethylene—was imported. If we shall increase the rate as provided in the House bill, which is 25 per cent, certainly that will be adequate protection for this new industry, and at the same time will let the industry which is engaged in the decaffeinization of coffee continue. I hope the advice of the Senator from New Mexico in this instance may be followed.

Mr. JONES of New Mexico. I think I might add the further suggestion that at the present time this article is under an embargo. If the general embargo provision shall remain in the bill, I am inclined to think that my friend from Ohio will not get much relief for his constituent; but, at any rate, I think we had better stay with the Senator from Ohio.

Mr. SMOOT. The Senator from New Mexico thinks that anybody who suggests any kind of a reduced rate is right. Does the Senator from New Mexico know anything about whether or not the 35 per cent rate is sufficient? According to the Reynolds report, 50 per cent would not be sufficient. The committee felt that on these chemicals we should try to get as low a rate as we could; but this is absolutely a new industry in the United States, and if we are going to have it continue here 35 per cent is not too high a rate to allow.

Mr. JONES of New Mexico. If the Senator from Utah has at last got some real information about this item, I think we ought to have it.

Mr. SMOOT. I have already given the Senator the information, but he does not care anything about what anybody says. He simply arises and asks the same question over again when Senators who have been absent return to the Chamber, not knowing that he has previously asked the question.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as amended. [Putting the question.] The "ayes" seem to have it.

Mr. WILLIS. I ask for a division, Mr. President.

The PRESIDING OFFICER. A division is requested.

Mr. SMOOT. Let us have the yeas and nays, Mr. President.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement as before, I vote "yea."

Mr. DIAL (when his name was called). I transfer my pair with the Senator from Colorado [Mr. PHIPPS] to the Senator from Ohio [Mr. POMERENE] and will vote. I vote "nay."

Mr. DILLINGHAM (when his name was called). Making the same announcement as before, I vote "yea."

Mr. McKELLAR (when his name was called). Making the same announcement as to my pair and its transfer, I vote "nay."

Mr. McKINLEY (when his name was called). Making the same announcement as before, I vote "yea."

Mr. OVERMAN (when his name was called). Making the same announcement as before as to my pair and its transfer, I vote "nay."

Mr. UNDERWOOD (when his name was called). I transfer the general pair I have with the Senator from Massachusetts [Mr. LODGE] to the Senator from Rhode Island [Mr. GERRY] and will vote. I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. STERLING. Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Delaware [Mr. DU PONT], I vote "yea."

Mr. SHIELDS. Making the same transfer as before, I vote "nay."

The result was announced—yeas 32, nays 24, as follows:

YEAS—32.

Ball	Curtis	Johnson	Lenroot
Brandegee	Dillingham	Jones, Wash.	McCormick
Bursum	Elkins	Kellogg	McCumber
Calder	France	Kendrick	McKinley
Colt	Gooding	Keyes	McLean
Moses	Rawson	Spencer	Townsend
Nicholson	Shortridge	Sterling	Wadsworth
Page	Smoot	Sutherland	Watson, Ind.

NAYS—24.

Ashurst	Heflin	McNary	Shields
Broussard	Jones, N. Mex.	Myers	Simmons
Dial	King	Oddie	Swanson
Fletcher	Ladd	Overman	Underwood
Harris	La Follette	Robinson	Weller
Harrison	McKellar	Sheppard	Willis

NOT VOTING—40.

Borah	Fernald	Newberry	Reed
Cameron	Frelinghuysen	Norbeck	Smith
Capper	Gerry	Norris	Stanfield
Caraway	Glass	Owen	Stanley
Crow	Hale	Pepper	Trammell
Culberson	Harreld	Phipps	Walsh, Mass.
Cummins	Hitchcock	Pittman	Walsh, Mont.
du Pont	Lodge	Poindexter	Warren
Edge	Nelson	Pomerene	Watson, Ga.
Ernst	New	Ransdell	Williams

So the amendment of the committee, as amended, was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On page 6, paragraph 13, which reads as follows:

Bleaching powder or chlorinated lime—

The committee proposes to strike out "three-fifths" and insert "one-fifth," so that it will read:

One-fifth of 1 cent per pound.

Mr. WADSWORTH. Mr. President, I desire to make a comparatively brief statement on this paragraph. It affects bleaching powder or chlorinated lime; and perhaps for the purpose of clarity I will be permitted to refer to these products as chlorine, inasmuch as chlorine is the base for both of them.

The House passed its bill imposing a tariff duty of three-fifths of a cent per pound on this product, and the Senate committee reports that duty cut to one-fifth of 1 cent. I regret the cut made by the Senate committee, and I feel sure that it has been made under a misapprehension of the facts. My recollection also is that one-fifth of a cent per pound is the present rate under the Underwood tariff law.

Mr. SMOOT. One-tenth of a cent. This is the same as the rate provided by the act of 1909.

Mr. WADSWORTH. Mr. President, chlorine is used in bleaching paper and textiles, in purifying water supplies for municipalities, in many laboratory undertakings, and it is also the base for all the gases that have been used in warfare. In fact, it may be said, I think, with absolute accuracy that every chlorine factory in the world is potentially an arsenal of immense importance to the country in which the factory is located.

I call attention also to the fact that this paragraph does not include any mention of liquid chlorine, and, as I understand, the bill does not treat with liquid chlorine at all, although liquid chlorine is interchangeable in its use with chlorine in other forms. When former tariff bills were enacted, the use of liquid chlorine was not general. It was not known commercially to any extent, and its presence did not constitute any economic problem; but to-day liquid chlorine has gained an important place in commerce involving these products.

The Senator from Utah states that one-fifth of a cent per pound was the 1909 rate. If conditions had not changed in any respect since 1909, I could make no complaint concerning that as an adequate protective rate; but I desire to call the attention of the committee and of the Senate to the astonishing changes that have taken place since that time.

Before the war the freight rate on chlorine from Niagara Falls, which is one of the places in this country where it is manufactured, to New York City, for example, was $2.20 per ton. At the same period—that is, before the war—the freight rate from Liverpool, England, to New York City was $3.12 per ton. Other things being equal, manufacturing and labor costs being equal, the freight rates of those days gave the manufacturer in the United States an advantage of nearly a dollar per ton in reaching this large market. Since the war that situation is reversed. The freight rate between Niagara Falls and New York, in 1921, was $5 per ton and the freight rate between Liverpool and New York was $4.36 per ton; so that instead of the American manufacturer having an advantage of nearly a dollar a ton in freight rates, to which he normally would be entitled under normal transportation conditions of the old days, it actually costs him more to reach his principal market to-day than it costs the manufacturer in England to reach the same market—that is, New York. The spread between the pre-war and the postwar rates in transportation alone constitutes a loss of advantage of $1.36 per ton to the American manufacturer.

This one item alone displays the complete change in the situation over which the American manufacturer has no control.

If we will turn to the labor costs, we will find an even more extraordinary change. Prior to the war, with bleaching powder or chlorine selling at $25 per ton, the American labor cost per ton was $18. That was the amount of money going into the pockets of American workingmen for every ton produced and sold at $25. At that same period, with chlorine imported from abroad selling at the same price of $25 per ton, $12 per ton went into the pockets of German workingmen. The German manufacturer had an advantage in labor costs of $6 per ton. The one-fifth cent per pound duty of that period amounted to $4 per ton, which went far toward equalizing the labor costs. The situation, however, has completely changed in that regard.

To-day the American labor cost, instead of being $18 per ton, is $39 per ton, and the German labor cost is $4.08 per ton only. So that the American manufacturer, with the present scale of American wages, is at a disadvantage of $25.92 on every ton he produces in the matter of labor cost.

It must become perfectly apparent that the duty of one-fifth of a cent per pound, which is the equivalent of $4 a ton, is utterly inadequate to maintain American wages in this industry, and either the industry must slow down or the wages must be reduced, for with $4 per ton assessed as an import duty, the American wage cost would still be $21 per ton greater than the foreign wage cost, and there is no getting away from that situation. One of two things must happen; either we abandon the industry or reduce our wage costs very largely. Such a thing, of course, is unthinkable.

I know that our Democratic friends take great delight in referring to these tariff duties as oppressive upon the consumers, and whenever we impose a duty which actually protects American workingmen in this matter of wages and living conditions they say we are taking vast amounts of money out of the pockets of the people, and that every individual consumer is thereby taxed unduly.

In concluding this brief statement, Mr. President, I want to call attention to one phase of this problem which is so often overlooked. We talk about a duty of one-fifth of a cent per pound or a duty of three-fifths of a cent per pound, and three-fifths of a cent being three times as much as one-fifth of a cent some people are apt to jump to the conclusion that the imposition of a rate three times higher than the lower rate means an excessive tax on the consumer. We forget, however, the enormous quantities of this product which are used and the tremendous field in which it is used. For example, I referred in the beginning of my remarks to the fact that chlorine is used for the purification of the water supplies of great cities. My information is to the effect that the city of New York, for example, has a contract with an American concern to purify its great water supply, the greatest in the world, on which 6,000,000 people are dependent for pure water every day, without interruption. The amount of liquid chlorine used is exceedingly small. About eight-tenths of a pound of chlorine is used in purifying the New York City water supply for every million gallons used daily. The normal consumption of water is about 100 gallons daily per capita.

Mr. TOWNSEND. A day?

Mr. WADSWORTH. One hundred gallons daily per capita. The normal consumption in a great city like New York is approximately 100 gallons per capita daily. That means that 0.8 of a pound of liquid chlorine purifies the water daily for 10,000 people. At 10 cents per pound, that means 0.8 of a cent to protect 1,000 people every day. The cost is infinitesimal; it might be said to be invisible. It amounts to nothing when scattered over such a tremendous field as that.

If the duty were 3 cents per pound it would mean that the cost for 1,000 people would be only one-third of a cent per day. So it is absurd to insist and argue that a duty of this kind imposes oppressive taxation upon consumers. It does no such thing. The product is scattered in such huge quantities over such an immense field of consumption that the matter of 3 cents per pound duty amounts to nothing, and can not possibly be reflected in the actual cost of the product to the consumer in a case of this kind.

It does, however, have a most profound effect upon the existence of the industry as a whole—the manufacture of the product in this country. As I have already stated, with a duty of one-fifth of a cent per pound, as proposed by the Senate committee, after that duty is assessed the difference in the labor cost as between Germany and the United States is $20 per ton. The one-fifth of a cent duty amounts to nothing in the way of protection. It will do nothing for the industry It is utterly impossible, as shown by mere statement, which I am certain is correct, for any industry in this country to survive a situation of that kind.

Three-fifths of a cent per pound would reduce the difference in cost from $20 to about $5 or $6, and still the American manu-

facturer would be at that disadvantage plus his disadvantage in freight rate. Actually, here in the United States he pays a greater freight rate to reach his eastern market from his point of production than is paid by the manufacturer in England who ships his stuff from Liverpool to New York.

One thing I wanted to emphasize before the Senate, and especially to members of the committee, was that whereas it is perfectly true that this country is now one of nine nations which have agreed, as among themselves, not to indulge in chemical warfare, nevertheless, there are many other great and powerful nations in this world, some of them distinctly inclined toward militarism and aggression, who are not parties to that agreement and who, in my humble judgment, will never abide by it or live up to it if they are once engaged in some great, vital war, and if we, by permitting the shrinkage of this industry, rob this country of facilities to manufacture chemical-warfare gases in case of need, in case they are used against our soldiers, and in case we are compelled, in order to save our lives, to reply to that attack in kind, if we are stripped of facilities for meeting that attack we shall find ourselves, as a Nation, in a desperately dangerous condition. This industry, which produces a product which is the base of every gas used in war, is potentially an arsenal of defense for the United States. I plead with my colleagues in the Senate that it be not permitted to die.

I think a duty of three-fifths of a cent per pound is actually not high enough to cover the actual differences in the cost of labor and transportation, and I think I have shown that by the figures; but with three-fifths of a cent, as fixed by the House, there is a chance that it will live.

I know this is a committee amendment, and very naturally the Members of the Senate, in large numbers, have confidence in the judgment of the committee. I am not going to ask a roll call on this. I wanted to call attention to this situation as emphatically as I could, in the hope that perhaps the members of the Senate Finance Committee might change their minds about it, or at least meet the conferees of the House with fairly open minds, for in some respects, Mr. President, this matter may become vital to the United States.

Mr. FLETCHER. Mr. President, I rose to ask the Senator how he could harmonize his statement that this industry required this additional protection, in order that it might live, with the statistics as to imports and exports. For instance, the duty under the act of 1913, which continues up to this time, was one-tenth of a cent per pound. The main plants appear to be at Niagara Falls, two in Michigan, and one in California, manufacturing chlorine, and they were able to manufacture so that under the duty of one-tenth of a cent a pound the importations in 1918 were only 540,131 pounds, in 1919 they were 341,812 pounds, in 1920 they were 2,474,617 pounds, and in 1921 they were 6,154,912 pounds, whereas in 1918 we actually made and exported to other countries under that duty of a tenth of a cent a pound 13,060,401 pounds; in 1919 a total of 21,619,736 pounds, in 1920 a total of 48,826,348 pounds, and for the first nine months of 1921 we exported 12,045,336 pounds, most of that going to Argentina, Canada, Brazil, and Spain; so that under the present duty of one-tenth of a cent a pound we are almost keeping out all importations, and at the same time we are exporting these vast quantities, ranging in 1920 to 48,826,348 pounds.

Mr. WADSWORTH. What is the figure for the first nine months of 1921?

Mr. FLETCHER. Twelve million pounds.

Mr. WADSWORTH. Surely the Senator sees the significance of the difference in the importation. That is at the rate of sixteen million a year instead of forty-eight million for 1920. It has dropped 200 per cent in one year, according to those figures.

Mr. FLETCHER. There were very much larger exportations than importations.

Mr. WADSWORTH. If the Senator will look at the increase of the importations he will find that they have increased twenty times.

Mr. FLETCHER. It may be that they are actually selling in foreign markets cheaper than in the home market. I do not know as to that.

Mr. WADSWORTH. The importations, starting from next to nothing, something like 300,000 pounds, have jumped to 6,000,000 pounds in two years.

Mr. FLETCHER. They appear to be increasing.

Mr. WADSWORTH. The exportations have dropped from 48,000,000 pounds to a basis of 16,000,000 in one year.

Mr. FLETCHER. According to these figures; but they gradually increased from 13,000,000 in 1918 to 48,000,000 in 1920.

Mr. WADSWORTH. During the war and for the first two years after the war, before Europe had a chance to get on its feet, and some of these chemical industries began operating again, it is perfectly true that we had about the only free commerce and free credit. We built up in this country during the war a chlorine industry almost twice as great as we possessed before the war, but the figures which the Senator has read show very clearly the tendency to-day. The importations since Europe had a chance to get on her feet have increased twenty-fold and the exportations in the last year have decreased 200 per cent. It will not take more than a year longer to have those two lines cross, the American exportation constantly going downhill, and the foreign importations constantly going uphill. It is utterly impossible to keep it up at that rate.

Mr. McCUMBER. Mr. President, I shall cite just a few figures concerning this. In 1914 the United States production was 310,000,000 pounds. That was at a time when we had one-tenth of a cent duty. At the same time I think we were importing about 80,000,000 pounds, or somewhere near that. In 1919 the production fell off to 177,000,000; but I think that may be attributed to the importation of liquid chlorine, which is to quite a considerable extent taking the place of the powder. The commercial importance of the bleaching was promoted by imposition of a duty of one-tenth of a cent per pound in October, 1897.

The industry supplies the greater part of the domestic consumption. The imports were 6,155,000 pounds during the first nine months of 1921, and that, of course, with only this very small rate. The committee took all of these matters into consideration, including the present rate of one-tenth of 1 per cent per pound, the rather small proportion of the importations, and a comparison of the importations with a like law. Under the Payne-Aldrich law the duty was also one-fifth of 1 cent, and even at that time the imports of bleaching powder ranged only from 80,000,000 to 100,000,000 pounds, while our domestic output was about 310,000,000 pounds. Therefore we thought that one-fifth of 1 cent would be sufficient protection at this time.

Mr. SMOOT. Mr. President, I think I can tell the Senator from New York and the Senate why the importations increased in the first nine months of 1921.

In the first nine months of 1921 the foreign price, the invoice price, was 2 cents a pound. The American manufacturers did not try to meet that cut price, because the foreign valuation in 1920 was 3 cents a pound. The American manufacturers have not only met the price but they are selling to-day for 1.6 cents per pound. That is the generally quoted price for which anybody in the United States can purchase it. The pre-war price was 1¼ cents, so that the rate we have given, one-fifth of 1 cent, is 25 per cent ad valorem duty. It is demonstrated that they can make this commodity about as cheaply here as anywhere in the world. I have not any doubt that the rate we have put on here, one-fifth of 1 cent a pound, will protect the industry in the United States.

Mr. President, I fully recognize the importance of the industry, and I would not like to support any kind of a rate that would in any way destroy the industry of the United States. If I did not believe that one-fifth of a cent per pound would be ample to take care of it, I would not vote for it upon the floor of the Senate. But from all the information that we have about it the committee believe that one-fifth of a cent a pound is sufficient.

Mr. JONES of New Mexico. Mr. President, I can not help feeling that the Senator from New York is unduly alarmed about the situation.

Mr. FLETCHER. Mr. President, will the Senator permit me to interrupt him?

Mr. JONES of New Mexico. I yield.

Mr. FLETCHER. One-fifth of a cent a pound, according to the present valuation of 2 cents a pound, would be 50 per cent ad valorem. The unit value given now on importations is two-tenths of a cent a pound, or one-fifth, so that a one-fifth of 1 cent duty would be 50 per cent ad valorem.

Mr. JONES of New Mexico. The commodity is a very important one in the country, and I believe, unless some good reason be shown for imposing a high duty, that we ought not to impose it. I call attention to the fact that this commodity is used for the purpose of bleaching pulp and paper stock and cotton and linen in the textile mills and laundries. That is a general consumption.

Of course, the Senator from New York makes a very strong appeal. He puts it upon the basis of preserving a war material, but I can not feel that the Senator is justified in his view that the industry is in danger. Before the war we were producing this commodity in very large quantities, and now we are not only producing it in very large quantities but we are export-

ing it. The production during the last year for which we have any information, as I recall, was over 300,000,000 pounds, and the importations were about 6,000,000 pounds for the first nine months of 1921. The price of the importation was 2 cents per pound. One-fifth of 1 cent makes quite a large percentage. I have not been able to find anything in the information which we are able to get through the usual sources giving any reason for apprehension about the industry. On the contrary, the Tariff Commission says:

The fact that we are now supplying our own consumption and that during the 1918 fiscal year we exported over 13,000,000 pounds is sufficient indication of the development of the bleaching-powder industry in the United States.

Another item:

The pre-war price of bleaching powder was practically constant at about $25 per ton.

That is 1¼ cents per pound, making it, as the Tariff Commission says, one of the cheapest chemical products. The last imported price of which we have any information was 2 cents per pound, or $40 per ton.

Mr. SMOOT. I will say to the Senator that the foreign price has been cut.

Mr. JONES of New Mexico. That is the latest we have in the statistics furnished.

Mr. SMOOT. That is the latest the Tariff Commission report has given, but in the Monthly Summary of Foreign Importations for March, I will say to the Senator, he will see that the price has been cut.

Mr. JONES of New Mexico. To what amount?

Mr. SMOOT. I think I can give it to the Senator, but it will take a little time to look it up. I think it is either 1 cent or a little over 1 cent per pound.

Mr. JONES of New Mexico. The price of this commodity became very high during the war and it has not been reduced to pre-war prices so far as I am advised. The Senator from Utah doubtless will find the later figure in a moment, but the latest information I have is that it is still considerably higher than the pre-war price.

I would like to call to the attention of the Senator from New York the extent to which the importations have decreased. In 1910 the imports amounted to about $750,000, and they kept decreasing until in 1914 they amounted to only $416,000 and in 1915 $197,000. Then during the war period the situation was practically nominal. In 1919 the imports were only $6,787 and the duty was only $341. In 1920 the value of the importations was $6,834 and the duty only $488. The price given was 1.04 cents per pound, which would be about $30 per ton. That was the foreign valuation. Of course, there is transportation on that, the landing charges, and the profit on it after it reaches here. It strikes me that instead of increasing this above the committee recommendation we had better retain the present duty.

The industry has gotten along satisfactorily, and to increase the rate to one-fifth of a cent per pound, as the committee proposes, is an increase of 100 per cent over the present rate. The industry has thrived under the present rate of one-tenth of a cent per pound. I had intended to move to amend the rate suggested by the committee and put it back where it is now. The industry is thriving. Our production is over 300,000,000 pounds a year. We are exporting it by the millions of pounds. It strikes me we had better let well enough alone and let it stay where it is now. The price is higher now than it was before the war, and whatever little competition there may be will have a tendency to get the price back to pre-war figures.

After the amendment proposed by the Senator from New York is voted upon, unless it be adopted, I shall then propose to reduce even the amount proposed by the committee.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

Mr. HEFLIN. Let us have the amendment reported.

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. On page 6, lines 3 and 4, the paragraph reads as follows:

Bleaching powder or chlorinated lime, three-fifths of 1 cent per pound.

The committee proposes to strike out "three-fifths" and insert "one-fifth."

Mr. WADSWORTH. Mr. President, I have offered no amendment. I simply expressed the hope that the committee amendment would be agreed to.

Mr. JONES of New Mexico. I thought the Senator had proposed an amendment.

Mr. WADSWORTH. Oh, no.

Mr. FLETCHER. The vote comes on the adoption of the committee amendment.

Mr. SMOOT. If we reject the committee amendment, then the three-fifths of a cent remains in the bill.

Mr. JONES of New Mexico. I thank the Senator for making clear the parliamentary situation. Then I would move at this stage to strike out one-fifth and insert one-tenth.

Mr. McCUMBER. That can be done, of course. That is an amendment to the committee amendment.

Mr. HEFLIN. That would be in order now.

Mr. JONES of New Mexico. I wish to state, from information which I have just had called to my attention, that the pre-war foreign price was 1 cent per pound or $1 per 100.

The present foreign price ranges from $1.60 to $1.75 per hundred. To that must be added, of course, the cost of transportation and the duty, whatever it may be, and the profits of the importer. We are using in this country about 300,000,000 pounds of it and are exporting it in large quantities. Therefore, I move to strike out "one-fifth" and to insert "one-tenth."

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from New Mexico to the amendment of the committee.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The next amendment of the Committee on Finance was in paragraph 22, on page 7, line 14, after the word "distilled," to strike out "and" and insert "or"; and in line 15, after the word "expressed," to strike out "and" and insert "or," so as to read:

PAR. 22. Chemical elements, and chemical and medicinal compounds, preparations, mixtures, and salts, distilled or essential oils, expressed or extracted oils,

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 8, paragraph 24, line 9, before the words "per centum," to strike out the numerals "25" and to insert the numerals "35," so as to read:

PAR. 24. Chloral hydrate, terpin hydrate, thymol, urea, and glycerophosphoric acid, and salts and compounds of glycerophosphoric acid, 35 per cent ad valorem.

Mr. McCUMBER. I ask that that amendment may be passed over, at the request of the Senator from Missouri [Mr. SPENCER].

The VICE PRESIDENT. Without objection, the amendment will be passed over.

Mr. WADSWORTH. I desire to address a question to the Senator from North Dakota [Mr. McCUMBER], referring again just for a moment to paragraph 13. I referred in my remarks on that paragraph to the absence of any reference to liquid chlorine. I believe that the question of liquid chlorine should be taken into consideration by the conferees on the bill, at least.

Mr. SMOOT. Liquid chlorine, I will say to the Senator from New York, is provided for in paragraph 5 under a rate of 25 per cent.

Mr. WADSWORTH. If that is correct I am, of course, satisfied.

The next amendment of the Committee on Finance was, on page 9, paragraph 25, line 14, to strike out the word "toluylenediamine" and to insert "tolylenediamine."

Mr. KING. Mr. President——

Mr. SMOOT. I will say to my colleague that that amendment is simply to change the spelling of the word in order to get it correct. Of course, I know the Senator has no objection to that.

Mr. KING. I have no objection to that, but I desired it understood that we were not to proceed with the consideration of paragraphs 25 and 26 at this time.

Mr. McCUMBER. There are a number of words in the bill, the Senator from Utah will observe, where the letters are thrown together indiscriminately and a word is supposed to result therefrom, but in some cases the admixture is not properly made, and it is therefore necessary to make corrections.

Mr. KING. I have no objection to that, if the understanding is that after disposing of those inconsequential matters the paragraphs will be passed over.

Mr. McCUMBER. All of paragraph 26 may be passed over.

Mr. KING. I desire that both paragraphs 25 and 26 may be passed over.

Mr. McCUMBER. Let all of paragraph 26 be passed over and also let the remainder of paragraph 25 be passed over.

Mr. KING. I understood the paragraphs relative to the coal-tar products and their derivatives would be passed over until we reach those provisions in the bill which deal with the embargo.

Mr. McCUMBER. I do not know that I desire to go that far at the present time, but I am inclined to think probably that may be the best way to dispose of them. Anyway, we may pass them over for the present. I will ask if the amendment correcting the spelling of the word on page 9, line 14, has been agreed to?

The VICE PRESIDENT. The amendment has not yet been agreed to.

Mr. KING. If the Senator will pardon me for a moment——

Mr. McCUMBER. Let us agree to the amendment correcting the spelling.

Mr. KING. Very well; of course, I have no objection to that.

Mr. HARRISON. Is section 25 going to be passed over now?

Mr. McCUMBER. When the amendment shall have been agreed to, I ask that paragraph 25 be passed over.

The VICE PRESIDENT. The question is on agreeing to the amendment on page 9, line 14.

The amendment was agreed to.

The VICE PRESIDENT. The next amendment proposed by the Committee on Finance will be stated.

The next amendment reported by the Committee on Finance was, on page 15, paragraph 27, line 17, before the word "linoleate," to strike out the word "sulphate" and to insert "sulphate and."

Mr. KING. I desire to suggest to the chairman of the committee, with respect to paragraphs 25 and 26, in view of the fact that they are inseparably connected with the dye embargo, that they go over until we reach that subject, because if the paragraphs be taken up now I shall be compelled to enter into a discussion of the dye embargo and then perhaps to discuss it later on, and it will not be in the interest of saving time.

Mr. McCUMBER. I think that we shall probably either do that or advance the dye embargo for a discussion before we reach it regularly, so that we may connect them in some way. I do not wish, however, at the present time to say positively which would be the better way; but we can go right on now to paragraph 27 and dispose of that.

Mr. KING. When that is done, shall we take a recess until to-morrow?

Mr. McCUMBER. I desire to proceed until 10 o'clock.

The VICE PRESIDENT. The question is on agreeing to the amendment on page 15, line 17, which has been stated. [Putting the question.] Without objection, the amendment is agreed to. The next amendment proposed by the Committee on Finance will be stated.

The next amendment proposed by the Committee on Finance was, on page 15, paragraph 27, line 10, after the word "linoleate," to insert "10 cents per pound."

The VICE PRESIDENT. Without objection, the amendment is agreed to.

Mr. JONES of New Mexico. Mr. President, I did not understand the action which was being taken. I supposed that the amendment was merely a correction of the spelling of a word in the other paragraph about which we were talking. Is this a correction in paragraph 27?

Mr. SMOOT. The amendment correcting the spelling of a word was agreed to, and now we have proceeded to another amendment.

Mr. JONES of New Mexico. The amendment now pending is to strike out the word "sulphate" and to insert the words "sulphate and," and after the word "linoleate" to insert the words "10 cents per pound."

Mr. SMOOT. The first amendment was agreed to. The second amendment is to insert the words "10 cents per pound." That is the amendment which is now pending. Instead of having a 30 per cent ad valorem duty, we provide a specific duty.

Mr. FLETCHER. To what ad valorem duty would 10 cents a pound be equivalent?

Mr. SMOOT. The price of this commodity is about 52 cents a pound, and a specific duty of 10 cents would be a 20 per cent ad valorem duty.

Mr. FLETCHER. There is another amendment to increase the House rate on cobalt salts from 25 per cent to 35 per cent.

Mr. SMOOT. The duty on all other cobalt salts is fixed at 30 per cent ad valorem. In the House bill the same rates were provided for the sulphate and linoleate as for the salts, but we did not think that there ought to be as much on the sulphate and linoleate as on the cobalt salts, and we increased the duty on the salts, and on the other items decreased the equivalent ad valorem.

Mr. JONES of New Mexico. I merely want to make a very short statement about this duty and call attention to the fact that the price for the first nine months of 1921 was nearly twice what it was in 1918. This seems to be a commodity the price of which not only has not come down since the war but has gone up. The raw material is found in Canada.

Mr. SMOOT. The Senator is referring to cobalt oxide. There is no amendment to that item.

Mr. JONES of New Mexico. I was merely calling attention to it as the base material out of which the other commodities are made. It is the basic material from which sulphate and linoleate are made.

Mr. SMOOT. Of course, if the Senator is laying a foundation for his observations, then I have nothing further to say.

Mr. JONES of New Mexico. That was my purpose in calling attention to it. The basic material comes from Canada, and it seems to me we ought not to put a duty on it, which would have a tendency to keep up the price. The oxide has risen in price already, and there is no reason why we should put up the price, so far as I can see, when the oxide is a material out of which the sulphate and linoleate are made. At any rate, Mr. President, there is not, so far as I am advised, any testimony anywhere to be found to justify this increase in the duty. Only one witness appeared before the committee, and his testimony did not take up over about an inch and a half of the printed record, and all he had to say about it was the amount of the duty which he thought he ought to have. That is all that I can find out about it in this record. Just one witness appeared and stated that he would like to have an increase in this duty, and he stated the amount that he wanted. There is no great flood of importations. The price of the basic material, cobalt oxide, is rising, and I do not see how there could be any flood of importations. It is a small matter, but I simply want to call attention to the circumstances under which this bill is written.

Mr. McCUMBER. Mr. President, possibly it will enlighten the Senate a little upon this subject to quote from the Summary of Tariff Information:

> Since Canada began producing cobalt in quantity the production of oxide in the United States has been very small. Canada furnishes nearly all of the world's supply. The output in 1919 (preliminary figures) of cobalt salts was valued at $104,970.
>
> The imports are almost entirely from Canada. They increased from 28,729 pounds in 1913 to 109,484 pounds in 1914 and to 238,934 pounds in 1916. The import during 1918 was 220,863 pounds.
>
> The large increase in imports of cobalt oxide has been accompanied by a marked decrease in imports of cobalt ore, which was free of duty under the acts of 1909 and 1913.

It will be seen, therefore, that, as Canada's output has supplied the United States market, we have ceased to be a manufacturer, and the question arises, with cobalt ore free, whether it is better to manufacture the articles here or whether they should be almost solely manufactured in Canada rather than in the United States.

Mr. JONES of New Mexico. May I call the attention of the Senator to the fact that he has been giving us the figures as to oxide, and not sulphate or linoleate?

Mr. McCUMBER. The first amendment relates to oxide, and that is the reason I discussed it.

Mr. JONES of New Mexico. The first amendment does not relate to the oxide, Mr. President. It relates to the sulphate and the linoleate. There is no change suggested by the committee in the rate fixed by the House on the oxide.

Mr. SMOOT. That is right, but I will say to the Senator that the rate on the oxide is only about 10 per cent. The oxide today is worth about $2.

Mr. JONES of New Mexico. Twenty cents a pound.

Mr. SMOOT. That would be just about 10 per cent.

Mr. JONES of New Mexico. About 10 per cent.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On page 15, line 19, after the word "cobalt," it is proposed to insert the words "salts and," so as to read:

> and all other cobalt salts and compounds.

The amendment was agreed to.

The ASSISTANT SECRETARY. After the word "compounds" on line 19, and after the comma, the committee proposes to strike out "25" and to insert "30," so as to read:

> and all other cobalt salts and compounds, 30 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, I realize that the amendment is going to be adopted. There is no suggestion of information at all about it, and I do not care to take up time in referring to these matters. They may appear very small to us, but they are of very considerable consequence to the people directly interested in them.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On page 15, line 24, after the word "known," it is proposed to insert within parentheses the words "except compounds of cellulose known as vulcanized or hard fiber," so as to read:

Compounds of pyroxylin, of other cellulose esters or ethers, or of cellulose, by whatever name known (except compounds of cellulose known as vulcanized or hard fiber), etc.

Mr. KING. Mr. President, I presume that the committee have transferred the words found in lines 24 and 25, "except compounds of cellulose known as vulcanized or hard fiber," to paragraph 29a.

Mr. SMOOT. That is correct.

Mr. KING. I should like to ask the chairman of the committee the reason of the change there, unless it was for the purpose of increasing the rate to be carried by the product, and I will not say to conceal, but to avoid, full disclosure as to the comprehensiveness of the amendment?

Mr. SMOOT. The object of the amendment is to decrease the rate, and not only that, but to have this vulcanized or hard fiber in a paragraph by itself, so that we can find out through the reports from the Treasury Department just how much of it is imported into the United States. The object is first to decrease the rate, and then, for statistical purposes, a new paragraph is made. If this amendment had not been made, it would have carried a duty of 40 cents a pound, or 60 per cent ad valorem. On the hard fiber that is all out of reason. Therefore the committee, as I say, took out this item and made a new paragraph for the purposes I have already stated.

Mr. KING. I am inclined to think there was some propriety in excising those words from paragraph 29 and constituting them a new paragraph; but I am somewhat in doubt as to the effect of the words "made wholly or in chief value of cellulose" in the new paragraph.

Mr. SMOOT. If the product was not made from cellulose, we would not want to give it this amount of duty. You see, it has to have a compensatory duty, because it is made from camphor, and camphor has a rate of 6 cents a pound; and not only that, but if it were not made from cellulose the hard fiber would not carry this rate of duty.

Mr. KING. I am inclined to think that if we are not very careful there will be some interpretation placed upon paragraph 29, or the following one, not designed by the committee, but that will enable the manufacturers of certain products which are very important to the lives of the people to claim a higher rate of duty than the article should carry, for the reason that some part of it, and only a small part of the value of the product, consists of any form of celluloid.

To illustrate what I mean, take toothbrushes. One would suppose that the important part of the cost of a toothbrush would be the bristles, and I fancy that that is the most important part, and the bristles would carry a certain rate, either specific or ad valorem, that might be lower than the rate carried upon the various forms of cellulose or celluloid. If you have a clause in here which makes a rate upon bristles—and I am using that only as an illustration—the rate might be fair, but if you have another provision in the bill under the terms of which, if the bristles are used in connection with celluloid, though the celluloid might constitute but a very small part of the cost of the finished product——

Mr. SMOOT. I will say to my colleague this is not celluloid; this is cellulose.

Mr. KING. I am speaking now, if the Senator will pardon me, of pyroxylin.

Mr. SMOOT. Oh, well, that is another matter.

Mr. KING. I am not speaking of the cellulose alone; I am calling attention now to paragraph 29. I was discussing the two together. The latter part of my remarks related to pyroxylin. So far as I know now, I do not object to the transposition and excision of those words from paragraph 29 and carrying them over to paragraph 29a.

Mr. SMOOT. I want to say to the Senator that if they are not carried over, the rate on hard-fiber goods falling under 40 cents a pound would be 100 per cent; so we took them out and put them in a bracket by themselves, and made the rate only 35 per cent.

Mr. KING. So far as I know now, I have no objection to taking a pro forma vote on the amendment to insert the words "except compounds of cellulose known as vulcanized or hard fiber"; but I do not want to take a vote upon paragraph 29a to-night. I should like a little further opportunity to see the full significance of that provision.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On page 16, line 4, the committee proposes to strike out "65 cents per pound and 25," and to insert "60," so that it will read:

Made into finished or partly finished articles, of which any of the foregoing is the component material of chief value, 60 per cent ad valorem.

Mr. KING. Mr. President, with my information—which I confess is somewhat limited—I am not satisfied with the rates which have been suggested for this paragraph. Undoubtedly they have been greatly increased over those of the Underwood-Simmons law, and I think that an examination of the Payne-Aldrich Act will show an increase over the provisions of that act.

Paragraph 17 of the Payne-Aldrich Act dealing with this subject reads:

Collodion and all compounds of pyroxylin or of other cellulose esters, whether known as celluloid or by any other name, 40 cents per pound; if in blocks, sheets, rods, tubes, or other forms, not polished, wholly or partly, and not made up into finished or partly finished articles, 45 cents per pound; if polished, wholly or partly, or if in finished or partly finished articles, except moving-picture films, of which collodion or any compound of pyroxylin or of other cellulose esters, by whatever name known, is the component material of chief value, 65 cents per pound and 30 per cent ad valorem.

That would seem to indicate that on those products perhaps the rate was higher than in the present bill.

Mr. SMOOT. The Payne-Aldrich rates were higher than those under the present bill, under the Senate amendment.

Mr. KING. Yes; I say, I am inclined to think that is true; but I shall offer an amendment to restore the rates of the Underwood-Simmons law as to this paragraph.

Mr. McCUMBER. May I ask the Senator a question? That is 40 per cent ad valorem, is it not?

Mr. KING. Forty and fifteen.

Mr. SMOOT. Twenty-five.

Mr. KING. It is 15.

Mr. SMOOT. No; partly finished articles, 25 per cent ad valorem.

Mr. KING. No; I think the Senator is wrong. Paragraph 25 of the Underwood Act provides:

Collodion and all other liquid solutions of pyroxylin, or of other cellulose esters, or of cellulose, 15 per cent ad valorem.

Mr. SMOOT. That is a different item entirely. In this bill that is in paragraph 28.

Mr. KING. It is in paragraph 25 of the Underwood Act.

Mr. SMOOT. Read the next provision, please.

Mr. KING. I say it is in paragraph 25 of the Underwood Act and deals with compounds analogous to those considered here.

Mr. SMOOT. No; this deals with liquid solutions, and that is an entirely different thing.

Mr. KING. Oh, well, the language is "solutions of pyroxylin, or of other cellulose esters, or of cellulose."

Mr. SMOOT. But that is the liquid solution.

Mr. KING. To be sure; I understand.

Mr. SMOOT. That is 15 per cent, it is true; but what we are discussing now is the compounds of pyroxylin or of other cellulose esters, of whatever name, and the rate on those is 25 per cent.

Mr. KING. The Senator misunderstood me. I intended to deal with the whole subject together——

Mr. SMOOT. Oh! I thought the Senator was dealing only with the paragraph that was before us.

Mr. KING. And I wanted to call the attention of the Senate to the fact that I shall move to restore the Underwood rates upon all of those items that might be denominated pyroxylin or pyroxylin compounds or divisions or groups.

Mr. SMOOT. If the Senator wants that done, then he will have to wait.

Mr. KING. I will have to move up one or the other of the paragraphs.

Mr. SMOOT. In fact, it would not be in order at this time.

Mr. KING. Oh, I understand that. My idea was to treat the entire subject at one time if we could, and, if we could not, to indicate now in advance to the committee what my view is with respect to the matter, and if I could not offer that amendment now because it dealt with another paragraph, that I would do so at a later date.

Mr. SMOOT. Then I should think the Senator would accept these amendments, because they are all decreases, and then, when we get into the Senate, offer the whole thing as a substitute.

Mr. KING. That might be done, although I am not satisfied with the rate which is provided in the paragraph which is under consideration.

Mr. McCUMBER. I think it might interest the Senator to get the purchasing prices in the foreign countries and in the United States, as shown by the Reynolds report. If he will take paragraph 25, celluloid dressing combs, celluloid in blocks, and hand-finished celluloid, he will find that the foreign value per dozen is $4.57; 36 cents is the landing charge, and there is a 40 per cent duty, making $1.62. The same article is sold for $10.75 in the United States. The American selling price of practically a like article is $9.25, but the foreign selling price is $4.57. The Senator can see that it could easily take the 60 per cent duty to equalize the cost prices at home and abroad.

Mr. KING. Mr. President, I will speak frankly to the Senator and say that there are a good many jokers in this provision. A moment ago, in a sort of an indirect comment to my colleague, I imperfectly pointed out what I conceived to be one of the dangers to be apprehended. Permit me to call the attention of the learned chairman to this language, lines 2 and 3, page 16:

Made into finished or partly finished articles, of which any of the foregoing is the component material of chief value.

It is obvious that under a construction which may be placed upon this language articles of common use may be greatly enhanced in value, to the damage of the people and to the great advantage of the manufacturers of pyroxylin in its various forms. I gave toothbrushes as an instance a moment ago. I refer to that because it is one which is so apt.

Mr. SMOOT. That exact wording has been in not only the Underwood law but in the Payne-Aldrich law as well, and in every law since we began the manufacture of celluloid in this country. I will say frankly to my colleague that I do not see how we could do otherwise. We have to have something of chief value, because these goods are made in connection with at least a half dozen—it may be a dozen—different articles. They are combined with other commodities and made into all sorts of toys and all sorts of articles. We must have a chief value somewhere, or else we would not know how to impose the duty. It is impossible to do it otherwise.

Mr. KING. Mr. President, I do not think my colleague is quite accurate; at least, if he is, I have not been advised of the facts as they exist. Let me call attention to paragraph 17 in the act of 1909, and paragraph 25 in the act of 1913. As I understood my colleague, he stated that the same language to which I called attention was found in the other laws.

Mr. SMOOT. In substance.

Mr. KING. Let us see if it is found there. I call attention to the act of 1909, paragraph 17. I do not think the language is exactly as it is in this bill, nor could it be construed as being the same.

Mr. SMOOT. There is a slight change in the wording. For instance, in the act of 1909 it is provided, "not polished, wholly or partly." That is not in this bill. There is a slight change, but the result is exactly the same.

Mr. KING. It is provided in the bill under consideration, "Articles, of which any of the foregoing is the component material of chief value." That language is not so broad as the language in the act of 1909, or the language in the act of 1913. I will not take the trouble to put the language of those two acts into the record, but even if it were true that the same language was found in a former law, I would regard it as unfortunate to adopt such language. I would regard it as unfortunate that it was adopted then, and I would think we should not adopt it now, particularly in view of the fact that, as I believe, this bill will perpetuate, or is calculated to perpetuate, high prices, and to give to the manufacturers of pyroxylin compounds a superior advantage.

I believe that pyroxylin can be manufactured very much cheaper now and in the future than it has been in the past, because the processes have been developed and improvements will be made, so that economies and cheapness will result in the future. But with the high prices under the provisions of this bill the purchaser would not get the advantage in those articles where any component part of the product was pyroxylin.

Mr. SMOOT. Unless we use those words, I can not conceive how it would ever be classified in entering this country. In the act of 1909 these words were used:

By whatever name known, if the component material of chief value.

That is what we say in this. In the act of 1913 it was provided:

By whatever name known, if the component material of chief value.

As I said to my colleague, there are many articles made of celluloid only partly. We have to decide in what class those goods will fall. That is not only true of celluloid, but it is true of the woolen schedule, it is true of the cotton schedule, it is true of every schedule we have in this bill. We have to impose a duty upon the article according to the component material of chief value.

Mr. KING. Will my colleague permit a question?

Mr. SMOOT. Certainly.

Mr. KING. As I recall, in the Payne-Aldrich law and the Underwood law, brushes, as an illustration, would come under this particular paragraph.

Mr. SMOOT. Yes; because of the very fact that it was so stated there in the paragraph itself.

Mr. KING. Notwithstanding the fact that some component part of the brushes was pyroxylin, or some form of pyroxylin. Under the wording of this paragraph, as I interpret it, brushes would be transferred to this paragraph and bear the duty this paragraph lays, if any part of the brush consisted of pyroxylin, or any of the compounds of pyroxylin.

Mr. SMOOT. If it is the component material of chief value, that is true.

Mr. KING. That is what I was complaining of, and because of the control of these products by the trusts, the chief value will be the pyroxylin products rather than the bristles or the other constituent parts of the brush. That is the danger.

Mr. SMOOT. The Senator refers to what trust? Japan absolutely controls the camphor of all the world. If there is any trust, it is in Japan. The Government there controls it; it controls the price. It says what we have to pay for it whenever it comes from Japan.

Mr. KING. The suggestion just made by my distinguished colleague may not lead us from the issue now under consideration. Conceding all that my colleague says, that Japan has a monopoly of the camphor, we do know that synthetic camphor is being produced in the United States, and that the production of synthetic camphor in the United States will increase tremendously with the development of the chemical industry in our country, so that we are not and will not be dependent upon Japan for camphor, unless we wish to be.

Mr. SMOOT. The camphor plants in the United States are closed down, and are begging for an increase from 6 cents to 25 per cent on camphor, and they will never start up with the rate we have fixed in this bill. I know that the St. Louis concern has made an offer that they want 25 per cent until they produce a certain quantity in the United States. The committee have granted that request.

ORDER FOR RECESS.

Mr. McCUMBER. Mr. President, may I ask both Senators to yield to me? I ask unanimous consent that when the Senate closes its session for this calendar day it agree to recess until to-morrow at 11 o'clock.

Mr. KING. May I supplement the unanimous-consent request just submitted by the Senator by asking that when the minute hand reaches 12 o'clock this evening we recess until 11 o'clock to-morrow?

Mr. McCUMBER. I would ask for a recess right away if we could get a vote upon this proposition.

Mr. KING. I desire to discuss this matter somewhat.

Mr. McCUMBER. The Senator has no objection to a recess until 11 o'clock to-morrow?

Mr. KING. No; I have not.

Mr. McCUMBER. Let us get the unanimous consent.

Mr. KING. I have no objection to it.

Mr. UNDERWOOD. Mr. President, I wish to be perfectly agreeable to the Senator and allow him to regulate the matter of the hours to suit himself. It is his business, as he is in charge of the bill. But I ask him, for information, if he proposes to have a night session to-morrow night?

Mr. McCUMBER. I think not, because some work has to be done in the Senate Chamber to-morrow night, which will take until Sunday night.

Mr. UNDERWOOD. Will the Senator, for the convenience of the Senate, state at what time he expects the Senate to take a recess to-morrow evening?

Mr. McCUMBER. I think about 5 o'clock. I now ask unanimous consent that when the Senate closes its session for this calendar day it agree to recess until to-morrow at 11 o'clock.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

CONTRACTS FOR FUTURE DELIVERY OF COTTON AND GRAIN.

Mr. HEFLIN submitted the following resolution (S. Res. 290), which was referred to the Committee on Agriculture and Forestry:

Whereas cotton and grain are two of the prime necessities of life in more general public use than any other commodities produced in the United States and the welfare of almost every citizen is dependent on the same; and

Whereas it is openly alleged and generally believed that the prices of said necessities of life are fixed and controlled by transactions for future delivery of the same made by the New York Cotton Exchange, New Orleans Cotton Exchange, and Chicago Board of Trade, respectively; and

Whereas it appears that the number of bales of cotton involved in transactions on said cotton exchanges for future delivery and the number of bushels of grain involved in transactions on said Chicago Board of Trade for future delivery in any one year exceeds by ten to fourteen times all the cotton and grain raised in the United States for the same period; and

Whereas it appears that in order to more effectually insure the domination of prices and control of the market for such necessities, the New York Cotton Exchange and New Orleans Cotton Exchange, and Chicago Board of Trade keep a record of every transaction in cotton or grain, respectively, made on such exchanges or board of trade, but refuse to permit continuous quotations of prices on the same to be disclosed to the public except under such circumstances as to be of little value; and

Whereas it appears that said cotton exchanges and said Chicago Board of Trade have entered into contract for the delivery to and transmission by certain telegraph companies of its continuous quotations of prices of said necessities of life sold for future delivery with such restrictions and conditions attached as to even more effectually insure the control of the market of said necessities of life by said cotton exchanges and board of trade; and

Whereas a monopoly or control of the prices and markets of any of the necessities of life by either individuals or corporations is injurious to the public interest; now, therefore, be it

Resolved, 1. That the President of the Senate be, and he is hereby, authorized and requested to appoint a committee of five Members of the Senate to take into consideration the relations of transactions for future delivery on the cotton exchanges and boards of trade in the United States to prices of cotton and grain. Also, whether said cotton exchanges or boards of trade, or either of them, and if so which, attempt to affect the prices of commodities dealt in by their members for future delivery by refusal to give to the public the continuous quotation of prices of the respective commodities dealt in by such exchanges or boards of trade, or in any other way; also, to ascertain whether said exchanges or boards of trade, and if so which, have entered into any contract with any corporation or individual for delivery to and transmission by said corporation or individual of the quotations of prices on said exchanges, and the terms and conditions of the said contract.

2. That said committee shall have power to send for such persons and papers as may tend to throw light on the subject under investigation and to administer oaths to all witnesses.

3. Said committee may hold meetings in the city of New York, New Orleans, or Chicago, in addition to Washington, if, in their opinion, the public interests would be promoted thereby.

4. Said committee shall report their findings of fact and conclusions of law, together with recommendations, to the Senate.

DEDICATION OF THE LINCOLN MEMORIAL.

Mr. CURTIS. Mr. President, I report favorably from the Committee on Rules a resolution regarding the attendance of the Senate on the ceremonies at the dedication of the Lincoln Memorial, and I ask for its immediate consideration.

The resolution (S. Res. 291) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the Senate accept the invitation to attend the ceremonies at the dedication of the Lincoln Memorial, May 30, 1922, at 2.30 o'clock p. m.; that a recess be taken at 1.30 o'clock p. m. on the day of May 30 until 11 o'clock on the morning of May 31; and that at the taking of the recess at 1.30 p. m. on May 30 the Senate, accompanied by its officers, shall proceed to the Lincoln Memorial.

Resolved further, That the Sergeant at Arms be directed to make the necessary arrangements to carry out this order.

PROHIBITION OF OPIUM.

Mr. CURTIS. Mr. President, from the Committee on Finance I make a favorable report with an amendment on a bill and ask unanimous consent for its immediate consideration. I will state that it is House bill 2193, the so-called narcotics bill. It is drawn to carry out the provisions of the agreement at The Hague in 1912, and it was passed by unanimous vote in the House.

Mr. UNDERWOOD. Mr. President, I am not familiar with this proposed amendment of the law. I was the chairman of the Ways and Means Committee when we reported the bill which is the present narcotic act, and Congress passed it, and I am heartily in favor of carrying out the treaty arrangements of this country in reference to the importation of opium. But my understanding was that at the time the bill which is the present law was passed it did carry out the terms of the treaty. It was prepared largely by the State Department, and I understood that the treaty arrangement had been complied with. I would like to have some statement as to what is the change in the conditions.

Mr. CURTIS. The existing law does not carry out fully the agreement, and this is simply to go on with the Harrison Act. It does not repeal any part of it, but strengthens it and complies fully with the obligations of the treaty.

Mr. UNDERWOOD. I was asking the Senator to what extent this supplements the treaty where it was not carried out before?

Mr. CURTIS. The bill provides for a commission of three—the Secretary of State, the Secretary of the Treasury, and the Secretary of Commerce—to which these matters are referred. It provides for a penalty to all those who violate the narcotic act. It provides for a penalty for the carriage of narcotics in vessels if it is knowingly done. It also provides a penalty to any merchant who handles the narcotics knowingly. I think I have stated briefly the only things that it provides.

The VICE PRESIDENT. Is there objection to the immediate consideration of the bill?

Mr. UNDERWOOD. I will state that I am, of course, in favor of the enforcement of this law. Under other circumstances I would ask that a bill of this importance be given a fuller opportunity for consideration, but I realize, the tariff bill being before the Senate, that if it is not considered in this way the bill will probably be delayed for quite a while, and I have no desire to delay the enactment of it into law. Therefore I shall make no objection to its immediate consideration, although I think under ordinary circumstances a bill of such importance should be taken from the calendar and considered in the usual way.

Mr. CURTIS. I agree with the Senator, and if it were not for the fact that the bill had been unanimously considered in the House, with every member of the House committee favorable to it, every member of the Senate committee favorable to it, and that it has been referred to the three departments for report and they are all favorable to it, I would not ask to have it taken up now.

Mr. UNDERWOOD. I will say to the Senator that I realize the very great importance of the measure to the American people in the enforcement of the law. The peculiar conditions of the bill are such that I am willing to grant unanimous consent, but bills of such importance should ordinarily await their turn on the calendar.

Mr. CURTIS. I agree with the Senator.

There being no objection, the Senate as in Committee of the Whole proceeded to consider the bill (H. R. 2193) to amend the act entitled "An act to prohibit the importation and use of opium for other than medicinal purposes," approved February 9, 1909, as amended, which was reported from the Committee on Finance with an amendment, on page 6, lines 24 and 25, to strike out the words "to a penalty equal to the value of the narcotic drugs" and to insert in lieu thereof: "(1) If the narcotic drug is smoking opium, to a penalty of $25 an ounce, and (2) if any other narcotic drug, to a penalty equal to the value of the narcotic drug"; so as to make the bill read:

Be it enacted, etc., That sections 1 and 2 of the act entitled "An act to prohibit the importation and the use of opium for other than medicinal purposes," approved February 9, 1909, as amended, are amended to read as follows:

"That when used in this act—

"(a) The term 'narcotic drug' means opium, coca leaves, cocaine, or any salt, derivative, or preparation of opium, coca leaves, or cocaine;

"(b) The term 'United States,' when used in a geographical sense, includes the several States and Territories and the District of Columbia;

"(c) The term 'board' means the Federal Narcotics Control Board established by section 2 of this act; and

"(d) The term 'person' means individual, partnership, corporation, or association.

"SEC. 2. (a) That there is hereby established a board to be known as the 'Federal Narcotics Control Board' and to be composed of the Secretary of State, the Secretary of the Treasury, and the Secretary of Commerce. Except as otherwise provided in this act or by other law, the administration of this act is vested in the Department of the Treasury.

"(b) That it is unlawful to import or bring any narcotic drug into the United States or any territory under its control or jurisdiction; except that such amounts of crude opium and coca leaves as the board finds to be necessary to provide for medical and legitimate uses only, may be imported and brought into the United States or such territory under such regulations as the board shall prescribe. All narcotic drugs imported under such regulations shall be subject to the duties which are now or may hereafter be imposed upon such drugs when imported.

"(c) That if any person fraudulently or knowingly imports or brings any narcotic drug into the United States or any territory under its control or jurisdiction, contrary to law, or assists in so doing, or receives, conceals, buys, sells, or in any manner facilitates the transportation, concealment, or sale of any such narcotic drug after being imported or brought in, knowing the same to have been imported contrary to law, such person shall upon conviction be fined not more than $5,000 and imprisoned for not more than 10 years.

"(d) Any narcotic drug imported or brought into the United States or any territory under its control or jurisdiction, contrary to law, shall (1) if smoking opium or opium prepared for smoking, be seized and summarily forfeited to the United States Government without the necessity of instituting forfeiture proceedings of any character; or (2), if any other narcotic drug be seized and forfeited to the United States Government, without regard to its value, in the manner provided by sections 3075 and 3076 of the Revised Statutes, or the provisions of law hereafter enacted which are amendatory of, or in substitution for, such sections. Any narcotic drug which is forfeited in a proceeding for condemnation or not claimed under such sections, or which is summarily forfeited as provided in this subdivision, shall be placed in the custody of the board and in its discretion be destroyed or delivered to some agency of the United States Government for use for medical or scientific purposes.

"(e) Any alien who at any time after his entry is convicted under subdivision (c) shall, upon the termination of the imprisonment imposed by the court upon such conviction and upon warrant issued by the Secretary of Labor, be taken into custody and deported in accordance with the provisions of sections 19 and 20 of the act of February 5, 1917, entitled 'An act to regulate the immigration of aliens to, and the residence of aliens in, the United States' or provisions of law

hereafter enacted which are amendatory of, or in substitution for, such sections.

"(f) Whenever on trial for a violation of subdivision (c) the defendant is shown to have or to have had possession of the narcotic drug, such possession shall be deemed sufficient evidence to authorize conviction, unless defendant explains the possession to the satisfaction of the jury.

"(g) The master of any vessel or other water craft, or a person in charge of a railroad car or other vehicle, shall not be liable under subdivision (c), if he satisfies the jury that he had no knowledge of and used due diligence to prevent the presence of the narcotic drug in or on such vessel, water craft, railroad car, or other vehicle; but the narcotic drug shall be seized, forfeited, and disposed of as provided in subdivision (d)."

SEC. 2. That sections 5 and 6 of such act of February 9, 1909, as amended, are amended to read as follows:

"SEC. 5. That no smoking opium or opium prepared for smoking shall be admitted into the United States or into any territory under its control or jurisdiction for transportation to another country, or be transferred or transshipped from one vessel to another vessel within any waters of the United States for immediate exportation or for any other purposes; and, except with the approval of the board, no other narcotic drug may be so admitted, transferred, or transshipped.

"SEC. 6. (a) That it shall be unlawful for any person subject to the jurisdiction of the United States Government to export or cause to be exported from the United States, or from territory under its control or jurisdiction, or from countries in which the United States exercises extraterritorial jurisdiction, any narcotic drug to any other country: *Provided*, That narcotic drugs (except smoking opium and opium prepared for smoking, the exportation of which is hereby absolutely prohibited) may be exported to a country only which has ratified and become a party to the convention and final protocol between the United States Government and other powers for the suppression of the abuses of opium and other drugs, commonly known as the International Opium Convention of 1912, and then only if (1) such country has instituted and maintains, in conformity with that convention, a system, which the board deems adequate, of permits or licenses for the control of imports of such narcotic drugs; (2) the narcotic drug is consigned to an authorized permittee; and (3) there is furnished to the board proof, deemed adequate by it, that the narcotic drug is to be applied exclusively to medical and legitimate uses within the country to which exported, that it will not be reexported from such country, and that there is an actual shortage of and a demand for the narcotic drug for medical and legitimate uses within such country.

"(b) The Secretary of State shall request all foreign Governments to communicate through the diplomatic channels copies of the laws and regulations promulgated in their respective countries which prohibit or regulate the importation and shipment in transit of any narcotic drug and, when received, advise the board thereof.

"(c) The board shall make and publish all proper regulations to carry into effect the authority vested in it by this act."

SEC. 3. That section 8 of such act of February 9, 1909, as amended, is amended to read as follows:

"SEC. 8. (a) That a narcotic drug that is found upon a vessel arriving at a port of the United States or territory under its control or jurisdiction and is not shown upon the vessel's manifest, or that is landed from any such vessel without a permit first obtained from the collector of customs for that purpose, shall be seized, forfeited, and disposed of in the manner provided in subdivision (d) of section 2, and the master of the vessel shall be liable (1) if the narcotic drug is smoking opium, to a penalty of $25 an ounce, and (2) if any other narcotic drug, to a penalty equal to the value of the narcotic drug.

"(b) Such penalty shall constitute a lien upon the vessel which may be enforced by proceedings by libel in rem. Clearance of the vessel from a port of the United States may be withheld until the penalty is paid, or until there is deposited with the collector of customs at the port, a bond in a penal sum double the amount of the penalty, with sureties approved by the collector, and conditioned on the payment of the penalty (or so much thereof as is not remitted by the Secretary of the Treasury) and of all costs and other expenses to the Government in proceedings for the recovery of the penalty, in case the master's application for remission of the penalty is denied in whole or in part by the Secretary of the Treasury.

"(c) The provisions of law for the mitigation and remission of penalties and forfeitures incurred for violations of the customs laws shall apply to penalties incurred for a violation of the provisions of this section."

SEC. 4. That such act of February 9, 1909, as amended, is amended by adding at the end thereof a new section to read as follows:

"SEC. 9. That this act may be cited as the 'narcotic drugs import and export act.'"

The amendment was agreed to.

The bill as amended was reported to the Senate, and the amendment was concurred in.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time and passed.

COLLECTION OF TAXES IN THE DISTRICT OF COLUMBIA.

Mr. JONES of Washington. Mr. President, I ask unanimous consent out of order to report with amendments from the Committee on the District of Columbia the bill (S. 3565) relating to the collection of taxes in the District of Columbia, and I submit a report (No. 702) thereon. I desire to say just this much about it. The bill simply provides for the payment of taxes twice a year in the District of Columbia instead of once a year as now, and it would be very helpful to meet the situation which confronts the District. The bill is urged by the District Commissioners. It is a short bill. If there is no objection, I would like to put it on its passage, and I ask unanimous consent for its present consideration.

Mr. UNDERWOOD. Mr. President, I have no objection to the Senator reporting the bill at this time and putting it on the calendar, but I hope he will not undertake to call it up for consideration until we have had the reflection of public sentiment in the District of Columbia with reference to it and have had some chance to consider it.

Mr. JONES of Washington. Very well. I will ask that the bill go to the calendar.

The VICE PRESIDENT. The bill will be placed on the calendar.

APPOINTMENT OF POSTMASTERS IN TENNESSEE.

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the RECORD certain letters which I have received from the Civil Service Commission, together with copies of letters which I wrote to them. Inasmuch as I had certain other letters with reference to the matter printed in the RECORD some days ago, I assured the commission that I would also have these incorporated in the RECORD.

There being no objection the letters were ordered to be printed in the RECORD, as follows:

MARCH 15, 1922.

Hon. GEORGE R. WALES,
Civil Service Commission, Washington, D. C.

MY DEAR MR. WALES: Inclosed please find affidavit of G. R. Dickson, of Rutherford, Tenn., that explains itself. Please file this with the other papers.

Very sincerely yours,

KENNETH McKELLAR.

—

HOME EXCHANGE BANK,
Rutherford, Tenn., October 21, 1922 (should be 1921).

CIVIL SERVICE COMMISSION,
Washington, D. C.

GENTLEMEN: Knowing that J. W. Akin, of this place, is an applicant for postmaster at Rutherford, Tenn., and as he occupied the position of cashier of this bank for a term of two years, we feel that we are in a position to suggest a few reasons why his application should not have any consideration.

Mr. Akin, while cashier of the Home Exchange Bank, developed to be a financial supporter of the local bootleggers by undertaking to "carry checks as cash items" on these irresponsible parties who had no funds in the bank whatever, and on one occasion he was caught by an official of this bank in substituting a worthless "bootlegger check" for currency in the bank, and was threatened with immediate dismissal.

His actions showed distinct evidence that he was a participator in the bootlegging profits, and many other similar acts of underhand graft such as buying war savings stamps during the war from citizens and patrons of the bank at below par, by discouraging them as to their real value, and then cashing them at full value.

Mr. Akin was dismissed without honor by an overwhelming vote of the stockholders of this bank. Mr. Akin also represented the Continental Fire Insurance Co. at this place, and for reasons of this kind his bondsmen withdrew from his bond. He also represented an estate here as trustee, and his bondsmen withdrew from his bond. These facts can be substantiated by addressing the county court clerk, Hon. J. H. Burress, Trenton, Tenn.

On general principles he is disliked by both political parties, and has made himself repulsive to the people of this community. His appointment as postmaster would meet with an overwhelming disfavor.

I wish to say further that Mrs. Claris E. Akin, while working for this bank, was a partner with her husband, John W. Akin, in buying war savings stamps from the public and the proceeds were deposited to John W. Akin's credit.

G. R. DICKSON.

(Notary's certificate attached, signed by Broeck Cummings, N. P.)

—

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., March 17, 1922.

Hon. KENNETH McKELLAR,
United States Senate, Washington, D. C.

MY DEAR SENATOR McKELLAR: I beg to acknowledge receipt of your letters of March 14 and 15 inclosing copies of affidavits by Mr. Lyle W. Davidson and Mr. G. R. Dickson, of Rutherford, Tenn., in regard to the examination of Mrs. Claris E. Akin for postmaster for that place.

The post office at Rutherford, Tenn., is a third class, at which the salary of the postmaster is $1,600 per annum. The examination consists of the subjects of (1) accounts and arithmetic, (2) penmanship, (3) letter writing, and (4) business training, experience, and fitness. The examination was originally held there on August 13, 1921.

In addition to Mrs. Akin, there were several other competitors in the examination, including her husband, John W. Akin. Mrs. Akin attained ratings in the written subjects as follows: (1) Accounts and arithmetic, 100; (2) penmanship, 82; (3) letter writing, 78.

The papers of all candidates were rated and based upon the evidence obtained as a result of questionnaires sent by mail to references of all the candidates and various citizens of the community listed in the commercial directory. Mrs. Akin and her husband were each assigned a rating of 40 on the subject of business training, experience, and fitness because some of the persons who filled out questionnaires involved Mrs. Akin with her husband in transactions unfavorably in connection with a bank. Mrs. Akin appealed from this first rating, and the commission decided, in order to do justice to all concerned, to send personal representatives there to make an investigation of all of the facts. An investigation was accordingly conducted there on December 17, 1921, the inspectors interviewing 13 representative citizens of the community, among them Mr. G. R. Dickson, whose affidavit you forward with your letter. In regard to Mrs. Akin, all of the persons interviewed agreed that her character and standing in the community are good; that she is a capable, experienced woman, courteous and accommodating, and amply qualified for the position of postmaster. In view of all of the facts as ascertained in the personal investigation, the examiners recommended that her rating be increased from 40 to 83 on the subject of business training, experience, and fitness, which was done, giving her a general average of 87.50 in the examination and placing her name at the head of the eligible list. No change was made in the rating of John W. Akin, her husband. However, the ratings of several of the candidates were raised as a result of the review on the evidence obtained in

the personal investigation. The list of candidates and their ratings on the first examination by examiners was as follows:

ELIGIBLES.

	Per cent.
William W. Taylor (preference)	82.08
Lowell C. Rickman (preference)	79.23
Terrance A. Bone (preference)	76.58
Daniel E. Meadows (preference)	73.95
Lera Page	73.28
Carlos King (preference)	70.05

INELIGIBLES.

Mrs. Claris E. Akin	66.00
John W. Akin	56.83
Drew J. Rion	58.38
Felix M. Flowers	56.38
Joe Zaricor (preference)	65.90

The list made up after investigation and reexamination by the examiners is as follows:

ELIGIBLES.

Mrs. Claris E. Akin	87.50
William W. Taylor (preference)	85.58
Lowell C. Rickman (preference)	82.23
Terrance A. Bone (preference)	81.58
Daniel E. Meadows (preference)	77.45
Carlos King (preference)	75.05
Lera Page	73.78

INELIGIBLES.

Joe Zaricor (preference)	68.40
Drew J. Rion	62.38
Felix W. Flowers	57.88
John W. Akin	56.83

Very respectfully,

G. R. WALES, *Commissioner.*

(Personal.)

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., March 21, 1922.

Hon. KENNETH MCKELLAR,
United States Senate.

MY DEAR SENATOR MCKELLAR: I notice that on pages 4587 and 4588 of the CONGRESSIONAL RECORD, covering yesterday's session, certain statements are made by you involving the integrity of the Civil Service Commission. They cover three principal cases.

As to the first of these, you state that you filed with the Civil Service Commission charges that you had already filed with the Senate against John W. Overall, apparently Republican national committeeman for the State of Tennessee, and that because the Civil Service Commission is "composed entirely of Republicans and anyone can understand that they would not care whether civil-service positions were bought or sold under them or not, if their Republican friends were interested," they took no action in regard to them. Your charges against Mr. Overall relate to what you term "trafficking in civil-service appointments."

I have carefully gone over your letter dated August 29, 1921, addressed to the Civil Service Commission, and the only specific case you mention is that of prohibition officer in the State of Tennessee, a position which is not in the classified service. You were advised in the commission's letter of September 1, 1921, in reply that such position is not in the competitive classified service, and that the case therefore was not within the commission's jurisdiction.

Your letter of August 29, 1921, also referred incidentally to the appointment of a rural carrier at Cheap Hill, Tenn., but gave no names and no testimony or evidence indicating that any one of the three persons whose names had been certified to the department for consideration in filling the position had paid money to Mr. Overall for any purpose whatsoever. You were advised in the commission's letter of September 1, 1921, of the names of these three persons, and that the department had not reported selection from among the three, and also were advised of the provisions of law and rules relating to trafficking in appointments, and that "if a prima facie case is submitted to the commission of violation of the Federal statutes, relating to trafficking or of the civil-service rules, the commission will submit it to the Department of Justice for prosecution or take such administrative action as may be appropriate."

The commission has not since heard from you in this connection, and your statement, therefore, on page 4132 of the CONGRESSIONAL RECORD, as to failure to take action, is not in accord with the facts.

The second case is mentioned on page 4132 of the RECORD, and relates to the presidential postmaster examination for McKenzie, Tenn. I am making inquiry into this case, which was handled in the routine procedure of the office, and will be glad to advise you of the facts within a few days.

As to the third case, mentioned on page 4133 of the RECORD, I quote below the commission's letter of March 17, 1922, giving you the facts:

"MY DEAR SENATOR MCKELLAR: I beg to acknowledge receipt of your letters of March 14 and 15, inclosing copies of affidavits by Mr. Lyle W. Davidson and Mr. G. R. Dickson, of Rutherford, Tenn., in regard to the examination of Mrs. Claris E. Akin for postmaster for that place.

"The post office at Rutherford, Tenn, is a third class, at which the salary of the postmaster is $1,600 per annum. The examination consists of the subjects of (1) accounts and arithmetic, (2) penmanship, (3) letter writing, and (4) business training, experience, and fitness. The examination was originally held there on August 13, 1921.

In addition to Mrs. Akin, there are several other competitors in the examination, including her husband, John W. Akin. Mrs. Akin attained ratings in the written subjects as follows: (1) Accounts and arithmetic, 100; (2) penmanship, 82; (3) letter writing, 78.

The papers of all candidates were rated and based upon the evidence obtained as a result of questionnaires sent by mail to references of all the candidates and various citizens of the community listed in the commercial directory. Mrs. Akin and her husband were each assigned a rating of 40 on the subject of business training, experience, and fitness, because some of the persons who filled out questionnaires involved Mrs. Akin with her husband in transactions unfavorably in connection with a bank. Mrs. Akin appealed from this first rating; and the commission decided, in order to do justice to all concerned, to send personal representatives there to make an investigation of all of the facts. An investigation was accordingly conducted there on December 17, 1921, the inspectors interviewing 13 representative citizens of the community, among them Mr. G. R. Dickson, whose affidavit you forward with your letter. In regard to Mrs. Akin, all of the persons interviewed agreed that her character and standing in the community are good; that she is a capable, experienced woman, courteous and accommodating, and amply qualified for the position of postmaster. In view of all of the facts as ascertained in the personal investigation, the examiners recommended that her rating be increased from 40 to 83 on the subject of business training, experience, and fitness, which was done, giving her a general average of 87.50 in the examination and placing her name at the head of the eligible list. No change was made in the rating of John W. Akin, her husband. However, the ratings of several of the candidates were raised as a result of the review on the evidence obtained in the personal investigation. The list of candidates and their ratings on the first examination by examiners was as follows:

ELIGIBLES.

	Per cent.
William W. Taylor (preference)	82.08
Lowell C. Rickman (preference)	79.23
Terrance A. Bone (preference)	76.58
Daniel E. Meadows (preference)	73.95
Lera Page	73.28
Carlos King (preference)	70.05

INELIGIBLES.

Mrs. Claris E. Akin	66.00
John W. Akin	56.83
Drew J. Rion	58.38
Felix W. Flowers	56.38
Joe Zaricor (preference)	65.90

The list made up after investigation and reexamination by the examiners is as follows:

ELIGIBLES.

Mrs. Claris E. Akin	87.50
William W. Taylor (preference)	85.58
Lowell C. Rickman (preference)	82.23
Terrance A. Bone (preference)	81.58
Daniel E. Meadows (preference)	77.45
Carolos King (preference)	75.05
Lera Page	73.78

INELIGIBLES.

Joe Zaricor (preference)	68.40
Drew J. Rion	62.38
Felix W. Flowers	57.88
John W. Akin	56.83

Very respectfully,

G. R. WALES, *Commissioner.*

It will be observed from this letter that all the persons interviewed at Rutherford, Tenn.—who were the leading citizens and business men of that community—without exception gave favorable testimony as to the good character and standing in the community of Mrs. Claris E. Akin, and these representative citizens included Mr. G. R. Dickson, who furnished you with an affidavit attacking Mr. Akin, the husband of Mrs. Claris E. Akin. The testimony secured by the commission's representatives while at Rutherford corroborated the affidavit of Mr. Dickson that Mr. Akin apparently is not the type of citizen desired for postmaster, but Mr. Dickson and all other persons spoke highly of Mrs. Akin. The department, of course, is not obliged to select Mrs. Akin, as two other eligibles were certified with her, but it seemed clear to the commission that her experience as assistant postmaster and her personal qualifications clearly entitled her to a place among the highest three eligibles.

I am assured that now the matter is brought to your personal attention, you will do the commission the common justice of having this letter presented to the Senate and printed in the RECORD.

Very truly yours,

G. R. WALES, *Commissioner.*

—

MARCH 24, 1922.

Hon. GEORGE R. WALES,
Civil Service Commission, Washington, D. C.

MY DEAR SIR: Your letter of the 21st received and noted. I will take pleasure in putting this in the RECORD and also put at the same time the charges I made to the commission in regard to the Overall matter and your letter of refusal to take cognizance of the charges. In my judgment your explanation of the Rutherford matter is wholly without merit. It seems impossible on the face of it that your examining aids could have found that Mrs. Akin was entitled to only 66 on the examination and 87.50 on the review of the examination. Of course, the inspector on the reexamination heard only one side of it. This is perfectly manifest.

I am called out of the city to-morrow, but as soon as I get back I will take the matter up and will be sure to have your letter go in the RECORD.

Very sincerely yours,

KENNETH MCKELLAR.

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., March 27, 1922.

Hon. KENNETH MCKELLAR,
United States Senate, Washington, D. C.

MY DEAR SENATOR MCKELLAR: We beg to acknowledge receipt of your letter of March 24, 1922, in further relation to the examination for postmaster at Rutherford, Tenn., and to thank you for granting the suggestion in our letter of March 21 that such letter be printed in the RECORD.

In your letter of March 24 you speak of our letter of refusal to take cognizance of charges you made to us in regard to the Overall matter. I shall appreciate it if you will kindly advise me if you refer to our letter of September 1, 1921, although I assume it must be that letter, for I am not able to find any other of the sort. By reference to your letter of August 29, 1921, you will note that the specific case you mention is that of prohibition officer, and in our letter of September 1, 1921, we pointed out that appointment to the position of prohibition officer is by statute entirely outside our jurisdiction.

We endeavored in our letter to you of March 21, 1922, to make clear the fact that the only reason that Mrs. Akin failed of attaining a high place among the eligibles on the first rating was because some of the testimony we have secured by mail seemed to involve Mrs. Akin with her husband in transactions unfavorably in connection with the bank, and that accordingly her rating on the subject of business training, experience, and fitness, as in other cases of personal unfitness because of questionable honesty, had been made as low as 40. Upon Mrs. Akin's appeal from this action the commission, as in other such

cases and in order to do justice to all concerned, sent personal representatives to Rutherford for the purpose of finding the exact facts. The result of this investigation, which included the testimony of 13 representative citizens of the community, showed that Mrs. Akin had suffered an injustice in the rating of 40 on the subject of business training, experience, and fitness, because these 13 representative citizens testified uniformly to her good character and standing in the community. Thereupon the commission, as in other such cases, corrected its previous action and gave her the rating to which she would have been entitled in the first place in the absence of testimony against her honesty.

I am sorry that I can not agree with you that the investigators in the personal examination heard only one side of the case, because the 13 witnesses were representative of the community and leading citizens and business men of the community, and as was previously stated to you, one of such witnesses was Mr. G. R. Dickson. It will be noted further that the personal investigation of the case confirmed the original action taken in Mr. Akin's case.

Very sincerely yours,

G. R. WALES, *Commissioner.*

—

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., April 19, 1922.

Hon. KENNETH MCKELLAR,
United States Senate.

MY DEAR SENATOR MCKELLAR: The commission has been awaiting publication in the CONGRESSIONAL RECORD of its letter to you under date of March 21, 1922, which you stated in your letter of March 24 would be so published; but inquiries at the Capitol indicate that you are still absent from the city.

In our letter of March 21 we stated that we would advise you of the facts connected with the examination for presidential postmaster at McKenzie, Tenn. They are as follows:

The Post Office Department reported under date of May 19, 1921, the existence of a vacancy in the position of postmaster at McKenzie, Tenn., giving the salary as $1,900 per annum. There were hundreds of other vacancies reported at the same time, and the commission was not able to announce an earlier examination date for the McKenzie vacancy than September 24, 1921.

The salary of $1,900 named by the department placed the office within the third class, and accordingly the examination that was announced included 50 per cent written tests and 50 per cent "business training, experience, and fitness." The examination resulted as follows:

	General average (per cent).
Paul M. Ware (preference; includes a bonus of 5 per cent)	86.25
Jack H. Marshall (preference; includes a bonus of 5 per cent)	84.25
James W. Marshall (preference; includes a bonus of 5 per cent)	80.93
Wallace H. Cannon	77.95
Henry G. Snead (preference; includes a bonus of 5 per cent)	75.83
Elmer T. Sparks	74.75
Andrew Ernest Argo	69.30

Under the former administration the Post Office Department held that it was within its discretion, when an office was advanced from the third class to the second class, to call for a new examination under the somewhat different standards for the latter class of office. In explanation of this it may be stated that at third-class offices the postmaster has considerable clerical work to perform and must himself handle the finances of the office, and for this reason the written tests are given; whereas in the second-class office and the first-class office the duties become more and more administrative and executive, with less personal clerical work, as the office grows larger.

Acting under this practice of the former administration the Post Office Department advised the commission that the salary of the postmastership at McKenzie, Tenn., had been increased to $2,300, thereby making it a second-class office, and requested that a new examination be held under the standard for a second-class office.

In view of this long-standing practice the request of the department was complied with, and examination announced for March 14, 1922, without the case being brought to the personal attention of the commissioners. As soon as it did come to the attention of the commissioners that the first examination had resulted in several well-qualified eligibles, it took the matter up with the Post Office Department and has canceled the second examination, the results of the first examination, namely, September 24, 1921, being recertified to the Post Office Department.

Very truly yours,

G. R. WALES,
Commissioner.

—

AUGUST 29, 1921.

CIVIL SERVICE COMMISSION,
Washington, D. C.

DEAR SIRS: I prefer the following charges against John W. Overall:

FIRST.

My resolution is as follows:

"*Resolved*, That the Post Office Committee of the Senate be, and is hereby, authorized and instructed to investigate the alleged violations of the civil-service act and the alleged selling or trafficking in Federal offices in Tennessee by John W. Overall, Republican national committeeman and alleged referee in patronage matters in that State."

SECOND.

I call your attention to the following letter:

NASHVILLE, TENN., *May 22, 1921.*

DEAR DUDLEY: I have been on the road for past four weeks, and I am in for to-day. Was out to see Mr. Overall last night and suggested to him it would be nice for his friends for him to be in Washington looking after us fellows he had indorsed and was going to indorse, and I suggest we should chip in and pay his expenses, and I, for one, would be glad to do so. I am writing to several I know he is going to indorse and asking them if they feel like it to write Mr. Overall, stating to him I had suggested this and inclose check for small amount if they felt like it. I assure you it will be good money spent, and if you feel able to kick in, say $10, do so. If not, it is all right. If he fails to indorse you I will pay your amount. I know positively he is going to put you over when the time comes if he can, and it is a 20-to-1 bet he can.

However, do as you think best. I never mentioned to him who I was going to write to. With best wishes,

Your friend,

TOM P. MAY.

Mr. May, as the newspaper articles and admissions hereinafter referred to show, is the Tennessee treasurer of the Republican committee, and has his office with Mr. Overall in Nashville, and is virtually the active manager of the office, Mr. Overall being national committeeman. Mr. Dudley J. Shivers is chairman of the Republican committee of Cheatham County, at Ashland City, and is also a member of the Republican congressional committee. He is an applicant for the postmastership at Ashland City. He was also interested in the appointment of a rural carrier at Chapel Hill, Tenn., called in the correspondence Cheap Hill. This letter of May 22, 1921, was written from Mr. Overall's office in Nashville and by his manager of that office. It was written after a talk with Mr. Overall, probably out at his house in Nashville. Evidently he talked about the letter he expected to write to secure these contributions for expenses. I call your especial attention to the last sentence of the letter, "I never mentioned to him who I was going to write to." In other words, this letter was not only written by Mr. Overall's agent but it was written from Mr. Overall's office in Nashville, and after a conference with Mr. Overall on the subject, and evidently after full approval upon the part of Mr. Overall. The only limitation that Mr. May makes as to the conference was "I never mentioned to him who I was going to write to." The relationship between May and Overall is most important, because the May letter is just as much Overall's letter and more than it is May's letter. It was written after full consultation. It was written with the full approval, and it brought the checks which Mr. Overall accepted, as he himself admits, as will be shown hereinafter.

THIRD.

In response to the foregoing letter on July 5, 1921 Mr. Shivers wrote the following letter to Overall:

ASHLAND CITY, TENN., *July 5, 1921.*

Hon. JOHN W. OVERALL,
Nashville, Tenn.

MY DEAR SIR: I am in receipt of a letter from Tom P. May, suggesting that we make a contribution to you in order to take care of your expenses while you are in Washington looking after our interests, and I think the suggestion well taken. I am herewith forwarding you a check for $10, which I trust you will accept. I realize that it is quite an expense on you to take these trips and takes up much of your time, and feel that we should show our appreciation in this manner.

Please inform me if you have had any reference to the matter of appointment of a rural letter carrier for the Cheap Hill, Tenn., post office. Examination was held for this vacancy on May 4, and I understand that the applicants have just recently received their grades. Please let me hear from you as soon as possible after receiving reference to this matter.

With kindest personal regards,

Very respectfully,

DUDLEY J. SHIVERS,
Chairman Republican Executive Committee Cheatham County and Member Sixth Congressional Committee.

It will be noted that Mr. Shivers delayed writing to Mr. Overall nearly six weeks. Why, it is not explained. Perhaps Shivers wanted to investigate and see whether he could get his office or not before he gave up his money. At all events, he must have satisfied himself, because on July 5 he sent the check for $10. It was not for a campaign fund, but it was for Overall's "expenses," and for the purpose of showing "appreciation" for the office he expected to get. From my reading of this letter, I am in some doubt as to whether Mr. Shivers intended the $10 as compensation or "appreciation" of the Ashland City post office he expected to get, or the Chapel Hill rural carrier, which he wanted for his friend. It is perfectly evident that Mr. Shivers did not consider that he was giving $10 to the Republican national campaign committee. He took May at his word and supposed that he was paying Mr. Overall for the office or for the two offices, as the case may be.

FOURTH.

That Mr. Overall understood the matter perfectly, that he understood that Mr. May was acting for him in collecting this money, and that Mr. May had explained the situation to him, is perfectly apparent from the following letter:

NASHVILLE, TENN., *July 7, 1921.*

Mr. DUDLEY J. SHIVERS,
Ashland City, Tenn.

MY DEAR MR. SHIVERS: I am in receipt of your letter of the 5th instant with inclosure, for which please accept my thanks.

The matter of appointing a rural carrier at Cheap Hill, Tenn., has not been referred to me yet. Perhaps, as you know, the department has been referring to me the three having the highest grades, and I am allowed to select one from the three for appointment.

Whenever this appointment is referred to me I will consult you about the matter and appoint any one of the eligibles that you may desire.

Yours very truly,

JOHN W. OVERALL,
Republican National Committeeman.

Mr. Overall knew that Shivers was an applicant for the Ashland City post office. He knew that Shivers had a friend that he wanted to be rural carrier. Shivers had written to him that his letter inclosing $10 was in answer to a letter from Tom P. May, from Mr. Overall's own office. There can not be any question, after reading this letter, that Mr. Overall understood the situation perfectly, ratified it, and confirmed it, if he had not instigated it. He received the money and agreed to appoint the rural carrier, anyway. He said that he would "appoint any one of the eligibles that you (meaning Shivers) may desire." In other words, he had received Shivers's money, receipted for it, and was going to give the office to whomsoever Shivers wanted to have it. In this way his agent, Mr. May, would not have to return the money under his agreement.

A more barefaced trafficking in petty Federal offices has never come to my notice, and I am sure it has never come to the notice of you or any member of the committee.

FIFTH.

In this connection I call your especial attention to pages 7 and 8, section 47, of Instructions to Applicants for Rural Carrier Examinations, as follows:

"In all cases selections shall be made with sole reference to merit and fitness and without regard to political considerations. No inquiry shall be made as to the political or religious opinions or affiliations of any eligible, and no recommendation in any way based thereon shall be received, considered, or filed by any officer concerned in making selections or appointments. Any such recommendation in writing forwarded to any such officer shall be at once returned to the writer, with atten-

tion invited to the purport of this order, and attention hereto shall be similarly directed in connection with any verbal recommendation. Where it is found that there has been a violation of these provisions by any officer concerned in making selections or appointments, such fact shall be cause for the immediate removal of such officer from the service, and the commission shall make prompt report of any such case for appropriate action to the Postmaster General, or as to presidential appointees, to the President. The appointment of the rural carrier concerned, if effected, shall be canceled."

I want also to call your attention to section 33, on page 5 of the civil service instructions, which is as follows:

"All contracts which involve traffic in public office are illegal, and any consideration paid or accepted or offered or agreed to be paid or accepted to induce the resignation of a public officer, or to secure his influence in procuring or aiding to procure any appointive office or place from the Government of the United States or from any officer of department thereof has been held to constitute bribery and is a felony, rendering both the briber and the person bribed punishable under section 112 or other sections of the Criminal Code of the United States."

The foregoing transactions are shocking violations of the spirit, if not the letter, of these rules. It not only involves trafficking in public office but it is an illegal sale of offices by Mr. Overall. In this connection I will say that on August 29 I wrote a letter to the Civil Service Commission calling attention to these facts.

SIXTH.

Mr. Overall, after a disclosure of these letters by me in the CONGRESSIONAL RECORD, came to Washington and gave out an interview, which was taken down by Jesse S. Cottrell, of Washington, correspondent of the Nashville Banner. In this interview, on August 15, Mr. Cottrell thus quotes Mr. Overall:

"That Colonel Overall is disturbed over the publicity that has been given of what he terms misinterpreted letters and misconstrued statements is evident, and he so admits, but he says he will go before any tribunal or committee and gladly tell all about the situation.

"To-day he talked freely, clarifying the statement issued in Nashville considerably. He says he set about, several months ago, to collect the deficit of $14,000 asked of Tennessee Republicans by the national committee, and did so, and has paid it, and that a small balance remains in banks at Nashville and Memphis which is carried for actual expenses of the Republican organization in Tennessee. Recently while he was on his farm, with instructions that he did not under any circumstances desire to handle matters politically or of a business nature, Tom May, State treasurer—of the Republican committee—sent letters to Republicans over the State, asking for a collection, saying that he thought it would be a generous thing for them to contribute to pay the expenses of Colonel Overall to Washington at various times."

You will note that the May letter, first quoted above, absolutely contradicts Mr. Overall on this subject. Mr. May writes to an applicant for the post office at Ashland City and says to him: "If he—meaning Overall—fails to indorse you, I will pay your amount." In other words, Mr. May says that after going up and talking to Mr. Overall in his home about the matter, that if Mr. Overall does not get the office for this applicant that he, May, will refund the applicant's contribution. You must recall the relationship between May and Overall. They are employees of the same political committee, Mr. May being under Mr. Overall. The two talked the question over, and Mr. May writes to this and other applicants for offices in Tennessee, in which he asks them to contribute, not to the campaign fund, but to Mr. Overall's expenses to Washington. The applicant sent the money to Mr. Overall with this distinct understanding with his agent, Mr. May. In other words, Mr. Overall is to deliver the goods or the money is to be refunded by his agent, Mr. May.

If this is not a barter and sale of offices, if this is not trafficking in office, if this is not the use of political influence in securing civil-service positions, then I would be glad to know what it is and what is considered trafficking in public office.

SEVENTH.

Mr. Cottrell then further quotes Mr. Overall in said published article:

"Colonel Overall was entirely ignorant of this (May's writing to these applicants), he says, and when five or six checks came in, ranging from $5 to $25, he simply indorsed them as national committeeman and had them placed to his credit as such, where the funds now are, thinking they were to meet any future amount charged as a deficit and to other expenses, since small sums were coming in at intervals throughout the year."

We thus have the evidence that Mr. Overall accepted this check; that he still holds this and other checks from other applicants for civil-service positions in Tennessee. There has been no refunding of the money, and it is immaterial whether the money was collected for Mr. Overall personally or for his expenses to Washington, or as contributions to the Republican campaign fund. In any event, it is a corrupt transaction, and under no circumstances, I submit, should the Civil Service Commission permit an office, however humble it may be, to go to this man who seems to have had Mr. Overall's indorsement, or to any other man having his indorsement. From a civil-service standpoint, owing to the inhibitions against the use of political influence contained in its rules, the transaction is more corrupt if the money thus obtained was used for political purposes than if it went to Mr. Overall personally.

EIGHTH.

Again quoting from Mr. Cottrell's published article, Mr. Overall is quoted as follows:

"Not until the Dear Dudley letter began to be talked of and had been shown did he know what was going on, and then he immediately notified Mr. May to cease absolutely such requests."

In other words, no question was asked about these checks, no investigation was made by Mr. Overall, though he had talked it over with Mr. May, until the letters became more or less public. It will be recalled that the letters were dated July 5 and 7. In this connection Mr. Overall convicts himself. He says that as soon as he learned that these letters were being sent out by Mr. May to applicants for civil-service positions and checks were coming in in answer to such letters of Mr. May he immediately gave instructions to Mr. May to cease absolutely such requests. If the requests were right, why did he give Mr. May these instructions? If it was right to receive this money, why did he not continue to receive it? If it was right for him to sell his influence in the Ashland City post-office matter or the Chapel Hill rural carrier matter for $10, why isn't it right for him to sell his influence for all other positions of like kind in Tennessee? Evidently Mr. Overall came to the conclusion it was wrong after it had been found out or he would not have directed Mr. May to cease absolutely such requests. Of course he knew it was wrong, and everybody knows it is wrong, and no civil-service office should be disposed of in this way. But it will be noted that while Mr. Overall stopped the practice he did not refund the moneys that had already been collected.

NINTH.

To Mr. Lewis, the correspondent of the Knoxville Sentinel, Mr. Overall said for publication:

"In a few instances I have received contributions from applicants for office which I have invariably applied to the deficit account, these checks having been sent to defray my expense to Washington, and they were likewise applied to the deficit."

It is thus seen that there could be no question about Mr. Overall receiving the money. The checks that passed through the Broadway National Bank of Nashville contain his indorsement, "John W. Overall, N. C." This admission further makes it apparent that the contributions came from applicants for office. Mr. Overall uses these words: "I have received contributions from applicants for office."

Why is Mr. Overall, a member of the National Republican Committee, receiving contributions from civil-service applicants for office? It is perfectly apparent from these statements of Mr. Overall that civil-service appointments in Tennessee are going to the applicants who send the money to him and not as a result of any civil-service examination that may be held under the auspices of the Civil Service Commission down there.

TENTH.

A man by the name of Bond Harmon, of Memphis, Tenn., wanted to be prohibition officer. He went to Mr. C. B. Quinn, of Memphis. Mr. Harmon likewise made a contribution of $10 to the deficit, giving the money to Mr. Quinn. On June 29, 1921, Mr. Harmon received the following letter from Mr. Quinn:

DEAR BOND: I am returning the $10 you gave me for the deficit I am collecting for the national committee and which you so kindly gave me. I can't support you—meaning for prohibition officer—for reasons best known to us both. I appreciate what you have done for me and will reciprocate when I can. Am sorry matters have so shaped.

Yours truly,

C. B. QUINN.

As to this matter the Knoxville Sentinel of August 15, in the article above referred to, quotes Mr. Overall as saying:

"In regard to the Bond Harmon check at Memphis, I know absolutely nothing about it. I am informed that Quinn collected the $10 from Bond Harmon, applying it to his subscription on the deficit fund. Quinn had subscribed $100 to the fund. I said I thought he had been overgenerous and suggested that he collect among his friends money to cut down his subscription, and this check, I understand, was so applied."

So that it seems that Mr. Quinn was doing in Memphis what Mr. May was doing in Nashville, to wit, taking up a collection from applicants for office. In this statement Mr. Overall says that he suggested to Mr. Quinn that he collect among his friends. In Mr. May's case he said he did not know Mr. May was going to do it. Evidently Mr. Overall could not indorse Mr. Harmon, and so the $10 was returned to him.

ELEVENTH.

In July, 1920, a rural-route carrier living at Smithville, Tenn., which is in Dekalb County, was carrying the mail from Watertown, in Wilson County, to Smithville over a tollgate road owned by said John W. Overall. While driving to Smithville the carrier's horse fell through a bridge, and almost killed himself and threw the carrier out of the buggy and lacerated his arm and injured him very greatly, the arm becoming so inflamed that at one time it looked as if it was very serious. The carrier brought suit against Overall for damages, and thereupon Overall sent his agent to the carrier, and this agent told the carrier that if he did not withdraw his suit against Overall that Overall would have the department to discharge him, that he had it within his power to do so. Overall had refused to pay for the horse hire while the horse was laid up and refused to make any reparation. The carrier, being a poor man and dependent upon his carrier's position for a livelihood for himself and family, was compelled to dismiss the suit in order to hold his place. These facts will be substantiated by proof.

TWELFTH.

Complaints have come in to me that he had a nonresident appointed postmaster at Gallatin, Tenn., notwithstanding the fact that there were several excellent Republican applicants for the place who were residents of Gallatin. A mass meeting of citizens generally was held in Gallatin to protest against the appointment of a nonresident postmaster at this place. Complaints have also come from Lewisburg, in Marshall County, where the postmaster was appointed at the instigation of Overall; and also at Waynesboro, in Wayne County, where Mr. Overall's appointee, it was claimed, was under indictment. Also, complaint has been made respecting the appointment of rural carrier at Murfreesboro.

These complaints which I have and will furnish to the committee, for the most part have come from Republicans.

THIRTEENTH.

Prominent Republicans all over the State have openly and in many cases through the newspapers stated that there should be an investigation and the matter sifted to the bottom. Four of the five Republican Congressmen in the State have given out interviews about these letters, in which interviews they have stated that there should be an investigation. Congressman SCOTT made the following statement:

"If what has been reported in the newspapers is true with reference to certain members of the Republican organization in Tennessee, the matter should be immediately investigated. The Republicans of Tennessee can not afford to let conditions of this character go unchallenged. Out of fairness to the accused, I would suggest that the State executive committee should be reconvened and a special committee designated to investigate these charges. If found untrue, the accused should be vindicated, and if found guilty, resignation immediately demanded."

Congressman CLOUSE, of the fourth district, made the following statement:

"The resolution introduced by Senator MCKELLAR was only called to my attention at a late hour last night, and having no knowledge of the facts upon which the charges are predicated, I hesitate to comment thereon further than to say that it is inconcelvable to me that anyone connected with the Republican organization of Tennessee would in any wise be influenced in his recommendations of various applicants, and I truly hope that when the facts are all made to appear that this matter will be cleared up to the entire satisfaction of all concerned. Whatever the facts may be, the charge is of such a character as demands a speedy investigation in order that, if false, the accused may be vindicated, and if found to be true, that the Republican Party, with its hundreds and

thousands of active leaders in different parts of the State, may be purged of any complicity in or countenance of such unworthy tactics."

Congressman REECE, of the first district, gave out the following statement:

"I have no formal statement to give out, but I feel that in the interests of the party and its future there should be an investigation of these reports by the proper tribunal. My district is not locally concerned in the situation, but in the interest of the party in Tennessee we can not afford to pass this matter by unnoticed. In fact, the party welfare demands an investigation, and I hope that such will be held at once."

Congressman BROWN, of the third district, stated as follows:

"I have read the resolution introduced in the Senate by Senator MCKELLAR, and some of the newspaper publications. This resolution, of course, has no reference to post offices in the five congressional districts represented in Congress by Republican Congressmen, because Mr. Overall has no connection with the distribution of such patronage in those districts. As I understand, Mr. Overall has been acting as referee and charged with the responsibility of making recommendations with respect to the appointment of postmasters, rural carriers, etc, in the five Democratic congressional districts. It has always been customary for the national committeeman in Tennessee to do this. I can not believe that John Overall has been trading in the post offices or any other kind of offices. John Overall has been many times honored by the Republican Party in Tennessee and has always borne the reputation of an honest man. I am sure that he will welcome an immediate and complete investigation either by the Post Office Committee of the Senate or by the State Republican committee, or any other responsible authority, and I am sure that such an investigation will not disclose any effort by Mr. Overall to compromise his political influence."

In addition, Mr. Overall himself gave out the following statement to the public:

"I have wired to Washington requesting a thorough examination of the charges preferred against me by Senator MCKELLAR and have also requested our State chairman, Mr. Gore, to call the State committee together and to make a thorough examination of the State."

Thus it will be seen that four out of the five Republican Congressmen in Tennessee, and Mr. Overall himself, desire an investigation.

FOURTEENTH.

In closing, I wish further to suggest that the contention made by Mr. May and Mr. Overall that this money was to be used as expense money to Washington is contradicted by the statement of Mr. Overall in his letter of July 7:

"Perhaps, as you know, the department has been referring to me the three having the highest grades, and I am allowed to select one from the three for appointment."

If Mr. Overall has an agreement with the Post Office Department, as he alleges, whereby he selects the one of the three eligibles for appointment, a trip to Washington about these offices is wholly unnecessary and no applicants for office should be required to pay such expense in whole or in part, even under the barter and sale system which is here shown to exist. Mr. Overall could sit in his office at Nashville or in his home at Nashville and select for appointment these civil-service applicants just as well as he could do it in Washington, and perhaps better. Of course, the statement that it is for expense money to Washington is a subterfuge, and the statement that it was to make up a deficit of the national committee is untrue, as shown in the sixth paragraph hereof by the admission of Mr. Overall himself, who says that such deficit had already been paid. But to whomsoever the money was to go, it was a corrupt collection of money, admittedly from applicants for office, and it has never been restored nor have the receivers of the money been punished.

In making these charges, I am simply repeating charges already widely published in my State. I make them in the interest of an honest administration of the civil-service and other laws and in the hope of preventing a further corrupt trafficking in public offices in my own State.

Very sincerely yours,

KENNETH MCKELLAR.

ELECTION OF SENATORS.

Mr. MCKELLAR. I enter a motion to discharge the Committee on Rules from the further consideration of Senate resolution 289, adding to the Standing Rules of the Senate a rule relative to statements of receipts and expenditures of candidates for nomination or election for United States Senator. I understand that the motion will go over under the rule.

The VICE PRESIDENT. The motion will be entered.

EXECUTIVE SESSION.

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session the doors were reopened; and (at 10 o'clock and 15 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Saturday, May 13, 1922, at 11 o'clock a. m.

NOMINATION.

Executive nomination received by the Senate May 12 (legislative day of April 20), 1922.

UNITED STATES MARSHAL.

Thomas J. Kennamer, of Alabama, to be United States marshal, northern district of Alabama, vice Henry A. Skeggs, whose term expires May 18, 1922.

CONFIRMATIONS.

Executive nominations confirmed by the Senate May 12 (legislative day of April 20), 1922.

MEMBER OF THE FEDERAL FARM LOAN BOARD.

Robert A. Cooper to be a member of the Federal Farm Loan Board.

COMMISSIONER OF FISH AND FISHERIES.

Henry O'Malley to be Commissioner of Fish and Fisheries.

RECEIVER OF PUBLIC MONEYS.

Peter G. Johnston to be receiver of public moneys at Blackfoot, Idaho.

POSTMASTERS.

CALIFORNIA.

William F. Hanell, Patterson.
William E. Edwards, Westmoreland.

FLORIDA.

Thomas Roden, Fort Pierce.
Rhea W. Pherigo, Kissimmee.

IDAHO.

Charles C. Henderson, Kamiah.

ILLINOIS.

Arthur L. Patterson, Grayville.

LOUISIANA.

John A. Moody, Cotton Valley.
Moses Biggs, Grayson.
Maggie E. Jones, Ringgold.

NEW YORK.

G. Frank Van Keuren, Allaben.
Hattie D. Lyon, East Setauket.
Annabel Wood, Hilton.
Anna M. Auch Moedy, Rosendale.
Andrew Wishart, Setauket.

TEXAS.

Hubert L. Ford, Bellevue.
John W. Robbins, Clyde.
William W. Sloan, Falfurrias.
George P. Harden, Groom.
Alice M. Smith, Livingston.
Joe H. Victery, New Willard.
Walter C. Vickers, Omaha.

VIRGINIA.

William D. Austin, Buena Vista.

WASHINGTON.

Frank G. Sanford, Bucoda.
Elva N. Hamilton, Mansfield.

WITHDRAWAL.

Executive nomination withdrawn from the Senate May 12, 1922.

POSTMASTER.

Charles A. Allen to be postmaster at Milaca, in the State of Minnesota.

HOUSE OF REPRESENTATIVES.

FRIDAY, *May 12, 1922.*

The House met at 12 o'clock noon and was called to order by the Speaker pro tempore, Mr. WALSH.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Holy, holy, holy, Lord, God Almighty, we most gratefully acknowledge Thy providence to be as the rock of ages that has withstood the tests and testimonies of time. We bless Thee that the broken "rock" shows us the best way to live, namely, the way of sacrifice and service. Be pleased to direct our President with great wisdom. Be with the entire citizenship of our country, and strengthen it with a growing reverence for law and authority. Bless every life with great peace, and lead us in our deliberations. Through Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

READJUSTMENT OF THE PAY OF THE ARMY, NAVY, ETC.

Mr. MCKENZIE. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 10972.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Illinois [Mr. MCKENZIE].

The question was taken, and the Speaker pro tempore announced that the ayes seemed to have it.

Mr. KRAUS. Division, Mr. Speaker.

The House divided; and there were—ayes 37, noes 6.

Mr. KRAUS. Mr. Speaker, I make the point that there is no quorum present.

The SPEAKER pro tempore. The gentleman from Indiana makes the point that there is no quorum present. Evidently no quorum is present. The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees. Those in favor of the motion that the House resolve itself into the Committee of the Whole House on the state of the Union will, as their names are called, answer "yea," those opposed will answer "nay," and the Clerk will call the roll.

The question was taken, and there were—yeas 265, nays 2, not voting 162, as follows:

Mr. Sanders of New York with Mr. Collins.
Mr. Butler with Mr. Rainey of Illinois.
Mr. Reed of New York with Mr. Gilbert.
Mr. Wurzbach with Mr. Blanton.
Mr. Darrow with Mr. Mead.
Mr. Gorman with Mr. Sears.
Mr. Bacharach with Mr. Taylor of Arkansas.
Mr. Osborne with Mr. Mansfield.
Mr. Siegel with Mr. Kunz.
Mr. Kopp with Mr. Campbell of Pennsylvania.
Mr. Volk with Mr. Rainey of Alabama.

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. A quorum is present. The Doorkeeper will open the doors.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 10972, with Mr. TOWNER in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the purpose of further considering the bill H. R. 10972, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 10972) to readjust the pay and allowances of the commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service.

Mr. STAFFORD. Mr. Chairman, I offer the following amendment, which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from Wisconsin offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. STAFFORD: Strike out section 2 and insert in lieu thereof:

"SEC. 2. That any commissioned officer in any of the services mentioned in the title of this act who receive allowances for quarters as provided herein shall not receive any increase of pay for sea duty."

Mr. STAFFORD. Mr. Chairman, under existing law persons connected with the Navy and the Coast Guard Service are en-

titled to 10 per cent additional pay while on sea duty. There is no additional pay allowed under existing law, so far as the Army is concerned, for field duty. The section reported by the committee attempts to reduce the pay for sea duty from 10 per cent to 5 per cent. The amendment that I propose is to eliminate entirely any pay for sea duty.

Under existing law commissioned officers connected with the Navy and the Coast Guard Service receive no allowance for quarters. In this bill they receive allowance in addition to the $1,000 or more of increased pay—allowances ranging from the lowest grade, period 1, of $480 a year to $1,500 in some instances. We are giving that increased allowance for quarters to the Navy and to the Coast Guard Service, which they do not have to-day.

We are also giving them additional allowance for rations, amounting to several hundred dollars a year. Now, this provision for field duty in the Army is absolutely unworkable, and if you increase the pay, as you do or are doing in committee, not only the base pay, amounting in many instances to several thousand dollars, but adding to that allowances for quarters ranging from $480 to $1,500, why should you increase their pay still more under the guise of sea and field duty? In the Postal Service, when you send men out in the Railway Mail Service you do not give them any additional pay for being away from their homes on field duty. In the inspectors' service you do not provide anything additional to them for doing their duty away from their offices. The place of duty for the Coast Guard and for the Navy is on the sea. Seventy or eighty per cent of the officers connected with the Navy perform their duty at sea.

Now, let us be a little reasonable. If by this act we are increasing the base pay of all these Coast Guard officers and naval officers several hundred dollars, and in some instances several thousand dollars, and adding to that allowances for quarters in varying amounts running from $480, the lowest, up to $1,500, which is going pretty far, why should the committee attempt to graft on the military service an extra percentage of pay for field duty when in war commissioned officers get an additional rating? When that emergency comes we can provide for that just as we did in the late war.

Mr. SCOTT of Michigan. Mr. Chairman, will the gentleman yield?

Mr. STAFFORD. Yes.

Mr. SCOTT of Michigan. Under what condition does the Coast Guard get the additional allowance?

Mr. STAFFORD. I have taken the authority of those who have stated it on the floor that section 1571 is broad enough to cover that.

Mr. SCOTT of Michigan. I understand, if the gentleman will permit, that the ruling of the comptroller was to the effect that the Coast Guard might come under that, but I have never known of an instance where the Coast Guard came in under it.

Mr. STAFFORD. I am glad the gentleman called that to my attention. We are giving the Coast Guard a higher increased pay than any other branch of the service, and yet it is proposed here to add to the pay of naval officers for sea duty a million dollars additional. The expense for quarters alone will run into several million dollars in allowances to naval officers.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent to proceed for five minutes longer in order to answer questions.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. McKENZIE. Mr. Chairman, I would like to ask the gentleman from Wisconsin a question.

Mr. STAFFORD. I will be glad to answer.

Mr. McKENZIE. Of course, the gentleman heard my statement in connection with this question yesterday?

Mr. STAFFORD. Yes.

Mr. McKENZIE. I want to ask the gentleman if in his amendment he does not provide that naval officers at sea, not receiving commutation allowance, may have the right to draw 5 per cent sea duty?

Mr. STAFFORD. Yes. I understand that there is no person under this bill at sea or at home who will not receive commutation of quarters.

Mr. McKENZIE. One moment. I do not understand that it is the gentleman's purpose to add to this bill expenses which we do not incur. This bill provides that officers at sea without dependents shall not receive commutation of quarters.

Mr. STAFFORD. I beg the gentleman's pardon. Every person, whether he has dependents or not, gets commutation of quarters, both at sea and at home. I thought the gentleman was acquainted with his own bill. Section 6 provides for an allowance for quarters to every person; and every person, whether he has a dependent or not, receives the minimum allowance of two rooms, at $20 per month each, or $40, namely, $480 a year. Will the gentleman dispute that?

Mr. BYRNES of South Carolina. Yes. If I understand the gentleman correctly, and if he will read to the end of the section, he will see the language "but no rental allowance shall be made to any officer without dependents by reason of his employment on field or sea duty."

Mr. STAFFORD. I notice that provision, yes; and I have that marked for elimination. [Laughter.]

Mr. BYRNES of South Carolina. I am glad the gentleman has it marked. That provision as I read it is a saving clause only, so that no additional allowance for quarters will be granted him if he has no dependents by reason of his sea duty.

Mr. STAFFORD. We are seeking by the proposed amendment to prevent any increase of pay being granted to any commissioned officer in the service who is receiving an allowance for quarters. Grant what the gentleman says is true. Nevertheless, does the committee contend that in addition to allowing them from $480 to $1,500 for quarters we are to add to that 5 per cent for pay?

It is true that I should have preferred the amendment offered by the gentleman from North Carolina [Mr. BULWINKLE] yesterday evening, but with the few Members here, it was not given that consideration which should have been given to it. I have drafted it in this form. If it is adopted you may rest assured it will be in the proper form, so that no one shall get sea-duty pay who gets an allowance for quarters.

Mr. EVANS. What does the gentleman propose to do as to field duty?

Mr. STAFFORD. It eliminates field duty altogether. The members of the Army never receive anything for field duty.

Mr. EVANS. Does the gentleman's amendment cure the difficulty?

Mr. STAFFORD. Yes; it eliminates it entirely.

The CHAIRMAN. The time of the gentleman from Wisconsin has again expired.

Mr. MONDELL. Mr. Chairman, there is very considerable doubt as to the advisability of a provision under which the Army is to receive an increase of 5 per cent for what is called field duty. It seems to me rather questionable as a matter of principle and quite impossible as a matter of administration. I think it would be very difficult, indeed, to draw any regulation under the provisions of this section for that class of duty. The bill provides that field duty shall be defined for the purposes of this act as "service in mobilization." Well, such services might be very temporary.

Concentration.

I do not know just what that includes. It might be a service of a few days, whatever concentration is.

Instruction.

Many officers, including retired officers, are engaged in the work of instruction in educational instructions. Are they entitled to field pay, 5 per cent? Undoubtedly they would be under this language.

Service in campaigns.

Of course, if there is to be any field pay, that is the condition under which it would be justified—service in campaign. But it covers also service—

In simulated campaign or on the march.

An organization leaves a post for a two, or three, or four, or five, or six day practice march, or it may from its post engage in a simulated campaign. Just when does the field pay begin and when does it end? It strikes me that unless the committee has it very clearly in mind how this provision shall be administered, and can make that very plain, we should be very slow in adopting a provision of this kind. This is entirely new, and not urged by the Army, as I understand, but for the purpose of equalizing, it is said.

Mr. McKENZIE. Equalizing upward.

Mr. MONDELL. We always equalize upward, never equalize downward. It is said it is for the purpose of equalizing conditions between the Army and the Navy. Now, I do not know enough about naval service to have a very clear idea as to whether the Navy should in time of peace have 5 per cent or any per cent extra for sea duty. I am very glad to listen to any argument gentlemen can make, but as the matter now appeals to me I do believe this provision for 5 per cent additional field pay for the Army is not only very questionable as a matter of

policy, but I believe it is absolutely unworkable as a matter of practice and administration.

Mr. GREENE of Vermont. Will the gentleman yield?

Mr. MONDELL. I yield to the gentleman from Vermont.

Mr. GREENE of Vermont. I quite agree with what the gentleman has said, and I understand that the Army never solicited this thing, but that it has been put in here in an attempt to equalize between the two services. But let us go back of that. Why would it not be the right idea to strike both out? Why should not a sailor go to sea?

Mr. MONDELL. That is his business.

Mr. GREENE of Vermont. A sailor should go to sea, just the same as a soldier should go into the field. That is his business. Why can we not equalize as between the two services by striking both out?

Mr. MILLS. I think the gentleman from Vermont is right.

Mr. MONDELL. I want to make clear my attitude in regard to this bill. We must have legislation on this subject. I desire to support the committee, but I think it is incumbent upon the committee to prove the wisdom of every provision in their bill. I think this is of very doubtful wisdom.

Mr. McLAUGHLIN of Michigan. Will the gentleman yield to me?

Mr. MONDELL. If I have the time.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent to withdraw my amendment and submit in lieu thereof the following, which will obviate all question as to the condition called to my attention by the gentleman from South Carolina [Mr. BYRNES]. I propose as a modification of my amendment to strike out section 2 and in lieu thereof insert the following:

SEC. 2. That no commissioned officer, while on field or sea duty, shall receive any increase of his base pay by reason of such duty.

Mr. MONDELL. Will the gentleman yield? Is that substitute necessary?

Mr. GREENE of Vermont. That is just what I was going to ask.

Mr. STAFFORD. Yes; because under existing law naval officers receive 10 per cent additional for sea duty, and there must be some positive enactment of law in order to rescind that legislative provision.

Mr. OLIVER. Mr. Chairman, let the amendment offered by the gentleman from Wisconsin be reported.

The CHAIRMAN. The Clerk will report the proposed modification.

The Clerk read as follows:

Amendment offered by Mr. STAFFORD: Strike out section 2 and insert in lieu thereof the following:
"SEC. 2. That no commissioned officer, while on field or sea duty, shall receive any increase of his base pay by reason of such duty."

The CHAIRMAN. Is there objection to the gentleman modifying his amendment?

Mr. PADGETT. Mr. Chairman, I do not desire to lose the right to make a point of order against the amendment.

Mr. STAFFORD. What is the point of order?

Mr. PADGETT. That it is substantially what was voted down yesterday evening under the Bulwinkle amendment.

The CHAIRMAN. The question is, Is there objection to the gentleman modifying his amendment?

Mr. PADGETT. If I make no objection to the modification, does that preclude me from making my point of order?

The CHAIRMAN. It does not.

Mr. PADGETT. All right.

The CHAIRMAN. Is there objection to the requested modification?

There was no objection.

Mr. PADGETT. Now, I make my point of order that this is substantially the same amendment that was voted down yesterday evening.

The CHAIRMAN. The gentleman from Tennessee [Mr. PADGETT] makes the point of order that the amendment as now modified is the same amendment in substance that was voted down yesterday.

Mr. STAFFORD. If there is any modification, as I take it, it is not for the Chair to pass upon the effect of the amendment. It has been ruled frequently that if there is any change in the phraseology of the amendment, that is sufficient to make it in order.

Mr. OLIVER. The amendment that the gentleman has offered would be absolutely meaningless, for the reason that you have no existing law that gives——

The CHAIRMAN. The question is on the point of order.

Mr. MONDELL. I move, as a substitute for the amendment of the gentleman from Wisconsin, to strike out the paragraph.

Mr. BYRNES of South Carolina. I make the point of order that that is the same amendment.

The CHAIRMAN. If no gentlemen desires to be heard, the Chair will rule on the point of order.

The objection of the gentleman from Tennessee [Mr. PADGETT] is to the amendment to his amendment offered by the gentleman from Wisconsin. In the judgment of the Chair the point of order is not well taken. It is not in substance or in form like the one decided yesterday.

Mr. MONDELL. Mr. Chairman, I have offered a substitute to strike out the section, and I understand the gentleman from South Carolina has made a point of order.

Mr. BYRNES of South Carolina. I did; that it is the same amendment that was considered and voted upon yesterday afternoon.

Mr. MONDELL. Mr. Chairman, I was not present when the amendment was debated last evening, and so I am not informed as to the parliamentary situation.

The CHAIRMAN. The Chair is informed that there was no motion to simply strike out the section; the motion was to strike out the section and insert, so that point of order is not well taken.

Mr. MONDELL. The point of order is overruled?

The CHAIRMAN. Yes.

Mr. MONDELL. Mr. Chairman, I do not desire to take up the time of the committee, but it does seem to me very clear that the provisions of this section are questionable, of doubtful wisdom and propriety. I think they should go out.

Mr. McKENZIE. Mr. Chairman, I wish simply to state that the committee in writing this section was trying to do what we believed the fair thing to both services. We put them on a parity; we cut down sea pay by 50 per cent. If it is the judgment of the House that this section should be eliminated from the bill, that is one thing. It would be logical to strike it out; but it is illogical and inconsistent to undertake to discriminate, as does the amendment of the gentleman from Wisconsin.

Mr. KING. What does the gentleman want?

Mr. McKENZIE. I am for the bill.

Mr. BYRNES of South Carolina. Will the gentleman yield?

Mr. McKENZIE. Yes.

Mr. BYRNES of South Carolina. If the amendment of the gentleman from Wyoming should carry, the existing law will prevail.

Mr. McKENZIE. Certainly; and that is 10 per cent sea pay.

Mr. KNUTSON. I would like to ask the gentleman from Illinois a question.

Mr. McKENZIE. I yield.

Mr. KNUTSON. Did the committee give careful consideration to this particular phase of the bill?

Mr. McKENZIE. We certainly did.

Mr. KNUTSON. That is good enough for me.

Mr. MONDELL. The committee has admitted that no one asked for this provision so far as the Army is concerned, and the reading of the paragraph itself makes it very clear that it would be utterly impossible to administer it. There is no question about that.

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. McKENZIE. Yes.

Mr. NEWTON of Minnesota. As I understand, the committee provides for 5 per cent increase in pay for field service and does away with the 10 per cent additional pay for foreign service and sea service.

Mr. McKENZIE. Yes.

Mr. GREENE of Vermont. Will the gentleman yield?

Mr. McKENZIE. I will.

Mr. GREENE of Vermont. If you are going to take away from the Army officer something you have not given him yet—the 5 per cent—why do you insist that the naval officer shall keep it? Where is the fairness in it? Both men are supposed to go into the service for the sake of performing their duty, and when one goes to sea and the other goes into the field one gets something for it and the other does not.

The CHAIRMAN. The question is on the modified amendment of the gentleman from Wisconsin.

Mr. STAFFORD. May we have it again reported.

The CHAIRMAN. Without objection, the Clerk will read the amendment.

The amendment was again read.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I move to strike out the last word. It seems to me that the amendment offered by the gentleman from Wisconsin ought to prevail. It seems to me that no commissioned officer ought to receive this additional pay. If the amendment offered by the gentleman from Wyoming should prevail, it would leave on the books a provision by which the officers of the Navy would re-

ceive additional pay of 10 per cent for duty at sea. If the amendment offered by the gentleman from Wisconsin prevails, it will wipe from the books that provision allowing a naval officer extra pay. I do not see why any naval officer or land officer should receive extra pay for doing his plain duty—for doing the very things he enlisted to do and that he is commissioned to do. [Applause.] This bill provides for additional pay for field duty, and it names a number of things that shall constitute field duty, every one of which is a duty that these officers should perform even in peace times. In time of peace there should be no extra pay for these ordinary duties. If he is not to do these things, for God's sake what is he to do? Absolutely nothing. We propose by this bill to give him extra pay for doing the plain simple thing that he has enlisted to do. [Applause.]

Mr. MONDELL. Will the gentleman yield?

Mr. McLAUGHLIN of Michigan. Yes.

Mr. MONDELL. I have no objection to the adoption of the amendment of the gentleman from Wisconsin. My only reason for offering the substitute was that personally I am not sufficiently clear as to the wisdom in regard to the sea pay. But that is a matter that can be considered later. Certainly there should be no such thing as field pay.

Mr. McLAUGHLIN of Michigan. I am willing to receive information, but, as it appears to me, I can see no reason for giving officers extra pay for doing their duty. Why should not naval officers go to sea? What are they commissioned for? To sit around the clubs in Washington; to sit in the barracks and quarters? What is a naval officer expected to do?

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. McKENZIE. Mr. Chairman, I ask for a vote.

Mr. OLIVER. Mr. Chairman, I ask for recognition for two minutes.

Mr. PADGETT. Mr. Chairman, I ask for recognition in opposition to the motion of the gentleman from Michigan [Mr. McLAUGHLIN].

The CHAIRMAN. The Chair will recognize the gentleman from Alabama.

Mr. OLIVER. Mr. Chairman, I want to call the attention of the gentleman from Wisconsin [Mr. STAFFORD] to the fact that his amendment as drawn does not accomplish the purpose he has in mind. In other words, no naval officer, under existing law, is now entitled to any increase in base pay by reason of sea service. He is now entitled to 10 per cent on his longevity and base pay for sea service, but this 10 per cent is not a part of his pay, either base or longevity, but is additional compensation, the term "compensation" being an inclusive word embracing all pay and allowances. Pay is one thing in naval law and compensation another, and in the drafting of the gentleman's amendment he has overlooked the fact that he is dealing with a technical subject; and what he should do, if he wishes to accomplish his purpose, is to provide that it shall not operate to increase pay or compensation. Then he will have covered the subject.

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent to again modify my amendment by striking out the word "base" and, after the word "pay," inserting the words "or compensation."

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to again modify his amendment in the manner in which the Clerk will report. Is there objection to the proposed modification? [After a pause.] The Chair hears none.

Mr. KING. Mr. Chairman, may we have it now reported.

The CHAIRMAN. The Clerk will report the modified amendment.

The Clerk read as follows:

Modified amendment by Mr. STAFFORD: Page 7, line 4, strike out section 2 and insert in lieu thereof the following:

"SEC. 2. That no commissioned officer while on field or sea duty shall receive any increase of his pay or compensation by reason of such duty."

Mr. PADGETT. Mr. Chairman, I rise in opposition to the amendment. I hope that the amendment will not prevail. For many years there has been the sea pay of officers, recognizing that there is an equity, a justice in allowing a little more pay to an officer at sea than on shore. That applies to the marines, to the Navy, to the Coast Guard. It is 10 per cent at the present time. In making the general adjustments the committee in apportioning and adjusting these different changes and rates which they have made in the bill reduced this from 10 per cent to 5 per cent. It is fair and just that it should go as it is now to the Navy, the Marine Corps, and the Coast Guard. If there is objection to its going to the Army, the whole proposition should not be killed and this injustice done to these three services that are required to leave home, to shift from place to place, from time to time, and have additional expense piled upon them because the committee, in a sense of justice and equity, have attempted to assimilate the Army to the conditions of the Navy, the Marine Corps, and the Coast Guard. I hope the amendment, in all justice and fairness, will be voted down.

Mr. GRIFFIN. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. GRIFFIN. Is the gentleman aware that the officers of the Navy are now getting commutation of quarters, which amounts in certain cases to over $1,000 a year, that they never got before?

Mr. PADGETT. That depends on where they are getting it, and who. There are some who do not get it.

The CHAIRMAN. The question is on the amendment as modified offered by the gentleman from Wisconsin.

The question was taken; and on a division (demanded by Mr. PADGETT) there were—ayes 73, noes 44.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk proceeded to read.

Mr. WALSH (interrupting the reading). Mr. Chairman, there is a motion pending to strike out the paragraph.

Mr. MONDELL. Mr. Chairman, I withdraw that motion.

Mr. WALSH. I object to its being withdrawn.

The CHAIRMAN (Mr. FESS). The amendment agreed to was in the nature of a substitute, and, therefore the motion to strike out has no effect.

Mr. WALSH. The amendment which was agreed to was a perfecting amendment. It struck out the text and inserted some new text, and there was pending at the time that that was voted upon a motion to strike out the entire section.

The CHAIRMAN. A motion to strike out a paragraph being pending and the paragraph then being perfected by an amendment in the nature of a substitute, a motion to strike out necessarily follows. That precedent is to be found in 5792, Hinds' Precedents.

Mr. MONDELL. Mr. Chairman, I am willing to withdraw the substitute, because I am satisfied with the amendment.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 3. That when officers of the National Guard or of the reserve forces of any of the services mentioned in the title of this act are authorized by law to receive Federal pay, those serving in grades corresponding to those of colonel, lieutenant colonel, major, captain, first lieutenant, and second lieutenant of the Army shall receive the pay of the sixth, fifth, fourth, third, second, and first periods, respectively. In computing the increase of pay for each period of three years' service, such officers shall be credited with full time for all periods during which they have held commissions as officers of any of the services mentioned in the title of this act, or in the National Guard, or in the Organized Militia prior to July 1, 1916, or in the Naval Militia, or in the National Naval Volunteers, or in the Naval Reserve Force or Marine Corps Reserve Force, when confirmed in grade and qualified for all general service, with full time for all periods during which they have performed active duty under reserve commissions, and with one-half time for all other periods during which they have held reserve commissions.

Mr. GREENE of Vermont. I think, Mr. Chairman, it is only fair to say that the earnestness of the gentleman from Mississippi has caused him to overlook a few facts. The fact is that in the present constitution of the Regular Army men have not been retained in their war-time rank; nothing of the kind whatever. It was specifically provided in the war-time legislation that whatever temporary rank was given to officers of the Regular Army because of their increased command during the period of the war, they should upon the arrival of peace revert to their old status and files in the Regular Establishment. And everyone of them did.

Mr. SISSON. The gentleman does not contend that these officers got no promotion in the war?

Mr. GREENE of Vermont. I do not know anything about the indirect causations of the war any more than I can figure out what the mathematics of war may be as to the question of high prices. I say, as a matter of law, the law did not give any permanent advance in commission.

Mr. SISSON. For example, you take the second lieutenants, and there are only 77 in this whole Army.

Mr. GREENE of Vermont. The answer to that is as simple as A B C. In 1920 we passed in this Congress the Army reorganization act, which increased the commissioned personnel of the United States Regular Army at least double, or very nearly double. And there were 5,000 or 6,000 or 7,000 vacancies to fill, and it was provided in that Army reorganization act that at least 50 per cent of those vacancies should go to the emergency officers of the World War, and that the remaining 50 per cent should be taken by the officers of the regular service already in the Army. There were advancements and promo-

tions, and that leads to the very thing I want to speak of in behalf of this bill.

These advancements and promotions came after the war as a result of the increase of the commissioned personnel of the Army and do not relate to the war at all. It was specifically laid down in all war-time legislation that no matter what the temporary rank or promotion any officer of the Regular Army got during the war, he must at the close revert to his old status in the files, and he did. What promotion he got was because of the Army reorganization act. If you had had this bill in operation when the Army reorganization act went into effect, these men whose increases in salaries you are talking about as being too much, considering their years and length of service, would never have received those raises, because it is one of the fundamentals of this bill that mere promotion and grade in the Army do not increase the pay, but there must go with it longevity of service, so that officers must earn that increase in pay as well as the increase in grade. That is where the contrast is. You would have saved millions of dollars if this very law had been in effect then.

What is the effect of it? Under this law, if a man gets an advanced grade through accelerated promotion before he has had sufficient length of service, he will not thereby get his pay increased, but must wait until his service in years has brought him into a higher-pay grade. On the other hand, in cases of long-continued service without promotion, if the policy of this Congress in years to come should be that we would diminish the Army, for instance, it would mean that good men, getting along 35 or 40 years of age, who had gotten no further than the captaincy, and who might never be promoted through the remainder of their service, would get an increase in pay for longevity which is reasonable and just. Everybody will concede it. There is the explanation of the whole thing. It works both ways.

If we had had this law in operation two years ago we would have saved money, and there would not have been all this talk about the acceleration of promotion and the raid upon the Treasury that came from it.

The CHAIRMAN. The time of the gentleman from Vermont has expired.

Mr. GREENE of Vermont. Mr. Chairman, may I have three minutes more?

The CHAIRMAN. Is there objection to the request of the gentleman from Vermont?

There was no objection.

Mr. GREENE of Vermont. I think, gentlemen, if you will permit me to say it in all frankness—because, after all, I think it is simply a reminder; you intended to do it, and will do it—we ought to look at this matter of pay of the Army as a purely impersonal one, and regard the Army as a purely impersonal permanent institution. We are not simply providing pay here for men whom we personally identify as having recently received accelerated promotions. We are not by this bill simply passing out money to some fellow of whom we say he has got his pay raised too fast and ought not to have any more now. We are providing for the men in the service now and for the generations of unknown men who are to follow them. If it does so happen that a few of these young men have, by reason of accelerated promotion, which was brought about by the increase of the Army by reason of the enactment of the Army reorganization act, got into grades and pay that are beyond their years, you may take it as a certainty that from that very fact they will stay in their grades in what is called "a hump" in the service for many years to come, without rapid promotion hereafter.

The very fact that they started out with rapid promotion means, in accordance with any actuary's tables, that they will remain for a long time in suspense in the grades they are in now. So that this question is not that of paying some men whom we now identify as having been too rapidly promoted, but it is laying down a basis of pay for the Army as an institution, so that when these men pass out one by one the flow of their successors will be compensated on a reasonable and just basis, and it will prevent our having the perhaps unusual and unfair allotment of pay in some instances, judging by years of service, that is now possible under existing law.

Mr. KING. Mr. Chairman, will the gentleman yield?

Mr. GREENE of Vermont. Yes.

Mr. KING. I am very glad to hear this explanation of the gentleman. Then we shall have some officers of the same grade receiving different amounts of pay for doing the same service.

Mr. GREENE of Vermont. If the gentleman will consult the philosophy of the bill he will find——

Mr. KING. I have consulted the bill, but not the philosophy.

Mr. GREENE of Vermont. Let me pose, then, for a moment as a philosopher. [Laughter.] The theory is that it is not mere grade that determines pay. In fact, the grade may not determine the pay at all if a man lacks years of service for the change in the pay period. So that when one man may be at the foot of the majors and the other at the top, they are both majors, but they have a different degree of longevity of service, and they get pay accordingly. [Applause.]

The CHAIRMAN. The time of the gentleman from Vermont has again expired.

Mr. BLAND of Indiana. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Indiana offers an amendment, which the Clerk will report.

The Clerk read as follows:

Mr. BLAND of Indiana offers the following amendment as a new section: "That all persons who have entered the Regular Army as commissioned officers shall be entitled to compute 50 per cent of their commissioned service in the National Guard and Organized Militia, whether in State or Federal service, or both, for longevity pay."

Mr. STAFFORD. Mr. Chairman, I reserve a point of order, or make a point of order, whichever the gentleman would like me to do.

Mr. BLAND of Indiana. I would like the gentleman to reserve the point of order.

Mr. STAFFORD. Very well.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

The committee informally rose; and Mr. WALSH having resumed the chair as Speaker pro tempore, a message in writing from the President of the United States, by Mr. Latta, one of his secretaries, who also informed the House of Representatives that the President had approved and signed bills and joint resolutions of the following titles:

On March 26, 1922:

H. R. 10559. An act making appropriations for the Departments of Commerce and Labor for the fiscal year ending June 30, 1923, and for other purposes.

On March 31, 1922:

H. R. 9606. An act to authorize the Secretary of the Interior to extend the time for payment of charges due on reclamation projects, and for other purposes.

On April 1, 1922:

H. J. Res. 263. Joint resolution authorizing the purchase of land for cemeteries for American military dead in Europe and the improvement thereof.

On April 6, 1922:

H. R. 9979. An act to amend an act entitled "An act granting a charter to the General Federation of Women's Clubs";

H. J. Res. 282. Joint resolution to authorize the Secretary of War to incur obligations for construction and maintenance of roads, bridges, and trails in Alaska, said obligations to be paid from the appropriation for the fiscal year ending June 30, 1922; and

H. R. 9633. An act to extend the provisions of section 2305, Revised Statutes, and of the act of September 29, 1919, to those discharged from the military or naval service of the United States and subsequently awarded compensation or treated for wounds received or disability incurred in line of duty.

On April 7, 1922:

H. R. 8815. An act to amend the act of March 1, 1921 (41 Stat. 1202), entitled "An act to authorize certain homestead settlers or entrymen who entered the military or naval service of the United States during the war with Germany to make final proof of their entries"; and

H. J. Res. 257. Joint resolution to appoint a commission for the exchange of sites for a post-office and courthouse building at New York, N. Y., between the Federal Government and the officials of the city of New York;

H. R. 9604. An act for the acquisition of a post-office site at Madison, Wis.; and

H. R. 10297. An act to extend the limitations of time upon the issuance of medals of honor, distinguished service crosses, and distinguished service medals to persons who served in the Army of the United States during the World War.

On April 11, 1922:

H. R. 2558. An act for the relief of Richard P. McCullough;

H. R. 7870. An act for the relief of I. C. Johnson, jr.; and

H. R. 8832. An act to provide for the exchange of certain lands of the United States in the Tahoe National Forest, Calif., for lands owned by William Kent.

On April 14, 1922:

H. J. Res. 7. Joint resolution to amend section 2 of the joint resolution entitled "Joint resolution to authorize the opera-

tion of Government-owned radio stations for the use of the general public, and for other purposes," approved June 5, 1920.

On April 15, 1922:

H. J. Res. 249. Joint resolution authorizing the Secretary of the Interior to donate and grant certain buildings in Alaska to the Woman's Home Missionary Society of the Methodist Episcopal Church.

On April 20, 1922:

H. R. 10864. An act to authorize an appropriation to enable the Director of the United States Veterans' Bureau to provide for the construction of additional hospital facilities and to provide medical, surgical, and hospital services and supplies for persons who served in the World War, the Spanish-American War, the Philippine insurrection, and the Boxer rebellion, and are patients of the United States Veterans' Bureau.

On April 21, 1922:

H. R. 10429. An act authorizing the Comptroller General of the United States to allow credits to and relieve certain disbursing officers of the War and Navy Departments in the settlement of certain accounts;

H. R. 2556. An act to advance Maj. Benjamin S. Berry to the permanent rank of major;

H. R. 7589. An act for the relief of Maj. Ellis B. Miller; and

H. J. Res. 309. Joint resolution appropriating $1,000,000 for the preservation, protection, and repair of levees under the jurisdiction of the Mississippi River Commission.

On April 25, 1922:

H. J. Res. 274. Joint resolution authorizing the commissioning in the Marine Corps of midshipmen under certain conditions;

H. R. 7234. An act for the relief of Miles Swift;

H. R. 8460. An act to authorize the occupation and use of certain lands in Alaska by Ketchikan Post, No. 3, American Legion, and for other purposes;

H. R. 9710. An act authorizing extensions of time for the payment of purchase money due under certain homestead entries and Government-land purchases within the former Cheyenne River and Standing Rock Indian Reservations, N. Dak. and S. Dak.; and

H. R. 927. An act for the relief of Capt. Fred S. Johnston.

On April 26, 1922:

H. R. 2004. An act for the relief of Frank Ferrin;

H. R. 3057. An act for the relief of George Van Derburgh Brown;

H. R. 3270. An act for the relief of Estella Barnett; and

H. R. 8342. An act to empower the Attorney General of the United States to fix the compensation of clerks of the United States district courts.

On April 28, 1922:

H. J. Res. 57. Joint resolution making the provisions of section 2296 of the United States Revised Statutes applicable to all entries made under the homestead laws and laws supplemental and amendatory thereof;

H. R. 1009. An act for the relief of H. C. Mullins, his wife, and minor children;

H. R. 2393. An act to provide for the establishment on the Mississippi River of a fish-rescue station, to be under the direction of the Bureau of Fisheries of the Department of Commerce;

H. R. 3346. An act for the relief of the heirs of Oscar Chrysler;

H. R. 5762. An act providing for a municipal park for the city of Butte, Mont.;

H. R. 5820. An act to place Albert Hamilton on the retired list of the United States Marine Corps;

H. R. 6686. An act for the relief of George Ciszek and Anna Ciszek; and

H. R. 7415. An act to correct and amend the service and military record of Herbert Langley, United States Marine Corps.

On April 29, 1922:

H. R. 10740. An act authorizing the use of special canceling stamps in certain post offices; and

H. R. 5588. An act to repeal section 5 of an act entitled "An act to establish the Lassen Volcanic National Park in the Sierra Nevada Mountains, in the State of California, and for other purposes," approved August 9, 1916.

On May 1, 1922:

H. R. 9671. An act to amend section 87 of the Judicial Code; and

H. R. 8690. An act to add a certain tract of land on the island of Hawaii to the Hawaii National Park.

On May 2, 1922:

H. R. 7272. An act for the relief of Monroe B. Shealy; and

H. J. Res. 319. Joint resolution making available funds for preserving and protecting, in the present flood emergency, the levees on the Mississippi River, its tributaries and outlets, not under the jurisdiction of the Mississippi River Commission.

On May 3, 1922:

H. R. 2158. An act to provide for the monthly payment of pensions.

On May 6, 1922:

H. R. 10240. An act to extend the time for the construction of a bridge across the Savannah River near Halleys Ferry and between the counties of Anderson, S. C., and Hart, Ga.; and

H. R. 10407. An act authorizing the counties of Jasper, S. C., and Chatham, Ga., to construct a bridge across the Savannah River at or near Savannah, Ga.

On May 8, 1922:

H. R. 10007. An act for the relief of certain persons to whom, or their predecessors, patents were issued to public lands in the State of Minnesota under an erroneous survey made in 1876.

On May 11, 1922:

H. R. 10730. An act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1923, and for other purposes;

H. R. 11547. An act making an appropriation for additional hospital facilities for patients of the United States Veterans' Bureau;

H. R. 10941. An act authorizing the Postmaster General to grant permission to use special canceling stamps or postmarking dies; and

H. J. Res. 268. Joint resolution extending the operation of the immigration act of May 19, 1921.

READJUSTMENT OF THE PAY OF THE ARMY, NAVY, ETC.

The committee resumed its session.

The CHAIRMAN. The gentleman from Indiana is recognized.

Mr. BLAND of Indiana. Mr. Chairman and gentlemen, I am convinced that in determining the service upon which to base the pay of a Regular Army officer several different kinds of experience should count. I understand that you compute the service of the West Point graduate. There are something like 400 men, officers, to-day in the Regular Army that were officers of the National Guard. These men necessarily are hand picked. They had to stand the test. You men who were here in Congress during the war will understand that there was a very decided sentiment over this country to the effect that the National Guard officers were being discriminated against and that the test made for them was of the hardest. Be that as it may, they have stood the test, and they are in the service by virtue of their efficiency.

Do you mean to contend that 20 years of service in drilling a company, in keeping the boys together and interested in the service, in intimately learning to know the soldier and his life, and in caring for him and getting him ready for the great conflict that came upon us suddenly—do you mean to say that that service does not qualify him as an officer of the United States Army? And if it does, and if a man is given pay on account of length of service, why should you not give him credit for his service in the National Guard when you give him credit for his service in the Regular Army? To deny that credit is to do him wrong.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. BLAND of Indiana. In a moment. Now, it is true that the officer of the National Guard was not in actual training duty all the time. But while he only drilled twice a week, his mind was constantly with his company and his heart was constantly with it, and it was his guidance that made it possible for the National Guard to be ready when this war came on to furnish the Rainbow Division to the Allies.

Mr. LINEBERGER. Mr. Chairman, will the gentleman yield?

Mr. BLAND of Indiana. I promised to yield first to the gentleman from Massachusetts.

Mr. WALSH. Do you compute this service and duty as a state of mind or active duty?

Mr. BLAND of Indiana. It was active duty as well as a state of mind, if you wish so to characterize it. It was active duty on the part of the National Guard officer in drilling his company and there were a lot of other duties aside from the mere drilling of his company. That service was given before the war, and it is given now. [Applause.]

You say we ought to give a Regular Army officer more pay on account of his length of service. Do you mean to say that the National Guard is not entitled to a similar kind of consideration when it comes to a matter of pay? You say he was serving the State. Well, if he was serving the State the Government should not complain. That service and experience is now

given to the Government. If that special and unselfish experience goes to the Government we ought to be proud of it and not discriminate against him on account of it.

Mr. LINEBERGER. Will the gentleman yield now?

Mr. BLAND of Indiana. Yes.

Mr. LINEBERGER. Is it not a fact, as was stated here yesterday, that the average term affecting all these officers is less than three years—two years and a half—and is it not a fact that many of these National Guard officers served on the border for as much as two years?

Mr. BLAND of Indiana. I think that is true.

Mr. LINEBERGER. That service was just as active as any Regular Army service, and most of the men affected were picked from among the officers who had had the most experience with troops.

Mr. BLAND of Indiana. As it is now, gentlemen, you are going to be charged with having written this bill at the behest of the Regular Army West Point officers, and I will tell you that you ought at least to show some sympathy for the man who voluntarily, without being bound by any shackles, has been serving his country and State. And surely in making a proper and just pay for our Army officers, the man who has not been drawing a salary, who has not been hooked up with the Government, the man who put his heart into the work voluntarily, the man who has given the best that is in him to the service, ought to be taken care of also. When the Government picks him out as a Regular Army officer and retains him, those who make the selection know that they are getting good record of service and a good service. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. LINEBERGER. I ask unanimous consent that the gentleman's time be extended five minutes.

The CHAIRMAN. The gentleman from California asks unanimous consent that the time of the gentleman from Indiana be extended five minutes. Is there objection?

There was no objection.

Mr. GREENE of Vermont. When the gentleman praises the National Guard officers, we all join him in that praise.

Mr. BLAND of Indiana. You are willing to praise them but you are not willing to help them when the time comes to do so.

Mr. GREENE of Vermont. I want you to find some standard by which you can judge a National Guard officer. The words "National Guard" do not mean all that they imply. Some of the National Guard is not national, and some of it is not a guard in some States. You know it and I know it, and that is one of the troubles; because where are you going to get an absolute standard by which you shall compute and compare the service of one National Guard officer with that of another?

Mr. BLAND of Indiana. Those who compute the service of the National Guard officer and give him credit for 50 per cent of it will have no trouble in determining what is service and what is not.

Mr. GREENE of Vermont. You have got to do it under a general law.

Mr. BLAND of Indiana. I have little doubt that in case of doubt, the doubt will be resolved against him.

Mr. GREENE of Vermont. Would you call service in some inside office job, which under the national defense act is given a commission, comparable with service with troops of the line?

Mr. BLAND of Indiana. I would no more want to pass on the technical details of what is National Guard service than I would want to pass upon what is certain kinds of service of a Regular Army officer under certain provisions of this bill.

Mr. GREENE of Vermont. But the Regular Army officer is in constant employment, night and day. It is his job. The National Guard officer serves a few days at a time. Where will you get your standard? We must enact the standard into law.

Mr. BLAND of Indiana. It is not difficult to tell whether a man is or is not an officer in the National Guard or Organized Militia.

Mr. COOPER of Ohio. Can the gentleman give the House some information along this line? I have been told that only about 2 per cent of the officers who lost their lives or were wounded during the World War were Regular Army men; that the others were National Guard officers and Volunteers.

Mr. BLAND of Indiana. I do not know the percentage, but I know that the gentleman's thought is correct. The Rainbow Division went out from the National Guard. They saw the elephant. They were put in the line early, and they kept them there until the war was won. [Applause.] And I want to say to you that some of the officers of the Rainbow Division very nearly lost the privilege of bringing their regiments home, because the Regular Army fellow wanted the honor of bringing them home. I think some of them were deprived of the privilege. [Applause.] We had men stand up here yesterday and say that the National Guard officers had the honor of being the head of the National Guard. I want to say that honor is all they ever did get, and if you leave it to the Regular Army officers, honor is all they ever will get. [Applause.]

Mr. LINEBERGER. Is it not a fact that the cynical, cold-blooded attitude of the Regular Army men and of those gentlemen who are eternally defending them in that attitude had a great deal to do with the difficulties that the National Guard experienced in France?

Mr. BLAND of Indiana. I have no doubt of it. Gentlemen, I do not mean to say that the regulations of the Army should be measured by the standard of the National Guard or the Organized Militia, but I do feel that when you go to pay these 400 men you certainly can give them credit for a part of their service. I am only asking you to give them 50 per cent credit for their National Guard commissioned service, and I think the House ought to grant it.

Mr. STAFFORD. Mr. Chairman, I make the point of order.

Mr. GREENE of Vermont. I rise in opposition.

Mr. STAFFORD. Let the point of order be disposed of first. I make the point of order that the amendment is not germane to this portion of the bill.

The gentleman from Wisconsin, my colleague Mr. COOPER, says it is a new section. True, but that does not destroy the rule that in the consideration of bills amendments offered must be germane to that part of the bill which is under consideration. I wish to call the Chair's attention to the fact that on yesterday when section 1 was under consideration, that part which provides for longevity pay to which this amendment directly relates, this amendment in substance was offered twice in a different form and rejected by the committee. Twice was it offered and by this committee rejected. It is substantially the same amendment.

Mr. CONNALLY of Texas. Will the gentleman yield?

Mr. STAFFORD. I will.

Mr. CONNALLY of Texas. Were the amendments in the identical language?

Mr. STAFFORD. Not the identical language, and it would have been in order to offer this after the rejection of the other amendments.

Mr. CONNALLY of Texas. But the gentleman a short time ago said that if there was any change in the language it would make it in order.

Mr. STAFFORD. My position is still in harmony with the statement I then made. We are not considering to-day section 1; we are making some progress. I say now for the benefit of the gentleman from Texas that on yesterday when section 1 was under consideration, which provides for longevity pay, even after the rejection of similar amendments, if this amendment or a similar amendment had been offered, it would have been in order. But section 1, I call the attention of the Chair to the fact at the bottom of page 5 and the top of page 6, is the only paragraph in this bill that relates to longevity pay. The proposal was offered twice yesterday in connection with that paragraph. The paragraph reads as follows:

> For officers hereafter appointed no service shall be counted for purposes of pay except active commissioned service under a Federal appointment and commissioned service in the National Guard when called out by order of the President. For officers now in the service all service which is now counted in computing longevity pay, and service as a contract surgeon serving full time, shall be included in the computation.

That is the only paragraph in this bill that relates to longevity pay. As I say, a similar amendment was offered twice to that paragraph during the consideration of section 1, and it was in order at that time. No point of order was made against it, because it was properly in order and germane to that paragraph of the section. Now, however, it is offered as a new section. I call the attention of the Chair to section 5822, Hinds' Precedents, where it says "an amendment inserting an additional section should be germane to the portion of the bill where it is offered." The Chair in making that ruling used this language:

> The Chair decides that we have passed the point in the bill at which it might have been offered. We shall never finish the bill unless some rule of this kind is observed. There is a provision in the bill for the completion of marine hospitals, and after that clause of the bill was passed the Chair ruled that amendments properly applicable to that clause of the bill at the time it was under consideration could not be received or entertained by the committee afterwards.

That is the logic of my objection.

The CHAIRMAN. What does the gentleman say as to the next section, 5823, of Hinds' Precedents?

Mr. STAFFORD. That is not applicable to this case. That says "an amendment germane to a bill as a whole but hardly germane to any one section may be offered at an appropriate

place with notice of motion to strike out the following section which it would supersede." That is not a parallel case.

Mr. Chairman, on yesterday this amendment was offered twice in substance at its proper place where it provides for longevity pay. If the Chair will examine the amendment, he will see that it provides for longevity pay. It would have been in order if it had been offered to section 1.

The CHAIRMAN. Does not the section relate to National Guard pay?

Mr. STAFFORD. It does not deal with longevity pay. Section 1 is the only provision in the bill that relates to longevity pay. This amendment relates exclusively to longevity pay. It seeks to increase the pay of these commissioned officers in the Army who have had prior National Guard service to the extent of 50 per cent of the service they performed while connected with the National Guard or Organized Militia. That amendment, substantially, was offered yesterday at the proper place in the bill. If there was nothing in this bill that related to longevity pay, and it being a general bill, then it would be in order to offer the amendment of this purport as a new section. But there being a provision in the bill as reported relating to longevity pay, it is not in order at this place. If we are going to make any progress at all, it should have been presented at the time when we were considering the paragraph in section 1. It was considered yesterday and rejected, and the fact remains that the House can never make any progress if after the proponents of an amendment have been defeated when the paragraph was under consideration they can offer it subsequently as a new section. We will never make any progress in bills of the Committee of the Whole if that fundamental rule is to be violated, that in consideration of a paragraph of the same general purport, after it has passed the section to which it is germane, it can again be considered.

Mr. GREENE of Vermont. Will the gentleman yield?

Mr. STAFFORD. Yes.

Mr. GREENE of Vermont. I direct the gentleman's attention to the fact that section 3 does not relate to permanent officers of the Regular Army. It relates to officers of the National Guard and reserve forces.

Mr. STAFFORD. Section 3 has nothing to do with longevity pay of permanent officers.

Mr. BLAND of Indiana. Mr. Chairman, I do not seek to attach this provision to any particular portion of the bill, as the Chair has noted. It is an amendment to the bill. If an amendment in the way of a new section is germane to the bill, and is within itself a subject matter that can well be in a separate section, there is no logic in excluding it as a separate section. On the contrary, the logic rests with making it a separate section. The gentleman from Wisconsin [Mr. STAFFORD] has stressed the proposition that it should have followed section 1, because there was where the longevity pay was under consideration.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. BLAND of Indiana. Not now. If I had offered this as a separate section, to follow section 3, the gentleman's argument could only apply in so far as that it would not be germane to the section. I ask the Chair to look at the amendment and look at section 3. If we desired to attach it to section 3 it can very well go on there, because we are discussing the question of the National Guard pay. It could well go on there, I think, as an amendment, but we are not going that far. But we are not contending that it is attached to section 3. We offer it as a separate matter and contend that it is entitled to take a place in the bill.

The CHAIRMAN. Does the gentleman's amendment apply to the National Guard officers or the Regular Army officers?

Mr. BLAND of Indiana. The service of National Guard officers as National Guard officers.

The CHAIRMAN. The amendment refers to all persons who had entered the Regular Army. They are Regular Army men, considered as coming from the National Guard?

Mr. BLAND of Indiana. Yes.

The CHAIRMAN. Then, are they National Guard officers or Regular Army officers?

Mr. BLAND of Indiana. They are Regular Army officers, but the subject that we are considering is the matter of giving credit for their service as National Guard officers. Congress has the right to amend the bill by inserting a separate section, if that section is a subject matter that can be well made a separate section.

Mr. GREENE of Vermont. Mr. Chairman, will the gentleman yield?

Mr. BLAND of Indiana. Yes.

Mr. GREENE of Vermont. That section deals with the pay of National Guard officers. How can the gentleman introduce into it a provision in respect to the pay of permanent Regular Army officers?

Mr. BLAND of Indiana. Because we are discussing the question of credit for service. We are not discussing the question of the National Guard pay.

Mr. HUSTED. Mr. Chairman, I think the gentleman from Wisconsin is advocating a very rigid and inelastic construction of the rule, which is not supported by the decisions of the House. Of course, an amendment must be germane to the section to which it is offered, or germane to the portion of the bill to which it is offered, if the amendment be offered in the form of a new section, but that is not construed so rigidly as the provision that the amendment must be germane to the section to which it is offered. If it is generally germane to the portion of the bill to which it is offered, it is sufficient.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. HUSTED. In a moment. This is an amendment which relates to pay, and this is the portion of the bill which relates to pay. This is an amendment which is not covered in any form by any preceding section of the bill. It is not in the first section. There is nothing relating to longevity pay for National Guard officers in that section. This, as a matter of fact, is really new matter and should properly be brought in as a separate section. Where is it offered? It is offered after section 3 which relates to National Guard officers, which relates to the pay of National Guard officers, which relates to pay based on length of service, and this is a mere modification. The fact that section 1 relates to longevity pay should not make any difference. This is in the portion of the bill relating to pay, and section 3 itself provides that in computing the increase of pay for each period of three years' service the officers shall be credited with full time for all periods during which they have held commissions as officers of any of the services mentioned in the title of the act. I contend that to hold so strictly as to say that this separate section must be offered only after the section particularly referring to longevity pay is too strict and rigid a construction of the rule.

Mr. GREENE of Vermont. Mr. Chairman, will the gentleman yield?

Mr. HUSTED. Yes.

Mr. GREENE of Vermont. The gentleman will remember that the first section relates to pay, longevity or what not, of permanent officers. The third section relates to pay of such as are temporary officers, like National Guard folks. The amendment relates to the pay of permanent officers.

Mr. HUSTED. Oh, yes; it relates to the pay of permanent officers, but they want to include one-half of their services as commissioned officers of the National Guard in computing that pay, and that in itself is enough to let this amendment in as a separate section at this point.

Mr. STAFFORD. Mr. Chairman, the gentleman from New York stated that in section 1 there is no provision for the pay of officers now in the service.

Mr. HUSTED. I did not say anything of the kind. The gentleman is mistaken. I said that there was no provision in section 1 relating to longevity pay for officers of the Regular Army who had been officers of the National Guard, based on their service in the National Guard, and there is nothing there relating to it.

Mr. STAFFORD. Section 1 is all pervading, if the Chair will permit, because on page 6 in the paragraph to which I directed the attention of the Chair it provides, and it is the only paragraph in the bill that does so provide, for the pay of officers now in the service. That section provides:

> For officers now in the service all service which is now counted in computing longevity pay, and service of a contract surgeon serving full time, shall be included in the computation.

The purpose of this amendment is longevity pay. I call the attention of the Chair to the Manual, section 777:

> Under the later practice an amendment should be germane to the particular paragraph or section to which it is offered, and an amendment inserting an additional section should be germane to the portion of the bill to which it is offered.

There is no question whatsoever that this amendment provides for the increase of pay of those Army officers who have had National Guard service. Increase of pay how? By longevity service. The amendment was presented yesterday, and properly so, but was rejected twice. I repeat again, if the committee is going to adopt a rule that after we have passed one section of the bill which covers the subject of pay of those now in the service it will be permissible to offer an amendment which was germane to the paragraph under consideration in a prior portion of the bill, and to again consider it, we will never make headway; we will never make progress.

The main purpose that any Member of the House should have in offering an amendment is that he should have oppor-

tunity to have it considered. They have had that opportunity, they have tested the sense of the House. They have not been asleep at the switch and the House has expressed itself twice on this very amendment or a similar previous amendment. Suppose the House now rejects it, will it be in order hereafter every time a section is read to offer the amendment anew? The Chair will realize we will never make headway after the sense of the House has been tested on an amendment and it is rejected if you may offer it anew on succeeding sections or paragraphs in the bill, when the only paragraph in the bill to which it relates is covered by another section which has been read.

Mr. COOPER of Wisconsin. Will the gentleman permit a question?

Mr. STAFFORD. I will.

Mr. COOPER of Wisconsin. Does the gentleman allege that the pending amendment is not germane to the bill?

Mr. STAFFORD. It is germane to section 1, because it deals specifically with longevity pay, with the pay of officers now in the service who have had prior service.

Mr. COOPER of Wisconsin. Then the amendment offered by the gentleman from Indiana [Mr. BLAND] is germane to the bill?

Mr. STAFFORD. Germane to section 1; yes.

Mr. COOPER of Wisconsin. Well, it is germane to some portion of the bill?

Mr. STAFFORD. That is the purpose of the rule.

Mr. BLAND of Indiana. Just a minute. If this amendment were adopted, would it in effect or by implication repeal or modify any other provision of this bill?

Mr. STAFFORD. It would modify directly section 1 of the paragraph to which I have called attention time and time again, and which relates to officers now in the service so far as longevity pay is concerned. It would directly qualify that. It was voted upon yesterday.

Mr. BLAND of Indiana. It does not necessarily repeal; it merely widens the scope of the longevity of service of an officer to determine the pay; that is all.

Mr. STAFFORD. We have had the matter up, and the proper time was when we were considering that subject matter.

Mr. BLAND of Indiana. It is not in conflict.

Mr. NEWTON of Minnesota. I want to call the attention of the gentleman to page 19, section 14, that has reference to the National Guard, and I would like to get the opinion of the gentleman if it should be voted down, each section following, whether it could be again offered following section 14.

Mr. STAFFORD. I prefer not to consider that question in connection with this discussion. If the Chair is going to hold this amendment is in order, then the Chair will have to hold that every time it is offered in a modified form it can be so modified and offered, but the time for its consideration was under section 1, and it was offered then and the House rejected it.

Mr. BLAND of Indiana. It is not the contention of the gentleman that if it is offered and defeated as a separate section that it could be offered as a separate section——

Mr. STAFFORD. That is the logic of the gentleman's position.

Mr. BLAND of Indiana. It is not.

Mr. STAFFORD. I will say the gentleman offered it where it was proper to offer it and it was rejected, and now he wishes to contradict himself and say it can be offered at any time.

The CHAIRMAN (Mr. FESS). The Chair is ready to rule. The gentleman from Wisconsin [Mr. STAFFORD] makes the point of order on the amendment offered by the gentleman from Indiana [Mr. BLAND] on the basis that the amendment which would have been in order after section 1 is not in order here because there is not anything mentioned in section 3 in regard to longevity, and also on the basis that section 3 deals with National Guard pay, while the amendment deals with longevity pay of Regular Army officers. The question is an exceedingly close one. There is no question that the amendment is in order if offered at the right place on the general rule that if the amendment would be germane to the bill it might be introduced at any point, without waiting for the complete reading of the bill and then introducing it at the end.

Mr. STAFFORD. If the Chair will permit, I think, with all deference to the Chair, he did not understand my position. I said it would not be in order following section 1, but only in order as qualifying the paragraph at the bottom of page 5 and top of page 6 that relates to longevity pay.

The CHAIRMAN. If the amendment is germane to the bill it is not necessary to introduce it at any particular point in the bill. That very question is set out in paragraph 5823 of Hinds' Precedents, volume 5:

> An amendment germane to a bill as a whole, but hardly germane to any one section, may be offered at an appropriate place—

And so forth.

On the matter of germaneness, therefore, the Chair is clear that the amendment does not need to be introduced at any particular point. On the question of continuous operation of permitting the amendment to be introduced time after time after it has been voted on, if this were a case of that sort, there would be no doubt as to the rule, but this amendment is not the amendment which was introduced yesterday. The Chair has read the amendment introduced yesterday as printed in the RECORD, and while it has the same principle it is different in its details. The Chair is of the opinion that it would be a strained construction of the rule of germaneness to say that you could not introduce this amendment as a new section at any place except after section 1. The Chair is also not convinced that there is delay in legislation by permitting the amendment to be introduced in a different form from that of the day before. Therefore the Chair will overrule the point of order.

Mr. McKENZIE. Mr. Chairman, I desire to make a brief statement in connection with this matter. The argument was made on yesterday, so it is not necessary to have further argument, in my judgment. I simply wish to state that in the consideration and preparation of this bill by the joint committee and later on by the special committee of the House this question did not come up for consideration.

It was not brought to our attention. We simply wrote the bill along the line of taking in all the character of service now given to officers in counting for longevity. After the bill was written our attention was called to this matter by some of the ex-service men in the House, who seemed to be very much interested in it, and who came and conferred with some of us on the committee in regard to it. And I said to them, as I have stated now, that we did not have the matter up for consideration; that it was not considered by the committee; that I had no prejudice in the matter, however, and if they wanted to submit their amendment in the House, that was up to them; but I could not accept any amendment to this bill, being chairman of the committee, and hoping to see the bill go through without any amendment. I want to make this statement in justice to these gentlemen and in justice to the committee, and I hope the House will vote upon it as quickly as possible in order that we may proceed with this bill, which we hope, above all things, to get completed to-day.

Mr. LINEBERGER. Will the gentleman yield?

Mr. McKENZIE. Yes.

Mr. LINEBERGER. As I understand, the gentleman himself has no prejudice against the amendment. He simply desires to see his bill go through, like all chairmen of committees on the floor of the House, without any amendment?

Mr. McKENZIE. I made a statement of the facts.

Mr. NEWTON of Minnesota. Will the gentleman yield there?

Mr. McKENZIE. I will.

Mr. NEWTON of Minnesota. Yesterday the House took action upon the question of civilians entering the Army above the rank of second lieutenant, whether by way of the National Guard or from the training camps or from any other source, and turned down the proposition. Now, does the gentleman think that it would be dealing fairly and equitably with an emergency officer who did not happen to have National Guard service to his credit not to provide him with the compensation that he would be entitled to because of the work that he is doing?

Mr. McKENZIE. I would say to my good friend that I do not think the cases are parallel. But I want the gentleman to understand that I am not making an argument for or against the proposition.

Mr. NEWTON of Minnesota. The gentleman says the cases are not parallel. They are to this extent, that under the present bill the Regular is cared for and the emergency officer, whether he is from the National Guard or from other service, is not cared for.

This amendment would take care of the National Guard officer, but would still leave the other emergency officer out on the limb. Is not that it?

Mr. FISH. Mr. Chairman, as I understand this amendment, it provides that 50 per cent credit shall be given to National Guard officers for their former commissioned service in the National Guard. We have already voted down an amendment providing 100 per cent credit and also voted down one for 75 per cent credit. Although I voted with my colleagues, my service-men colleagues, yesterday in favor of the 75 per cent amendment, I did so with a mental reservation. But I do believe that former National Guard officers should have some credit for their service in the guard. [Applause.] This amendment that we are about to vote on provides for 50 per cent credit, and I think we should be able to agree on giving at least that amount of recognition to the former National Guard officers now in the Regular Army. I desire to point out, Mr.

Chairman, that 82 per cent of these National Guard officers came from seven large States, like Ohio, Massachusetts, New York, Wisconsin, California, and Pennsylvania, and one or two others. It seems a matter of simple justice that we should give them some credit, and why can we not agree on this amendment providing for 50 per cent? Mind you, the best men in the National Guard went into the Regular Army. They had to be the best officers, or the Regular Army would not have taken them. Most of these officers served on the border in 1917. And are you going to say to them that they can not get any credit for that service when they were actually serving the Federal Government on the border, although under the bill it is not computed as such?

Mr. FROTHINGHAM. Will the gentleman yield?

Mr. FISH. No; I can not yield.

Mr. FROTHINGHAM. I have not talked at all.

Mr. FISH. This is the first time that I have opened my mouth on this bill. I hope that we can agree on this 50 per cent amendment.

Mr. GREENE of Vermont. Mr. Chairman, I move to strike out the last word.

I do not believe any principle ought to be compromised, whether it is 50–50, or anything else. I do not believe any proposition of that kind ought to prevail in this House. I want to call attention to one practical thing about this. We know, in the first place, that in no organized profession in the world do people bring in with them as candidates any longevity that they may get by reason of something that they did previous to going into that profession. You would not do it in the case of the bar or any other place where it required certain qualifications to make candidates competent. Where has the National Guard ever been standardized so that we can tell what service to count? A governor may give a commission to a man, he may have a nice honorary position on his staff, and then when he goes into the United States Army immediately he gets years of alleged service credited to him for pay purposes.

I do not deny, nobody can deny, that there was some splendid material in the National Guard that did go into the Regular Army. There is more outside that did not. But you have got to have a law with some justice. If a man goes into the profession of arms at 21 from the outside, nobody gives him credit for any time that he was actually in business. But if he goes in at 30 or 35 as second choice, you want Uncle Sam to pay him for all the time he was outside before he made up his mind the second time.

If you once recognize the proposition that you can give these men constructive service for pay purposes that puts them ahead of other men in the same files with them, the next move will be to put those men ahead of those same fellows in the same files for promotion purposes. And the Army reorganization act is based on the fact that a man must go up the line for promotion only according to his actual longevity as provided by that law. If you add this longevity to it for pay, the logic of it will be one more amendment, and you add longevity to it for promotion, and he jumps over those he used to serve behind.

Mr. LINEBERGER. The gentleman, I think, is perhaps right; but there are a great many Members of the House who think that the Regular Army might be improved somewhat thereby. I know the gentleman is sincere in what he says, and I admire his frankness.

Mr. GREENE of Vermont. The gentleman has caused me to say something that out of good feeling I would not have said. He can not but feel that there is somewhere in the air, not far from Washington, an organized attempt to bring comment to bear on the Regular Army which would not bring credit to one of the institutions of our Government. And it also runs to the intention of injecting something into the Regular Army that would be like a burr under the saddle. It is also plain that it is not the intention to benefit the Regular Army as a whole as an American institution, but 400 men.

Mr. LINEBERGER. The gentleman has spoken in riddles. I am sure I have no idea whatsoever as to what the gentleman refers. And I think we would be glad to have him elucidate in order that we may find out at what he is driving.

Mr. GREENE of Vermont. I will. If you come into my nursery, I can make it plain.

Mr. LINEBERGER. I would like to have it in the record.

Mr. GREENE of Vermont. You introduced this subject on the question of improving the Regular Army. Some gentlemen who preceded you on this question also suggested remarks about the Regular Army that were not particularly complimentary.

Mr. LINEBERGER. Well, I think as American Congressmen we ought to be interested in improving every activity of the Government, the Army included.

Mr. GREENE of Vermont. So do I, but I believe in doing it the right way.

Mr. McSWAIN. Mr. Chairman, the genial and able and valuable gentleman from Vermont has just finished the same speech that he made yesterday on the same proposition. I am not going to take up the time of the committee to make the same speech on the same subject that I made yesterday. [Laughter.]

Mr. GREENE of Vermont. And I got just as much applause then as you did now.

Mr. JEFFERS of Alabama rose.

Mr. McKENZIE. Mr. Chairman, I move that the debate close on this amendment at the expiration of five minutes.

The CHAIRMAN. The gentleman from Illinois moves that the debate on this amendment close at the expiration of five minutes. The question is on agreeing to that amendment.

The motion was agreed to.

The CHAIRMAN. The gentleman from Alabama [Mr. JEFFERS] is recognized.

Mr. JEFFERS of Alabama. Mr. Chairman, I spoke yesterday on the amendment that I offered to the bill and I wish now to take a few minutes further in connection with this new section that has been offered by the gentleman from Indiana [Mr. BLAND].

I want to say that this proposition is not entirely new. It has been presented to Congress before, in different ways. I remember that a bill was introduced some months ago by our colleague, Mr. HILL, of Maryland, which bill provided that Army officers who had previous commissioned service in the National Guard should be allowed to compute that service in figuring longevity pay. His idea, as expressed in his bill, is the idea we have in fighting for this amendment, which I trust will carry.

The point has been raised here that men who are now in the Regular service, who are ex-National Guard officers, came into the Regular service of their own free will and accord and could have left it off had they wanted to. I want to call attention, my friends, to the fact that many of these valuable officers in the service to-day broke all the threads of their civil life, broke down their professions, cut loose from their positions in civil life and entered the service in time of stress; and I want also to again emphasize the point that I made yesterday, that when they entered the Army in time of need they not only entered it themselves, but they brought into it companies and battalions and regiments, and in organizing these companies and battalions and regiments they had, in many cases, consumed their own time and money; and if longevity pay is going to be given to anybody, some credits for longevity pay should be given to these men who gave themselves loyally to the development of the National Guard, and when the zero hour had come and there was fighting to be done those troops were ready to stand in the breach until our Army could be made ready. They not only stood in the breach, but they fought through the war with distinction. Now, their credit has been limited to only 50 per cent, and, God knows, that is little enough consideration. [Applause.]

Gentlemen talk here about their having gone in purely of their own volition, voluntarily forsaking civil occupations. They went to France and when they came back many of them found it impossible to get back their old jobs. They found mossbacks sitting on their jobs. When they went to France they were assured that their jobs would be open to them on their return, but they found themselves not able to get their jobs back again, notwithstanding all the promises that had been made to them. They suffered, therefore, very great loss and were under a distinct economic handicap.

Having broken completely the thread of civil life and finding, in many cases, only broken promises in place of former jobs, they looked over the field and decided to reenter the Army. They knew the Army game and loved it, but they reentered the Army not only because they loved the game but because their former professions had been lost to them and they were not able to get them back. Take the case of physicians, for example. They were promised their practice when they came back, but when they came back those promises were in many cases forgotten. And take young lawyers, just getting a little practice built up. They gave up their start in life, and when they came back they found that their practice was in the hands of others, and people forgot to see that they got that practice back again, as had been so fervently promised.

We have heard it stated that there is a propaganda on foot to have uncomplimentary things said about the Regular Army, and mention has been made of a "burr under the saddle." When the legislative representatives of the Army come to know and realize that there are people here who will check them in their deceitful methods it will be a good thing for the Army and for the country. They are not going to be able to put things

over as they have in the past, either by their own efforts or through cold-blooded spokesmen here.

I do not know anything of the "plain" propaganda that has been referred to by the gentleman from Vermont [Mr. GREENE], but I freely predict here that there will be more "burrs" inserted "under the saddle" all along the line until they come to recognize the fact that there are men here who have gained knowledge by experience in the Army game and who are going to check them right along. For the good of the Army organization of this country those men whose business it is to suggest Army legislation must not try to deceive this Congress and discriminate against any certain class or classes in the Army, but they must be fair and honest with Congress and the people of this country, and they must deal squarely with all those in the Army, and not continually try to take care especially well of certain classes in the Army and discriminate against others. Now, that is plain talk, but it is straight.

Mr. GREENE of Vermont. Mr. Chairman, will the gentleman yield right there?

Mr. JEFFERS of Alabama. I can not yield; I have not time. The gentleman was not interrupted by me, and I can not yield to him now.

These ex-National Guard men now in the Regular Army were already economically handicapped, many of them, and now you want to leave them handicapped by this bill.

They deserve better consideration and more nearly a square deal. They are amongst the most valuable and most desirable Army officers we have to-day. They are closer to the civilian population than any other set of officers that we have in the Army. They are not so far removed from the people and have a better conception of the relationship of the Army to the people of the country. They are not in the Army simply on account of having been picked up and educated at West Point. They were educated by their own people or by themselves. They served in the guard for the love of the soldier game and through loyalty to the country and to their communities. In developing these National Guard outfits they produced something—they produced the goods, and they also delivered the goods when the time came. They are well balanced; they are good officers. They are now in the service, and certainly are due this consideration that this new section would give them. I ask your support on this proposition. [Applause.]

The CHAIRMAN. The time of the gentleman from Alabama has expired. The question is on agreeing to the amendment.

The question was taken, and the Chairman announced that the "ayes" appeared to have it.

Mr. STAFFORD. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 40, noes 30.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 5. That each commissioned officer on the active list, or on active duty below the grade of brigadier general or its equivalent, in any of the services mentioned in the title of this act, shall be entitled at all times, in addition to his pay, to a money allowance for subsistence, the value of one allowance to be determined by the President for each fiscal year in accordance with a certificate furnished by the Secretary of Labor showing the comparative retail cost of food in the United States for the previous calendar year as compared with the calendar year 1922. The value of one allowance is hereby fixed at 60 cents per day for the fiscal year 1923, and this value shall be the maximum and shall be used by the President as the standard in fixing the same or lower values for subsequent years. To each officer of any of the said services receiving the base pay of the first period the amount of this allowance shall be equal to one subsistence allowance, to each officer receiving the base pay of the second, third, or sixth period the amount of this allowance shall be equal to two subsistence allowances, and to each officer receiving the base pay of the fourth or fifth period the amount of this allowance shall be equal to three subsistence allowances: *Provided*, That an officer with no dependents shall receive one subsistence allowance in lieu of the above allowances.

Mr. MADDEN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. MADDEN: Page 9, line 2, after the word "years," strike out all of lines 2 to 12, inclusive.

Mr. KRAUS. Mr. Chairman, I suggest the absence of a quorum.

The CHAIRMAN. The gentleman from Indiana suggests the absence of a quorum. The Chair will count. [After counting.] One hundred and fourteen gentlemen are present—a quorum. The gentleman from Illinois [Mr. MADDEN] is recognized.

Mr. LONGWORTH. Mr. Chairman, I ask unanimous consent that the amendment may again be reported.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent that the amendment be again reported. Without objection, the Clerk will again report the amendment.

There was no objection.

The amendment was again read.

Mr. MADDEN. Mr. Chairman, the effect of the amendment I have offered, if adopted, would be to reduce the number of subsistence allowances to any single officer to one, whereas the section as it reads provides that there may be anywhere from one to three, and the argument is made by those who favor the additional number of subsistence allowances that men with families are entitled to better consideration than men who have no families.

To that I reply that when you employ men in any walk of life you do not employ them because they have families or because they have not families. You employ them for the ability which they possess, and whether a man is married or not, he is expected to perform the duties for which he is employed, and no additional consideration is given to the man in the performance of the duties because he is married. The cost of these allowances under the section as it is presented by the committee would be $10,054,000 a year. We are entering upon a new field by granting allowances to officers in the Army.

Mr. BLACK. Will the gentleman yield for a question?

Mr. MADDEN. In just a moment. Up to this time they have not been given rations, and my contention is that they ought not to be given rations.

Mr. BLACK. Will the gentleman yield just there?

Mr. MADDEN. Yes.

Mr. BLACK. Is it not the view of the gentleman that the whole section ought to go out; that we ought not to start any of this ration business?

Mr. MADDEN. I would be perfectly willing to accept such an amendment.

Mr. BLACK. I will be very glad to offer one.

Mr. MADDEN. But I thought I would go along the lines of least resistance. I am frank to say that in the exercise of my own judgment I would move to strike out the entire section; but I was even willing to do something which I feel I ought not to do, and that the House ought not to do, in order to get something done, for up to the present time we have not been able by any argument to produce any effect on the bill leading in the direction of economy.

It is not denied that the intention of section 5 is to increase the pay of commissioned officers. But they do not come here and ask for increased pay in the bill. They come and ask you to give these men rations, and they fix the ration allowance at 60 cents a day, with the further provision that at some time in the dim, distant future the Secretary of Labor may ascertain the cost of the ration and certify that to the President of the United States, who will then be called upon to certify it to the Army, and thereby fix the cost from time to time through that circumlocution. Now, why should we pay $10,000,000 and more a year to start on a new activity which it has never been thought necessary to indulge in before? If the pay of the officers in the Army is not sufficient, why not say so in plain language? Why should we use the subterfuge of rations? Why should we call upon the President from year to year to fix the amount that may be allowed for rations?

The CHAIRMAN. The time of the gentleman has expired.

Mr. MADDEN. I would like five minutes more.

The CHAIRMAN. The gentleman asks an extension of five minutes. Is there objection?

There was no objection.

Mr. MADDEN. Now, let us see where we are "at." In the first place, we grant to the officers of the Army housing facilities for their families when the officer is in the field. We grant them housing facilities, lighting, heating, and all that. We do more than that. We transport their children from place to place at the expense of the Treasury. That is a new engagement that we have taken on recently. Up to a short time ago there were no housing facilities allowed to the families of officers in the Army when the officer was away on duty. But we have changed that. Until very recently there was no transportation allowance made for the family of an officer, but we have changed that. And now we propose to feed the officer in addition to his pay. Are we ever going to stop? Is there no line to be drawn anywhere? Are we to continue forever to increase the expense of the Government in connection with the Army officer?

Mr. JOHNSON of Washington. This is money, not rations.

Mr. MADDEN. It is money, not rations, but it means the same thing.

Mr. JOHNSON of Washington. Will the same officer who gets money in lieu of rations be permitted to continue to buy rations at the Army rate?

Mr. MADDEN. Yes; that goes without saying. The gentleman from Washington would have to buy at the regular market rate, while the Army officer is permitted to buy at Government cost. We might just as well hand him the money as a new addition to his salary.

Mr. McLAUGHLIN of Michigan. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. McLAUGHLIN of Michigan. The wrong impression ought not to be given as to the advantage that the officer or enlisted man gets by buying at the commissary.

Mr. MADDEN. I do not want to give a wrong impression.

Mr. McLAUGHLIN of Michigan. He is charged the ordinary price. He is not buying from one who profiteers and charges an unreasonable price, but he has to pay, and everyone who buys at the commissary has to pay, a reasonable price.

Mr. MADDEN. I am making no complaint about that. I was simply stating a fact. It is a fact, is it not, that the gentleman from Michigan is not permitted to enjoy that privilege? It is also a fact that the Army officer is allowed to enjoy that privilege. Does anybody deny that? Is there any reason in the world why we should give an Army officer rations? I ask anybody here to answer. If it is to be increased pay, why do we not say so?

Mr. McLAUGHLIN of Michigan. Does the gentleman ask that as a question?

Mr. MADDEN. Yes.

Mr. McLAUGHLIN of Michigan. I am under the impression that this was allowed because the base pay was fixed accordingly, with the idea that this would be allowed. Otherwise the base pay would have been higher.

Mr. MADDEN. The base pay has already been increased by the bill.

Mr. McLAUGHLIN of Michigan. But the increase takes this into consideration.

Mr. MADDEN. Oh, yes. You add this on the top of that, and then you add something else on top of both, and before you get through nobody knows what the pay will be.

Mr. McLAUGHLIN of Michigan. The chairman of the subcommittee or of the commission, the gentleman from Illinois [Mr. McKENZIE], says I am right in that; that in fixing the base pay the committee took into consideration the fact that these allowances would be made.

Mr. MADDEN. Oh, yes; they did take that into consideration, undoubtedly; but in taking it into consideration they always equalize upward.

Mr. McLAUGHLIN of Michigan. But the gentleman from Illinois has approved the base pay which the other gentleman from Illinois, his colleague [Mr. McKENZIE], says was based taking into consideration that subsistence would be allowed also.

Mr. MADDEN. Well, but it never has been allowed. We have always had the base pay. There is no reason why we should add this to it. It is not justified. It can not be defended. It ought not to be permitted. I protest against it. [Applause.]

Mr. CONNALLY of Texas. Mr. Chairman, I offer an amendment to strike out the section.

The CHAIRMAN. That is not in order now.

Mr. CONNALLY of Texas. Very well, I will offer it later. Mr. Chairman and gentlemen of the committee, I think the views of the gentleman from Illinois [Mr. MADDEN] are well founded. Of course, everybody who knows anything about this bill knows that this allowance purports to be for rations but is not intended for rations at all. The committee desires this provision in order to increase the base pay. It seems to me that if the committee had really wanted to increase the base pay it should have increased it and not come before the House with the pretense that officers in the Army are to be furnished with rations by the Government, when everybody knows that they are not going to be furnished rations; that it is not intended that rations be supplied. Never in recent years, so far as I know, have commissioned officers been furnished rations. Enlisted men are furnished rations, but commissioned officers have always borne their living expenses out of their pay. If the base pay in this bill is not high enough, the committee should have had the frankness to have made it high enough and not presented a device to raise it and yet not seem to raise it. It is provided under this bill, gentlemen will argue, that this makes a 60-cent ration, which means $219 a year.

Mr. MADDEN. Six hundred and fifty-seven dollars for certain officers.

Mr. CONNALLY of Texas. Certain officers would be allowed three rations, which would be $657 additional pay.

But the committee says it has a provision in the bill whereby the Secretary of Labor will certify the cost of the rations, and that every time the cost of a ration goes down 1 per cent the Secretary of Labor will certify to the President, and the President will reduce the allowance. That is a beautiful theory, but everybody knows that it is not practicable. Suppose the cost of living goes down 2 per cent, how much will it amount to? Not enough to pay for the bookkeeping. Everybody knows how the allowance is to be made. It is provided that the President shall make it. Of course, the President does not know anything about it; he is not going to make it. The Secretary of War will make it for the President. The Secretary of War is not going to fool with fixing rations, and so the Chief of Staff will make it for him. The Chief of Staff has no time to fool with fixing rations, so some major or captain down in the department will fix it for the Chief of Staff, and perhaps some second lieutenant will do it for him.

Mr. McKENZIE. Will the gentleman yield?

Mr. CONNALLY of Texas. I will.

Mr. McKENZIE. The gentleman does not want to be unfair. The bill provides the value of the rations shall be fixed on the certification of the Secretary of Labor to the President of the United States.

Mr. CONNALLY of Texas. Here is what the bill provides. The bill provides that the Secretary of Labor shall certify to the President the comparative cost of food in future years as related to that cost for 1922, and upon that the ration is to be determined. That is what is in the gentleman's bill.

Mr. JOHNSON of Washington. Does the gentleman make the prediction that the cost of the ration will ever be less than 60 cents?

Mr. CONNALLY of Texas. Of course, it will not, practically; it might be a fraction of 1 per cent.

Mr. JOHNSON of Washington. The maximum is 60 cents.

Mr. BLACK. And if the tariff bill passes it may be more.

Mr. OLDFIELD. Four and three-quarters per cent.

Mr. CONNALLY of Texas. I do not think it will differ over one-half of 1 per cent.

Mr. ARENTZ. The passage of the tariff bill will depend upon when the Democrats run out of words, will it not? [Laughter.]

Mr. CONNALLY of Texas. As long as the gentleman's party is in power there will be no tariff on words. Now, I am not antagonistic to the Army officers. I want them to have just compensation. But what I object to in this Army bill here is having to look on almost every page to see what the compensation is going to be. We have the base pay here on one page; turn over four or five pages and you have the longevity pay.

Somewhere else there is allowance for quarters; turn over three or four pages more and you find an allowance for rations which we do not intend to furnish, and which they do not want and would not eat if we did furnish them; and then further along, in another place, there is 5 per cent increase for field service. Somewhere else, if they are ordered away, they get 8 cents a mile allowance for travel and $7 per day for food. That is what is wrong with this bill, and the committee ought to have the courage to frame a bill so that the country will know what the pay is.

Mr. BYRNS of Tennessee. Will the gentleman yield?

Mr. CONNALLY of Texas. Yes.

Mr. BYRNS of Tennessee. How many bookkeepers does the gentleman think will be needed to keep these accounts?

Mr. CONNALLY of Texas. The gentleman from Tennessee, with his long service on the Committee on Appropriations, has a vivid idea of what it would take to do this bookkeeping.

Mr. McKENZIE. Will the gentleman yield?

Mr. CONNALLY of Texas. Certainly.

Mr. McKENZIE. Does the gentleman think it will require any more clerks to keep these accounts than it has on commutations in the different zones in the whole country?

Mr. CONNALLY of Texas. Commutation is not affected by zones; it is the heat and light; that is a good suggestion, to equalize the heat and light. I do not object to it. Take the quarters under the gentleman's bill. A major general, if he happens to be a single man—what does he do? He gets an allowance for six rooms.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. CONNALLY of Texas. I ask for three minutes more.

The CHAIRMAN. The gentleman from Texas asks that his time be extended three minutes. Is there objection?

There was no objection.

Mr. CONNALLY of Texas. There are not many major generals, but there are some of them, and a major general who is a single man is allowed nine rooms. Is not that right?

Mr. McKENZIE. Under the present law.

Mr. CONNALLY of Texas. What under this bill?

Mr. McKENZIE. Six.

Mr. CONNALLY of Texas. A major general?

Mr. McKENZIE. Yes. The gentleman would better read the bill.

Mr. OLIVER. That is correct.

Mr. CONNALLY of Texas. I thought I was going to somebody who knew what is in his own bill.

Mr. OLIVER. The amount, however, for six rooms is larger than the amount that he is allowed now for nine.

Mr. CONNALLY of Texas. Yes; I was about to call attention to that. He gets six rooms at $120 a month—$20 a room. An officer in the first pay period gets only two rooms.

Mr. OLIVER. In the first period. In order that the gentleman may remember the rooms, a man with dependents gets one more room than the period which he is in. If in the first period, he gets two rooms; if in the second period, three rooms; on up to the sixth period, and then he gets six rooms.

Mr. CONNALLY of Texas. Of course, what I had in mind was to draw the attention of the committee to the fact that these allowances are really not intended to supply rooms, but are devices for increasing the compensation. A major general is allowed six rooms under this bill, and was allowed nine under the other. I submit that no major general who is single has any business with six or nine rooms, but in order to get the increased compensation they create a fictitious allowance for six or nine rooms in order to give him the increase in pay.

Mr. MADDEN. And getting nine rooms he is allowed only $108 a month, while with six rooms he is allowed $120 per month.

Mr. CONNALLY of Texas. Of course, under the present law the room allowance is $12 a room and under this bill it is $20 a room.

Mr. KNUTSON. Is it not a fact that a six-room apartment in Washington that rented for $50 before the war rents now for $150 a month?

Mr. CONNALLY of Texas. Oh, I would say to the gentleman that I do not think the gentleman from Minnesota [Mr. KNUTSON], who is a single man, is entitled to as much allowance for rooms as some gentleman on the Republican side who has a large family. I have no objection to giving reasonably increased compensation, but I do object to making the fictitious allowances merely for the purpose of increasing the compensation. The theory upon which this bill is written in a measure tends to destroy ambition among the Army officers. If an officer once gets a place in the Army, his pay thereafter is fixed not by his rank or his efficiency but by how many years he remains in the Army. A man may be a major and get less pay than a captain, because the captain has been in the Army longer than the major has. Where is the incentive to promotion? Where is the incentive for efficiency if all you require for an Army officer to get increased pay is to be able to stay on the pay roll without being cashiered or court-martialed? I believe this whole system of pay is wrong. I believe the basis of pay that is regulated entirely by the length of service is a false basis and does not represent the proper elements that the Congress should adopt in fixing pay. I believe there ought to be an incentive to promotion.

Mr. McKENZIE. Mr. Chairman, I shall not take very much time to answer my friend from Illinois [Mr. MADDEN] or my friend from Texas [Mr. CONNALLY]. It is a matter of grave regret to me to know that my old friend from Illinois, a man for whom I have had the highest admiration, a man whom I have always felt had a big heart, a generous disposition, should take the position that he now does, and I have always thought that my good friend from Texas was animated by similar feelings, by the feelings which have animated heretofore my friend from Illinois. I love my friend from Illinois. We have been friends for many years. I know his condition in life. I know the beautiful home that he has near the city of Chicago, Du Page County, where he can enjoy life when he gets permission to leave this place where we all have to toil. I know the comforts and conveniences of life that he enjoys, and I am glad that he has them. I do not envy him those. I have always been glad to see him enjoy them, because most that he has in this world is the result of his own energy and industry. I envy no man the good things of this life, but I regret that with his experience, with his knowledge, he should take this floor and undertake for the lack of knowledge—I will put it that way—to mislead the Members of the House as to the meaning of this bill. He does not even have a conception of the great fundamental principle expressed in section 5. Neither does my good friend from Texas have the least conception of what the members of this committee were driving at. Is there a man here to-day, except my friend from Indiana [Mr. KRAUS], who would say that we should put the men of the Army and Navy and the Coast Guard and the Public Health Service and all of these services back to the pay of 1908 without an increase at all? That is the proposition submitted by the gentleman from Illinois.

Mr. EVANS. Mr. Chairman, will the gentleman yield?

Mr. McKENZIE. Yes.

Mr. EVANS. Why not add the amount that was estimated here at 60 cents per day to the salary which is fixed as the base pay?

Mr. McKENZIE. I tried to explain that the other day in my opening speech. I said that for many years, since I have been a member of the Committee on Military Affairs, I have felt that it is an unjust thing to take from the Treasury of the United States and give to a major general, such as the one spoken of by the gentleman from Texas, $1,684 a year, this to a man who has not a soul dependent upon him, in order that he may live in luxury down here on Sixteenth Street or in the great clubs of this city. My contention has been all of the time that the base pay of these officers should be alike. This bill puts them on the same level. My contention has further been, when it comes to allowances, that we should not give to the man without dependents the same amount of money and allowances that we give to the man with a wife and little children.

Mr. BLACK. Mr. Chairman, will the gentleman yield?

Mr. McKENZIE. Yes.

Mr. BLACK. Can the gentleman advance any better reason as to why the Government should pay a military officer 60 cents a day ration allowance than it should pay any civilian employee?

Mr. McKENZIE. I am sure my good friend is not serious when he asks a question like that, when he must realize that the men in the Army and the Navy and in these services are not permitted to go out into the world and make money on the side. They are held to their places, they are moved about from year to year. The prejudice against these men comes from the fact that we see some of them here in the city of Washington.

And I want to say to you, my good friends, these officers you see now in the city of Washington had moved many, many times. They have spent years on the border——

The CHAIRMAN. The time of the gentleman has expired.

Mr. McKENZIE. I ask for five additional minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. McKENZIE. They have spent years in Alaska; and finally after long years they get a term here in Washington. One gentleman of the Coast Guard—a very good officer—who is now serving a term in the city of Washington, told me that he spent 15 years at sea before he had an opportunity to come to the city of Washington. This bill provides that a single officer, like my good old friend, General Crowder, will get $960 less under this bill—$1,684 originally—than that which he has been drawing from the Government. But it goes a little further and says that a young man coming into the first period as a second lieutenant shall get $219. When he gets a little further in life, and perhaps his responsibility is greater, he gets $438, and the maximum he can get is $657. Gentlemen, we are not deceiving you by this bill, and we are not deceived. This is not a fund to buy flour with entirely. This gives an increase in this bill to those officers over the pay of 1908; and you gentlemen to-day, if you now want to turn around and vote against these men who are now in the Army and Navy and Marine Corps and the Geodetic Survey and the Public Health Service and say that while everybody else in the world has been getting some consideration we will not give you any—we will put you back to the pay of 1908. Why, my good friend from Illinois, when he talks about that increase of $10,000,000, he means it is an increase over the pay of 1908. Are you opposed to giving these men some increase over 1908?

Mr. BULWINKLE. Will the gentleman tell the House what the total cost will be for all branches of the service?

Mr. McKENZIE. I can only tell it in this way, that the cost of all branches of the Government will be about $15,000,000 less the first year under the present cost——

Mr. BULWINKLE. For subsistence?

Mr. McKENZIE. I have not figured that up, but I am willing to say it is $10,000,000.

Mr. JOHNSON of Washington. Then why go through the subterfuge of having an estimate by the Secretary of Labor? Can not we fix it at 45 cents or 50 cents or 60 cents? It is salary. It is not a ration to be eaten or in lieu of a ration, but money to be paid out on salary account under the thin guise of ration allowance.

Mr. McKENZIE. The gentleman does not get the fundamental idea of this bill.

Mr. JOHNSON of Washington. I think I have, and also I think this figure will never be less than 60 cents, and that there will be argument before us in a year or two to make it more than that.

Mr. McKENZIE. With the Secretary of Labor making his report and MARTIN MADDEN running the Committee on Appropriations he will see to that. The Secretary of Labor fixes the cost of a ration from year to year, based on cost of living. We fix the cost for this year at 60 cents; it might be 50 cents next year——

Mr. JOHNSON of Washington. But the officers do not get the ration; it is money.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. CURRY. I ask unanimous consent that the gentleman may have five additional minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. McKENZIE. I want to say to my friend from Washington that we call this subsistence allowance for a reason; not to give these men bacon and eggs, but to give them money, an increase in pay; I state that very frankly.

Mr. JOHNSON of Washington. I am in accord with the gentleman in the desire to properly pay our officers, but I want it to be done in the open. I am not afraid of the additional pay, but I do not want to see it carried in this disguise.

Mr. McKENZIE. If the gentleman thinks so, I will take the mask off; I want you to see it. We want to fix that as an increase in pay, and we call it subsistence allowance for the reason that subsistence is easily arrived at in the value. The Department of Labor estimates every year the cost of living. It is a fluctuating automatic increase or decrease in the pay of these officers. It will go down, possibly, hereafter, but it will never go up, and can not go up.

Mr. KLINE of Pennsylvania. Are you also increasing the pay of the privates while increasing the pay of the officers?

Mr. McKENZIE. Some enlisted men—I do not know what the gentlemen means when he says the privates. Does he mean men in the seventh grade, the lowest class in the Army and Navy? I will say that we are not reducing them and we are not taking one cent away from them, and the statement made yesterday that we are reducing the enlisted man is not a fact, because we are not reducing any of them. When an enlisted man comes in hereafter he will get $21 when he enters the service——

Mr. JONES of Texas. Will the gentleman yield?

Mr. McKENZIE. I will.

Mr. JONES of Texas. The gentleman said this was an increase over 1908?

Mr. McKENZIE. Yes.

Mr. JONES of Texas. Will the gentleman give the estimate of the added per cent of increase?

Mr. McKENZIE. I think it is about 20 per cent; it is not quite as much as the bonus.

Mr. HARRISON. Will the gentleman yield for this question: Whether in this arrangement as to pay of officers and dependents the subsistence is not made in this way to reflect in the cost of living?

Mr. McKENZIE. Absolutely.

Mr. HARRISON. That when the cost of living is increased the pay of the officers automatically increases?

Mr. McKENZIE. Yes; but not beyond the limit.

Mr. HARRISON. When it goes down the pay goes down?

Mr. McKENZIE. That is it. That is what it means. I thank the gentleman.

I want to say to you, my dear good friends, that this amendment offered by my friend, with all of his plausibility, with all of his talk for economy, and with all that goes with the power of a man at the head of the Appropriations Committee of the House, is an appeal to you men—to do what? To destroy this bill that we have worked on for months and months, harder than I have ever worked in my life, in order to do justice to these men and secure better treatment for them. I want to appeal to you now—it is not anything personal to me—but I want to appeal to you as Americans to stand up and defeat this amendment, because this amendment is offered for no other purpose than to destroy this bill. And if you do not defeat the amendment, you might just as well strike out the enacting clause. I do not want to see a friend of mine from Illinois do that. [Applause.]

The CHAIRMAN. Debate is closed on the amendment.

Mr. OLIVER. Mr. Chairman, I ask for recognition. I move to strike out the last word.

The CHAIRMAN. What is the position of the gentleman on the amendment?

Mr. OLIVER. I am for striking it out. I am opposed to this provision.

The CHAIRMAN. The difficulty is this, that the chairman of the committee ought to have the right to close debate on this amendment. If the Chair should allow the gentleman to speak at this time, he ought to allow some one else to speak. There has been plenty of debate, as it appears to the Chair, on this amendment.

Mr. OLIVER. Mr. Chairman, I ask unanimous consent for five minutes on this amendment.

Mr. BYRNS of Tennessee. Mr. Chairman, a parliamentary inquiry. I would like to know whether the Chairman of the Committee of the Whole is in control of the debate and can determine the question as to whether the debate should proceed, or that the committee should determine it? The committee itself, as I understand, has not placed any limitation on the debate, and I insist that the gentleman from Alabama [Mr. OLIVER] has the right to move to strike out the last word, and continue to make those motions until the committee itself has acted.

The CHAIRMAN. The Chair will act within his rights, and not otherwise. The gentleman from Alabama asks unanimous consent to proceed for five minutes. Is there objection?

Mr. KNUTSON. Mr. Chairman, reserving the right to object, I would ask that the gentleman from South Carolina [Mr. BYRNES] be given an equal amount of time.

Mr. BYRNES of South Carolina. Mr. Chairman, I ask unanimous consent that the debate be continued for 10 minutes, 5 minutes to be given to the gentleman from Alabama [Mr. OLIVER] and 5 to myself.

The CHAIRMAN. Is there objection?

Mr. JOHNSON of Washington. Mr. Chairman, reserving the right to object, I understand that agreeing to that request would not preclude the right to offer additional amendments.

The CHAIRMAN. The Chair thinks not.

Mr. JOHNSON of Washington. I do not object.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina [Mr. BYRNES]? [After a pause.] The Chair hears none. The gentleman from Alabama [Mr. OLIVER] is recognized.

Mr. OLIVER. Mr. Chairman, I wish to emphasize again that the difference between the members of the subcommittee is not one as to whether the pay of the officer and enlisted personnel of the services, affected by this bill, should be increased over the 1908 pay schedule but rather one as to whether any needed increases should be provided for by permanent or by temporary legislation instead.

There is a sharp difference between members of the subcommittee as to a number of the provisions of the pending bill, not that those differences arise from a desire to deny adequate compensation to officers but from a desire to grant only proper and reasonable increases in pay and allowances, free from unjust discriminations, and to simplify officer pay, so that it may be fixed at an amount that you and others may know what in truth is the pay of officers in the several grades.

This bill in no way simplifies the matter of officer pay and allowances. You have added to it many new factors that will make it more difficult to determine. What are some of the factors added? You undertake to now give a ration allowance. Certainly, this has not been attempted for the past 50 years, and the very fact that we may have had it long years ago and abandoned it is good reason why it should not be again drafted on the law. You have added another item that is indefinite, involves unfair discrimination, not only as to officers now in the service but those who may hereafter enter, in that you permit the advancement to higher pay periods by reason of other than commissioned service to some officers and deny it to others. This involves an increase of $500 in the base pay alone of those so advanced.

You have been generous as to longevity pay by increasing the per cent from 40 to 50, and by removing, for the grades of colonels, lieutenant colonels, and majors, the present limitation of $1,000.

Mr. McKENZIE. I wonder if the gentleman has gone over the figures and realizes that for the coming year the longevity pay in this bill will be two hundred and thirty-five thousand and odd dollars less than it would be otherwise?

Mr. OLIVER. Figures are very misleading unless you are permitted to explain them in connection with the facts on which the calculations are made, but we are now discussing a matter altogether dissociated from mere totalities. I am referring to these matters to show the different items that enter into the compensation of officers under this bill, and thereby to demon-

strate that instead of simplifying the pay and compensation of officers, you have really further complicated the matter.

Now, if there be a desire to provide further pay for officers in the service, no good reason, I submit, can be given for providing a ration allowance. It does not comport with the dignity of an officer's commission to say that a part of his pay represents a 60-cents-a-day ration, or two or three 60-cents-a-day rations. Under such a system prior to 1870 it fell into disfavor because of its abuse. We have had nothing of this for 50 years, and I must confess to some surprise to hear it suggested at this late day. Under the old system some officers had worked their allowances up to 40 rations, together with servant assignments. Who knows to what extent this matter will again be abused if we undertake in this cheap, undignified way to provide pay for the commissioned personnel of our military services. Soon the cry will come, "Why, 60 cents will support no one, nor will two rations of 60 cents."

If you desire to provide further increased pay, vote it in a dignified way. Do not undertake to give it under the guise of a 60-cents-a-day ration.

Large additional officer pay will flow from the drastic changes of existing law, provided for in section 1 of the pending bill. As for me, I would much prefer voting gratuity allowances to officers in need rather than a 60-cents-a-day ration.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

The gentleman from South Carolina [Mr. BYRNES] is recognized.

Mr. BYRNES of South Carolina. Mr. Chairman, I think that I am partly responsible for the inclusion in the bill of this section. As has been stated by the gentleman from Illinois [Mr. MCKENZIE] in his opening speech, the purpose of this section is to provide an increase of pay over the pay of 1908.

The question was whether we should do what the gentleman from Alabama [Mr. OLIVER] says, provide for an increase of base pay, or provide for an increase in this way. He says that it is not dignified, but the question of dignity is not involved. If you had done what he suggested, and what the gentleman from Texas [Mr. CONNALLY] and the gentleman from Illinois [Mr. MADDEN] suggests and increased the base pay, then you would have increased the pay that the officer receives when he retires, because it is based upon the base pay. But when you make it a part of the allowance you save money, and the chairman of the Committee on Appropriations ought to be in favor of it.

Mr. OLIVER. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of South Carolina. I can not yield in five minutes. In my hand I hold a chart showing the increased pay. Here is the 1908 scale, and the scale provided by this bill. If you vote for this amendment you take away from the first and second lieutenants and the captains every dollar of increase over the 1908 pay, and you leave only an increase of pay to the lieutenant colonel and the colonel, who receive it because of their long years of service and longevity pay.

Now, the reason why I advocated the provision in the bill was this: The question was whether or not, in view of the abnormal conditions, this was an opportune time to change the pay. If you increased the pay, and the cost of living decreased, the pay would remain as fixed at this time. On the other hand, if you provided it as an allowance for rations, and the cost of living decreased, then the appropriation would decrease. If you will read the bill you will see that it provides that this is a maximum allowance, but that it shall be changed hereafter every year on the certificate of the Secretary of Labor to the President of the United States if there is a decrease in the cost of living. They say that does not mean anything. You must assume, if you believe that, that the Secretary of Labor will publish statistics that are not true, in order to please the War Department. The Labor Department pride themselves upon the accuracy of their statistics. If the Department of Labor does publish statistics showing a reduction in the cost of living, the gentleman from Illinois [Mr. MADDEN] will have them, and if the President does not certify to a reduction he will attend to it. If there is a reduction of 6 cents it will be 10 per cent, and will save $1,000,000.

My friend from Alabama [Mr. OLIVER] and my friend from Texas [Mr. CONNALLY] told you that a bachelor major general under this law will get six rooms. I suggest that you read the bill on page 10, lines 22 to 25. There you will see that it is specifically provided that such officer shall get only four rooms, and the major general who has been held up to you in order to prejudice the case will get $960, instead of the $1,600 that he gets now according to law.

Mr. OLIVER. Mr. Chairman, will the gentleman yield there? The gentleman is mistaken.

Mr. BYRNES of South Carolina. I regret I can not yield. I am not mistaken. I ask the gentlemen to read the bill, not to take what I say, and not to take what the gentleman from Alabama says. The bill says such officer shall receive four rooms.

Mr. CONNALLY of Texas. This is a colonel, and not a major general.

Mr. BYRNES of South Carolina. The gentleman said major general. I have checked it up with the finance officers of the Army, and he will get four rooms. If you adopt this amendment which has been offered you take out of the bill the only provision that enables us to make a satisfactory distinction between a man with dependents and the man without dependents. We have endeavored to equitably distribute this increase in pay over the 1908 schedule. The young officer, unmarried, receives the smallest allowance. He does not need it. Then we provided that when the officer arrived at that rank and age when he would likely have dependents that he should receive an allowance which would take care of his dependents, and when he grew older and it was assumed that his dependents would be able to take care of themselves the allowance was reduced.

We believed that if an increase was to be made over the scale of 1908 it was better to give a greater proportion of the increase to the man with dependents than to the bachelor with no dependents. [Applause.]

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. OLIVER. Mr. Chairman, I ask unanimous consent that the gentleman's time may be extended for one minute in order that he may correct what I know he would not intend to do for anything—make a statement that would mislead the House as to what a provision of this bill provides. I ask unanimous consent that he be allowed one minute.

Mr. BYRNES of South Carolina. If the gentleman is going to ask a question, I shall want more than one minute in which to answer. I want time to answer.

Mr. OLIVER. I want only time to ask the gentleman a question and let him do the answering.

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama?

Mr. KNUTSON. I object.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Illinois [Mr. MANN].

The question was taken, and the amendment was rejected.

Mr. BLACK. Mr. Chairman, I move to strike out the section.

Mr. JOHNSON of Washington. Mr. Chairman, I have an amendment to section 5, a perfecting amendment.

The CHAIRMAN. Is it a perfecting amendment?

Mr. JOHNSON of Washington. Yes; I think it is a perfecting amendment. It is to strike out part of it.

The CHAIRMAN. The gentleman from Washington offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. JOHNSON of Washington: Page 8, line 24, strike out "60" and insert "45," and after the word "day" insert a period and strike out the rest of the line, all of line 25, all of line 1, page 9, and all of line 2 to the period.

Mr. JOHNSON of Washington. Mr. Chairman, the amendment as offered is simple. The preceding amendment, offered by the gentleman from Illinois [Mr. MADDEN], having failed, I desire to place before the House an opportunity to fix the value of one allowance per officer at 45 cents, rather than 60 cents, and to let that figure stand through the various classes and for the future. I can not see that anything will be gained by a roundabout process, based upon a table to be prepared by the Secretary of Labor, to be handed to the President of the United States. It has been stated by the chairman of this select committee that this is a plan to increase the pay of the officers in the various grades. In the amendment I do not offer to strike out these lines by which the officers receive the price of two rations or three rations. I am simply endeavoring to induce the House of Representatives to decide that all ration allowances, which are additions to pay, be 45 cents instead of 60 cents. It is not the price of the ration at all. It is an effort to increase the pay. We can say now by adopting this amendment that the increase is either 45 cents, or 90 cents, or $1.36 per day, or by voting this amendment that the increase disguised as rations is 60 cents, $1.20, or $1.80 per day in the future.

Mr. MCKENZIE. Mr. Chairman, I do not wish to discuss this matter. It was all carefully thought out by the committee.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Washington.

The question was taken, and the Chairman announced that the noes appeared to have it.

Mr. JOHNSON of Washington. Mr. Chairman, I ask for a division. I ask for a rising vote.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 15, noes 75.

So the amendment was rejected.

Mr. BLACK. Mr. Chairman, I move to strike out the section.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Mr. BLACK moves to amend by striking out all of section 5.

Mr. McKENZIE. Before my friend proceeds, I ask unanimous consent that at the expiration of his five minutes all debate on this section and all amendments thereto be closed.

Mr. OLIVER. I ask that the gentleman extend that to 10 minutes, giving me 5 minutes, so that I can make a statement to the House correcting certain misinformation.

Mr. McKENZIE. I move that at the end of 10 minutes debate be closed on the section and all amendments thereto.

Mr. MADDEN. I raise the question as to whether or not it is in order to move to close debate until after the first five minutes of debate have been had.

The CHAIRMAN. It is not.

Mr. HUSTED. The gentleman asked unanimous consent.

Mr. MADDEN. I make the point of order that it is not in order.

The CHAIRMAN. It is not in order, so the Chair will not put the motion.

Mr. BLACK. Mr. Chairman, the distinguished gentleman from Illinois [Mr. McKENZIE], in discussing this section which we now have under consideration, referred to it as containing a great fundamental principle. Now, the older I grow in experience the more thoroughly do I find out that there are not so many fundamental principles. We Americans have always been taught to think that the Declaration of Independence and the Constitution of the United States contain a few, and now, this afternoon, the distinguished gentleman from Illinois [Mr. McKENZIE] comes along and adds another one to the list, to wit, this provision of law to pay these officers a ration of 60 cents a day. The historian should get out his pen and ink and record this great event. It marks an epoch in American history. What is this great fundamental of which the gentleman from Illinois speaks? Let us analyze the bill a little and find out. In the first place, officers are classified in six periods. The pay of those periods ranges from $1,500 to $4,000 as a base. Added to that is the longevity pay, which may equal 50 per cent of the base pay. Added to that is the pay for commutation of quarters. We will take a colonel for example, whose base pay is $4,000. He may be drawing in addition to that by reason of a sufficient length of service $2,000 as longevity pay, causing him to receive $6,000. He may have added to that $120 a month as commutation of quarters. In addition to all these he may have added this great fundamental contained in section 5, which my friend from Illinois discussed so eloquently, to wit, rations at 60 cents a ration, with a maximum of three a day.

Now, gentlemen of the House, in all seriousness, I submit that at a time when the Congress of the United States is devising such emergency measures as a revival of the War Finance Corporation in order to enable the producers of the country to get the cost of production, if possible; at a time when the Congress of the United States is being called upon to give needed rations to the flood sufferers of the great Mississippi Valley; at a time when the taxpayers of the country are suffering under a load such as they have never been called upon to bear in the history of the Republic, it looks to me as though it is a little bit too much to ask them to have put upon their bended backs the burden of paying officers a 60-cent ration who are already getting as high as $6,000 a year. I am not going to vote for any such provision, and will be certain to vote against the whole bill if it is allowed to remain. [Applause.]

Mr. McKENZIE. Mr. Chairman, I move that all debate on this section and all amendments thereto close in five minutes, the five minutes to be controlled by the gentleman from Alabama [Mr. OLIVER].

Mr. MONDELL. Mr. Chairman, I hope the gentleman will make that 10 minutes. I would like to have a little time on this section.

Mr. McKENZIE. Then I will make it 10 minutes.

The CHAIRMAN. The gentleman from Illinois moves that all debate on this section and all amendments thereto close in 10 minutes, 5 minutes to be used by the gentleman from Alabama and 5 minutes by the gentleman from Wyoming.

Mr. LONGWORTH. Mr. Chairman, that can not be put in the form of a motion.

The CHAIRMAN. That is an explanation by the Chair.

The motion was agreed to.

Mr. OLIVER. Mr. Chairman, there are no two gentlemen in the House for whom I entertain a higher regard and a warmer affection than I do for the gentleman from Illinois [Mr. McKENZIE] and the gentleman from South Carolina [Mr. BYRNES]. I know that neither of them would knowingly mislead the House about any matter connected with this important bill, and that if either has made a statement of fact that is not borne out by the bill, it is simply an error in failing to carefully read or accurately recall in the heat of argument the provisions of the bill affecting the matters to which our differences relate. My friend from South Carolina [Mr. BYRNES] was rather positive in his recollection that this bill gave to a major general but four rooms. This bill, I respectfully submit, on that point is too plain to admit of any difference between the gentleman from South Carolina and myself. The section from which the gentleman got his information relates only to officers holding a grade below that of brigadier general. If he will read the section referred to he will find that it relates only to allowances for officers in grades below that of brigadier general. Section 8 determines the pay and allowances of officers above the grade of colonel and of all corresponding grades. I will read such part of section 8 as is pertinent to the matter under discussion.

SEC. 8. That commencing July 1, 1922, the annual base pay of a brigadier general of the Army and of the Marine Corps, rear admiral (lower half) of the Navy, commodore of the Navy, and Surgeon General of the Public Health Service shall be $6,000; and the annual base pay of a major general of the Army and of the Marine Corps, and rear admiral (upper half) of the Navy shall be $8,000. Every such officer shall be entitled to the same money allowance for subsistence as is authorized in section 5 of this act for officers receiving the pay of the sixth period and to the same money allowance for rental of quarters as is authorized in section 6 of this act for officers receiving the pay of the sixth period.

The money allowance for subsistence as authorized in section 5 is $438 a year, and the money allowance for rental of quarters authorized in section 6 of this act is $1,440 a year; in other words, the allowance is for two rations and six rooms.

No distinction is made between officers in these grades on account of dependents. To my mind there should be no question between lawyers as to the interpretation of this section, but that evidently must account for our differences.

I regret to find my friend from Illinois [Mr. McKENZIE] and my friend from South Carolina [Mr. BYRNES] also inaccurate in their calculations as to the increases given by the pending bill to officers, exclusive of all ration allowances. Take the grade of colonel. This bill provides a maximum pay and allowance for colonels, exclusive of the ration allowance, in excess of the amount which, under the limitation of $7,200, the colonel is allowed to draw. Likewise, there are lieutenant colonels now in the service who under this bill would be entitled to draw the maximum pay of a colonel, to wit, $7,200, even though you deduct from his allowance the entire ration allowance of $438. The increase in pay and allowance of a lieutenant colonel over the 1908 bill, if this bill passes, based on the maximum pay for that grade, will be $2,224. There are lieutenant colonels now in the service who will be entitled to the maximum pay of the grade on the passage of this bill. Likewise, the maximum pay and allowance of a captain in the Army and of corresponding grade in the Navy will be increased $2,197 over the 1908 act and $1,447 over the May 18, 1920, bonus bill. There are now more than 130 captains in the Army and of corresponding grades who will be entitled to the large increases just stated.

The House must not forget that many new factors will enter into the pay of officers if this bill passes, and it will be very difficult for one not well versed in Army and Navy pay schedules to know what the pay or compensation of an officer in any grade is at any particular time. It will be necessary to know his length of service, whether he has dependents or not, what service he is engaged in, whether he is occupying public quarters, whether he is performing duty with the air or the submarine service, and so forth, because all of these matters may very properly enter into his pay and compensation. Since I have shown that there are lieutenant colonels and colonels who will receive under this bill, even if you strike out the ration allowance, the maximum pay of a colonel, to wit, $7,200, I do not think the argument made by the gentleman from Illinois is sound when he says it will ruin the bill to strike it out. [Applause.]

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. BYRNES of South Carolina. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. That motion is not in order; the time has been limited.

Mr. MONDELL. Mr. Chairman, in view of the statements made by the gentleman from Alabama who has just taken his seat, I prefer to yield my time to some one with a better knowledge of the technicalities and details of the bill than I. I would be glad to yield my time to the gentleman from South Carolina [Mr. BYRNES].

Mr. BYRNES of South Carolina. If the gentleman is kind enough to include me in that category, I will say that I only desire to be recognized for a few minutes. Mr. Chairman, there is little difference between me and my friend from Alabama and no excuse for getting "het" up about it. It is evident that there was a misunderstanding between us. The gentleman from Texas [Mr. CONNALLY] made a statement about the bachelor major general.

Mr. CONNALLY of Texas. I will state that I quoted from the gentleman from Illinois. [Laughter.] I asked the gentleman from the floor how many rooms a major general was entitled to, and he said six.

Mr. BYRNES of South Carolina. I think the gentleman from Texas is right. The gentleman from Texas believed he was right and proceeded to talk about six rooms that the bachelor major general would get, and I made the statement that he would get but four rooms. I did not specify that I was talking about a *man* without dependents, because I was replying to the gentleman from Texas, who specifically referred to a bachelor major general. The gentleman from Alabama had in mind a major general with dependents, who gets six rooms. I had reference to the officer referred to by Mr. CONNALLY of Texas, without dependents, who gets four rooms. Section 8, considered in connection with section 6, gives him four rooms. There is no real difference about it at all; he was right as to dependents and I was right as to a major general without dependents.

Mr. OLIVER. The gentleman is in error in one thing. Section 8 makes no difference between a general with or without dependents, or whether he is a brigadier general or an admiral.

Mr. BYRNES of South Carolina. Section 8 says that these officers shall receive rooms provided for in the sixth section. Then if you will look at section 6, page 10, at the bottom, you will see that it provides that where an officer in the sixth period has no dependents he shall receive only four rooms. Then there is the further fact that even if he has dependents he can not get the full amount of the allowance because there is a maximum provision in the bill which prohibits him from receiving the maximum. All he could receive would be $1,262 in the case of a major general and $1,062 in the case of a brigadier general, because of the operation of the maximum provision. In the hope of providing a scientific system of pay we provide that when an officer is young, with less responsibilities, he shall receive less additional pay, but when he has reached the period of life where he has children to support and his responsibilities are greater, he shall receive more; and then when the children are grown up and have been educated there should be a reduction in the allowances. The officers agree that it is fair. No man can complain of that except the bachelors, and I think some of my bachelor friends are willing to admit the justice of this provision. [Laughter and applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas.

Mr. BLACK. May the amendment again be reported?

The CHAIRMAN. Without objection, the amendment will be again reported.

The Clerk again read the amendment.

The question was taken, and the amendment was rejected.

Mr. JOHNSON of Washington. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 8, line 24, strike out the figures "60" and insert the figures "50."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 6. That each commissioned officer on the active list or on active duty below the grade of brigadier general or its equivalent, in any of the services mentioned in the title of this act, if public quarters are not available, shall be entitled at all times, in addition to his pay, to a money allowance for rental of quarters, the amount of such allowance to be determined by the rate for one room fixed by the President for each fiscal year in accordance with a certificate furnished by the Secretary of Labor showing the comparative cost of rents in the United States for the preceding calendar year as compared with the calendar year 1922. Such rate for one room is hereby fixed at $20 per month for the fiscal year 1923, and this rate shall be the maximum and shall be used by the President as the standard in fixing the same or lower rates for subsequent years. To each officer receiving the base pay of the first period the amount of this allowance shall be equal to that for two rooms, to each officer receiving the base pay of the second period the amount of this allowance shall be equal to that for three rooms, to each officer receiving the base pay of the third period the amount of this allowance shall be equal to that for four rooms, to each officer receiving the base pay of the fourth period the amount of this allowance shall be equal to that for five rooms, and to each officer receiving the base pay of the fifth or sixth period the amount of this allowance shall be equal to that for six rooms. The rental allowance shall accrue while the officer is on field or sea duty, temporary duty away from his permanent station, in hospital, on leave of absence, or on sick leave, regardless of any shelter that may be furnished him for his personal use, if his dependent or dependents are not occupying public quarters during such period. In lieu of the above allowances an officer with no dependents receiving the base pay of the first or second period shall receive the allowance for two rooms, that such an officer receiving the base pay of the third or fourth period shall receive the allowance for three rooms, and that such an officer receiving the base pay of the fifth or sixth period shall receive the allowance for four rooms, but no rental allowance shall be made to any officer without dependents by reason of his employment on field or sea duty.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word in order to inquire of the chairman of the committee having the bill in charge what the present allowance is for rooms for officers?

Mr. McKENZIE. Does the gentleman want any specific grade?

Mr. STAFFORD. No; but what the comparative increases are, as provided in the bill.

Mr. McKENZIE. Let us take a major general in Washington. Under existing law he draws $1,684.85 for quarters, heat, and light. Under this bill, and figuring now for a single officer, he would draw $960.

Mr. STAFFORD. Suppose he is married.

Mr. McKENZIE. Then he would draw $1,440.

Mr. OLIVER. He gets exactly the same if he is married or not married. You would have to change the law.

Mr. McKENZIE. Oh, I challenge the statement of the gentleman from Alabama on that proposition. I want the House to understand that either the gentleman from Alabama is mistaken or I am mistaken; and if I am mistaken I pledge myself to the membership of this House to go before the Senate or anyone else and ask to have it changed.

Mr. OLIVER. Let me say this to the gentleman——

Mr. STAFFORD. Oh, my time is running; and permit me for a moment to control my own time. Will the gentleman give the rates as to the other grades so that the House may know what is done by this bill in this schedule of pay?

Mr. McKENZIE. Let us take a captain.

Mr. STAFFORD. Married.

Mr. McKENZIE. A captain now present in Washington draws $800.50. He would go into the third pay period, and he would be entitled under this bill, if he had dependents, to $960.

Mr. STAFFORD. What would be the subsistence? Would it be additional to what it is here?

Mr. McKENZIE. The subsistence is a different proposition.

Mr. STAFFORD. He gets no subsistence at the present time.

Mr. McKENZIE. A captain would get an increase for rental.

Mr. STAFFORD. How about a first lieutenant, married?

Mr. McKENZIE. Under existing law a first lieutenant draws $623.80. Under the bill he would draw, if he had dependents, $720, and $480 without dependents.

Mr. STAFFORD. And it is the gentleman's contention that the allowance provided in this bill, so far as quarters are concerned, is about the same within a radius of $100 to $200.

Mr. McKENZIE. It would not average over $100. Remember, this is based upon the maximum amount, $20, and that may be reduced from year to year. The existing law provides about $17.

Mr. KRAUS. Mr. Chairman, will the gentleman yield?

Mr. McKENZIE. Yes.

Mr. KRAUS. I take it that the gentleman will concede that there is an average increase of at least $3 per month per room?

Mr. McKENZIE. Yes; but next year, if rentals go down in the city of Washington and the Ball Rent Act is not repealed, it may be made $20, because this is figured on the basis of war prices.

Mr. STAFFORD. Mr. Chairman, I withdraw the pro forma amendment.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last two words for the purpose of saying that while I favor good pay for the Navy and Army and officers of the Coast Guard, officers of the Public Health Service, and others, I am afraid that hereafter, if this bill in its present form becomes a law, whenever I meet a colonel of the Army, or an admiral, or a chief surgeon. I shall say to myself that the actual salary of that officer was fixed, not by Congress, but by the Secretary of Labor on some statistician's schedule based on the price of onions and potatoes to the people. Congress, in fixing the actual pay of Army officers, Navy officers, and others,

is passing the buck to the Secretary of Labor. The Secretary of Labor will have the say. And the officers will be around promptly to show him—they will; you know it. The price of onions will mean more to the officer than it will to the man in the street. And then, again, when I meet these officers I shall think of their rent allowances, and I shall never be able to rid myself — no matter how great their achievements — of the thought that part of their pay was fixed on the operation of the Ball Rent Act in the District of Columbia. Is that the way Congress proposes to fix the pay of the officers in these various important services of the great Government of the United States?

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

SEC. 7. That when the total of base pay, pay for length of service, and allowances for subsistence and rental of quarters, authorized in this act for any officer below the grade of brigadier general or its equivalent, shall exceed $7,200 a year, the amount of the allowances to which such officer is entitled shall be reduced by the amount of the excess above $7,200: *Provided*, That this section shall not apply to the Captain Commandant of the Coast Guard nor to the Director of the Coast and Geodetic Survey.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word for the purpose of asking the gentleman from Illinois what the maximum pay is that may be received by the Captain Commandant of the Coast Guard and the Director of the Coast and Geodetic Survey.

Mr. McKENZIE. The pay of the Captain Commandant of the Coast Guard and the man at the head of the Coast and Geodetic Survey is that of a colonel in the Army or a captain in the Navy. When this matter came up for discussion in committee it appeared that these two men, occupying these exalted positions in comparison to those occupied by the other men in the service, ought to have some distinctive promotion. In other words, that they should have the grade of brigadier general, for example. However, the committee felt that we had no right to enter upon that field of legislation, and we so stated to them; but we put in this provision that, while we hold down all of the other colonels in the Army and captains in the Navy to $7,200 we do permit these two gentlemen, in case their allowance and salaries should overrun $7,200 to some small extent, to retain that, feeling it was better to do that than to undertake to give them an increase in grade.

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent to withdraw the pro forma amendment.

The Clerk read as follows:

SEC. 9. That commencing July 1, 1922, the monthly base pay of warrant officers and enlisted men of the Army and Marine Corps shall be as follows: Warrant officers of the Army and Marine Corps, $148; warrant officers, Army Mine Planter Service, master, $185; first mate, $141; second mate, $109; engineer, $175; assistant engineer, $120; enlisted men of the first grade, $126; enlisted men of the second grade, $84; enlisted men of the third grade, $72; enlisted men of the fourth grade, $54; enlisted men of the fifth grade, $42; enlisted men of the sixth grade, $30; enlisted men of the seventh grade, $21; and the pay for specialists' ratings shall be as follows: First class, $30; second class, $25; third class, $20; fourth class, $15; fifth class, $6; sixth class, $3. Existing laws authorizing continuous-service pay for each five years of service are hereby repealed, effective June 30, 1922. Commencing July 1, 1922, warrant officers of the Army and Marine Corps, including warrant officers of the Army Mine Planter Service and enlisted men of the Army and Marine Corps, shall receive, as a permanent addition to their pay, an increase of 5 per cent of their base pay for each four years of service in any of the services mentioned in the title of this act, not to exceed 25 per cent. On and after July 1, 1922, an enlistment allowance equal to $50, multiplied by the number of years served in the enlistment period from which he has last been discharged, shall be paid to every honorably discharged enlisted man of the first three grades who reenlists within a period of three months from the date of his discharge, and an enlistment allowance of $25, multiplied by the number of years served in the enlistment period from which he has last been discharged, shall be paid to every honorably discharged enlisted man of the other grades who reenlists within a period of three months from the date of his discharge. Nothing contained herein shall operate to reduce the pay now being received by any transferred member of the Fleet Marine Corps Reserve. On and after July 1, 1922, retired enlisted men of the Army and Marine Corps shall have their retired pay computed as now authorized by law on the basis of pay provided in this act.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word in order to get some information as to the amount the pay of a retired enlisted man of the Army or Marine Corps would be increased by reason of the last sentence on page 14, authorizing those who are now retired to receive the same retired pay as though under the provisions of this bill.

Mr. McKENZIE. I will say to the gentleman that when this bill goes into operation the retired pay will be based upon the grade and length of service. So far as the enlisted men in the Navy and the Marine Corps are concerned, they have special laws covering the retirement in those services. For instance, in the Fleet Naval Reserve men can retire and be subject to call after 16 and 20 years' service, and the same thing in the Marine Corps, with pay at one-third and one-half.

Mr. STAFFORD. We have entered into a contract with these men who have heretofore done service in the Army and Marine Corps. Now you provide to increase their retirement pay. What is the reason for granting them an additional gratuity to that which they are now receiving?

Mr. McKENZIE. I want to say to the gentleman we did not in this bill provide for anything more than a readjustment of the retired pay to correspond with the readjustment of the active pay. We did not change the law.

Mr. STAFFORD. If you do not make an increase in the pay, what is the purpose of the paragraph to which I am directing attention; that—

On and after July 1, 1922, retired enlisted men of the Army and Marine Corps shall have their retired pay computed as now authorized by law on the basis of pay provided in this act.

That certainly means an increase of the retirement pay.

Mr. McKENZIE. I presume that is true in some cases.

Mr. STAFFORD. How much would it amount to in the case of these men?

Mr. McKENZIE. I am frank to say I do not have those figures, but it would be very small.

Mr. STAFFORD. Does the gentleman think we ought to grant this additional grade to men who have separated themselves from the service?

Mr. McKENZIE. I do not think that it will grant them any additional grade.

Mr. STAFFORD. But the gentleman thinks it will require increased pay.

Mr. McKENZIE. If they have the service. It only applies the same principle to these men as to commissioned officers.

Mr. KRAUS. I would ask the chairman if he does not believe as a matter of fact this provision should not be made to conform to the first amendment which was adopted introducing a limitation in the case of officers. As a matter of fact there is a difference in some extent. I do not know to what extent, and it seems to me that the provision for enlisted men should be made to conform to the amendment adopted by the House.

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. STAFFORD. I will.

Mr. NEWTON of Minnesota. It occurs to me, from this sentence the gentleman from Wisconsin just read with reference to enlisted men, that if it was adopted it places them on a different basis from the commissioned officer if you limit the retired commissioned officer to be retired with what he is getting under existing law. Now, this retired pay is based upon the proposed law.

Mr. McKENZIE. The gentleman from Minnesota will understand that among the enlisted men their scale of retired pay is different from that of the commissioned personnel.

Mr. STAFFORD. But the committee having already taken the stand that as far as the commissioned officers are concerned their retired pay shall be no higher than they are now receiving, why should we not apply the same standard to the enlisted men?

Mr. McKENZIE. I want to say to the gentleman from Wisconsin I did not agree with the amendment adopted by the committee in respect to commissioned officers. I think it was a mistake.

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent to withdraw the pro forma amendment and offer a substantive amendment, as follows: Line 4, page 14, strike out all the remaining portion of the section after the word "law."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 14, line 4, after the word "law," strike out the remainder of the section.

Mr. STAFFORD. Mr. Chairman, just a word. I believe the committee has already heard the colloquial discussion with the gentleman from Illinois. On yesterday we passed an amendment limiting the retired pay of officers on the retired list to that which they are now receiving, not granting to them additional pay that would be allowed under this bill. This amendment seeks to require these retired enlisted men to continue to receive the present pay and not to give the additional pay which they would have under the conditions of this bill.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

SEC. 10. That on and after July 1, 1922, the monthly base pay of warrant officers of the Navy and Coast Guard shall be as follows: During the first 6 years of service—at sea, $153; on shore, $135; during the second 6 years of service—at sea, $168; on shore, $147;

after 12 years' service—at sea, $189; on shore, $168. On and after July 1, 1922, for purposes of pay, enlisted men of the Navy and Coast Guard shall be distributed in seven grades, with monthly base rates of pay as follows: First grade, $126; second grade, $84; third grade, $72; fourth grade, $60; fifth grade, $54; sixth grade, $36; seventh grade, $21. Chief petty officers under acting appointment shall be included in the first grade at a monthly base pay of $99. Mates shall receive the pay of enlisted men of the first grade of the Navy. Nothing contained herein shall operate to reduce the pay now being received by any transferred member of the Fleet Naval Reserve. In lieu of all permanent additions to pay now authorized for enlisted men of the Navy and Coast Guard, they shall hereafter receive, as a permanent addition to their pay, an increase of 10 per cent on the base pay of their rating upon completion of the first four years of enlisted service, and an additional increase of 5 per cent for each four years' service thereafter, the total not to exceed 25 per cent. All transient additions to pay of enlisted men of the Navy and Coast Guard are hereby repealed, except as provided for in section 21 of this act.

The rates of pay of the insular force of the Navy shall be one-half the rates of pay prescribed for enlisted men of the Navy in corresponding ratings. Existing laws authorizing a reenlistment gratuity to enlisted men of the Navy and Coast Guard are hereby repealed, and hereafter an enlistment allowance equal to $50 multiplied by the number of years served in the enlistment period from which he has last been discharged, but not to exceed $200, shall be paid to every honorably discharged enlisted man of the first three grades who reenlists within a period of three months from the date of his discharge; and an enlistment allowance of $25 multiplied by the number of years served in the enlistment period from which he has last been discharged, but not to exceed $100, shall be paid to every honorably discharged enlisted man of the other grades who reenlists within a period of three months from the date of his discharge. On and after July 1, 1922, retired enlisted men of the Navy and Coast Guard shall have their retired pay computed as now authorized by law on the basis of pay provided by this act.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word. I wish to inquire, the information not having been heretofore given in the discussion of this bill, how the rate of pay of warrant officers of the Army, Navy, Coast Guard, and Marine Corps, as provided in this section of the bill and prior sections, compares with the existing pay?

Mr. McKENZIE. I want to say to the gentleman from Wisconsin in regard to that matter that two years ago, in 1920, there was a most exhaustive study made in reference to pay of enlisted men of the Navy, and at that time an effort was made to increase the pay of the enlisted men of the Navy, but before we got through with it we had this hodge-podge bill known as the bonus or temporary pay bill, and the only thing in it that we ever had under consideration at all was the pay of the enlisted men of the Navy.

It was worked out at that time scientifically, as the gentleman from Alabama will admit, and we accepted that pay as fixed at that time with only two changes which we thought to be just and fair to the enlisted men of the Navy.

Mr. OLIVER. If the gentleman will pardon me, I fully confirm what the gentleman from Illinois [Mr. McKENZIE] has said, and I wish to say this, that no one perhaps deserves as much credit for it as Captain Williams of the Navy. He was before the committee, and the hearings he submitted to it are very elaborate, and give an accurate, detailed description of the Navy and the pay of the Navy.

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent to withdraw the pro forma amendment.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none. The Clerk will read.

The Clerk read as follows:

SEC. 11. That warrant officers of the Army, including those of the Army Mine Planter Service, of the Navy, Marine Corps, and Coast Guard, shall be entitled at all times to the same money allowance for subsistence as is authorized in section 5 of this act for officers receiving the pay of the first period, and to the same money allowance for rental of quarters as is authorized in section 6 of this act for officers receiving the pay of the first period. To each enlisted man not furnished quarters or rations in kind there shall be granted, under such regulations as the President may prescribe, an allowance for quarters and subsistence, the value of which shall depend on the conditions under which the duty of the man is being performed, and shall not exceed $4 per day. These regulations shall be uniform for all the services mentioned in the title of this act. Subsistence for pilots shall be paid in accordance with existing regulations, and rations for enlisted men may be commuted as now authorized by law.

Mr. HICKS. I move to strike out the last word.

Mr. Chairman, the committee will soon vote on this bill, and I have no doubt but that the committee will approve of it and the House will pass it. It seems to me this bill should be passed, because it gives to us now three things that are absolutely essential and three things that we have lacked. One has been the lack of uniformity of pay, another has been knowledge as to what the pay is in various branches of the service, and the other has been the fact that we have not based pay largely on length of service but more on rank. This bill provides for those three things being accomplished, and I sincerely hope that in the interest of both officers and men of these services this bill will receive the sanction of the House and the Senate and of the President. I most earnestly recommend, after some careful study of the provisions of this bill, and especially the needed provisions, that the committee see its way to stamp its approval upon it. [Applause.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 12. That hereafter officers of any of the services mentioned in the title of this act, when traveling under competent orders without troops, shall receive a mileage allowance at the rate of 8 cents per mile, distance to be computed by the shortest usually traveled route, and existing laws providing for the issue of transportation requests to officers of the Army traveling under competent orders, and for deduction to be made from mileage accounts when transportation is furnished by the United States, are hereby made applicable to all the services mentioned in the title of this act, but in cases when orders are given for travel to be performed repeatedly between two or more places in the same vicinity, as determined by the head of the executive department concerned, he may, in his discretion, direct that actual and necessary expenses only be allowed. Actual expenses only shall be paid for travel under orders outside the limits of the United States in North America. Unless otherwise expressly provided by law, no officer of the services mentioned in the title of this act shall be allowed or paid any sum in excess of expenses actually incurred for subsistence while traveling on duty away from his designated post of duty, nor any sum for such expenses actually incurred in excess of $7 per day. The heads of the executive departments concerned are authorized to prescribe per diem rates of allowance, not exceeding $6, in lieu of subsistence to officers traveling on official business and away from their designated posts of duty.

In lieu of the transportation in kind authorized by section 12 of an act entitled "An act to increase the efficiency of the commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service," approved May 18, 1920, to be furnished by the United States for dependents, the President may authorize the payment in money of amounts equal to such commercial transportation costs when such travel shall have been completed. Dependent children shall be such as are defined in section 4 of this act.

Mr. CONNALLY of Texas. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. CONNALLY of Texas: Amend by striking out the word "may," in line 10, and the words "in his discretion," in line 11, and insert in lieu thereof the word "shall."

Mr. CONNALLY of Texas. Mr. Chairman and gentlemen of the committee, I think the gentleman from Illinois [Mr. McKENZIE] will accept this amendment. It simply provides that where the duty of an officer calls him habitually from one place to another, he shall only receive actual expenses instead of 8 cents a mile. It would be ridiculous for an officer who had to go from Washington to Baltimore once a week, say, in the performance of his duty, to be allowed 8 cents a mile instead of his actual traveling expenses. Under this bill as it is drawn, unless the head of the department in his discretion should enter an order limiting the mileage to actual expenses, an officer who traveled from Camp Humphreys to Washington and back each day in the performance of his duty would, in addition to his regular pay, draw 8 cents a mile coming and going.

Mr. McKENZIE. I will say to my friend that that was not the intention. I am certain the comptroller would not permit any such thing to get by him.

Mr. CONNALLY of Texas. If the gentleman will accept this amendment, the comptroller will not have to act on it. The comptroller is going to be governed by the law, and the present bill provides that the head of the executive department concerned may in his discretion allow it.

Mr. McKENZIE. I have not the time to look up the reasons given for the language, but I do know every word of this bill was very carefully considered.

Mr. OLIVER. All of that is worked out by regulations, as I understand, and we understood that they have been very carefully guarded, but I see no objection to accepting the amendment.

Mr. BYRNES of South Carolina. If the gentleman from Illinois will permit, it will only make certain what the gentleman wants.

The CHAIRMAN. The question is on the amendment of the gentleman from Texas [Mr. CONNALLY].

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. CONNALLY of Texas. Division, Mr. Chairman.

The committee divided; and there were—ayes 25, noes 42.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 13. That, commencing July 1, 1922, the annual pay of female nurses of the Army and Navy shall be as follows: During the first three years of service, $840; from the beginning of the fourth year of service until the completion of the sixth year of service, $1,080; from the beginning of the seventh year of service until the completion of the ninth year of service, $1,380; from the beginning of the tenth year of service, $1,560. Superintendents of the Nurse Corps shall receive a money allowance at the rate of $2,500 a year, assistant superintendents, directors, and assistant directors at the rate of $1,500 a year, and chief

nurses at the rate of $600 a year, in addition to their pay as nurses. Nurses shall be entitled to the same allowance for subsistence as is authorized in section 5 of this act for officers receiving the pay of the first period, and to the same allowance for rental of quarters as is authorized in section 6 of this act for officers receiving the pay of the first period.

Miss ROBERTSON. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The lady from Oklahoma offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Miss ROBERTSON: Page 18, line 23, strike out the word "first" and insert in lieu thereof the word "second," and on page 19, line 2, strike out the word "first" and in lieu thereof insert the word "second."

Miss ROBERTSON. Mr. Chairman, since I came into this House I have never made any appeal as a woman for any special recognition or any legislation for women. I feel it my privilege, my duty, to ask a little recognition for the women of the nursing service, who stand in a class wholly to themselves.

Just a few little figures. The first women came into the Army as the Corps of Nurses in 1901—just of age this year, you see. At first there were only 200 of these pioneers until the border trouble in 1916, and then their number doubled with increased need until there were 400 of them. At the beginning of the war these were in the service. When the armistice came there were 21,408. In all this number of 21,408 devoted women there was not one drafted person. We have heard much to-day of the West Pointer, educated and equipped by his Government, in comparison with the National Army man, who paid his own way—a discussion in which, of course, I took no part. Every woman of these volunteers came to the work trained and equipped at her own cost, after years of the toil and discipline and drudgery which are required to becoming a registered nurse. Every one of those 21,408 had gone through all this drudgery, the scrubbing of floors, the cleaning of sores, the menial, repulsive duties which young women are made to undergo in order to deter them from entering a service which only the bravest, strongest women should go into.

Mr. HICKS. For information, has the lady estimated what the cost will be if this amendment goes into operation?

Miss ROBERTSON. No. I leave that to you men.

To go back to it, all these women had been trained. No one was taken into the service unless she was fully qualified, and some of you men who served overseas or who when wounded or sick over there or here were ministered to by them, know what their work was. In the American Expeditionary Forces there were 10,066 nurses, and God's angels seemed to watch over them, because only three were wounded and only 103 died. The total number who died in the service was 266. There were 257 nurses decorated for their splendid service. To day there remain in the corps 862 nurses, 803 of them being in the number that rank as second lieutenants, 54 as first lieutenants, 4 captains, and 1 major.

I can not give this to you in the hard dollars and cents in which you vote appropriations. I can only think of women, women who must pass through such a fiery test of truth and purity and bravery when they do this work for the men in uniform. I know that in civil life the average life of a woman as a nurse is 10 years, so brief a record after all the stress of years of preparation; but with women nurses in civil life there are so many of them to whom marriage comes when some fortunate man they have brought to health adds to it happiness for nurse as well as patient; but there is very little of this for the Army nurse. She must go into her work governed by the divine-mother impulse that makes the faithful, successful nurse of the woman. One of the most beautiful and appreciative girls that it was my privilege to help educate was a young girl with a slight tincture of Cherokee blood—gifted, talented, educated. I have seen her take a little child, and by sheer force of will of her personal vitality and, it seemed to me, of divine help, bring that little child from the very borderland of death into strong, happy young infancy. Marvelous she was as a nurse; proud of her I was.

The CHAIRMAN. The time of the lady from Oklahoma has expired.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I ask unanimous consent that the lady from Oklahoma may proceed for five additional minutes.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent that the time of the lady from Oklahoma be extended for five minutes. Is there objection?

There was no objection.

Miss ROBERTSON. When the thousands of the National Guard went through Oklahoma to the border, seeing them, she heard the call to a new service, and she threw aside all else to enlist as an Army nurse. And this is the War Department record:

Miss Olive F. Heath was appointed in the Army Nurse Corps from her home at Muskogee, Okla., July 15, 1916, and was first stationed at the Army and Navy Hospital, Hot Springs, Ark. She was transferred to Walter Reed General Hospital June 3, 1917; served continually until her illness January 28, 1918, which resulted in her death from pneumonia on February 25, 1918. Miss Heath was a very fine woman and an excellent nurse. She contracted pneumonia while awaiting transfer to France.

My last letter from her was from Walter Reed telling me she expected sailing orders at any time. She did not get over to France. But the memory of that beautiful heroic life, ended with pneumonia in the line of duty at Walter Reed, makes me come and ask for a greater recognition to these women, for better pay, for more consideration, so that they may have pay and service consideration that will allow them to look forward to a home of their own when they can no longer work. [Applause.]

Mr. LINEBERGER. Mr. Chairman, I ask unanimous consent that the amendment of the lady from Oklahoma be again reported. I think there are many Members who did not quite understand the import of it.

The CHAIRMAN. Without objection, the amendment will again be reported.

The amendment was again read.

Mr. McKENZIE. Mr. Chairman and gentlemen of the committee, I am sure we all join in the beautiful sentiments expressed by the lady from Oklahoma in connection with the services of the Army and Navy Nurse Corps, but the committee, after hearing the testimony and having the nurses before us, decided to write the provisions of the bill as you now find them.

I want to call your attention to the present law which provides the pay of nurses. It is fixed by the act of July 9, 1918. It is $720 for the first period of 3 years, with an increase of $60 a year for each period of 3 years thereafter until 12 years, when the limit of $960 is reached. These nurses are entitled to $360 a year in addition to their pay as nurses by the act of February 28, 1919. The pay of the superintendent and director of the Army Nurse Corps is $2,400; that of assistant superintendents and directors $1,800, and that of assistant directors, $1,500. The bill repeals this schedule and establishes the new rates found in the bill, which as you will observe are very material increases. The amendment offered by the lady from Oklahoma simply would provide that nurses would receive $219 additional subsistence money, and if they had dependents then they get one additional room, which would mean $240.

Now, I have maintained all the time that the committee tried to write a fair and simple and economical bill, giving to everyone fair pay. This has been indorsed by the heads of the Nurse Corps, whose letter I have in my office, but do not happen to have here. There has been no criticism of the action of the committee, but if the membership of the House feel that we have not gone far enough in our generosity to these most excellent ladies, it is up to the House to change this. The committee felt that we have been generous in what we have done.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I rise to support the amendment offered by the lady from Oklahoma [Miss ROBERTSON].

The chairman [Mr. McKENZIE] has spoken of the compensation for nurses. This bill provides that for the first three years the compensation shall be $840; the next three years, $1,080; the next three years, $1,380; and after that, $1,560, and the gentleman from Illinois speaks of these as liberal rates of compensation. If he will compare them with rates of compensation paid to the trained nurses in private life he will find the rates of compensation in this bill are very low indeed. A trained nurse in private practice gets anywhere from $5 to $10 a day and her subsistence and quarters; that is, room and board and all living expenses are provided without expense to herself. Ten dollars a day is $3,600 a year as a money compensation, and is in addition to all living expense while employed.

Mr. STAFFORD. Oh, $5 a day does not make $3,600 a year.

Mr. McLAUGHLIN of Michigan. Ten dollars a day, I said; and that is not a high compensation, although it is the largest amount I stated. The gentleman can estimate as well as I can what the living expense of the nurses during their service amounts to, so that compensation in this bill is not high. It is very small compared with what is paid in private life.

But the amendment offered by the lady from Oklahoma does not seek to increase compensation. It seeks to increase the amount allowed for subsistence and for quarters. Nurses of the Army and Navy are, almost without exception, provided with quarters and subsistence at or in connection with hospitals or at other suitable Government buildings; both are provided, so that the salary allowed is clear. Thus they usually have

no expense for quarters or subsistence. But some of them find it necessary to go outside and occupy rooms—rent rooms and pay for them, of course—and provide their own meals. Sixty cents a day is the subsistence that one of these women living outside will receive if this bill becomes law. The lady from Oklahoma asks a moderate increase to $1.20. The amount allowed for a room or rooms would be $40 a month under the bill. The lady's amendment would make it $60 a month. In this city or in a city of any size what kind of a room would a lady get for $40 a month and live as she wishes to live and as she ought to live? This meager compensation, this inadequate compensation, as I look at it, or the allowance for rooms or for living will not permit nor is it an encouragement to proper living.

Now, I think this Congress wishes to provide for subsistence and for living quarters for these women which are adequate to their needs, and which will provide for and encourage proper and healthful living conditions to them. Forty dollars a month will not pay for a suitable room, nor will 60 cents a day buy even one decent meal. This amendment should be adopted; it will provide $60 per month for rooms and $1.20 a day for meals. Smaller amounts will be improper and altogether inadequate and a reproach to the Congress itself.

The CHAIRMAN. The question is on agreeing to the amendment offered by the lady from Oklahoma.

The question was taken, and the Chairman announced that the ayes appeared to have it.

Mr. STAFFORD. Division, Mr. Chairman.

The committee divided and there were—ayes 35, noes 30.

Accordingly, the amendment was agreed to.

The Clerk read as follows:

SEC. 17. That on and after July 1, 1922, retired officers and warrant officers shall have their retired pay, or equivalent pay, computed, as now authorized by law, on the basis of pay provided in this act: *Provided*, That nothing contained in this act shall operate to reduce the present pay of officers, warrant officers, and enlisted men now on the retired list or officers or warrant officers in an equivalent status of any of the services mentioned in the title of this act. Active duty performed after June 30, 1922, by an officer on the retired list or its equivalent shall not entitle such officer to promotion. Hereafter retired officers of the Army, Navy, and Marine Corps below the grade of brigadier general or commodore and retired warrant officers and enlisted men of those services shall, when on active duty, receive full pay and allowances.

Mr. OLIVER. Mr. Chairman, on yesterday there was an amendment adopted limiting the amount of retired pay. I only ask the chairman of the committee to accept an amendment subject to the same limitations as appear in the amendment already adopted.

Mr. McKENZIE. I am opposed to that, because I was opposed to the other amendment.

Mr. OLIVER. My purpose is just to make it consistent.

Mr. McKENZIE. I would rather try to reverse our action on the former amendment.

Mr. OLIVER. I think perhaps the other amendment covered it, it was so broad; but we can straighten that out in conference.

Mr. McKENZIE. Mr. Chairman, I desire to offer a perfecting amendment, on page 21, in line 8, to strike out the word "and," at the end of the line, and insert after the word "corps," in line 9, the words "Coast Guard and Geodetic Survey."

The CHAIRMAN (Mr. LONGWORTH). The gentleman from Illinois offers an amendment which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. McKENZIE: Page 21, line 8, strike out the word "and" at the end of the line and insert after the word "corps," in line 9, the words "Coast Guard and Geodetic Survey."

The amendment was agreed to.

Mr. WEAVER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from North Carolina offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. WEAVER: Page 21, lines 7 and 8, after the word "promotion," insert a colon and insert: "*Provided*, That officers and former officers of Philippine Scouts who were placed on the retired list of the Army prior to June 4, 1920, shall, upon the passage of this act, be entitled to advancement for active duty heretofore performed subsequent to retirement in accordance with section 127a of the act of June 4, 1920, and to the same retired pay and benefits received by other retired officers of the Army of like grade and length of service."

Mr. GREENE of Vermont. Mr. Chairman, I make a point of order against the amendment. I will reserve it if the gentleman wishes to explain his amendment.

Mr. WEAVER. I will be very glad if the gentleman will reserve it.

Mr. GREENE of Vermont. Does the gentleman's amendment provide that these officers shall be advanced in grade?

Mr. WEAVER. If the gentleman will reserve his point of order, I will explain my amendment.

Mr. GREENE of Vermont. All right.

Mr. WEAVER. Mr. Chairman, in the act of June 4, 1920, it is provided that officers in the Philippine Scouts shall be retired upon the same pay and with the same rights of promotion as officers in the Regular Army; but the act provided that as to officers already retired or who had been retired prior to the passage of that act, they should receive the pay of second lieutenants.

Mr. Chairman, there are about 89 of these officers. I think 65 of them are captains. They were the men who really did the arduous service in the Philippines. They were there during the Philippine insurrection. They were the men who helped to quell that insurrection. Yet a Philippine officer retiring now gets the same pay and the same right to promotion that an officer in the Regular Army gets, while those same rights and privileges are denied to the men who served from 1898 up to June 4, 1920. These men feel that that discrepancy was not really intended in the bill, and that it ought to be corrected, and that is the purpose of this amendment.

Mr. GREENE of Vermont. Mr. Chairman, by the gentleman's own statement his amendment seeks to perform an act of legislation which is not within the purview of this bill at all. It provides that men who have been in the military service and have been retired heretofore with a certain rank and grade shall be promoted from that rank and grade to a higher one. This bill does not deal with promotions. This bill does not change the grade status of any officer, and has no authority for it, nor did the committee reporting the bill have any authority whatever to go into that question. This bill deals entirely with compensation. I will say to the gentleman further that while there may be some justice in his proposition—we are not debating the merits of it at all—there is an ample remedy in another vehicle for it; but on this bill it is clearly out of order, and I make the point of order.

The CHAIRMAN. The Chair is not advised as to whether the Philippine Scouts are included in this bill.

Mr. GREENE of Vermont. The question is simply this: This bill fixes the pay of officers of various services, but does not disturb their relations to one another by way of changing their grade and rank. The gentleman's amendment proposes to take the officers of a certain service and change the grade and rank and give them more pay. To the extent it changes the grade and rank of anybody it is without the jurisdiction and purview of this bill. The Philippine Scouts are not included in the bill.

The CHAIRMAN. The Chair is inclined to think that the amendment offered by the gentleman from North Carolina is not covered by the bill, is not germane, and therefore sustains the point of order.

The Clerk read as follows:

SEC. 20. That all officers, warrant officers, and enlisted men of all branches of the Army, Navy, Marine Corps, and Coast Guard, when detailed to duty involving flying, shall receive the same increase of their pay and the same allowance for traveling expenses as are now authorized for the performance of like duties in the Army. Exclusive of the Army Air Service, and student aviators and qualified aircraft pilots of the Navy, Marine Corps, and Coast Guard, the number of officers of any of the services mentioned in the title of this act detailed to duty involving flying shall not at any one time exceed one-half of 1 per cent of the total authorized commissioned strength of such service. Regulations in execution of the provisions of this section shall be made by the President and shall be uniform for all the services concerned.

Mr. McKENZIE. Mr. Speaker, I move that the committee do now rise and report the bill to the House with the amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and Mr. WALSH, Speaker pro tempore, having taken the chair, Mr. TOWNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 10972) to readjust the pay and allowances of the commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service, and had directed him to report the same back with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. McKENZIE. Mr. Speaker and gentlemen of the House, we have now concluded the consideration of this bill, which has taken six months of the most difficult and arduous toil in its preparation. In my judgment it is a day's work that will mean much to the country and much to the services. I feel that in the coming years it will save millions of dollars to the taxpayers of this country, that it will bring satisfaction to the rank and file of the several services affected, and that it will do justice where justice should be done. It puts humanity into

the law which heretofore never had any humanity in it. It provides for the home, wife, and little ones as well as for the officer himself. It will bring a feeling of greater confidence to the men of these services who serve us so well in the hour of stress. I could not, before moving the previous question, resist the temptation to say to the membership of this House that I feel most grateful to you for the manner in which you have supported the committee on this all-important bill. It is a technical bill, full of complications far-reaching in their effects, and as a Member of this House I well know that it was only the confidence that you had in the membership of the committee—that we were trying to do the right thing—that prompted you to follow us in a matter that would have taken weeks and months of difficult study to understand in all of its many details. I want to thank you one and all, and I want to especially express my gratitude to the members of the committee who have aided me in this work, and especially to my good friend Mr. BYRNES of South Carolina, who has so ably and earnestly labored with me through these long months.

Mr. Speaker, I move the previous question.

The previous question was ordered.

Mr. OLIVER. Mr. Speaker, I ask unanimous consent for three minutes.

The SPEAKER pro tempore. The gentleman from Alabama asks unanimous consent, notwithstanding the order of the previous question, that he may proceed for three minutes. Is there objection?

There was no objection.

Mr. OLIVER. Mr. Speaker, there has been no difference between the gentleman from Illinois [Mr. MCKENZIE] and the minority members of the committee as to the necessity and importance of providing adequate pay for the officer and enlisted personnel in the military branches of the Government. The minority members, for reasons which we think entirely sound and which are fully set out in the minority report, have favored caring for any needed increase in the pay of the officer and enlisted personnel of these services by a temporary rather than permanent bill at this time. The pending bill, we have felt, involving, as it does, many radical and far-reaching changes of existing law, is drafted along illogical and unscientific lines, and in no way simplifies the pay and compensation allowance of the commissioned and enlisted personnel in the services affected, but really serves to add greater confusion and complications to an already very technical subject.

In the coming years I can but feel that many fundamental errors which have found their way into the preparation of this bill will rise to confront us. Too many concessions have been made to remove what the officers, who really prepared this bill, felt might become sources of opposition. A casual reading of section 1 will disclose many concessions, many discriminations, and many gifts of service in præsenti for the purpose of enabling officers to be advanced hereafter to a higher pay period while still holding commissions in a grade lower than such pay period. New rights and privileges are granted to officers now in the service never enjoyed under existing law, and not even remotely promised; and, strange to say, such rights and privileges under the terms of the bill will expire with the officers now in the service. Hereafter the officers who are commissioned, and who really must take the places of the officers now in the service, will be denied the right to claim advancement to pay periods on the same conditions freely granted in the pending bill to the officers now in the service.

When a bill embodies unjust discriminations, makes an unfair distribution of benefits to the personnel of important services, sooner or later these matters come home to confront us in the shape of strong protests and appeals to remedy the wrong. This bill provides one character of service for the officers now holding commissions to advance them to higher pay periods, and denies this right to officers hereafter commissioned. Congress will later be called on to remedy the wrongs thus sought to be perpetuated. Take the commissioned warrant officer. Many of them are now, under existing law, receiving and enjoying pay and allowances of first lieutenants, and yet they, under the terms of this bill, will be forever barred from receiving the pay and allowances of the next higher grade, while officers who hold commissions in this same grade can, under the terms of the bill, use the very character of service that the commissioned warrant officer now has to advance them to the next higher pay period, thereby increasing their base pay $500, their longevity pay by 50 per cent instead of 40, and also their allowance for subsistence and rentals.

Years of service have been given outright to certain groups of officers by more than one subdivision of section 1. To some officers this gift will immediately advance them to higher pay periods, thereby increasing their base and longevity pay and allowance. To other officers the gift will become effective after the lapse of further years, but when effective it will serve to immediately advance them to the next higher pay period from that in which they hold commissions, and result in substantial increases in pay and allowances.

You have denied gifts of service to others equally entitled to it; yea, you have not been content with making gifts of service in section 1 of the bill, but you have actually provided that such service could be used not alone as existing law requires—that is, for increasing longevity pay—but under the terms of this bill you permit it to be used to advance these officers to higher base pay on which the increased longevity percentage may be computed.

These rights and privileges, I repeat, are given only to certain groups of officers now in the service, and to be forever withdrawn and denied, by the terms of the bill, to all officers hereafter commissioned.

Mark my prophecy, you are but laying the foundation for future unrest and dissatisfaction in the services. Far better to have waited before writing permanent law until the permanent strength of these services could be fixed and adjustments now pending accomplished, and providing for needed increases by temporary legislation instead. [Applause.]

Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the RECORD.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. Is a separate vote demanded on any amendment? A separate vote not being demanded on any amendment, the Chair will put them in gross. The question is on agreeing to the amendments.

The amendments were agreed to.

The SPEAKER pro tempore. The question is on ordering the bill to be engrossed and read a third time.

The bill was ordered to be engrossed and read the third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

Mr. CONNALLY of Texas. Mr. Speaker, I offer the following motion to recommit:

The Clerk read as follows:

Mr. CONNALLY of Texas moves to recommit the bill to the committee with instructions to report the same back forthwith with the following amendment: "Strike out section 5 of the bill."

Mr. MCKENZIE. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the motion to recommit.

The question was taken.

Mr. CONNALLY of Texas. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER pro tempore. The gentleman from Texas make the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and thirty-one Members present, not a quorum. The Doorkeeper will close the doors, the Sergeant at Arms will notify absentees, and the Clerk will call the roll. The question is on the motion to recommit.

The question was taken; and there were—yeas 41, nays 221, answered "present" 3, not voting 164, as follows:

YEAS—41.

So the motion to recommit was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. Gahn (for) with Mr. Goldsborough (against).
Mr. Knight (for) with Mr. Mead (against).
Mr. Linthicum (for) with Mr. Blakeney (against).
Mr. Lankford (for) with Mr. Petersen (against).
Mr. Rossdale (for) with Mr. Crago (against).
Mr. McClintic (for) with Mr. Hukriede (against).

General pairs:

Mr. Langley with Mr. Clark of Florida.
Mr. Treadway with Mr. Cockran.
Mr. McArthur with Mr. Kindred.
Mr. Kiess with Mr. Ward of North Carolina.
Mr. Wurzbach with Mr. Sullivan.
Mr. Winslow with Mr. Bankhead.
Mr. Stiness with Mr. Brand.
Mr. Kendall with Mr. Rainey of Alabama.
Mr. Kahn with Mr. Garner.
Mr. Siegel with Mr. Kunz.
Mr. Layton with Mr. Moore of Virginia.
Mr. Lee of New York with Mr. Carter.
Mr. Appleby with Mr. Dominick.
Mr. Fitzgerald with Mr. Garrett of Texas.
Mr. Bacharach with Mr. Collins.
Mr. Perkins with Mr. Sears.
Mr. Hill with Mr. Blanton.
Mr. Morin with Mr. Smithwick.
Mr. Hutchinson with Mr. Wingo.
Mr. Dowell with Mr. Sisson.
Mr. Atkeson with Mr. Stevenson.
Mr. McPherson with Mr. Davis of Tennessee.
Mr. Michaelson with Mr. Rainey of Illinois.
Mr. Sanders of Indiana with Mr. Hudspeth.
Mr. Kearns with Mr. Drane.
Mr. Butler with Mr. Logan.
Mr. Osborne with Mr. Campbell of Pennsylvania.
Mr. Coughlin with Mr. Lyon.
Mr. Smith of Michigan with Mr. Gilbert.
Mr. Perlman with Mr. Mansfield.
Mr. Graham of Pennsylvania with Mr. Taylor of Arkansas.
Mr. Shreve with Mr. Fields.
Mr. Patterson of New Jersey with Mr. Ten Eyck.
Mr. Gorman with Mr. Kitchin.
Mr. Connell with Mr. Martin.
Mr. Dickinson with Mr. Humphreys.
Mr. Griest with Mr. Steagall.

Mr. ROSSDALE. Mr. Speaker, I voted aye. I am paired with the gentleman from Pennsylvania, Mr. CRAGO, and I desire to withdraw my vote and answer "present."

The name of Mr. ROSSDALE was called, and he answered "Present."

Mr. MCCLINTIC. Mr. Speaker, I wish to withdraw my vote of "aye" and answer "present," for the reason that I am paired with the gentleman from Missouri, Mr. HUKRIEDE.

The name of Mr. MCCLINTIC was called, and he answered "Present."

Mr. LANKFORD. Mr. Speaker, I am paired with the gentleman from New Jersey, Mr. PATTERSON, and wish to withdraw my vote and answer "present."

The name of Mr. LANKFORD was called, and he answered "Present."

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. A quorum is present. The Doorkeeper will open the doors. The question is upon the passage of the bill.

The question was taken, and the Speaker pro tempore announced the ayes appeared to have it.

On a division (demanded by Mr. BLACK) there were—ayes 219, noes 26.

Mr. BLACK. Mr. Speaker, I ask for the yeas and nays.

The SPEAKER pro tempore. Twenty-four gentlemen have arisen, not a sufficient number, and the yeas and nays are refused.

So the bill was passed.

On motion of Mr. MCKENZIE, a motion to reconsider the vote by which the bill was passed was laid on the table.

EXTENSION OF REMARKS.

Mr. GALLIVAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of self-government in Lithuania.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

LITHUANIA A REPUBLIC.

Mr. GALLIVAN. Mr. Speaker, Lithuania, on whose domain many of the bloodiest campaigns of the World War were waged, has received little attention from the world at large; her sufferings have received scant sympathy and she has bandaged her own wounds. Over the present country of Lithuania, once the largest State in Europe, extending from the Black Sea to the Baltic, the armies of Germany and Russia crossed and recrossed in that war, the Germans frequently raiding the country to capture cattle and the Russians counterattacking to gain immediate results for the moral effect elsewhere. For centuries Lithuania has been in turn the victim of the crushing oppression of Russia and of Germany.

Her masters prevented the Lithuanian people from assembling at public functions. The Lithuanian language, which is said by some philologists to be the oldest living language today, was prohibited in all the public establishments in Lithuania, and it is not difficult to imagine how much unhappiness

and how much disorder such administration brought into the life of a people yearning to be free.

If we but recall that the reading of books written in Lithuanian was forbidden until 1904, we will realize how hard the struggle of these poor people has always been. From 1864 to 1904 they were prohibited from printing even a prayer book in their own language and in the Latin characters. They were persecuted with unspeakable severity for smuggling such publications over the border; their children were compelled to receive instruction in a language that few of them ever understood—these are but a few of the sufferings the Lithuanian people have endured.

Although many of the European nations have recognized the present Lithuanian Government, the United States of America has thus far ignored that young Republic. On the broad issue of self-determination, Lithuania measures up to every principle enunciated by the world's greatest statesmen when the recent war was at its height. If the promises these men made are not forgotten, Lithuania rests confident that her case as presented to the jury of the world will receive that verdict which will strike off her shackles and restore her to the freedom of government and equality among nations.

Many of the principles of its present republican government were borrowed from America. A recent incident in this connection was the presentation by Lithuanians in America of a "liberty bell" to the mother country in commemoration of the fourth anniversary of its independence. The bell is to be rung on all national holidays and days of important historical significance to the country.

The ancient capital of Lithuania's new area, which is slightly in excess of the combined areas of New Hampshire, Vermont, Massachusetts, and Rhode Island, was Vilna, whose narrow and winding streets, stony pavements, and horse-drawn cars give it a quaint and almost medieval atmosphere. Though the seat of its government now is Kovno, many of the great events in its history centered around Vilna.

Vilna was founded at the junction of the Vilna and Vilayka Rivers by Gedimin in 1322, and is connected by railway lines with Petrograd and through Warsaw with most of the capitals of Europe.

When Napoleon passed through the city in 1812 on his way to Moscow the Lithuanian nobles crowded around him, as it was believed he would restore the old Lithuanian State. Near the city to-day there stands a stone which tells the tragic story simply. On the one side it bears the word, "Napoleon Bonaparte passed this way in 1912 with 400,000 men." On the other side there are engraved the telltale words, "Napoleon Bonaparte passed this way in 1812 with but 9,000 men."

I fervently hope that the day is not far distant when America will recognize the new Government so closely patterned after our own.

Mr. McLAUGHLIN of Michigan. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on this bill.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

Mr. KING. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman rise?

Mr. KING. To extend my remarks in the RECORD on the subject of the soy bean industry.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

THE SOY BEAN INDUSTRY IN AMERICA.

Mr. KING. Mr. Speaker, I desire to extend my remarks on the subject of the soy bean industry in America by inserting a letter from Mr. Louis F. King, president of the Tri-County Bean Growers' Association of Illinois, which includes the counties of Schuyler, Hancock, and Adams.

The letter is as follows:

HUNTSVILLE, ILL.

Hon. EDWARD J. KING,
House of Representatives.

MY DEAR MR. KING: I am inclosing an editorial clipping from Wallace's Farmer in regard to tariff on tropical fats, as follows:

KEEPING OUT TROPICAL FATS.

It is reported from Washington that the soap and oleo people are making strenuous efforts to put coconut oil, soy bean oil, copra, and other tropical fats on the free list. This is a matter of grave concern to the dairyman, the corn man, the hog man, and the cotton man. Last, but not least, it means much to our infant soy bean industry. Eventually, we should be able to produce soy beans on a large scale more cheaply in the United States than they now do in China, provided we have protection while the industry is young.

All fats are more or less interchangeable and every pound of fat imported from the Tropics influences either directly or indirectly the price of corn, hogs, butter, and cotton.

The soap and oleo people should learn how to utilize home-grown fats instead of tropical fats. They seemed to get along all right with home-grown fats before the war, when we imported only about one-third as many pounds of tropical oils as we have been importing since the war. A tariff of 4 cents a pound on all coconut oil and soy bean oil will teach our manufacturers to depend on the home-grown fats, on the corn oil, lard and soy bean oil, and cottonseed oil produced by American farmers, instead of the coconut oil and soy bean oil produced by low-grade oriental labor. This is a matter of importance to Corn Belt farmers and they should write their Congressmen and Senators at once. The matter of a tariff on vegetable oils will be decided in the very near future, and there is no time to lose.

You will readily understand the object of this editorial. If, as it says, some tariff would be an advantage, do what you can in the interest of the bean business.

We have started an organization to encourage the growing of soy beans, and one thing that will greatly help would be the development of the oil industry in this locality. The acreage will be increased 100 per cent, probably more, this year, especially if the kind of weather we are now having continues. Not an oat has been sown nor a furrow plowed. It is raining all the time.

If it should turn better now not much field work can be done for some time. This condition is likely to result in a large amount of June planting and farmers may be forced to do what they have been slow to undertake—the growing of beans.

Farmers would have been ahead if they had all planted soy beans last year and reduced the corn acreage. From $20 invested in seed I produced $232 net profit from beans planted in 30 acres of corn last year.

Up to the present most of the beans grown have been used for seed, but as production increases growers are looking to the oil business for a new cash outlet. This section of Illinois being a live-stock section, beans will soon be used as stock feed, but the beans would make a richer protein food if the oil were extracted. The oil has no particular value as a feed, as we have plenty of that in other things. An oil mill, sooner or later, will be a necessity.

I have an idea that in a few years as large an acreage of beans will be grown as of wheat, aside from what is grown along with corn. The harvesting of beans can be followed immediately with the sowing of wheat, no preparation of seed bed being necessary, and there is likely to be an increased yield of wheat over what a prepared seed bed would give.

Agriculture seems to be commanding more attention from Congress and other interests than ever before. I hope farm organization will continue to progress and avoid any traps that may be laid to defeat the forward movement. I feel that it is important for every farmer to put good management behind his own business and not expect organization and legislation to do it all, although these are very essential.

L. F. KING,
President Tri-County Bean Growers' Association.

Mr. GOODYKOONTZ. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman rise?

Mr. GOODYKOONTZ. To make a unanimous-consent request to insert in the RECORD a statement from an absent Member, Mr. JOHN W. LANGLEY, as to how he would vote on the Army pay bill if he were present.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The telegram is as follows:

LOUISVILLE, KY., *May 12, 1922.*

I have a general pair with Representative CLARK of Florida, but I want the RECORD to show that I am for the Army pay bill.

JOHN W. LANGLEY.

Mr. LOWREY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a brief clipping from the American Lumberman on the Mississippi River.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The matter is as follows:

TO WHOM DOES THE RIVER BELONG?

The river belongs to the Nation;
The levee, they say, to the State;
The Government runs navigation;
The Commonwealth, though, pays the freight.
Now, here is the problem that's heavy—
Please, which is the right or the wrong—
When the water runs over the levee,
To whom does the river belong?

It's the Government's river in the summer,
When the stage of the water is low,
But in spring when it goes on a hummer
And starts o'er the levee to flow,
When the river gets suddenly dippy
The State must dig down in its till
And push back the old Mississippi
Away from the farm and the mill.

I know very little of lawing,
I've made little study of courts,
I've done little geeing and hawing
Through verdicts, opinions, reports;
Why need there be anything more said
When the river starts levees to climb?
If the Government owns the aforesaid,
It must own it all of the time.

If the bull you are leading should bellow
And jump over somebody's fence,
There isn't much doubt you're the fellow
Expected to bear the expense;
If it follows a Sunday-school teacher
And chases the maid up a tree,
You're the owner the same of the creature
Undoubtedly all will agree.

If some time should somebody's chickens
Get into your garden and dig
And pull up the plants like the dickens,
Or somebody's bull pup or pig,
The owner thereof can not blame it
On you or some party remote;
The owner thereof can't disclaim it—
The chick or the pup or the shoat.

If it's your Mississippi in dry time,
It's yours, Uncle Sam, when it's wet;
If it's your Mississippi in fly time,
In flood time it's your river yet;
There's no other way you can make it;
And so when I give the alarm
Come get your darned river and take it
Away from my timber and farm.
—Douglas Malloch, in American Lumberman.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. BANKHEAD, for an indefinite period, on account of death in family.

To Mr. COLTON, for two days, on account of important business.

To Mr. WYANT, from May 15 to May 18, on account of official business.

MESSAGE FROM THE PRESIDENT—TRADING WITH THE ENEMY ACT.

The SPEAKER pro tempore laid before the House the following message from the President.

The Clerk read as follows:

To the Congress of the United States:

In accordance with the requirements of section 6 of the trading with the enemy act I transmit herewith for the information of the Congress a communication from the Alien Property Custodian and a copy of Senate Document No. 181, Sixty-seventh Congress, which document contains a report of all proceedings had under the trading with the enemy act by the office of the Alien Property Custodian during the present administration as well as proceedings under the previous administration from the passage of the trading with the enemy act, October 6, 1917.

WARREN G. HARDING.

THE WHITE HOUSE, *May 12, 1922.*

The SPEAKER pro tempore. The message is ordered printed and the document, having already been printed as a Senate document, will be referred to the Judiciary Committee, where the previous message on this subject was referred.

ORDER OF BUSINESS.

Mr. MONDELL. Mr. Speaker, I ask unanimous consent to address the House on a matter of the program.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

Mr. MONDELL. Mr. Speaker, we will take up for consideration to-morrow first the conference report on the Post Office appropriation bill, and we will probably consider also the conference report of the independent offices bill, and probably the conference report of the State and Justice appropriation bill.

On Monday there will likely be some suspensions and the consideration of the Unanimous Consent Calendar. On Tuesday the House will take up the scrapping bill; the scrapping bill will be taken up Tuesday, I think, without question. Following the disposition of the scrapping bill, and without Calendar Wednesday being utilized for Calendar Wednesday business, we hope to take up the river and harbor bill. Among the bills to be considered on Monday will be an appropriation bill making appropriation of $500,000 for the Department of Justice.

Mr. GARRETT of Tennessee. Is that one of the suspension bills?

Mr. MONDELL. Well, we will consider that under unanimous consent, if unanimous consent is given. I think that would be better than to consider it under suspension of the rules.

Mr. GARRETT of Tennessee. So far as I know, I have an idea that there will be no objection on this side. The gentleman mentions the suspension bills. Has he any other suspension bills in mind for Monday at present? I merely ask it because Members want to know.

Mr. MONDELL. I think a request will be made for consideration of the bill providing for an additional grand jury for the District of Columbia. Possibly other requests will be made. I am not in position to say now just what the Speaker may determine to do, as that is the Speaker's prerogative. But I hope the Members will be present as far as possible for them to do so.

ADJOURNMENT.

Mr. MONDELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 37 minutes p. m.) the House adjourned until Saturday, May 13, 1922, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

610. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate of appropriation for the Department of Commerce, Bureau of Fisheries, for the fiscal year ending June 30, 1923, for fish-rescue station, Mississippi River Valley, $60,000, and for salaries for fish-rescue station, Mississippi River Valley, $15,280; in all, $75,280 (H. Doc. No. 314); to the Committee on Appropriations and ordered to be printed.

611. A letter from the Secretary of the Treasury, transmitting a list of useless executive papers in files of the Federal reserve banks, the Federal prohibition directors of the various States, the customs service in Juneau, Alaska, and in the office of the custodian at Davenport, Iowa, to be disposed of; to the Committee on Disposition of Useless Executive Papers.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. ZIHLMAN: Committee on Labor. H. R. 11155. A bill creating the positions of second assistant secretary and private secretary in the Department of Labor; with an amendment (Rept. No. 1003). Referred to the Committee of the Whole House on the state of the Union.

Mr. REED of West Virginia: Committee on the District of Columbia. S. 2919. An act to extend for the period of two years the provisions of Title II of the food control and the District of Columbia rents act, approved October 22, 1919, as amended; with amendments (Rept. No. 1006). Referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. ROSE: Committee on Claims. H. R. 745. A bill for the relief of William H. Philbrick; without amendment (Rept. No. 1004). Referred to the Committee of the Whole House.

Mr. EDMONDS: Committee on Claims. H. R. 8219. A bill to adjust accounts of Capt. J. S. Carpenter, Supply Corps, United States Navy; with amendments (Rept. No. 1005). Referred to the Committee of the Whole House.

Mr. WHITE of Kansas: Committee on the Public Lands. H. R. 11233. A bill authorizing the Secretary of Commerce to convey certain land to the county of Muscatine, Iowa; with amendments (Rept. No. 1007). Referred to the Committee of the Whole House.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 11602) granting a pension to Parthine Curtis; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 9926) granting a pension to Mercia Fox; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. LAYTON: A bill (H. R. 11633) to authorize the acquisition of a site and the erection of a Federal building at Middletown, New Castle County, Del.; to the Committee on Public Buildings and Grounds.

By Mr. STEENERSON: A bill (H. R. 11634) granting the consent of Congress to the county of Norman and the town and village of Halstad, in said county, in the State of Minnesota, and the county of Traill and the town of Herberg, in said county, in the State of North Dakota, to construct a bridge

across the Red River of the North on the boundary line between said States; to the Committee on Interstate and Foreign Commerce.

By Mr. HOGAN: A bill (H. R. 11635) authorizing the erection of an addition to the Federal building, Brooklyn, N. Y.; to the Committee on Public Buildings and Grounds.

By Mr. HICKEY: A bill (H. R. 11636) to authorize the appointment of stenographers in the courts of the United States and to fix their duties and compensation; to the Committee on the Judiciary.

By Mr. MONDELL: A bill (H. R. 11637) authorizing the Secretary of the Interior to approve indemnity selections in exchange for described granted school lands; to the Committee on the Public Lands.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BULWINKLE: A bill (H. R. 11638) granting an increase of pension to Delilah J. Sprinkle; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11639) authorizing the Secretary of the Treasury to pay war risk insurance to the stepfather of Max Wilcox; to the Committee on Claims.

By Mr. DEMPSEY: A bill (H. R. 11640) granting a pension to Joseph Edwards; to the Committee on Invalid Pensions.

By Mr. KETCHAM: A bill (H. R. 11641) granting a pension to Mary E. McGill; to the Committee on Invalid Pensions.

By Mr. MOORE of Illinois: A bill (H. R. 11642) granting an increase of pension to Susan S. Boyd; to the Committee on Invalid Pensions.

By Mr. RAMSEYER: A bill (H. R. 11643) granting a pension to Elizabeth Fenner; to the Committee on Invalid Pensions.

By Mr. ROSSDALE: A bill (H. R. 11644) for the relief of Sophie Posner; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5575. By the SPEAKER pro tempore (by request): Resolution adopted by the Common Council of the City of Hartford, Conn., expressing the desire that the frigate *Hartford* be brought to that city for its final resting place; to the Committee on Naval Affairs.

5576. By Mr. ANSORGE: Petition of the Five Points Masonic Club, of New York, recommending the passage of the Towner-Sterling bill; to the Committee on Education.

5577. By Mr. CAREW: Resolution adopted by the New York Chapter, Military Order of the World War, urging the Government to conduct periodical training camps for reserve officers and enlisted men; to the Committee on Appropriations.

5578. By Mr. KISSEL: Petition of the George M. Jones Co., Toledo, Ohio, relative to the existing miners' strike; to the Committee on Labor.

5579. Also, petition of Scarsdale Post, No. 52, Scarsdale, N. Y., relative to the size of the Army; to the Committee on Appropriations.

5580. Also, petition of the Civil Service Forum, New York City, N. Y., relative to House bill 9756; to the Committee on Ways and Means.

5581. By Mr. SINCLAIR: Petition of Marion Hitchens and 24 others, of La Moure, N. Dak., in support of House bill 10890; to the Committee on Ways and Means.

5582. By Mr. SINNOTT: Petition of citizens of Gaston, Oreg., protesting against the passage of House bill 9753, to secure Sunday as a day of rest in the District of Columbia; to the Committee on the District of Columbia.

5583. By Mr. STRONG of Pennsylvania: Petition of citizens of New Bethlehem, Pa., favoring the establishment in Palestine of the national home for the Jewish people; to the Committee on Foreign Affairs.

5584. By Mr. TOWNER: Petition of William Wright and 30 other citizens of Grand Rapids, Mich., asking for the passage of the Towner-Sterling educational bill; to the Committee on Education.

5585. Also, petition of I. E. Hawkins, of Portsmouth, Va., and 92 other citizens of the State of Virginia, asking for the passage of the Towner-Sterling educational bill; to the Committee on Education.

SENATE.

SATURDAY, *May 13, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

INVITATION TO VISIT QUANTICO (VA.) MARINE CORPS BASE.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Navy, which was read and referred to the Committee on Naval Affairs, as follows:

THE SECRETARY OF THE NAVY,
Washington, May 13, 1922.

MY DEAR MR. VICE PRESIDENT: It gives me much pleasure to inform you that the visit of the Members of the Senate to the Marine Corps post at Quantico, Va., which was postponed on account of bad weather, will take place on Thursday, the 18th instant.

The *Mayflower* has been assigned by the President to be used for the trip to Quantico and return, and will sail from the navy yard at 8.30 a. m. on the above-mentioned date.

Will you please bring this invitation to the attention of each Member of the Senate, as I am exceedingly desirous that a large number of the Senators should take advantage of this opportunity to visit Quantico.

With best personal wishes, I am,
Very sincerely yours,

EDWIN DENBY,
Secretary of the Navy.

Hon. CALVIN COOLIDGE,
Vice President of the United States, Washington, D. C.

DISPOSITION OF USELESS PAPERS.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury transmitting, pursuant to law, a list of papers and documents on the files of the Treasury Department not needed in the transaction of business and having no permanent value or historic interest, and asking for action looking to their disposition, which was referred to a joint select committee on the disposition of useless papers in the executive departments. The Vice President appointed Mr. JONES of Washington and Mr. HARRIS members of the committee on the part of the Senate, and ordered that the Secretary notify the House of Representatives thereof.

PETITIONS AND MEMORIALS.

Mr. TOWNSEND presented petitions of sundry citizens of Saginaw, Grand Rapids, Zeeland, Sebewaing, Unionville, Akron, Pigeon, Bay Port, Gagetown, Bach, Mount Morris, Genesee, Burton, Flint, and Chesaning, all in the State of Michigan, praying for the imposition of a tariff duty of $2 per hundred pounds on imported Cuban sugar, which were referred to the Committee on Finance.

Mr. SIMMONS presented a resolution adopted by the Negro Teachers' Association of Bertie County, N. C., condemning lynchings for any cause and agitation of the race question and favoring harmony between the races in this country, which was referred to the Committee on the Judiciary.

Mr. LADD presented resolutions of the Kiwanis Club and the Association of Commerce, both of Minot, N. Dak., protesting against repeal or amendment of the transportation act of 1920, and in general against adverse railroad legislation, which were referred to the Committee on Interstate Commerce.

Mr. CAPPER presented memorials of sundry citizens of Burlington and Weir, Kans., remonstrating against the enactment of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. McKINLEY presented a resolution adopted by the Seventh Annual Convention of the Women's International League for Peace and Freedom, favoring recognition by the Government of the United States of the Russian Soviet Republic, the Far Eastern Republic, and the autonomous republics carved out of the former Russian Empire, which was referred to the Committee on Foreign Relations.

Mr. WILLIS presented the petition of Mrs. Albert Peet and sundry other citizens of Cincinnati, Ohio, praying for inclusion in the pending tariff bill of only a moderate duty on imported kid gloves, which was referred to the Committee on Finance.

He also presented petitions of C. J. Delong and sundry other citizens of Antwerp, Ira A. Poole and sundry other citizens of Toledo, and A. J. Cowman and sundry other citizens of Rossford, and sundry other citizens of the State of Ohio, praying for the imposition of a tariff duty of $2 per hundred pounds on imported Cuban sugar, which were referred to the Committee on Finance.

REPORTS OF COMMITTEES.

Mr. WADSWORTH, from the Committee on Military Affairs, to which was referred the bill (S. 3461) to amend the act of February 28, 1920, so as to authorize the acquisition of addi-

tional land and the disposition of certain lands already acquired at Camp Knox, Ky., reported it without amendment and submitted a report (No. 703) thereon.

Mr. WALSH of Montana, from the Committee on Indian Affairs, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (H. R. 8256) authorizing the issuance of a patent in fee to Perry H. Kennerly for land allotted to him on the Blackfoot Reservation, Mont. (Rept. No. 704); and

A bill (H. R. 8669) authorizing the issuance of a patent in fee to Jerome Kennerly for land allotted to him on the Blackfoot Reservation, Mont. (Rept. No. 705).

Mr. WALSH of Montana, from the Committee on Indian Affairs, to which was referred the bill (H. R. 9344) providing for the appropriation of funds for acquiring additional water rights for Indians on the Crow Reservation, in Montana, whose lands are irrigable under the Two Leggins Irrigation Canal, reported it with amendments and submitted a report (No. 706) thereon.

Mr. LADD, from the Committee on Indian Affairs, to which was referred the bill (S. 3279) to provide for the payment of one-half the cost of the construction of a bridge across the San Juan River, N. Mex., reported it without amendment and submitted a report (No. 707) thereon.

He also, from the same committee, to which was referred the bill (S. 2714) for the improvement of a wagon road on the Colville Indian Reservation, reported it with amendments and submitted a report (No. 708) thereon.

Mr. HARRELD, from the Committee on Indian Affairs, to which was referred the bill (H. R. 6512) for the relief of and purchase of lands for certain of the Apache Indians of Oklahoma, lately confined as prisoners of war at Fort Sill Military Reservation, and for other purposes, reported it without amendment and submittted a report (No. 709) thereon.

He also, from the same committee, to which was referred the bill (H. R. 11054) to validate certain deeds executed by members of the Five Civilized Tribes, and for other purposes, reported it with an amendment and submitted a report (No. 710) thereon.

Mr. SPENCER subsequently said: Mr. President, the junior Senator from Oklahoma [Mr. HARRELD] earlier in the day reported from the Committee on Indian Affairs House bill 11054. He desires to have the bill recommitted to the committee, and I therefore ask unanimous consent that it may be recommitted to the Committee on Indian Affairs.

The PRESIDING OFFICER (Mr. ROBINSON in the chair). Without objection, the bill will be recommitted. The Chair hears no objection, and it is so ordered.

Mr. SPENCER, from the Committee on Indian Affairs, to which were referred the following bills, reported them each without amendment and submitted reports thereon.

A bill (S. 3393) for the relief of the Indians of the Gila River and Papago Reservations in the State of Arizona (Rept. No. 711); and

A bill (H. R. 9951) to amend section 22 of an act approved February 14, 1920, entitled "An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes," for the fiscal year ending June 30, 1921 (Rept. No. 712).

Mr. SPENCER, from the Committee on Indian Affairs, to which were referred the following bills, reported them each with amendments and submitted reports thereon:

A bill (S. 3308) for the relief of the heirs of Israel Folsom, deceased (Rept. No. 713); and

A bill (S. 3384) authorizing an appropriation to meet proportionate expenses of providing a drainage system for Paiute Indian lands in the State of Nevada within the Newlands reclamation project of the Reclamation Service (Rept. No. 714).

Mr. SUTHERLAND, from the Committee on Military Affairs, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 2595) for the relief of Lewis Myshrall (Rept. No. 715); and

A bill (H. R. 5125) for the relief of Oliver A. Campbell (Rept. No. 716).

He also, from the same committee, to which was referred the bill (S. 685) to remove the charge of desertion from the military record of Albert F. Smith, deceased, reported it with amendments and submitted a report (No. 717) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MYERS:

A bill (S. 3593) to authorize an exchange of lands with owners of private land holdings within the Glacier National Park; and

A bill (S. 3594) for the relief of Anton Rospatrick and the exchange of certain lands owned by the Northern Pacific Railway Co.; to the Committee on Public Lands and Surveys.

By Mr. CURTIS:

A bill (S. 3595) to reimburse Rube Allen for losses and damages sustained by him through the negligent dipping of tick-infested cattle by the Bureau of Animal Industry, Department of Agriculture; to the Committee on Claims.

A bill (S. 3596) granting a pension to Caldona Vaughn (with an accompanying paper);

A bill (S. 3597) granting a pension to Nancy K. Sadler (with an accompanying paper);

A bill (S. 3598) granting a pension to Mary J. Quincy (with accompanying papers);

A bill (S. 3599) granting a pension to James D. Martin (with accompanying papers); and

A bill (S. 3600) granting a pension to James F. Bierly (with accompanying papers); to the Committee on Pensions.

By Mr. SPENCER:

A bill (S. 3601) for the relief of contractors who entered into contracts with the Chief of Ordnance prior to the war and completed thereafter; to the Committee on Military Affairs.

By Mr. McKELLAR:

A bill (S. 3602) for the purchase of a post-office site at Dickson, Tenn.; to the Committee on Public Buildings and Grounds.

By Mr. KEYES:

A bill (S. 3604) providing for a readjustment of the rates of pay of chief pay clerks and chief pharmacists; to the Committee on Naval Affairs.

By Mr. ASHURST:

A bill (S. 3605) authorizing the sale of surplus power developed under the Salt River reclamation project, Arizona; to the Committee on Irrigation and Reclamation.

By Mr. SHIELDS:

A bill (S. 3606) granting an increase of pension to Charles Dunaway (with accompanying papers); to the Committee on Pensions.

TARIFF BILL AMENDMENTS.

Mr. JOHNSON submitted four amendments intended to be proposed by him to House bill 7456, the tariff bill, which were referred to the Committee on Finance and ordered to be printed.

DEPARTMENT OF EDUCATION.

Mr. McNARY submitted an amendment intended to be proposed by him to the bill (S. 1252) to create a department of education, to authorize appropriations for the conduct of said department, to authorize the appropriation of money to encourage the States in the promotion and support of education, and for other purposes, which was referred to the Committee on Education and Labor and ordered to be printed.

AGRICULTURAL CREDITS.

Mr. FLETCHER submitted an amendment intended to be proposed by him to the bill (S. 3051) to amend the Federal farm loan act by establishing a farm-credits department in each Federal land bank, which was referred to the Committee on Banking and Currency and ordered to be printed.

He also submitted an amendment intended to be proposed by him to the bill (S. 3390) to provide credit facilities for the preservation and development of the agricultural industry, including live stock, in the United States; to extend and stabilize the market for United States bonds and other securities; to create an agency for the liquidation of commercial assets owned by the United States, for acting when required as depository of funds belonging to the United States, and otherwise performing services as fiscal agent of the United States, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

GOV. ROBERT A. COOPER, OF SOUTH CAROLINA.

Mr. DIAL. Mr. President, I send to the desk and ask to have printed in the RECORD an editorial from the Columbia State, a leading newspaper of the South, in reference to the appointment of Governer Cooper on the Federal Farm Loan Board.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the State, Columbia, S. C., May 12, 1922.]

AN EXCELLENT APPOINTMENT.

The President of the United States could have made no appointment better conceived with the object of demonstrating that he has the interest of the whole country at heart than that of Gov. Robert A. Cooper to succeed Mr. Lever as a member of the Federal Farm Loan Board. A glow of cordial good feeling toward Mr. Harding will overspread South Carolina when the people read this morning that this honor has been conferred upon their executive.

Mr. Cooper is not only worthy of the honor but is admirably fitted to perform the duties of the office. Brought up on a small farm, and a practicing lawyer many years in an agricultural county, he is familiar with the problems of the tillers of the soil and in full sympathy with them. In the three and a half years that he has served as governor he has taken a lively interest in every movement promising agricultural improvement and development, and has exhibited, as a result of close study, a wide knowledge of the needs of the rural districts. The President might have searched the South Atlantic States a long time without discovering another so well fitted to assist in carrying out the purposes that underlie the establishment of our national rural credits banking system. While South Carolinians will regret that they will not have his services as governor to the end of the term to which he was elected, they will reflect that in his new post he will have opportunities to assist their State and the other States whose conditions are similar to those of their own and with which he is so fully acquainted. The heavier work of his second term, to which he was elected without opposition, has been completed. The general assembly will not meet again until next year, and, fortunately, the affairs of the Commonwealth will be under excellent direction when he shall be succeeded by Lieut. Gov. Wilson G. Harvey. Mr. Harvey, by the way, will be the first citizen of Charleston, the metropolis of the State, to fill the governor's chair since Judge A. G. Magrath in 1865.

The appointment is cause for congratulations all around. The country will have a faithful and capable officer on the board, which has scarcely begun the great work which it is expected to do in the course of the years for the development of American agriculture, and the gentleman appointed receives no more than his deserts. The State speaks, we believe, for all the people of South Carolina when it thanks President Harding for this indisputable testimonial of his good will toward it.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, the pending question being the amendment of the Committee on Finance, on page 16, line 4, to strike out "65 cents per pound and 25" and insert "60," so as to read:

PAR. 29. Compounds of pyroxylin, of other cellulose esters or ethers, or of cellulose, by whatever name known (except compounds of cellulose known as vulcanized or hard fiber), in blocks, sheets, rods, tubes, or other forms, and not made into finished or partly finished articles, 40 cents per pound; made into finished or partly finished articles, of which any of the foregoing is the component material of chief value, 60 per cent ad valorem.

Mr. HARRISON. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Borah	Johnson	Nelson	Sterling
Brandegee	Jones, N. Mex.	New	Sutherland
Capper	Jones, Wash.	Newberry	Swanson
Caraway	Kendrick	Nicholson	Townsend
Colt	Keyes	Norbeck	Underwood
Culberson	King	Oddie	Wadsworth
Curtis	Ladd	Overman	Walsh, Mass.
Dial	La Follette	Page	Walsh, Mont.
Dillingham	Lenroot	Pittman	Watson, Ga.
Fletcher	McCumber	Pomerene	Watson, Ind.
France	McKellar	Rawson	Weller
Harreld	McKinley	Robinson	Williams
Harris	McLean	Sheppard	Willis
Harrison	McNary	Simmons	
Heflin	Moses	Smoot	
Hitchcock	Myers	Spencer	

Mr. McKINLEY. I wish to announce that the Senator from Nebraska [Mr. NORRIS] is engaged in a hearing before the Committee on Agriculture and Forestry.

Mr. KENDRICK. I wish to announce the absence of my colleague [Mr. WARREN] on account of a death in his family. I ask that this announcement may stand for the day.

The VICE PRESIDENT. Sixty-one Senators have answered to their names. A quorum is present.

Mr. KING. Mr. President, when we recessed last night we were considering paragraph 29, compounds of pyroxylin.

Mr. McKELLAR. Mr. President, will the Senator yield to me for a few moments to bring up another matter?

Mr. KING. I shall be glad to do so if it does not meet with the opposition of my distinguished friend, the chairman of the committee [Mr. MCCUMBER].

Mr. McCUMBER. There was so much confusion in the Chamber I did not hear what the Senator from Tennessee said.

Mr. KING. The Senator from Tennessee asks me to yield to him to bring up another matter. I say I shall be glad to yield if it meets with the approval of the Senator from North Dakota.

Mr. McCUMBER. Of course, it depends upon whether it is a matter which will provoke any extended discussion.

Mr. McKELLAR. I think it will take only a few minutes.

Mr. McCUMBER. Very well.

Mr. KING. With that understanding, I yield.

PRICES OF CRUDE OIL AND GASOLINE.

Mr. McKELLAR. Mr. President, I send to the desk a resolution which I now offer and ask to have read, and then I wish to make a few remarks about it.

The VICE PRESIDENT. The resolution will be read for the information of the Senate.

The reading clerk read the resolution (S. Res. 292) as follows:

Resolved, That the Committee on Manufactures or any subcommittee thereof be, and it is hereby, authorized and instructed to investigate and report to the Senate as early as possible:

1. The stock of crude oil on hand at the refineries in the United States for the years 1920, 1921, and 1922.
2. The price of crude oil during the various months in said years.
3. The stock of gasoline on hand during the said years 1920, 1921, and up to date in 1922.
4. The relation of prices of gasoline during said years to the prices of crude oil.
5. Whether or not the recent increase in the price of gasoline has been by some companies or whether there has been any uniformity in the prices demanded by all of the companies.
6. Whether these prices have been put in at the same time or at substantially the same time.
7. Whether there has been any understanding or agreement between various companies to raise the prices.
8. Whether there is any natural reason for the increase of prices of gasoline.
9. And all such facts as bear upon the present increase of prices of gasoline, in view of the decreased price of crude oil.

Mr. McKELLAR. Mr. President, I wish to call attention to the fact that crude petroleum, in Pennsylvania at the wells, in January, 1919, was $4 per barrel, and at the same time gasoline was sold at the wholesale price of 24.5 cents. Afterwards crude oil went up and then the price receded until on May 11 the price of crude oil was $3.25, while the wholesale price of gasoline was 26 cents. It will thus be seen that while the price of crude oil has very greatly decreased, the price of gasoline has increased substantially. It will be noted that these increases in the price of gasoline have taken place in the last month or six weeks to a very considerable degree. The prices have gone up in the cases of all the companies, and, as I understand, all over the country. They have gone up simultaneously and uniformly, evidencing, as it seems to me, an agreement among all the oil companies to raise the price.

The resolution merely asks that the Committee on Manufactures, or a subcommittee thereof, be directed to investigate and report. Therefore, with this statement, I ask unanimous consent for the immediate consideration of the resolution, as I take it that no Senator would object to its passage.

Mr. KING. Mr. President, allow me to say to the Senator that there are two resolutions traversing almost the same ground as the Senator's resolution now pending before the Committee on Commerce. The Senator from Oklahoma [Mr. HARRELD] offered one.

Mr. McKELLAR. I hope the Senator will not object to the passage of this resolution.

Mr. KING. I do not object.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

Mr. SMOOT. I have no objection to the subject matter of the resolution, and I want to have an investigation made; but I do not think the Senator desires to have two committees of the Senate gathering identical information at the same time.

Mr. McKELLAR. Oh, no; but there has been no other committee appointed to get the information.

Mr. SMOOT. I think there is an investigation now before the Committee on Commerce on the identical subject.

Mr. McKELLAR. Not under any resolution I have been able to find. I am sure the Senator from Utah, who is usually so accurate, is mistaken in this case.

Mr. SMOOT. I may be mistaken, but I would like to have the Senator's resolution go over for a few moments until I can ascertain the fact, and if there is no such resolution before the Senate I hope his resolution will be adopted.

Mr. McKELLAR. That course will be satisfactory. With that understanding I will ask that the resolution go over until the Senator from Utah can ascertain the status.

I ask unanimous consent to have printed in the RECORD at this point certain figures which I have in regard to the prices and stocks of oil.

The VICE PRESIDENT. Without objection it is so ordered.

The matter referred to is as follows:

Wholesale prices of crude petroleum and gasoline, January and July, 1919–1921, and January and March, 1922.

Products.	1919		1920		1921		1922	
	January.	July.	January.	July.	January.	July.	January.	March.

EDUCATIONAL CONDITIONS IN THE SOUTH.

Mr. WATSON of Georgia. Mr. President, yesterday afternoon the following dialogue took place between myself and the senior Senator from Utah [Mr. SMOOT], whose attention I respectfully invite to the proceedings of the Senate, as recorded on page 6816 of the RECORD:

Mr. WATSON of Georgia. It is only fair that the Senator from Utah should be given the facts as to the southern situation.

Mr. SMOOT. The Senator need not even take the time to make that suggestion. The Senator from Utah would never have thought of referring to it if it had not been for the Senator from Arkansas, and this is the first time in my life that I ever have referred to the educational situation in the South.

Mr. MCCUMBER. Mr. President, I inquire what is the pending amendment?

Mr. SMOOT. Just a moment.

Mr. WATSON of Georgia. If the Senator will allow me, it is the colored Republicans who can not read.

Mr. SMOOT. Mr. President, I only take the statistics as to literacy. I do not want to go any further into the matter, I will say to the Senator from Georgia, and if I were the Senator from Georgia I would not even invite it.

Mr. President, I should like the Senator from Utah to tell the Senate what he meant by that.

Mr. SMOOT. Mr. President, I meant that I did not particularly care to discuss the question of literacy or illiteracy in the South or in any other portion of the country.

Mr. WATSON of Georgia. Why did the Senator throw at me the taunt that I should not invite such a discussion?

Mr. SMOOT. Mr. President, because of the fact of what the Senator from Georgia has said upon the floor. The Senator asked permission to interrupt and made the statement.

Mr. WATSON of Georgia. The Senator from Georgia did not provoke the discussion at all. He was in utmost good humor in everything he said.

Mr. SMOOT. So was I.

Mr. WATSON of Georgia. But the reference which I have read is distinctly offensive, and would have been noticed at the time if I had heard what the Senator from Utah said. He, however, spoke in a low tone, there was some little conversation on our side of the Chamber, and I had to inquire of my colleagues what language the Senator from Utah had used.

Mr. SMOOT. I did not speak in a low tone. There may have been conversation around me, but I was speaking in the same tone in which I always speak in the Senate.

Mr. WATSON of Georgia. Then, Mr. President, once for all, I will say that if the Senator from Utah thinks that any Senator from the South is afraid to invite a discussion of any situation in the South, or of the record of any Southern State, the Senator has only to enter upon the discussion and he will find that we are ready to meet it.

Mr. SMOOT. The Senator from Utah did not say that the Senator from Georgia was afraid to go into the discussion of the illiteracy in the South. I myself spoke in good humor; but I did not think the question ought to have been injected at all into the discussion that was then proceeding, and I merely stated what the Senator from Georgia has read, that I did not think the Senator from Georgia ought to invite it.

Mr. WATSON of Georgia. Why not?

Mr. SMOOT. Because, Mr. President, I did not think it would do any good at any time, whether we were discussing a tariff bill or any other measure.

Mr. WATSON of Georgia. The RECORD shows that the Senator from Utah himself injected the question of what Republicans read and what Democrats read, and he said that the Republicans read newspapers on both sides, but that Democrats read only Democratic newspapers.

Mr. SMOOT. The Senator from Georgia did not inject the question into the discussion at all. It was injected by the Senator from Arkansas [Mr. ROBINSON].

Mr. WATSON of Georgia. Well, the Senator from Arkansas is amply able to take care of himself.

Mr. ROBINSON. Mr. President, it seems that my friend the Senator from Utah [Mr. SMOOT] insists upon throwing upon me the responsibility for the very illuminating discussion which occurred in the Senate yesterday afternoon. The proceedings were highly humorous to those of us who believe that we are endowed by nature with some sense of humor. The Senator from Utah previous to my interruption of him had used the language which is reported on page 6816 of that remarkable publication which so accurately preserves the virtuous record of our proceedings here, or perhaps I had better say the record of our virtuous proceedings:

> Mr. SMOOT. Then the Senator ought to be thankful for that, if that is the case; but I want to say that the Republicans are open-minded enough to read Democratic papers. I never knew before in my life that a Democrat could only read a Democratic paper and a Republican could only read a Republican paper. That may be the case with the Democrats, but I assure Senators upon the other side that it is not the case with Republicans. I do not think that there has been a time since I began to read newspapers when I have not subscribed to a Democratic newspaper and that very fact has made me a Republican.

Previous to that brilliant and instructive declaration by the Senator from Utah, I had not participated in the discussion. It was at the conclusion of the remarks of the Senator from Utah just quoted that I asked him to yield and made what seemed to be a humorous remark that is said to be responsible for this great issue. I said:

> Mr. ROBINSON. The Senator by his assertion that he never knew before that a Democrat could not read a Republican newspaper has invited the assertion that many Republicans do not read any newspapers.

Whereupon the Senator from Utah replied:

> Mr. SMOOT. That may be the case; but I want to say to the Senator from Arkansas that, so far as ability to read newspapers is concerned, he ought not to refer to such a thing in view of conditions in the South.

Realizing that the Senator from Utah had failed to appreciate the very fine spirit of humor that ran through my remarks and that he had become resentful, if not slightly offensive, I did not choose at that time to make any further observations.

There are some Senators who are unable to escape from the spirit of sectionalism which at one time threatened to divide the Union. There are some Senators who think that virtue and intelligence are the peculiar characteristics of the particular locality from which they come and that illiteracy and ignorance and other unfortunate defects in citizenship are confined to certain sections of the country. I felt at the time that the Senator from Utah made the remark which I have just quoted that he was undertaking to taunt me for what I had said as a pleasantry. I can not understand why his suggestion should have been made except for that purpose.

> So far as ability to read newspapers is concerned, he—

The Senator from Arkansas—

> ought not to refer to such a thing in view of conditions in the South.

It is true, Mr. President, that in some portions of the Union there is a considerable degree of illiteracy; it is true that in some of the Southern States there is illiteracy, and that it is present in a greater degree than is found in some Northern and some Western States. Every student of history knows that when the Civil War ended it left the South in ruins, impoverished to a degree that is pathetic in the memory of all fair-minded Americans. It left upon the South the burden of educating a very large population which had recently been liberated from slavery, and which, unfortunately, was almost totally illiterate. If the Senator from Utah desires to make a serious issue of this matter, if he wishes to flaunt in my face the unfortunate conditions with which my people have been confronted respecting illiteracy, I shall not hesitate to meet that issue.

No other people in all the course of history have so bravely met misfortune, so gallantly faced and surmounted difficulties which threatened to overwhelm them, and so triumphantly emerged from the misfortunes of desolating warfare as have the people of the South. And to-day at great expense we are maintaining in every Southern State practically at the expense of the white people educational institutions for the benefit of colored students, liberal and progressive, and without discrimination—institutions of the same character as those which are provided for the white children of the South.

In spite of sneers, in spite of petty insinuations, with hope in their hearts and courage in their souls, the indomitable white race of the South is advancing to a condition of enlightenment and glory, and leading upward the men, women, and children of the black race.

Here we ought to forget sectional lines and sectional antagonisms, and live and serve in the consciousness of the fact that we are citizens and servants of a great Republic.

AMENDMENT OF COTTON FUTURES ACT.

Mr. DIAL. Mr. President, I do not care to inject myself into this debate; but I merely want to say, speaking of slavery, that we have not gotten out of that condition yet. In fact, the war freed the colored population, but soon thereafter the whole South became enslaved, by the custom and then the law of selling cotton, and it seems that I am not making much progress in getting these shackles removed.

Last year I introduced an amendment to the cotton futures contract law which has been pending before a subcommittee of the Agricultural Committee of the Senate for over 12 months, and I can not get a report to the Senate. I am not asking sympathy, but I am merely asking justice for our people. If Congress could realize the injustice of that law, I feel that it would not be three days before they would correct it.

From the report of the National Agricultural Congress just filed on January 27 of this year I want to read just two or three lines, and I will take only a moment of the time of the Senate. On page 152 of that document, after giving the cost of raising a crop of cotton, it says:

> The balance of $182.50 represents labor for the entire year for man, wife, and two children, which is 61 cents per day for 300 days. On a 365-day basis, this gives a total revenue of 10 cents per day for each member of the tenant's family of four. That these figures are not overdrawn can be readily proven by reference to the production statistics of the Department of Agriculture, which are readily available.

Mr. President, we speak of the pauper labor of Asia. We have a living example of it right here; and the Congress of the United States is responsible to a great extent for this condition of poverty and of illiteracy. While we are here trying to provide means of lending money to the people of the country, yet we are doing but little to aid them in getting a proper return for the products of their labor.

I charge the Congress—and I realize that that is pretty strong language—with being in favor of the bears on the cotton markets—unintentionally, of course; but the disastrous result to the farmer is the same. The law simply amounts to confiscation, and I am making every effort in my power to get the Agricultural Committee of the Senate to report this amendment. If it should be reported, I believe that there will be little objection on the floor of the Senate. If we can get it enacted into law, it would help the condition of the laboring people of my section of the country more than anything else or perhaps everything else that we could do in their behalf.

These figures, Mr. President, are not mine. They are from this report of our own committee, and I say they are startling, indeed.

It took exactly 30 years for Congress to pass the present law. I trust it will not take quite so long to pass my amendment. If the subcommittee prefers not to report my amendment favorably, I ask that it report something or just send it back. I will endeavor to take care of it on the floor, and believe I can do so.

ELECTION OF SENATORS.

Mr. POMERENE. Mr. President, I want to beg the indulgence of the Senate just for a minute or two with reference to another subject. I would not take the time during the discussion of the pending bill if I did not feel that it was of the utmost importance.

After the decision of the Supreme Court in the case of Newberry et al. *v.* The United States, I presented, in the form of a resolution, a proposed new rule of the Senate to govern and control election expenditures as they relate to Members of this body. Accepting, as we were obliged to accept, the decision of the Supreme Court that the recent amendment did not give to the Congress authority to regulate the expenditures at a primary, I felt there must be some way whereby they could be regulated; so I took up the corrupt practices act which was approved on August 19, 1911, and eliminated therefrom all of the provisions of that law in so far as they related to the election of Members of the House of Representatives and framed a new rule of the Senate containing provisions of the corrupt practices act so far as they relate to the selection of Senators. It provides that any Senator who fails to comply with the provisions of the rule should be denied a seat in the Senate.

That resolution was presented on January 16. I have taken up the subject, I think, on two different occasions with the chairman of that committee. I realize, as all Senators realize, how extremely busy we have all been. I was out of the city on yesterday, but I had been advised before going by the chairman of the committee [Mr. CURTIS] that he would call the Committee on Rules together on yesterday. The public prints this morning tell me that the rule or resolution was considered on yesterday.

I am exceedingly anxious that we shall not leave the law in its present uncertain state. I think it is a reflection upon the Congress as well as upon this body that there should be no regulations to meet present conditions. The Attorney General, it seems, within the last few days has given an opinion to the effect that the corrupt practices act, as it now appears upon the statute books, would not be effective even so far as it related to the election of Senators, and I realize there is room for controversy. I am not prepared, speaking as a lawyer, to say either that he is right or that he is wrong. If Senators have not taken occasion to go over this matter they will be interested, perhaps, in the history of the legislation and the constitutional amendment relating to the election of Senators by popular vote.

The corrupt practices act was approved August 11, 1911. At that time the only election of Senators known to the law was by the legislatures of the several States. The seventeenth amendment was submitted to the several States in May, 1912. The ratification of this amendment was not proclaimed until May 31, 1913; so that it will appear to Senators that the method of electing Senators, which obtained when the corrupt practices act was approved, was done away with, and there was substituted for that method the election of Senators by the people. Now, the question is, was the corrupt practices act, which applied to the election of Senators by the legislatures, broad enough to embrace a method of election by popular vote, which was authorized by the Constitution at a later date?

Of course, every lawyer realizes that this presents a very interesting, not to say difficult, question. I seek now to avoid that objection by a bill I am going to present. I have had the assistance of the drafting bureau in the preparation of this bill. In substance, it provides the same limitation and regulations with respect to the election of Senators by popular vote that were contained in the corrupt practices act of August 19, 1911, applying to the election of Senators by the legislatures. I also provide the same limitations and regulations with respect to the nomination of candidates for Senator that were contained in the corrupt practices act. I do this with some diffidence, because I realize that the majority of the Supreme Court, as it was then constituted, held that the seventeenth amendment did not cover primaries. While I accept their judgment for the time being, I have hoped that upon a reconsideration of the subject the court might change its view; and I am constrained to take this position because of the doctrine laid down by our Supreme Court in the case of McPherson against Blacker, in One hundred and forty-sixth United States Supreme Court Reports, page 1.

Without taking the time of the Senate to read this opinion, briefly the facts were these: Our fathers adopted the electoral college as a method whereby to choose the President and Vice President. The second clause of section 1 of Article II of the Constitution provides like this:

> Each State shall appoint in such manner as the legislature thereof may direct a number of electors—

And so forth.

Note the words "appoint in such manner as the legislature thereof may direct"; and in the early history of our country the legislatures in fact appointed the electors. Later on the States provided by statute for the election of presidential electors by popular vote. Then the question was presented to the courts, Is the popular election of presidential electors an appointment within the contemplation of this section of the Federal Constitution, which said that "the States shall appoint the electors in such manner as the legislatures thereof may direct"? The Supreme Court held that a statute of a State which provided for the popular election of electors was an appointment within the phraseology of the Constitution.

It seems to me that if the Supreme Court could so liberally construe this provision of the Constitution as to hold that a popular election of electors was an appointment as provided in the Constitution, they would be justified in saying that the seventeenth amendment, which provides for the popular election of Senators, is comprehensive and elastic enough to include any step which may be taken looking to the selection of a Senator or a senatorial candidate.

It is because I have faith in the decision of the Supreme Court as rendered in the case of McPherson against Blacker that I have presumed to reincorporate in the bill which I am about to present these provisions with respect to the primary.

Mr. President, I now ask that this bill, which I send to the desk, may be referred to the Committee on Privileges and Elections for their consideration. It does seem to me that this Congress ought not to adjourn, that the Senate ought not to adjourn, without doing something to regulate the practices which have grown up in this country, and which certainly all of us must regret.

The VICE PRESIDENT. Without objection, the bill will be received and so referred.

The bill (S. 3603) to regulate expenditures in connection with the nomination and election of Senators and Members of the House of Representatives, and for other purposes, was read twice by its title and referred to the Committee on Privileges and Elections.

Mr. McKELLAR. Mr. President, I wish to indorse most heartily the statement which has just been made by the Senator from Ohio [Mr. POMERENE]. It does seem to me that this body has the right and the power to keep men from occupying places in the Senate who go out on the market and buy them. The Supreme Court has held, by an opinion of five to four, that the corrupt practices act, so far as it relates to primaries, is unconstitutional, and the Attorney General has given us an opinion that the whole act is inapplicable to the selection of Senators, either in the primary or in the general election. So that leaves the matter open.

It is a matter of common knowledge that the newspapers throughout the country have been printing the story that seats in this body are now open to purchase, that they are open to the highest bidder, and the Senate is doing nothing in the world to prevent a situation of that kind.

The Supreme Court, in declaring in the majority opinion the corrupt practices act unconstitutional so far as primaries were concerned, had this to say:

> It should not be forgotten that, exercising inherent police power, the State may suppress whatever evils may be incident to primaries or conventions. As each House shall be the judge of the elections, qualifications, and returns of its own Members, and as Congress may by law regulate the time, place, and manner of holding elections, the National Government is not without power to protect itself against corruption, fraud, or other malign influences.

It seems to me that we find there a suggestion by the Supreme Court that the Senate is not powerless to prevent the purchase of seats in this body. We all know that seats can be purchased in primaries, as well as in the general elections, and it seems to me, with the situation as it is, with the floodgates open to the corrupt use of money, the Senate ought to do something to protect itself against persons coming in here through the purchase of seats.

For that reason I offered a resolution, and the senior Senator from Ohio [Mr. POMERENE] has also introduced a resolution to amend the rule so as to incorporate the corrupt practices act. Those measures to amend the rules have been referred to the Rules Committee of this body. It appears, from what the newspapers have stated, that some have thought that the two measures should go to the Committee on Privileges and Elections, and others have thought that they should go to

the Committee on the Judiciary. Under those circumstances I entered a motion yesterday for the discharge of the Committee on Rules from the further consideration of my resolution, and, of course, that motion went over under the rules of the Senate.

Mr. President, it seems to me that in the interest of the purity of the elections of Members of this body we ought to leave no stone unturned to protect the body against the purchase of seats herein. Both Houses of Congress have passed upon the corrupt practices act. We all believe that there should be a corrupt practices act, and it seems to me it ought to be embodied in a rule, and I ask unanimous consent that we proceed to the immediate consideration of this amendment to the rules.

Mr. MOSES. I object.

Mr. McKELLAR. I move that the Senate proceed to the consideration of the motion to discharge the Committee on Rules from the further consideration of Senate Resolution 289, and on that I ask for the yeas and nays.

Mr. MOSES. Mr. President, I suggest the absence of a quorum.

Mr. SMOOT. That is not the bill or resolution which has just been offered.

The VICE PRESIDENT. It is a resolution which is before the Committee on Rules.

Mr. McKELLAR. I move to discharge the Committee on Rules and to proceed to the consideration of this amendment to the rules.

Mr. McCUMBER. Mr. President——

Mr. MOSES. I have suggested the absence of a quorum.

Mr. McCUMBER. I was going to move to lay the motion of the Senator from Tennessee on the table.

Mr. MOSES. In either event, we want to have a quorum present.

Mr. McCUMBER. If the Senator will withhold that suggestion——

Mr. MOSES. I withhold the suggestion.

Mr. McCUMBER. I move to lay the motion of the Senator from Tennessee on the table.

Mr. MOSES. Now, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. ROBINSON. A parliamentary inquiry.

The VICE PRESIDENT. The Senator will state his inquiry.

Mr. ROBINSON. What is the parliamentary status?

The VICE PRESIDENT. The present status is the calling for a quorum.

Mr. ROBINSON. I understood the Senator from North Dakota to make a motion.

The VICE PRESIDENT. The Senator from North Dakota made a motion to lay the motion of the Senator from Tennessee on the table.

The roll call was concluded, and the following Senators answered to their names:

Brandegee	Harrison	McLean	Robinson
Broussard	Heflin	McNary	Sheppard
Bursum	Hitchcock	Moses	Simmons
Capper	Johnson	Nelson	Smoot
Caraway	Jones, N. Mex.	New	Spencer
Colt	Jones, Wash.	Newberry	Sutherland
Culberson	Kendrick	Nicholson	Swanson
Curtis	Keyes	Norbeck	Townsend
Dial	King	Norris	Underwood
Dillingham	Ladd	Oddie	Walsh, Mont.
Fletcher	La Follette	Overman	Watson, Ga.
France	Lenroot	Page	Watson, Ind.
Gooding	McCumber	Pittman	Weller
Harreld	McKellar	Pomerene	Williams
Harris	McKinley	Rawson	Willis

The VICE PRESIDENT. Sixty Senators having answered to their names, a quorum is present. The Chair will state the parliamentary situation.

The Senator from Tennessee [Mr. McKELLAR] made a motion to discharge the Committee on Rules from and that the Senate proceed to the immediate consideration of Senate Resolution 289, following which the Senator from North Dakota [Mr. McCUMBER] moved that the motion of the Senator from Tennessee be laid on the table.

Mr. McKELLAR. Mr. President, on that question I ask for the yeas and nays.

Mr. CURTIS and Mr. ROBINSON addressed the Chair.

The VICE PRESIDENT. The Senator from Kansas.

Mr. CURTIS. I wish to submit a request or have the Senator from Arkansas do so.

Mr. ROBINSON. I submit the request to the Senator from North Dakota that he withhold his motion to lay on the table until some members of the Rules Committee may briefly explain the situation touching the resolution.

The VICE PRESIDENT. Does the Senator from North Dakota withhold his motion?

Mr. CURTIS. It will take only a few moments.

Mr. McCUMBER. Very well, if the Senator so desires for just a few moments. I am trying to save time and get to work on the tariff bill. I withhold the motion to lay on the table.

Mr. CURTIS. It will not take long.

Mr. McCUMBER. I withdraw the motion for the present time.

Mr. CURTIS. Mr. President, I think that the Senate is entitled to have a statement with reference to this matter. The two resolutions were referred to the Committee on Rules, one introduced by the Senator from Ohio [Mr. POMERENE] and one day before yesterday introduced by the Senator from Tennessee [Mr. McKELLAR]. The first opportunity the committee had for a meeting thereafter was yesterday. I notified the two Senators referred to that I would have a meeting yesterday of the Committee on Rules.

The committee was called together, the resolutions were discussed, and the committee were of the opinion that we have no jurisdiction and that the resolutions should be referred to the Committee on Privileges and Elections or to the Committee on the Judiciary. I think most of the members thought they should go to the Committee on Privileges and Elections. One member expressed the opinion that they should go to the Committee on the Judiciary.

The chairman of the Committee on Rules was directed to consult with the Senator from Ohio and the Senator from Tennessee, as to their wishes, whether the resolutions should be referred to the Committee on Privileges and Elections or to the Committee on the Judiciary. Immediately after the committee adjourned I, as chairman of the committee, took up the matter, as directed by the committee, with the Senator from Tennessee and told him the result, and that it was my purpose to take up the question with the Senator from Ohio. The Senator from Ohio was not here yesterday, and this is the first time I have seen him since.

It does seem to me that it would be unwise under all the circumstances to have the matter acted upon and discharge the Committee on Rules when the committee is ready to consult the wishes of the two Senators and, as a committee, report that the resolutions shall be referred to the proper committee.

Mr. POMERENE. Mr. President, will the Senator yield?

Mr. CURTIS. Certainly.

Mr. POMERENE. Just a little while ago I introduced a bill, which was referred to the Committee on Privileges and Elections, which is substantially a reenactment of the old corrupt practices act of August, 1911. I then made the statement, in the absence of the Senator from Kansas, I believe, that I had conferred with him some time ago about it and that I had seen by the New York press that it was the intention of the chairman of the committee to confer with me to-day. I make that statement in fairness to the Senator from Kansas.

Mr. ROBINSON. Mr. President, as a member of the Committee on Rules I feel it my duty to make to the Senate a statement touching the resolution of the Senator from Tennessee [Mr. McKELLAR] and the consideration which has been given to that resolution by the Committee on Rules. The resolution was introduced by the Senator from Tennessee on the calendar day of May 11, and at the first meeting of the committee which has been held since that date it was brought to the attention of the committee by the chairman, the Senator from Kansas [Mr. CURTIS].

I am anxious to proceed in every proper and effective way to regulate the expenditure of money by candidates for membership in this body. No bill or resolution which in my opinion is fairly calculated to accomplish that result will be denied my prompt and cordial support. During the consideration of the resolution by the Committee on Rules I raised the question of the power of the Senate to control expenditures in elections, either primary or general, by means of a rule of this body to the extent of denying a seat in this body to a candidate who may have conformed to existing laws of his State touching the subject.

The Constitution of the United States defines negatively the qualifications of a Senator, and the Constitution gives to each House of Congress the power to determine the elections, returns, and qualifications of its Members. The Constitution does not give to the Senate the power to fix the qualifications of Senators, and it would be unfortunate if the Senate had that power. If the Senate by a rule could override the statutes of the States or other lawfully exercised authority for the regulation of elections and declare that a candidate who had conformed to the law in an election should be denied a seat in the Senate because he had not conformed to a rule of the

Senate, then by the enactment of rules the Senate would have and exercise the power to deny to the States their right under the Constitution, which every State admittedly has to equal representation in the Senate of the United States.

I have no doubt that it is within the power of the Senate to prescribe some rule touching the matter, but I have not the slightest doubt if the law of Ohio, for instance, permits a candidate to spend $10,000 in consummating his election to the United States Senate and the rule of the Senate limits the expenditure to $5,000 or to $750, as is the statute in some States, that an effort to deny one a seat in this body because he had complied with the laws of his State, the legal authority governing his election, and had failed to conform to a rule of the Senate touching the matter, would constitute a denial of the State's representation.

The power of the Senate to make rules is limited to the procedure of the body. It is a government after the organization and not for the constitution of the body itself. It no more gives the Senate the power to prescribe the qualifications of its Members than to fix the qualifications of other officers. If the Senate by fixing rules could regulate and determine who shall be Members of the Senate, then the majority of the Senate might deny representation to the States whose political opinions at the time were reflected in the minority. The Senate can make rules for the government of the conduct of its Members in the discharge of their duties after they become Members, but it has no power to make rules declaring who shall not become Members of the Senate, particularly if the rule contravenes the Constitution and the law touching the question.

Mr. BRANDEGEE. Mr. President——

The VICE PRESIDENT. Does the Senator from Arkansas yield to the Senator from Connecticut?

Mr. ROBINSON. I yield to the Senator from Connecticut with pleasure.

Mr. BRANDEGEE. I wish merely to amplify very briefly the statement made by the Senator from Arkansas, and to confirm what he has said, by calling attention to the exact wording of section 5, Article I, of the Constitution, which provides:

> Each House shall be the judge of the elections, returns, and qualifications of its own Members.

I call the attention of the Senate to the fact that there is nothing in the Constitution which confers upon the Senate the right to fix the qualifications of Senators, but the only right conferred upon the Senate is that it shall be the judge of whether or not Senators have the qualifications which are required by law.

Mr. ROBINSON. The Senator from Connecticut is anticipating the very next point of my argument.

Mr. BRANDEGEE. I beg the Senator's pardon.

Mr. ROBINSON. I thank the Senator, because he has made very clear in a few words what must be apparent to every lawyer, that the power of the Senate under the Constitution of the United States is not to fix the qualifications or to prescribe the terms or conditions under which Senators may be chosen, but it is the power—a quasi judicial power—to determine when or whether a Senator is elected and when or whether he is qualified. Even the courts of the United States, once the certificate of a person claiming to be a Senator is presented and received here, can not sit in trial upon his right to that seat. The only authority which can determine whether or not he is elected or whether or not he is qualified under the Constitution is this body, but the power to determine that question being a judicial or a quasi judicial power, is not to be confused with the legislative power, and the Senate in making rules can not legislate. The power of the Senate to make rules is not broader, is not more comprehensive, than the legislative power of the Government. If Congress can not deal with the matter by law, it not involving a judicial question under section 5 of Article I of the Constitution but involving only a legislative question, no one can contend that by the exercise of its power to make rules Congress may fix the qualifications of its Members or regulate the manner of their election.

Mr. WILLIAMS. Not even Congress, but merely the Senate.

Mr. ROBINSON. The contention here is that the power, having failed as a legislative power, is to be upheld as a quasi judicial power to make constitutional a rule of the Senate for the control of elections in the United States, when an identical statute which was passed by both Houses of Congress has been held unconstitutional.

No man more than I is interested in dealing with this subject effectively and intelligently. I will respond to any call from any source that invites my thought or my vote in support of valid, effective action by this body looking toward the prevention of the use of large sums of money in elections.

The way to deal with the question is by law and if the power under the Constitution as it now exists is so restricted that we may not go to the full extent we should like to go, let us do all that can be done under the organic law of the land through the enactment of a statute, and then, if necessary, let us amend the Constitution. Do not, however, waste time in adopting a rule governing the procedure of this body which, in fact and in law, is designed to be an exercise of legislative power and which must fail when tested in the courts.

In the form in which it is now proposed, I would not vote for the rule, because I am not willing to give to a majority in the Senate the power to deny representation to the minority in this body, and no Senator dare do that, however interested he may be in preserving the integrity of elections.

I supported the suggestion in committee respecting jurisdiction that was made by the Senator from Alabama [Mr. UNDERWOOD] and concurred in by the Senator from Mississippi [Mr. HARRISON]. While the Committee on Rules has jurisdiction to recommend any rule which is within the power and authority of the Senate to adopt and enforce, it has no power to prescribe the terms and manner of holding elections for Senators. If it had that power, and should exercise it in contravention of the power now exercised by the States, the States would either be compelled to conform their statutes to the rule of the Senate or be denied the privilege of representation here because they had refused so to conform.

In the State of Kansas, for instance, if I am correctly informed, the law permits the expenditure of only $750 by a candidate for the Senate. A similar limit exists in California. The rule varies in the different States, and a Federal law on the subject is needed and justified; but there can not be accomplished by a rule of the Senate what the Congress of the United States can not do by legislation, because the power of the Senate under the Constitution in reference to the qualifications of its own Members is not legislative, but is judicial or quasi judicial; it is not to prescribe the manner, the method, or the conditions that shall apply to elections, but it is to determine the validity of an election after that election has occurred. It is not to define the qualifications of a Senator, but to judge whether the qualifications prescribed by the Constitution and the laws enacted pursuant to it exist in fact.

Mr. WILLIAMS. Mr. President——

Mr. LENROOT. I rise to a point of order. I make the point of order——

Mr. McKELLAR. Mr. President, before the Senator makes the point of order I should like to be heard for just a few moments, not exceeding five minutes, I think.

Mr. LENROOT. I will reserve the point of order for that purpose, the Senator from Tennessee having made the motion.

Mr. McKELLAR. I thank the Senator for his courtesy.

Mr. President, in view of the speech made by the Senator from Arkansas——

Mr. WILLIAMS. Mr. President, if the point of order has not prevailed, I had addressed the Chair and had supposed I was recognized, but a point of order of some sort was made.

The PRESIDING OFFICER (Mr. SPENCER in the chair). The Senator from Wisconsin withdrew for a moment his point of order at the request of the Senator from Tennessee. The Senator from Tennessee is upon the floor because the Senator from Wisconsin yielded to him.

Mr. WILLIAMS. But the Senator from Wisconsin can not farm out possession of the floor. He can make his point of order, but if the point of order has been withdrawn, I had addressed the Chair first, and unless I am out of order, I want to be heard.

Mr. LENROOT. A point of order is in order at any time, and I will make the point of order unless the Senator from Tennessee, being the mover of the motion, can be recognized.

Mr. McKELLAR. I should like very much to be recognized, if the Senator is willing to yield.

Mr. WILLIAMS. I had claimed the floor before the Senator from Tennessee rose.

Mr. CURTIS. Mr. President——

The PRESIDING OFFICER. The Senator from Wisconsin has the floor.

Mr. McKELLAR. Mr. President, will the Senator from Wisconsin yield to me?

Mr. LENROOT. I yield to the Senator from Tennessee.

Mr. WILLIAMS. Mr. President——

Mr. CURTIS. Mr. President, I rise to a point of order. I had intended to make the point which, I presume, the Senator from

Wisconsin was about to make, that the motion is not in order at this time because under the rules it must lie over for one day.

Mr. McKELLAR. Mr. President, will the Senator from Kansas withdraw his point of order?

Mr. CURTIS. No; I will have to insist on it.

Mr. McKELLAR. I should like to be heard for just a moment. I do not think the point of order is well taken. It is true the motion would have to lie over for one day, but it has gone over for one day.

Mr. WILLIAMS. The motion has to go over for a day, but not the discussion of the motion. The Senate is in the habit every day of discussing questions that have not as yet precipitated themselves parliamentarily. It is with a view of following that practice that I rise.

The PRESIDING OFFICER. The point of order made by the Senator from Kansas is well taken. To-day is the same legislative day as yesterday, and the motion has not gone over one day under the rule, because the Senate has been in recess. Therefore the motion is not before the Senate.

Mr. WILLIAMS. Now, I ask for recognition by the Chair.

Mr. CURTIS. Mr. President——

The PRESIDING OFFICER. The Senator from Mississippi has the floor.

Mr. WILLIAMS. Mr. President, a moment ago, just before he took his seat, the Senator from Arkansas [Mr. ROBINSON] said that the rule as to the amount of money which may be expended in the several States in senatorial elections varies. Now, I wish to submit the observation that the rule *ought* to vary. It is literally absurd to say that a candidate running for the office of Senator in the Empire State of New York, with its immense population and large area, shall not expend any more money in a primary election or in a general election than a candidate running for the same office in the State of Delaware, with its very small population and its very small area.

Our ancestors were much wiser in a few things than is the modern so-called progressive seeking uniformity. Uniformity would be a curse if it were enforced throughout all of the States, not only in regard to the subject matter now under theoretical consideration but in regard to nearly everything else. I have no sympathy at all with the idea that marriage laws should be the same in Florida as in Maine; climate suggests something different. The very "E pluribus unum" upon our seal shows that we are one out of many; and, Mr. President, it is not without reason that we are the United States, and that the United States are plural and not singular. We are one Government composed of many States, and the States are plural even after they are united under one Federal Government, which is singular.

Mr. President, the Democratic Party for years fought the idea that the Federal Government could perpetuate a given majority in power by usurping the authority of the States over "elections and returns and qualifications." The language of the Constitution is that each House shall be "the judge of"—"the judge of"; not that it shall prescribe, not that it shall create, not that it shall ordain, but that it shall be "the judge of" the elections and returns and qualifications of its Members.

What does the phrase "the judge of" mean? It means to include only existing facts, because you can not be the judge of a thing which does not exist. You can not create the thing under the guise of being the judge of it. What is the existing fact of which the Senate is to be a judge with regard to the returns and the elections and the qualifications? The existing fact is the ordinance or prescription made by the Constitution and by the laws passed "in pursuance" of it; not any law of Congress; not even a law, much less a rule, of one of the two bodies of Congress. Even the law passed by Congress prescribing, fixing, and creating elections and returns and qualifications must be in pursuance of the Constitution—even the law. A fortiori must a *rule* of either body be not only "in pursuance of" the Constitution but limited to the transaction of its business *after* it has been organized. A rule of any body, whether of a corporation or of this body, has nothing to do with the *constitution* of the body. It has nothing to do with the *creation* of the body. It has nothing to do with the election of the Members of the body. It merely prescribes how business shall be conducted *after* the body has been *lawfully* organized.

That is all there is to it. You can not create a rule of this body which shall fix my qualifications as a Senator, or which shall change the election in the State, or which shall falsify the return from the State. What is your power? It is "to judge" of the return. Does that enable you to change the return? You are simply to sit in a judicial capacity and determine which of two candidates has received a majority by the lawful "return," lawfully ascertained, in pursuance of the constitution of the State, in accordance with the State law, provided that the State law itself does not violate the Constitution of the United States.

How are you to be the judge of "the election"? Precisely in the same way. How are you to be the judge of the qualification—the judge of what qualification? Not a thing created by you. An existing thing prescribed by law under the Constitution, or, rather, prescribed by the Constitution, and such laws as are passed in pursuance of it.

Mr. President, I merely wanted to utter my protest against what seemed to be assumed by the Senator from Arkansas, as a thing to be desired, to wit, that there should be the same rules in each State as to the expenditure of money in an election for the Senate. Take Delaware; take Rhode Island; take Nevada; take Texas—the first, a State with very small area and very small population; the second, a State with very dense population, though small area; the third, a State of very large area, although very sparse population; the fourth, a State of sparse population with immense area, equal to half of Europe in its domain.

There ought to be common sense in everything. The great merit of the Anglo-Saxon has been that he has always used common sense. He is not a theorist. He is not a mere logician. He does not undertake to say that under all circumstances and at all times a given theory should prevail. The theory must vary with the conditions; and if the theory does not vary with the conditions, then justice, which is the thing to be aimed at, has been sacrificed. It is absolutely absurd to say that in an agricultural State like Mississippi, where no money at all is needed in elections except for traveling expenses and hotel expenses and the dissemination of literature, a man should be allowed to expend as much money as the absolute necessities of the case would require in a State like New York. The very permission would argue corruption. Why, if I spent as much money as a candidate for the Senate in Mississippi as another in New York might expend without objection, moral or legal, ethical or otherwise, I would be, by the very fact of the disproportion between the expenditure and the end aimed at, guilty of corruption.

Of course it is true that there is a limit beyond which the expenditure of money by its very amount means corruption; but that limit varies in Delaware, in New York, and in Mississippi. So you come back finally to the doctrine of our fathers: The State ought to be the judge of the amount of money which ought to be spent in a primary or a general election within that State, and the only supervision that the Senate or the House ought to take over it is this: That where the amount has exceeded the amount prescribed by the State, the law has been violated; and wherever the State should prescribe an amount so large as to be in itself proof positive—obvious, plain, and palpable—of corruption, then the State could judge that the limit had been passed, and that the spirit of the law had been violated, and that the man, as in the Newberry case, had rendered himself unfit by mere expenditure for a place upon the floor.

The PRESIDING OFFICER. The question is upon agreeing to the amendment of the Committee on Finance to the pending tariff bill.

Mr. McCUMBER. Mr. President, it has been so long since we have considered the tariff bill that I think we will have to revive our memories a little by having the Secretary state the pending amendment.

Mr. McKELLAR. Mr. President, before that is done will the Senator yield to me for about five minutes?

Mr. McCUMBER. Mr. President, let me call the attention of the Senator to the fact that we have now spent 1 hour and 40 minutes to-day in discussing something that is not before the Senate, which the Chair has ruled is not before the Senate. The Senator from Utah has not had an opportunity to get in his second or third speech on this amendment during the legislative day, and it does seem to me that we ought to stop this everlasting discussion of matters entirely outside of the question before the Senate.

Mr. McKELLAR. I am sure the Senator will admit that I have taken as little time as any Senator on this floor during this debate.

Mr. McCUMBER. No; the Senator started the ball rolling this morning, and it has been kicked all over the Senate Chamber——

Mr. McKELLAR. That is true.

Mr. McCUMBER. And the discussion is liable to last an hour or two longer unless I insist on going on with the tariff bill.

Mr. McKELLAR. I will be perfectly frank with the Senator. I have made a courteous request of him. The Senator

will not save any time by denying a reasonable and courteous request such as I have preferred.

Mr. McCUMBER. I am certain, Mr. President, that the Senator can say what he is going to say no matter whether I yield the floor now or not——

Mr. McKELLAR. Why, of course, I can. I am perfectly aware of that.

Mr. McCUMBER. Or whether I yield it 10 minutes from now. Consequently, with the assurance of the Senator that he is only going to take five minutes, I yield to the Senator from Tennessee.

Mr. McKELLAR. Mr. President, the first thing I desire to do is to prefer a unanimous-consent request. I ask unanimous consent that the Committee on Rules be discharged from the further consideration of Senate Resolution 289, and that it be referred to the Committee on Privileges and Elections.

Mr. CURTIS. There is no objection to that.

The PRESIDING OFFICER. Unanimous consent is asked. Is there objection?

Mr. CURTIS. I ask, however, that that request also include Senate Resolution 210, introduced by the Senator from Ohio [Mr. POMERENE], so that both of them may go there.

Mr. McKELLAR. I do not know just what the Senator from Ohio might desire to have done if he were present.

Mr. CURTIS. I ask that the request be amended so as to include both, and I shall talk the matter over with the Senator from Ohio.

Mr. McKELLAR. Very well; that is entirely satisfactory to me.

The PRESIDING OFFICER. Is there objection? If not, it is so ordered. The Committee on Rules will be discharged from the further consideration of Senate Resolution 289 and it will be referred to the Committee on Privileges and Elections, and the same action will be taken with Senate Resolution 210, offered by the Senator from Ohio.

Mr. McKELLAR. Now, Mr. President, I desire to say just a word about the proposed rule.

Section 5 of Article I of the Constitution of the United States provides as follows:

> Each House shall be the judge of the elections, returns, and qualifications of its own Members.

If, instead of saying "each House," the Constitution had provided that "the Congress shall be the judge of the elections, returns, and qualifications of its own Members," would anybody deny that Congress had the full power to pass such a law as has been passed, and which has recently been declared unconstitutional? I take it that if the Congress now were clothed with the plenary power of that clause in section 5, no lawyer in this body would make the argument that Congress did not have the power to pass the bill that has been passed and has been declared unconstitutional by the Supreme Court.

Instead of saying the Congress shall have the power, the Constitution provides that each House shall be the judge of the elections, returns, and qualifications of its own Members, and this body has followed in the past the very principle which I say pertains in this case. When Mr. Lorimer was deprived of his seat in this body, it was under this section. There was no statute of the United States under which he was declared disqualified. He was disqualified under this plenary power.

To say that the Senate can not exercise the right under this power granted to it to make a rule governing such cases is, to my mind, the denial of what is perfectly apparent. If the Senate has the power to pass on the qualifications of a Senator, it has the power to fix the rule under which it shall pass upon the qualifications of a Senator. One inevitably follows the other.

Mr. President, I am not going to take any time to discuss this matter further except to say that under the present conditions we have no regulation of any kind, no law, no rule governing the expenditure of vast sums of money for seats in the Senate. I want action. I think the Senate ought to take action. I hope the Senate will adjourn before a great while. We are not going to sit a great deal longer, and something ought to be done about this, and for that reason I offer the amendment to the rule.

I do not think we ought to come to another election before some rule or some regulation or some law is passed which will prevent the purchase of seats in this body. The purchase of seats in the United States Senate has gotten to be a common scandal, and it ought to be stopped. We ought to find a way of stopping it, and I believe that the way proposed by me, in direct accord with what the Senate has already adjudged, in direct accord with the precedents of the Senate, is the proper way by which the result that all of us ask for can be obtained.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, the pending question being on the amendment of the committee in paragraph 29, on page 16, line 4, after the word "value," to strike out the words "65 cents per pound and 25," and to insert "60," so as to read:

> Made into finished or partly finished articles, of which any of the foregoing is the component material of chief value, 60 per cent ad valorem.

Mr. KING. Mr. President, just one word before proceeding to the discussion of this amendment. I have listened with interest to the debate concerning expenditures in senatorial elections, and the proposition to provide by rule of the Senate for a limitation of expenses by candidates for the Senate. I suggest to the junior Senator from Tennessee [Mr. McKELLAR] and to others who may share his views, and particularly to Democrats who believe in, or are supposed to believe in, the rights of the States and the capacity of the people for local self-government, that there is danger if they press too far the doctrines suggested that the powers of the States to determine vital matters, matters which appertain to sovereign States, will be destroyed and the Federal Government made supreme in domestic affairs and in all election matters. Every State has plenary power to enact such laws as it may deem proper for the regulation of expenditures of candidates. I am willing to trust the people of Tennessee and the people of Massachusetts and the people of other States. Congress has the power, regardless of any State law, if it believes that corruption has vitiated an election or has resulted in the triumph of a candidate, to refuse him a seat, or, at any rate, to expel him. So I am not so much concerned in regard to that matter because the Senate has the power to expel a Senator if there has been corruption or evil and corrupt practices which have won the election for the Member whose seat may be contested or whose right to a seat may be challenged.

Mr. McKELLAR. In view of the Senator's vote on that subject, I was wondering if he trusts the people of Michigan to be honest and fair in the matter of the election of United States Senators.

Mr. KING. Mr. President, I shall not indict a whole people. Burke declared many years ago that could not be done. No doubt there was corruption in the primary election, and without a Federal statute the Senate had the right to consider the question of the right of the sitting Member to his seat in the Senate and act as its judgment dictated with respect thereto. In other words, there may be such corruption in an election, such profligate expenditure of money, as to warrant the Senate in expelling a Senator who was the beneficiary of the improper and wrongful act.

But I shall not pursue the matter further.

Mr. President, the Senator from North Dakota unfairly commented upon my "second or third speech" upon this item. I have made no speech upon it. I was calling attention to its provisions when a recess was taken last evening.

I regret that under the rules I am not permitted to amend, in line 2, by striking out the numerals "40" and inserting in lieu thereof "25 per cent ad valorem," but I move to amend, in line 5, by striking out the numerals "60" and inserting in lieu thereof the numerals "40."

As a matter of fact, this article ought to be placed upon the free list, and I serve notice now that when we return to this section, after we have concluded the committee amendments, I shall move to amend, in line 2, by striking out "40" and inserting "25 per cent ad valorem."

With respect to the item now under consideration, I might add that the Senate amendment will prove highly advantageous, if adopted, to the Du Pont Co., with its several hundred millions of dollars capital. An increase in the rate laid upon this item will add greatly to its profits. That corporation, or some of its subsidiary corporations, is a manufacturer of many products that are denominated pyroxylin products and which are embraced within paragraph 29. Briefly, pyroxylin, as is shown by the survey, does enter into many of the commodities which are in daily use by the people. I read from the survey:

> Pyroxylin plastics are substances composed of pyroxylin and camphor. They are sold under different trade names, such as "celluloid," "fiberoid," "viscoloid," and "pyralin."
>
> Pyroxylin plastics are used for making combs, mirror and brush backs, knife handles, buttons, toys, and many other articles.

Senators will observe the multitudinous uses to which this important product is put. I read further:

> The materials used in the manufacture of the plastics are pyroxylin, camphor, alcohol, and substances to be used as pigments and stabilizers. The stabilizer usually used is urea and the pigment zinc oxide.

It will be seen, Mr. President, that we have in our own country the constituent parts of pyroxylin in all of its forms. We are rich in the primary products, if I may be permitted that expression, which constitute the finished product of pyroxylin in its various forms. The domestic production of pyroxylin plastics has increased greatly, its value in 1899 being $1,526,000, in 1919 nearly $5,082,000, in 1914 being $8,876,000, and in 1919 the preliminary figures show the product to be $30,069,000.

The same tariff report shows that the imports of pyroxylin plastics, not made in the finished or partly finished articles, have never averaged more than 1 per cent of the domestic production, and the imports of the partly or wholly finished manufactured articles in 1914 were approximately 10 per cent of the domestic production.

Let me call attention to the latest statistics, to show that there is no necessity, even from a protectionist standpoint, justifying this high duty or any duty, and that the imposition of this rate must have been directed to satisfy the greed of the trusts and corporations interested in the manufacture of these products.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from North Dakota?

Mr. KING. I yield.

Mr. McCUMBER. If the Senator will allow me, there are a great many celluloid articles which are coming in under other heads. Therefore, just taking the particular importations the Senator speaks of is not a fair statement of the real conditions.

Let us take toys, for instance. An immense quantity of toys are coming in from Japan, but they will come in under the head of toys rather than under the head of these celluloid productions. That is explained by the Tariff Commission.

Mr. KING. The Senator knows that there is a heavy rate laid in this bill upon toys, and I doubt not that upon every product in which celluloid, or pyroxylin in any of its many forms, is used bears a very high rate. As a matter of fact, the rate on toys in the existing law is higher than the rate on this article.

Mr. McCUMBER. The Senator does not mean existing law. The existing law carries a duty of 35 per cent on toys.

Mr. KING. Let me call attention, as I was about to do, to the imports in later years. In 1918 the entire quantity imported was 4,977 pounds. The unit value was $1.22 per pound. That was the import valuation. In 1919 the imports were 5,000 pounds plus. In 1920 they were 7,000 pounds plus; in 1921 they were 29,000 pounds plus. The entire importations in the last nine months of 1921 were $71,332 in value. The number of pounds is not given in the statistics which I have.

We have exported celluloid. In 1910 our exports were valued at $1,189,080; in 1914, at $1,387,541; in 1917, at $3,112,000; in 1920 they amounted to 8,000,000 pounds. There was a marked falling off in 1921 to two and a quarter million, as there was a falling off in substantially all of our exports.

It is not to be wondered that there should be a decline in the volume of exports of this product, as a decline is noted in practically all of our exportable products during that year.

So we are confronted now with the fact that we are producing in such large quantities as to satisfy the domestic market, and, in addition, we are reaching out to satisfy a portion of the world's demands. Our imports, as stated, are practically nil. It can not be claimed that we will derive revenue from this duty. Therefore from a revenue standpoint this rate can not be supported. No necessity exists for the protection of the domestic market, because there is no foreign competition. Therefore it is obvious that the only purpose of this high rate is to permit the trusts and those who control these compounds to maintain the extortionate prices now imposed or if desired to raise them to higher levels.

Mr. President, I denounce a policy of this character, particularly where it deals with the products which are so important in the life of the people. The producers comprised under this paragraph enter into every home. There is not a home in the United States that does not buy one or more of these pyroxylin products. The bill taxes every woman who buys a knife or some article for her home which contains any form of celluloid product. The combs, the brushes, and the thousand articles of daily use in which celluloid in any of its varying forms is used are heavily taxed in this bill. May I inquire for whose benefit? For the benefit of the Du Pont Co. and other great corporations, which have during the past 10 or 15 years made hundreds of millions of profits.

Let me call attention to some who are interested in making these compounds: The E. I. du Pont de Nemours Co.; the American Cellulose Co.; the Hercules Powder Co., another of the allied companies of the Du Pont interests; the Conowingo Chemical Co. of Pennsylvania. These are among the number of corporations engaged in the manufacture of these products.

Mr. President, this is about all I care to say in regard to the item.

Mr. McCUMBER. Mr. President, I think I should complete the list the Senator has given by including the Viscoloid Co., the Fiberloid Co., and the Nixonoid Co., which are all manufacturing this product.

Mr. President, yesterday one of the Senators upon this side of the Chamber, if I understood his language correctly, stated that he was not inclined to follow the report of the committee unless the committee gave the reasons in these instances which guided it in arriving at certain rates. Because of that I am going to take a little more time in discussing this particular amendment than I otherwise would. If I took the same length of time in the discussion of every amendment, of course, we would not get the bill through the Senate this summer. I am trying to facilitate the progress of the bill as much as possible by refraining from entering into any general discussion of the thousands of items which are included within the amendments.

The House bill provided on these compounds of pyroxylin, of other cellulose esters or ethers, or of cellulose, by whatever name known, that there should be placed a duty of 65 cents per pound specific and in addition thereto 25 per cent ad valorem. The committee struck out the 65 cents per pound and 25 per cent ad valorem and proposes simply 60 per cent ad valorem.

Now, we have given what may seem at the first glance to be a rather steep duty—60 per cent ad valorem. If any Senator thinks that there was any mere guesswork in applying the rates to any one of these items, he is woefully mistaken. If he had been before the committee every day during the long months when we were laboring upon the bill, he would have found a large blackboard with the figures of the rates, the importation costs, the cost in the United States, the profits that were made, the landing charges, the amount received for the foreign article in the United States, and the amount received in the markets of the United States for like or similar articles that entered into competition.

He would have found our lightning calculators and our mathematicians working out a system upon that blackboard in an attempt to equalize what we call in another portion of the bill the competitive conditions between the foreigner and the American manufacturer. We have as a rule followed this system just as closely as we could and have given great care to every one of the items. Of course, there are fluctuating prices, as the Senator from Utah has indicated, and that rendered our work more complex and difficult.

Mr. KING. Mr. President——

Mr. McCUMBER. I yield to the Senator from Utah.

Mr. KING. I wish to inquire of the Senator if he was not mistaken in giving the impression that there was any testimony before his committee with respect to these pyroxylin items? There was not a word of testimony, so far as the Senate hearings indicate, and the only testimony that I can find is that found in the House hearings at pages 145 to 150. That testimony is very unsatisfactory. Of course, it is the testimony of interested witnesses. They are not subjected to cross-examination, and it is a bald, bare demand—that is the effect of it—for these very heavy rates.

Mr. McCUMBER. I will give the Senator a little more evidence and will let him arrive at his own conclusion as to whether the Tariff Commission, made up of partisans, we will say, or both sides, or nonpartisans or bipartisans, whatever he sees fit to call them, have not given a rather satisfactory report. I think they have tried to give us an unbiased statement of the situation and for the very purpose of guiding our judgment in arriving at these rates.

I call attention to the summary of tariff information for 1921, at page 87.

Mr. KING. Mr. President, I concede the Senate committee had the Tariff Commission report, but I am speaking of the independent testimony, the testimony of witnesses. The Senator spoke of that.

Mr. McCUMBER. Of course, we must use all the testimony that is in the report, not only from the Tariff Commission, not only from the daily reports of prices which are presented to us, but in addition to that the testimony of witnesses. I will read but a paragraph or two:

> The domestic production of pyroxylin plastics has increased greatly, its value being in 1899, $1,526,572; in 1909, $5,682,379; in 1914, $8,876,509; and in 1919 (preliminary figures), $30,169,000.
>
> Germany was formerly the largest producer of pyroxylin and our strongest competitor. England and France were extensive manufacturers of pyroxylin plastics before the war. When the factories were largely given over to the making of explosives the production of plastics

in those countries greatly diminished, with a consequent increase in exports from the United States. Japan will probably become the leading competitor under normal conditions, since she controls the world's supply of camphor and is growing in experience in manufacture.

Synthetic camphor was manufactured in this country during the war, but its manufacture was discontinued because of the low prices of natural camphor. It is now reported (December, 1921) that manufacture is to be resumed at an early date.

Now, Mr. President, we have some testimony as well upon the subject, and I will read a little of it. Of course it is from interested witnesses, but, as a rule, while witnesses may consider that they need a protection greater than is actually needed, and we must always make allowance for their inclinations in that direction, nevertheless I think we can rely ordinarily upon given statements of fact made by them, and especially when we can compare those facts with the commercial reports and ascertain whether or not they agree with them.

Here is the testimony of Nathan M. Clark, vice president of the Celluloid Co., representing the Pyroxylin Manufacturers' Association. On page 145 of the House Ways and Means Committee Hearings he said:

We were saved by the World War, for it at once shut out Germany, France, England, and Japan more effectively than any tariff we might hope to ask for.

The war is over, but it has left us burdened with heavy taxation. We are paying the highest wages ever known in the history of this country. Our raw materials are more than 150 per cent higher than pre-war.

Now, remember that the present Underwood-Simmons law gave a 40 per cent protection when the wages in the United States were 150 per cent less than they are now.

Mr. KING. If the Senator from North Dakota will yield to me, I desire to say that the Underwood law imposed a duty of 40 per cent on certain products and 25 per cent on others. There was a differentiation.

Mr. McCUMBER. Yes; but on the finished product the protection was 40 per cent. The witness continued further as follows:

And the condition of foreign exchange is the most threatening menace to our manufacturers they have ever before faced.

Our European competition is very serious. The competition from Japan threatens to annihilate us. Europe and America are in a similar position as regards camphor, which enters largely into our commodity, but Japan rules the world as to this item. We are at her mercy when we buy camphor. She tells us how little or how much we may have, the price we must pay, and has systematically reduced our supply.

Naturally her control of this item has given her intimate knowledge of its use. Some years before the war the Japanese evidently coveted the pyroxylin plastic business, of which they had learned from their camphor distribution, and numerous factories were there instituted to make a home market for their camphor and at the same time control the pyroxylin industry. This effort was successful, and made great progress up to 1914–15, when all but one of these factories were diverted to war purposes. Since the armistice there has been a general amalgamation of Japan industries and the pyroxylin manufacturers have recently been consolidated into a governmentally fostered trust, which is now spreading out its tentacles to monopolize the pyroxylin plastic business of the world. To-day the American market is flooded with circular letters and samples of materials offering Japanese material under the trade-mark of the Celluloid Co.

With the highest Japanese daily wage in any industry of 45 cents as compared with the American average of $5.25 in this industry, and Japan in complete control of the camphor supply, it does not take much imagination to see the great disadvantage of the American manufacturer.

It is evident from the statistics that the American pyroxylin plastic industry exports but a normally small proportion of its production. Its market must be essentially American, and should be preserved.

That was paragraph 25 of the Underwood law.

Now, Mr. President, let us see whether or not this statement is borne out by the information secured from the Reynolds report. I have a table here showing for certain groups of items of manufacture, the country, foreign value, the landing charges, the selling price of the imported article, the selling price of the like domestic article, the rate required to equalize the difference between the foreign and domestic selling price, the Senate committee rate, and the profit and overhead allowed on cost. I will take combs, and under the head of countries will select France. Take the unit value of a dozen French combs, $4.58; the landing charges, 37 cents; or a total, by adding the two, of $4.95. Practically the same domestic article is sold for $9.25. It would require, to equalize the American price with the foreign price, after allowing a 25 per cent profit on cost to the importer, a rate of 54 per cent. We have given them more than that; we have given them 60 per cent.

In England wages have risen enormously, and in order to equalize the American and English costs the rate would have to be only 20 per cent. Still, we are compelled to make our rates general upon the foreign valuation, and to allow 60 per cent when it is only necessary to grant from 12 to 20 per cent against the British manufacturer.

Now I come to the Japanese manufacturer, and I will take as an example a gross of combs. The average Japanese cost, shown for two items in the report, is $6.46 a gross; the landing charge is 65 cents, and the selling price of the foreign article is $13.63. The American selling price for a gross of the equivalent article is $30.40. Therefore, in order to equalize the American product with the Japanese product, even allowing the importer 25 per cent profit on cost, we would have to have a duty of 266 per cent.

We have not given the American manufacturer 266 per cent, but we have given him a protective rate of 60 per cent. Another group of Japanese articles would require 108 per cent. Yet we have given only 60 per cent ad valorem duty upon all these importations.

Mr. President, that 60 per cent ad valorem duty is necessary not to equalize the cost between the American and Japanese product, because that rate does not begin to equalize the difference; but we do not lose sight of the fact that the American manufacturer can fill orders quickly in the domestic market; that he is in direct communication daily with his customers, and that gives him an advantage in itself. However, taking all of these factors into consideration, we believe that the American manufacturer, in order to hold his own against the Japanese manufacturer, must have at least 60 per cent ad valorem duty.

I do not intend to cover every item in this bill with as full discussion as I have given upon this one item. I simply say that there are so many items that it is impossible to take the time to discuss each one of them in detail and at sufficient length to give the Senate a clear and comprehensive understanding as to why the committee fixed each particular rate.

The PRESIDING OFFICER (Mr. McKINLEY in the chair). The question is on agreeing to the amendment offered by the Senator from Utah [Mr. KING] to the amendment reported by the committee.

Mr. KING. Mr. President, just a word in reply to the Senator from North Dakota. The first figures read by the Senator I have put into the RECORD, and I shall not quote them all again. The preliminary figures for 1919 show a domestic production valued at more than $30,000,000. To show that we have no competition, all that is required is to direct attention to the fact that from 1899 to 1919 the domestic production increased from $1,526,000 worth to more than $30,000,000 worth.

The Senator from North Dakota also read the words:

Germany was formerly the largest producer of pyroxylin and our strongest competitor.

When Germany was our strongest competitor, and was one of the largest producers of pyroxylin products, the imports into the United States of what might be denominated unmanufactured products or compounds of pyroxylin were less than 1 per cent, and of the finished and semifinished products of pyroxylin and all compounds were less than 10 per cent. So when Germany was at the zenith of her industrial power, when she had brought her chemical efficiency to the highest state of perfection, she could not compete with us, and we were shipping abroad and competing successfully with Germany and other nations in the markets of the world, increasing our exports from about 1,000,000 pounds to several million pounds. Not only were we satisfying our domestic needs, but, as I have said, we were competing with Germany and other nations in the markets of the world. How, in the light of these facts, can this tariff rate be justified?

Germany confessedly is not now a competitor, and there must be some other hobgoblin, when Germany is out of the way, brought into the Senate to frighten Senators to an acceptation of the terms of this bill. So the Senator quotes from the Tariff Commission, which indulges in speculation more than it should as a collator of facts. It uses these words:

Japan will probably become the leading competitor under normal conditions.

Mark the words—"will probably become the leading competitor under normal conditions." Yet the Tariff Commission has stated that—

Germany was formerly the largest producer of pyroxylin and our strongest competitor.

I am not sure, if we attribute to these words and to the adjectives the proper meaning, whether they consider Japan, if she is a competitor, a stronger competitor than Germany. I am not sure whether they interpret the words "will probably become the leading competitor" as meaning a stronger competitor than Germany; but they say that Germany was our strongest competitor when she and all other nations combined exported to the United States 1 per cent of the unmanufactured product and 10 per cent or less of the semifinished or finished product. If Germany and all other nations could send to the United States only when Germany was the "strongest competitor" the limited quantity which I have indicated, then

where is the basis for apprehension of Japan becoming a formidable rival of the United States in the domestic market and in the world market?

That is a mere conjecture, a mere speculation. The Tariff Commission was obviously unfair in the statement respecting Japan if the language is to bear the meaning which my learned friend places upon it; but when we consider that the commission declared Germany to be our "strongest competitor" when she and all the world sold us so little, we are warranted in attaching but little importance to their prognostication of what Japan may do in the future as a "probable" competitor of the United States.

Now, Mr. President, we are confronted with the fact that prices have been raised enormously over those of pre-war days, and it is undoubtedly the purpose of the trust engaged in the manufacture of these products to maintain prices at a high level, or possibly to increase them. The pre-war price of sheets and tubes—what might be denominated the semifinished or semimanufactured products—was 47 cents per pound. It is a little difficult to determine the present domestic price, because of the various forms assumed by the semifinished and the completely finished products, and the Tariff Commission does not give us those figures; but the foreign unit value of unfinished products in 1921 was $1.20 per pound. So, it is apparent that other nations are charging now, because of industrial conditions, much more for the products of pyroxylin than they did prior to the war, so neither Germany nor any nation can be a successful competitor, particularly if pre-war prices are to govern. Indeed, the prices in the world now, as far as I can judge from the figures before me, must be from 100 to 300 per cent in excess of the pre-war prices. Therefore, producing as we do practically all that we consume, and exporting millions of pounds annually, it would seem that there can be no justification for the imposition of this rate. No reason exists for this high rate except that the manufacturers want it in order that they may exploit the people. They evidently regard Congress as pliant and complacent.

I am ready for a vote.

Mr. SMOOT. Mr. President, the Senator from North Dakota [Mr. MCCUMBER] was called from the Chamber a moment ago, and he asked me to put in the RECORD the figures of production of celluloid and manufactures of celluloid by Japan, showing the increase, beginning with the year 1915, down to 1921. The figures are taken from the Thirty-fifth Statistical Report of the Department of Agriculture and Commerce of Japan, and the yen is converted to par of 49.8 cents. I do not want to read the figures. I simply ask that they be printed in the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Japanese production of celluloid and manufactures of—Production in principal foreign countries.

[From the Thirty-fifth Statistical Report of the Department of Agriculture and Commerce, Japan. Yen converted at par value of $0.4985.]

1915	$661,336
1916	1,705,527
1917	3,295,187
1918	7,188,017

Mr. WALSH of Massachusetts. Mr. President, may I ask the Senator if camphor is not a very important product in the manufacture of celluloid?

Mr. SMOOT. It is.

Mr. WALSH of Massachusetts. And is it not a fact that Japan practically controls the entire output of camphor?

Mr. SMOOT. She controls the entire output, with the exception of what little synthetic camphor was made in Germany before the war and what we made during the war; and to-day the one factory in the United States that made synthetic camphor during the war is closed entirely.

Mr. WALSH of Massachusetts. Is it not a fact also that Japan took advantage of war conditions to demand a very, very excessive price for camphor?

Mr. SMOOT. Not only did they double the price but in many cases they sold the camphor at an advance of six or seven hundred per cent.

Mr. WALSH of Massachusetts. I think our celluloid manufacturers desire to have camphor put on the free list; and I notice that you have retained a duty, notwithstanding the fact that you say the only synthetic camphor factory in this country has gone out of business.

Mr. SMOOT. That is true; but it will stay out of business even with the rate that we have provided.

Mr. WALSH of Massachusetts. Why put a duty on camphor, then, if we are not producing it here?

Mr. SMOOT. What the St. Louis people wanted was a 25 per cent ad valorem duty. If we had given them a 25 per cent ad valorem duty, that would have had to be carried clear through all the celluloid goods made in this country, with a higher rate of duty; and the committee thought they could not go that far.

Mr. WALSH of Massachusetts. One of the troubles with this bill and this schedule is the effort to maintain one little industry at the public expense.

Mr. SMOOT. Of course we have not done that, however. The duty of 6 cents per pound provided on camphor is not going to do that. In fact, I think the Monsanto people will have to turn their camphor plant into some other line of industry.

Mr. KING. Mr. President, my colleague [Mr. SMOOT], in response to the question of the Senator from Massachusetts, called attention to the fact that Japan had increased the prices upon camphor very much. That is true; and unfortunately many of our American manufacturers increased their prices not 200 or 300 or 400 per cent, but in many instances 500 to 700 and 1,000 per cent and more.

Mr. SMOOT. That was the case all over the world during the war.

Mr. KING. So that we can find evidences of greed and selfishness in the United States perhaps exemplified just as strongly as in other nations. When the war was on every nation was charging everything that it could, and manufacturers in the United States were robbing their own country by their extortionate prices.

Mr. SMOOT. The only difference between the camphor proposition and what was done by some of the American manufacturers is this: The Government of Japan controls camphor, and the Government of Japan did that. I do not know that it is any worse than what some other Governments did during the war, and I did not make the statement by way of criticism. I simply answered the question asked by the Senator from Massachusetts.

Mr. WALSH of Massachusetts. Mr. President, the Senator yesterday spoke about the Government control of chemicals by Germany, and the Government control of camphor in Japan. Does the Senator recommend Government control of chemicals for dyes?

Mr. SMOOT. The Senator knows that I do not, and I will not even go so far as to vote for an embargo. I voted against the embargo in the first place, and I will vote against it now.

Mr. WALSH of Massachusetts. I should like to call the attention of the Senator from Utah to a remark he just made, calling attention to the excessive prices, amounting to extortion, charged by the manufacturers of dyes and chemicals during the war. Does not that demonstrate, and also what the Senator's colleague from Utah said, the absolute absurdity of considering war statistics or war prices in making a tariff bill? The moment you go into that, you are going into the question of protecting profits and abnormal prices that were charged under abnormal conditions. It seems to me that the only sound course we can pursue here is to confine our statistics pretty much to the conditions prior to the war, in 1914, and in the last year; and the last year's conditions have been changing very rapidly. Only within three days an importer in my office informed me that in the last six months an article produced in Germany has increased in price 600 per cent, going to show how dangerous it is, upon prices submitted to our committee as of last August, to follow statistics and prices estimated as of that time, in view of the tremendous change that is taking place in Europe in the matter of advance in prices; and I know that the Senator agrees with me a good deal on the matter.

Mr. SMOOT. Mr. President, of course, at this time I do not want to go into the discussion of that subject, but I have up to January 1 of this year some facts that I intend at the proper time to present to the Senate of the United States.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Utah [Mr. KING] to the amendment of the committee.

Mr. CURTIS. Let us have the yeas and nays.

The yeas and nays were ordered.

Mr. WALSH of Massachusetts. May we have the amendment stated?

The VICE PRESIDENT. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. On page 16, line 5, it is proposed to strike out "60," and in lieu thereof to insert "40."

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from Wyoming [Mr. WARREN]. Not being able to secure a transfer, I withhold my vote.

Mr. STERLING (when his name was called). Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Delaware [Mr. DU PONT], I vote "nay."

Mr. UNDERWOOD (when his name was called). I transfer my general pair with the senior Senator from Massachusetts [Mr. LODGE] to the junior Senator from Rhode Island [Mr. GERRY] and vote "yea."

Mr. WATSON of Georgia (when his name was called). I have a general pair with the junior Senator from Arizona [Mr. CAMERON], which I transfer to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Pennsylvania [Mr. CROW] and vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY];

The Senator from Maine [Mr. FERNALD] with the Senator from New Mexico [Mr. JONES];

The Senator from New Jersey [Mr. FRELINGHUYSEN] with the Senator from Montana [Mr. WALSH]; and

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS].

Mr. DILLINGHAM. I have a general pair with the junior Senator from Virginia [Mr. GLASS]. In his absence I transfer that pair to the junior Senator from Pennsylvania [Mr. PEPPER] and vote "nay."

Mr. COLT. I transfer my pair with the junior Senator from Florida [Mr. TRAMMELL] to the junior Senator from Washington [Mr. POINDEXTER] and vote "nay."

Mr. DIAL. I have a pair with the senior Senator from Colorado [Mr. PHIPPS], and am unable to secure a transfer. I therefore withhold my vote.

Mr. FLETCHER (after having voted in the affirmative). I have a general pair with the Senator from Delaware [Mr. BALL]. I transfer my pair to the Senator from Nevada [Mr. PITTMAN] and allow my vote to stand.

Mr. HARRIS. I transfer my pair with the junior Senator from New York [Mr. CALDER] to the Senator from Arizona [Mr. ASHURST] and vote "yea."

Mr. SIMMONS (after having voted in the affirmative). Since voting I find that the Senator from Minnesota [Mr. KELLOGG], with whom I have a general pair, has not voted. I transfer my pair with that Senator to the senior Senator from Missouri [Mr. REED] and allow my vote to stand. I wish to state that the Senator from Missouri [Mr. REED], if present, would vote "yea."

Mr. ROBINSON. I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Massachusetts [Mr. WALSH] and vote "yea."

The result was announced—yeas 17, nays 35, as follows:

YEAS—17.

Borah	Hitchcock	Pomerene	Underwood
Caraway	King	Robinson	Watson, Ga.
Fletcher	La Follette	Sheppard	
Harris	McKellar	Simmons	
Heflin	Myers	Swanson	

NAYS—35.

Brandegee	Harreld	McKinley	Shortridge
Broussard	Johnson	McLean	Smoot
Bursum	Jones, Wash.	New	Spencer
Capper	Kendrick	Newberry	Sterling
Colt	Keyes	Nicholson	Townsend
Curtis	Ladd	Norbeck	Watson, Ind.
Dillingham	Lenroot	Oddie	Weller
France	McCormick	Page	Willis
Gooding	McCumber	Rawson	

NOT VOTING—44.

Ashurst	Ernst	Moses	Shields
Ball	Fernald	Nelson	Smith
Calder	Frelinghuysen	Norris	Stanfield
Cameron	Gerry	Overman	Stanley
Crow	Glass	Owen	Sutherland
Culberson	Hale	Pepper	Trammell
Cummins	Harrison	Phipps	Wadsworth
Dial	Jones, N. Mex.	Pittman	Walsh, Mass.
du Pont	Kellogg	Poindexter	Walsh, Mont.
Edge	Lodge	Ransdell	Warren
Elkins	McNary	Reed	Williams

So Mr. KING's amendment to the amendment of the committee was rejected.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 16, line 6, to strike out, after the word "articles," the parentheses and the words in the parentheses, "except photographic and moving-picture films."

The amendment was agreed to.

Mr. SMOOT. The junior Senator from Utah [Mr. KING] was called from the Chamber, and asked that we pass over paragraph 29a. To accommodate also the Senator from Nebraska [Mr. HITCHCOCK], I now ask that we take up paragraph 41, page 20.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will report the amendment.

The READING CLERK. On page 20, line 4, in the paragraph relating to ink, to strike out "20" and insert "30," so as to read:

PAR. 41. Ink, and ink powders not specially provided for, 30 per cent ad valorem.

Mr. SMOOT. Mr. President, I am going to ask the Senate to disagree to that amendment, and if the Senate shall act favorably on my suggestion the rate will be 20 per cent ad valorem instead of 30 per cent.

Mr. HITCHCOCK. Mr. President, I want to ask the Senator whether that will prevent me from moving to make it 15 per cent? I had intended to move to substitute "15" for "30," which would restore the rate in the present law.

Mr. SMOOT. The Senator can move to strike out "30," the figures in the Senate committee amendment, and insert "15."

Mr. HITCHCOCK. I make that motion, as affecting this proposed amendment.

Mr. SMOOT. Then my suggestion will be treated merely as a statement, not to be acted upon at this time, and the Senator's motion can be made first. But I want to have it understood that when the motion of the Senator from Nebraska shall be disagreed to, if it is, then I shall ask that the committee amendment be disagreed to and that the rate be 20 per cent, as provided in the House text. The House provided 20 per cent on the American-valuation plan. The Senate, then, will provide 20 per cent on the foreign-valuation basis.

Mr. HITCHCOCK. Mr. President, it is very gratifying to me to see this evidence of a change of mind on the part of one of the members of the Committee on Finance, at least. This proposed doubling of the tariff on inks illustrates one of the worst vices in this whole bill. It is really typical of many of the other schedules which have been recommended by the Finance Committee to the Senate. It can not be defended either upon a protective-tariff theory or upon any other theory which any party has ever advocated in this country.

The fact is that at the present time and for many years—I think the statistics will warrant me in saying for 20 years—the ink industry of the United States has been sufficient to supply the American demand, and the American manufacturers have been able to meet all competition.

At the present time the tariff is 15 per cent, and it has been 15 per cent ever since 1913. Prior to that time, under the Payne-Aldrich law, high as was the rate in that monstrosity of taxation, the tariff was only 25 per cent, but during all the time that ink has been subject to a tariff of 15 per cent the American manufacturers have controlled the market.

During all this time there has been practically no importation of ink. The average importation from 1910 to 1913 was nominal—that is, $33,000 a year. After 1918 the imports have been $23,700, $23,400, $41,300, and during the first nine months of last year they were only $16,170, showing that the imports of ink into this country for the last 10 or 15 years have been merely nominal, practically none at all, and the customs receipts from them have been almost nothing at all.

Meanwhile the production of ink in this country by the domestic manufacturers has been about from twelve to fifteen million dollars a year of printer's ink and somewhere between three and four million dollars of writing ink. The American manufacturers have supplied the whole American demand.

But that is not all. During all this period we have had large exports of ink of American manufacture to other countries. The American exports between 1910 and 1918 were as follows:

Printing ink averaged $525,106 a year.

All other kinds of ink during that period, from 1910 to 1918, averaged $242,000 a year; and since that time the exports have shown themselves to be very large also.

In 1918 we exported over $1,000,000 worth of printer's ink and almost half a million dollars worth of all other kinds of ink. In 1919 we exported $1,712,000 worth of printer's ink and $856,000 worth of all other kinds of ink. In 1920 we exported $1,892,000 worth of printer's ink and $936,000 worth of all other

kinds of ink. I only have figures for the first nine months of 1921, showing exports of about $1,000,000 worth of inks.

In the face of that fact, how is it possible even for a Republican, believing in the idea of a high protective tariff, to levy a tax on ink, as was proposed by this committee, of 30 per cent? The only possible motive for doing so would be to monoplize the American market so hopelessly as to tempt the ink manufacturers in this country to unite into a trust and raise the prices upon the supply of the consumers of this country. There is no excuse for it even from the Republican standpoint.

If you wanted to pick out an industry which has been eminently successful under the existing tariff of 15 per cent, you would pick out the manufacture of ink as that industry, and yet apparently the House of Representatives proposes to increase the rate to 20 per cent, and the Committee on Finance, in order not to be outdone, offers to raise it to 30 per cent. The worst part of this disclosure is that the discovery applies not only to ink, but it applies to many other articles upon which extortionate tariffs are levied in this bill.

When we can demonstrate, as we can by the statistics in this case, that the American market is supplied by the American producers, and that there is practically no competition from abroad and has not been for the last nine years, under a 15 per cent tariff, how can the committee justify its recommendation to the Senate to double that tariff and make it 30 per cent?

The suggestion of the Senator from Utah that the committee will abandon that attempt and accept a 20 per cent tariff is good as far as it goes. But what reason is there for increasing the tariff from 15 per cent as it exists now to 20 per cent? There is no more reason for that than there is for making it 30 per cent. There are, practically speaking, no imports. The American manufacturer dominates the market. He not only sells his goods in this market almost to the exclusion of all other countries but he is selling millions of dollars' worth of ink from year to year in other countries, and selling that ink in competition with the whole world.

I think the Senator from Utah should go further than to abandon the committee amendment of 30 per cent. I think he should let the rate stand where it is. If I had my way I would reduce it below 15 per cent, because the 15 per cent rate has been demonstrated by experience to be practically a prohibitory rate, and it ought to be reduced down to the point where it would invite foreign competition, in order that the price might be held down; but at least it should be reduced to the existing rate.

Mr. SMOOT. Mr. President, I will only take a few moments of the time of the Senate. The products from which ink is made are costing a great deal more now than before the war and these coal-tar products for the printers' or lithographing inks, and tannate of iron for the ordinary common writing ink, have increased greatly in price. In order to protect the dye industry of the country there are higher rates fixed in the bill than were ever before imposed upon these articles. Therefore, to make it equal to conditions existing in the past we certainly must give them a 5 per cent differential, and that is all I think they ought to have, I will say to the Senator. That is why I have moved now that the Senate disagree to the committee amendment.

I do not know that there is very much more to say about it than what I have said. I could read what the Tariff Commission have to say about it and show the exportations and the consumption to-day and have all those figures placed in the RECORD.

The 20 per cent rate is only 5 per cent more than the Underwood law rate, and it is 5 per cent less than the rate in the Payne-Aldrich law, notwithstanding the fact that the Payne-Aldrich law had most of these things upon the free list.

Mr. WALSH of Massachusetts. Mr. President, may I ask the Senator what facts the committee had before them that led them to increase the rate over the rate contained in the House bill?

Mr. SMOOT. The increase was made because the House bill was based on the American-valuation plan, and the Senate committee accepted the House bill, but put it upon the foreign-valuation basis and made the rate 30 per cent. That is the reason why it was done. I think it ought to be 20 per cent upon the foreign valuation.

As I was about to say when I was interrupted by the Senator, in 1909 most of these items from which ink is made were upon the free list or carried a very low rate of duty. I may say in passing that in 1909 there was no effort whatever to protect the dye industry in the United States.

Mr. HITCHCOCK. Mr. President, will the Senator permit a question?

Mr. SMOOT. Certainly.

Mr. HITCHCOCK. He does not claim that black inks are made out of coal-tar products?

Mr. SMOOT. No; I said the lithographing inks are made out of coal-tar products.

Mr. HITCHCOCK. The Senator is submitting plain black inks to a tariff rate of 30 per cent, whereas they have all been excluded, practically, by the existing tariff of 15 per cent. I realize it is a fact that by increasing the duties on oxalic acid and coal-tar products and some of the other things which enter into the manufacture of some kinds of ink and by increasing the duties on the other chemicals it is going to be made much more expensive to manufacture ink in this country. That is the vice of the bill.

Mr. SMOOT. It is the vice of the bill, is what the Senator says, but it is an absolutely necessary vice, if we may call it such, if we are going to protect the industries which make the articles or products that enter into the manufacture of inks. It is a question of policy. It may seem to be a vice to the Senator from Nebraska, and no doubt it is, because he said so, but it does not seem a vice in my opinion, and the American people, when they understand what it is really for, will not think so, either. I do not think, so far as the price of ink is concerned, that it is going to make any difference to the ultimate consumer. I will say that frankly to the Senator. I do not think it will, but I do want to have a rate sufficient that they can not ship the other items in here under a protective tariff and by so doing compel us to make ink from those articles here and allow the ink market to go somewhere else.

Everything being equal, I do not think we would have to have any higher rate than is in the Underwood-Simmons law to-day—15 per cent—but everything is not equal. We are only giving a 5 per cent differential.

Mr. HITCHCOCK. The Senator says 5 per cent. It is a 33 per cent increase from 15 to 20 per cent. That is an enormous increase.

Mr. SMOOT. If it was a quarter of a cent and was increased to half a cent, that would be an increase of 100 per cent. It is not a question of the percentage of increase. It is a question of what the actual rate is.

Mr. HITCHCOCK. I have been unable to find any evidence at all that there is the slightest danger of competition from abroad. If the Senator has any evidence of that sort in the record, I wish he would produce it here.

Mr. SMOOT. I will say to the Senator, so far as this item is concerned, that there was no testimony before the committee in the hearings.

Mr. HITCHCOCK. Then the Senator admits that the American manufacturer has supplied the ink market for the last 15 or 20 years practically without competition from abroad?

Mr. SMOOT. I will admit that the great bulk of the ink used in the United States is produced in the United States. There is no question about that.

Mr. HITCHCOCK. I quoted the figures showing that the imports of ink are not over $30,000 a year, and have not been for the last 20 years, and that the exports of ink are now running something like $2,000,000 a year, and that the manufacture of ink in this country amounts to $12,000,000 or $15,000,000 a year of printer's ink and $3,000,000 or $4,000,000 a year of ordinary writing ink. If that is not a complete case of holding the American market for the American producer, I do not know how a case could be made out.

Mr. SMOOT. It has been held, as I said, under the 25 per cent duty in the Payne-Aldrich law. It has been held by the 15 per cent duty which was in effect under the Underwood-Simmons law. Now, we have reduced the duty which is imposed upon some of the articles entering into the manufacture of ink. The Senator knows that all forms of ink fall under this paragraph, and there is a disadvantage to the American manufacturer of ink because of the duties which have been imposed. All we are asking is a 5 per cent increase of duty upon the present existing rate. The House bill rate was 20 per cent on the American valuation, and we made it 20 per cent on the foreign valuation.

Mr. HITCHCOCK. There is no more justification for increasing the duty on ink 33⅓ per cent than there is for increasing it 100 per cent. You are increasing it 33 per cent even upon your own figures. The committee have attempted to double it, and yet the fact is that the country imports less than $30,000 worth of ink a year and consumes something like $14,000,000 worth of ink a year, and we are supplying ink by the millions of dollars worth to the rest of the world and competing with all the people in our exports. Under those conditions why is not a 15 per cent tariff ample, even from the Republican standpoint, to protect the industries of the country?

Mr. SMOOT. I told the Senator that it would be ample if it had not been for the increase in duties upon articles which enter into the manufacture of ink.

Mr. HITCHCOCK. They do not enter into the manufacture of black ink.

Mr. SMOOT. The Senator knows that all kinds of ink fall under paragraph 41.

Mr. HITCHCOCK. I am making the point that the great bulk of this ink is black ink and that black ink costs no more to manufacture now than it has in the past, and that the only inks which it can be claimed have increased are colored inks and writing fluids; and the only increase in those is due to the tariff bill itself, which increases the tariff on oxalic acid and some of the other chemicals that are used in the various inks.

Mr. SMOOT. All of the inks are made of coal-tar dyes, and all of the lithographic ink takes linseed oil and resin. We have given the farmer a duty upon flaxseed, we have given him an extra duty upon his linseed oil, and that must be compensated in some way.

The Senator has said it is an increase of 33 per cent. That is true as it relates to the Underwood law rate. The increase is from 15 to 20 per cent, but that is an increase, as I see it, of 5 per cent duty. That is all it is. As I said before, it is like taking one-fourth of a cent and increasing it to 1 cent. That is a 400 per cent increase, but it is an increase of only three-quarters of 1 cent per pound or yard or whatever the unit is. That is all there is to this matter. If it had not appeared that way, the committee would have reported it at 15 per cent.

Mr. HITCHCOCK. As a matter of fact, the committee have reported in favor of doubling the present duty, whereas experience for the last 15 years shows that it is a prohibitive duty even now. It has kept out competition, or something has kept it out. Either it has been kept out by the tariff rate or by the superior manufacturing skill of the American producer, but whichever it is there is no need to increase the rate.

Mr. SMOOT. The committee asked that the 30 per cent ad valorem amendment be rejected and a rate of 20 per cent ad valorem be agreed to as the House provided it. The House based it on the American valuation, and we grant 20 per cent on the foreign valuation.

Mr. HITCHCOCK. The Senator is assuming that the House has made a correct selection in 20 per cent, and that his own committee made a mistake when they recommended 30 per cent. But in the tariff reports themselves are found the fact that we have not for 15 or 20 years had any importation of ink to speak of. In the reports themselves is found the proof that the manufacturers of this country not only make all of the ink that America consumes but that they are making two or three million dollars worth of inks which are exported to other countries. Did the House have these facts? Did the House have this information? If so, why did they propose an increase?

It seems to me a person is perfectly justified in claiming that the existing 15 per cent duty is excessive; that it is prohibitory, because it has not admitted any foreign competition at all. There is no foreign competition with $30,000 worth of ink coming in, special inks of some sort, as against the consumption of ink by the country amounting to $14,000,000 a year. It is a prohibitory duty now, so why make it more prohibitory? The only thing that should be done is to reduce the rate and reduce it so as to make it competitive. That is the Republican theory—that was the Republican competitive theory, at any rate—to have a tariff so fixed as to compensate for the difference in cost of manufacture in the various countries and keep competition alive. But we have here a tariff rate as it exists under the existing law which is prohibitory, and which has been found by experience to be prohibitory.

The Underwood law reduced the tariff rate from 25 per cent to 15 per cent. It was like many other of the efforts in that law, a step in the right direction. It was a very conservative step. Experience has shown that the reduction from 25 to 15 per cent left the American industries just as strong in the field as they were before. It did bring about some decrease in the cost of ink. The consumers got some benefit by the reduction from 25 to 15 per cent. The 15 per cent rate, as it has existed for the last nine years, was ample not only to protect American industries, but it actually gave them a monopoly of the American market, and yet in the face of that the Senator stands here and asks for an increase of the duty. I can not understand on what theory it is to be done. It can not be defended on any theory.

It can not be defended on any theory that it is necessary to protect the existing market. It can only be defended on the theory that it is to give a license to some one to increase the price of ink, and to encourage manufacturing concerns to form a trust and shut off competition.

Mr. WALSH of Massachusetts. Mr. President, supplementing what the Senator from Nebraska has said, it is interesting to note that if this amendment shall be adopted and the 5 per cent duty levied shall be added to the price which will be charged for ink to the consumers in America, there will be taken out of the consuming public, the users of ink, the sum of $1,650,000 per annum. The output of ink in 1919 was valued at approximately $33,000,000, and the only explanation for increasing the duty is, as the Senator from Nebraska has stated, to give a license to the American manufacturers of ink to charge in this instance 5 per cent more for their product than under present tariff laws and conditions. There is no foreign competition in ink. This tariff rate on ink can mean only one thing—an opportunity to raise the price of the domestic output to those who use ink, largely printers, over one and one-half million dollars per annum. Of course, the printers will pass this tax on to their customers.

Mr. SMOOT. In 1914 the entire production of printing ink approximated $14,000,000 and writing ink $2,500,000.

Mr. WALSH of Massachusetts. In 1919 the quantity produced was valued at $33,000,000.

Mr. SMOOT. No; I think the Senator is mistaken.

Mr. WALSH of Massachusetts. The Summary of Tariff Information, on page 125, states:

> In 1919, according to preliminary figures, the output of writing inks was $6,434,000 and of printing ink $26,238,000.

Does not that amount to nearly $33,000,000? The consumption and output has doubled since 1914.

Mr. SMOOT. Printing ink represents the bulk of the value of the ink product, and, as the Senator from Massachusetts knows very well, nearly all of the articles which go into the manufacture of printing ink are assessed more heavily under the pending bill than was every before known.

Mr. WALSH of Massachusetts. Yes; but I did not say that the amount named by me if collected by the ink manufacturers would necessarily be profit. I stated that the additional duty would permit charging the consumers of ink the additional sum which I have indicated, namely, $1,650,000.

Mr. SMOOT. Providing that local competition would not absorb that.

Mr. WALSH of Massachusetts. Certainly. But these increased tariff rates are justified, if at all, on the theory that these industries need this protection, and that implies increase in price.

Mr. SMOOT. There is only one answer to the Senator's argument, and that is, as I have already stated, that on the raw materials which go into the manufacture of ink higher duties have been placed than were ever before known in a tariff bill. There has got to be some compensation afforded in the finished product, else the protection would be a great deal less than is afforded by existing law. I will state to the Senator from Massachusetts very frankly that if it were not for that fact I would not support a duty higher than 15 per cent under existing conditions; but we must take care of the situation which I have described, and it is for that reason that 5 per cent is added to the duty.

Mr. UNDERWOOD. Mr. President, I have listened with much interest to the reasons the Senator from Utah has given as to why the taxation on this commodity should be increased, but I am not able to follow his argument. The Senator asserts that if this increase from 15 to 20 per cent ad valorem is made in the tariff duty on inks, that increase will not be borne by the ultimate consumer.

Mr. SMOOT. It will probably be taken care of by local competition.

Mr. UNDERWOOD. The Senator from Utah stated that it was negligible; that the ultimate consumer would not feel it, and would not have to pay it.

Mr. SMOOT. I said that local competition would probably absorb the amount.

Mr. UNDERWOOD. Now, let us see if the Senator is right in supposing that local competition will absorb the amount. We have heard that argument made a great many times in this debate; it has been said that the tax is a very small one; that there is only a 5 per cent increase in the duty; but a 5 per cent increase in the value of the commodity is not a small increase. Many of the articles which were embraced in the early tariff bills enacted by this Government, to which reference has been made in the debate as being protective tariff bills, only carried a 5 per cent rate in their entirety.

A rate of 5 per cent on the value of an article from a business standpoint is a very large tax. On an average in the

United States, a manufacturer is making a very good profit and doing a most excellent business if he makes 2½ per cent on the turnover of his business. Of course, I realize that in some cases the profit is much larger than that, though in some cases it is not as much as 1 per cent, and yet in those cases manufacturers make satisfactory profits and grow rich. However, in this case the tax amounts to 5 per cent on the turnover.

The Senator from Utah indicates that that tax may not be paid by the American public, but he admits himself out of court in making that statement, for when he says that there are no importations now coming in, and that if the tax had not been changed on the raw material which the producers of ink must buy the tax in the present law would have been adequate, he admits that the tax which is being levied on the raw material out of which ink is being made is going to lift the price of the raw material to the extent of the tax.

Mr. SMOOT. It will do that as to the manfacturer of ink?

Mr. UNDERWOOD. Well, if it is going to lift the price of the material out of which the ink is made to the extent of the tax on that raw material, why will it not lift the price of ink to the extent of the tax to the consumer? Miracles can not be performed in the application of this bill. The Senator's contention shows from my standpoint the viciousness of the idea of writing prohibitive tariffs. I am not complaining against raising a reasonable amount of revenue at the customhouse. I think that the committee of which I was chairman 10 years ago, which wrote the present law, made a mistake when it put the tax on ink as high as 15 per cent. We did not know, however, that we were making a mistake.

We reduced the tax from 25 per cent on the value of the product to 15 per cent, believing that thereby some competition from abroad would be produced; but conditions subsequently showed that, although the American manufacturer was forced to reduce his prices to some extent, the lower rate did not open the market for the importation of ink at all, but still left a prohibitive tariff wall for the benefit of the domestic manufacturer of this product and excluded all competition from abroad.

My theory has been that in levying tariff duties they should not be made prohibitive; they should not be made so high that when the foreign article reaches the customhouse the barrier of taxation is so great that it can not climb the barrier and get in, because in that event the Treasury of the United States receives no benefit of the tax, and the tax is not levied at all for a governmental purpose, but is levied for the sole purpose of enabling the producer or manufacturer of this country to lift his price and make the American people pay more for his product; in other words, it is legislating dollars out of the pockets of the mass of the people in order to build up great profits for special interests. That is the point where we differ with Senators on the other side of the aisle in reference to levying taxes at the customhouse.

We are willing to levy a tax if it is competitive, if it will allow a reasonable amount of the foreign goods to come into this country to compete with the home product and to furnish revenue to the United States Government. It seems that those who believe in a protective tariff have now reached the point where they demand a prohibitive tariff, and, so far as they are able, they propose to build up the tariff wall so high that no importations can come in, and the American manufacturer may have a monopoly behind the tariff wall and exploit the American people to his heart's desire.

It may be said that this is not an important article; that the people do not wear it and do not eat it; but it is important. Only a few years ago the great newspapers of this country, on account of the great increase in the price of their raw materials, the cost of newsprint paper, the cost of ink, the cost of all their supplies, had great difficulty in making the two ends meet and in making their advertisements and their circulation pay for the price of the paper.

To-day the cost involved in the production of a newspaper in the United States has grown so great that the selling price of a newspaper can not under any circumstances pay for the printing of the paper, with the result that only the great dailies can exist. The small paper which has not the opportunity to secure advantageous advertisements can no longer function in the field of carrying knowledge and information to the American people. The same statement applies to books, including books of information and schoolbooks. In this bill the majority are raising the taxes on paper of all kinds; they are raising the tax on printers' ink; they are raising the tax on everything that goes to make a book or a newspaper, and thereby are penalizing the American people in their efforts to secure knowledge, education, and the advantages that grow out of educational development.

It may be said that it is only a cent or two, that it is only a small amount; but 10 cents make a dime, and 10 dimes make a dollar; and when the tax is increased on every item in a bill which covers 4,000 articles a burden of taxation is imposed to the point where men of moderate means in the United States are deprived of the advantages in life which they are entitled to have because prohibitive taxes are levied at the customhouse for the benefit of special interests that are already prospering and growing rich.

The PRESIDING OFFICER (Mr. ROBINSON in the chair). The question is on the amendment offered by the Senator from Nebraska [Mr. HITCHCOCK] to the amendment reported by the committee.

Mr. HITCHCOCK. I should like the yeas and nays on the amendment to the amendment.

The PRESIDING OFFICER. The Senator from Nebraska demands the yeas and nays.

The yeas and nays were ordered; and the reading clerk proceeded to call the roll.

Mr. DIAL (when his name was called). Making the same announcement of my pair as on the former ballot, I withhold my vote. If at liberty to vote, I should vote "yea."

Mr. FLETCHER (when his name was called). Making the same announcement as before as to my pair and its transfer, I vote "yea."

Mr. HARRIS (when his name was called). I transfer my pair with the Senator from New York [Mr. CALDER] to the Senator from Arizona [Mr. ASHURST] and will vote. I vote "yea."

Mr. JONES of New Mexico (when his name was called). I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED] and will let this announcement stand for the day. I vote "yea."

Mr. OVERMAN (when his name was called). Again announcing my pair with the senior Senator from Wyoming [Mr. WARREN], and not being able to secure a transfer, I withhold my vote.

Mr. STERLING (when his name was called). Making the same transfer as on the last roll call, I vote "nay."

Mr. UNDERWOOD (when his name was called). I transfer my general pair with the Senator from Massachusetts [Mr. LODGE] to the Senator from Rhode Island [Mr. GERRY] and will vote. I vote "yea."

Mr. WALSH of Montana (when his name was called). I have a pair with the Senator from New Jersey [Mr. FRELINGHUYSEN]. I am unable to secure a transfer of my pair, and accordingly withhold my vote.

Mr. WATSON of Georgia (when his name was called). I have a general pair with the Senator from Arizona [Mr. CAMERON]. Being unable to secure a transfer, I therefore withhold my vote.

Mr. WATSON of Indiana (when his name was called). Making the same announcement as heretofore, I vote "nay."

The roll call was concluded.

Mr. DILLINGHAM. Making the same announcement as heretofore, I vote "nay."

Mr. COLT. Making the same announcement as before, I vote "nay."

Mr. SIMMONS (after having voted in the affirmative). I transfer my general pair with the Senator from Minnesota [Mr. KELLOGG] to the Senator from Texas [Mr. CULBERSON] and will let my vote stand.

I also wish to announce that if the Senator from Missouri [Mr. REED] were present he would vote "yea" on this question.

Mr. McCUMBER (after having voted in the negative). I ascertain that my pair, the junior Senator from Utah [Mr. KING], has not voted. I therefore transfer that pair to the senior Senator from New York [Mr. WADSWORTH] and will allow my vote to stand.

Mr. JONES of Washington. Has the senior Senator from Virginia [Mr. SWANSON] voted?

The PRESIDING OFFICER. He has not voted?

Mr. JONES of Washington. I promised to take care of the Senator from Virginia for the day if he happened to be away. I find, however, that I can transfer my pair to the Senator from Oregon [Mr. MCNARY], and I do so, and vote "nay."

The roll call resulted—yeas 15, nays 31, as follows:

YEAS—15.

Caraway	Hitchcock	Myers	Simmons
Fletcher	Jones, N. Mex.	Pomerene	Underwood
Harris	La Follette	Robinson	Walsh, Mass.
Heflin	McKellar	Sheppard	

NAYS—31.

Brandegee	Colt	France	Jones, Wash.
Bursum	Curtis	Gooding	Keyes
Capper	Dillingham	Johnson	Ladd

Lenroot	New	Shortridge	Townsend
McCormick	Nicholson	Smoot	Waston, Ind.
McCumber	Oddie	Spencer	Weller
McKinley	Page	Sterling	Willis
McLean	Rawson	Sutherland	

NOT VOTING—50.

Ashurst	Ernst	Moses	Shields
Ball	Fernald	Nelson	Smith
Borah	Frelinghuysen	Newberry	Stanfield
Broussard	Gerry	Norbeck	Stanley
Calder	Glass	Norris	Swanson
Cameron	Hall	Overman	Trammell
Crow	Harreld	Owen	Wadsworth
Culberson	Harrison	Pepper	Walsh, Mont.
Cummins	Kellogg	Phipps	Warren
Dial	Kendrick	Pittman	Watson, Ga.
du Pont	King	Poindexter	Williams
Edge	Lodge	Ransdell	
Elkins	McNary	Reed	

The PRESIDING OFFICER. On the amendment of the Senator from Nebraska [Mr. HITCHCOCK] to the amendment of the committee, the yeas are 15, the nays are 31. There are present and paired Senators DIAL, OVERMAN, WALSH of Montana, and WATSON of Georgia. The nays have it, and the amendment to the amendment is rejected. The question is on agreeing to the amendment of the committee.

Mr. McCUMBER. Mr. President, at this time I wish to ask unanimous consent that when the Senate closes its session for this calendar day it recess until Monday at 11 o'clock.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from North Dakota? The Chair hears none, and the consent order is entered.

Mr. SMOOT. Mr. President, I shall ask the Senate to reject the Senate committee amendment on this item, so that if we disagree to the 30 per cent rate the rate will be 20 per cent, as provided by the House.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

MICHIGAN SENATORIAL ELECTION.

Mr. TOWNSEND. Mr. President, a few moments ago the junior Senator from Tennessee [Mr. McKELLAR] interrupted the junior Senator from Utah [Mr. KING] with this question:

> In view of the Senator's vote on that subject, I was wondering if he trusts the people of Michigan to be honest and fair in the matter of the election of United States Senators.

Mr. President, this insinuation is unbecoming to any Senator of the United States. The people of the country do not know the Senator as I know him. If they did, I would not make any reference to this inference. The people of Michigan can be trusted quite as much as those who sent the Senator from Tennessee to this body.

He appears as a politician so intent on trying to strengthen his own political fortunes that he is willing to indict the electorate of a State who in all times of peace and war have demonstrated their civic and political honor, their virtue, their intelligence, and their patriotism to an extent unsurpassed by the people of any other State. If the time has come when the junior Senator from Tennessee or any other Senator presumes to prescribe the standard of political morals for any State, then indeed has senatorial courtesy, not to say senatorial decency, degenerated into license to insult the people of all of the States.

I resent the unjust inference to the people of Michigan, than whom there are no more just or fair in any State in this Union. Nothing could more emphasize the argument of the senior Senator from Arkansas [Mr. ROBINSON] against the assumption of congressional power to prescribe the rules which the States must observe in selecting Senators than the mental attitude of the junior Senator from Tennessee. With a pharisaical candor like that which inheres in the small politician, he indicts as unfair and dishonest the people of a great sovereign State.

Mr. President, I simply rose to resent this inference as against the honesty, the fairness, and the justness of the people of Michigan.

Mr. McKELLAR. Mr. President, there was an election in the State of Michigan in November, 1918. The people of Michigan, through their representatives, had passed a law of this kind:

> Every person who, directly or indirectly, by himself or by any other person in his behalf, gives, lends, or agrees to give or lend, or offers or promises any money or valuable consideration, or promises or endeavors to procure any money or valuable consideration or office, place, or employment, to or for any voter, or to or for any person on behalf of any voter, or to or for any person in order to induce or have such person induce any voter to vote for or refrain from voting for, or support or oppose any candidate, or on account of such voter having voted or refrained from voting at any primary election in this State; every person who by any means receives, agrees, or contracts for any money, gift, fee, loan, or valuable consideration, office, place, appointment, or employment for himself or any other person, for voting or agreeing to vote, or for refraining or agreeing to refrain from voting in a particular manner at any such primary election; or for inducing, or undertaking to induce any other person to vote in a particular manner, or to do or perform any of the acts or things forbidden by this act, or on account of doing or agreeing to do, or having done any campaign work, electioneering, soliciting votes for such candidates on primary day or prior thereto, or who after any primary election in this State, directly or indirectly, by himself or by any other person in his behalf, gives or receives any money or valuable consideration or place, position, or employment on account of any person having voted or refrained from voting, or having induced any other person to vote or refrain from voting in any such primary election; or having induced or undertaken to induce any other person to vote in a particular manner or for any particular candidate at any such primary election, or on account of any person having done or been a party to doing anything forbidden by this act, it being the intent of this clause to prohibit the prevailing practice of candidates hiring with money and promises of positions, etc., workers on primary day and prior thereto; * * * shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding $500 or by imprisonment for a period of not more than six months, or by both such fine and imprisonment in the discretion of the court.

That act was violated, and TRUMAN H. NEWBERRY was indicted in the Federal courts of Michigan by the Federal authorities and convicted of a conspiracy to violate that act, and not a law officer of the State of Michigan ever undertook to prosecute NEWBERRY in the State courts of Michigan. No grand jury was empaneled to indict him. No attorney general or prosecuting officer undertook to prosecute him for that crime.

The Supreme Court of the United States reversed the judgment several years afterwards on a technicality, and even after that was done no law officer of the State of Michigan undertook to prosecute, though the proof was clear that he was guilty of violating the statute. There was a provision in the statute that he should not spend over $3,750, and yet no representative of the majesty of the law of the State of Michigan ever undertook in the slightest degree to prosecute this violator of the law of that State.

When I said the people of Michigan, I was referring to those who represent the people of Michigan in the offices. So far as the voting population are concerned, I do not believe for a minute that those voters would have acted in the same way. I say the representatives of your people have been derelict in their duty to prosecute in this case. A seat was bought in this body. It was bought by your colleague and by those of his friends who aided him in doing it. Yet you upheld him by your vote.

Mr. SPENCER. Mr. President——

Mr. McKELLAR. You followed the example of the other representatives of your State and violated——

Mr. SPENCER. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The Senator from Missouri will state his point of order.

Mr. SPENCER. I call attention to the statement of the Senator from Tennessee that a seat was bought in this body by the junior Senator from Michigan and I call upon the Chair——

Mr. McKELLAR. Is it possible that any man with any common sense in the Republic doubts that a seat in this body was bought by Mr. NEWBERRY?

Mr. SPENCER. I call upon the Chair to enforce the second section of Rule XIX. No one knows better than the Senator from Tennessee how absolutely unfounded is his statement. Nor do I believe any Senator knows better than he how unparliamentary is his language.

Mr. McKELLAR. Mr. President, if I had been guilty of the language that has just been used by the Senator from Michigan, if I were his colleague I would not undertake to raise that point here.

The PRESIDING OFFICER (Mr. ROBINSON). Rule XIX of the Senate, paragraph 3, is as follows:

> No Senator in debate shall refer offensively to any State of the Union.

Paragraph 2 reads as follows:

> No Senator in debate shall, directly or indirectly, by any form of words impute to another Senator or to other Senators any conduct or motive unworthy or unbecoming a Senator.

Mr. McKELLAR. Will the Chair hear me before he rules? I trust the Chair is going to hold that that rule also applies to the unparliamentary and disrespectful and discourteous language of the senior Senator from Michigan.

The PRESIDING OFFICER. The Chair was just about to say that, under paragraph 4 of Rule XIX, it is the duty of the Presiding Officer to call to order any Senator who violates this rule. Any Senator is at liberty, if the Presiding Officer fails to do so, to call the Senator violating the rule to order. The present occupant of the chair was not in the chair at the time when the statement complained of by the Senator from Michigan was made by the Senator from Tennessee. The Senator from Tennessee was not called to order for that statement.

The Chair thinks that the language of the Senator from Tennessee is violative of the rule of the Senate. The present occupant of the chair, in view of the fact that the Senator

from Michigan elected not to call the Senator from Tennessee to order for his alleged offensive remarks concerning the State of Michigan, and no other Senator having done so, the occupant of the chair did not call the Senator from Tennessee to order for his subsequent statement respecting the junior Senator from Michigan, and the manner in which he procured his seat. The Chair, under the rule of the Senate, is compelled to sustain the point of order.

Mr. McKELLAR. Mr. President——

The PRESIDING OFFICER. Without objection, the Senator from Tennessee will proceed in order.

Mr. McKELLAR. I want to say this about the people of Michigan——

The PRESIDING OFFICER. The Chair hears no objection.

Mr. McKELLAR. I have no doubt that there are just as good people in the State of Michigan as there are in any State in this Union. The Senator from Michigan knew that I did not intend to reflect in any way on the people themselves. My purpose was to call attention to the fact that the law officers of Michigan, whose duty it was to enforce laws against crime in that State in respect to corrupt practices in elections, and especially in respect to the corrupt practices in the Newberry case, had been derelict in their duty, and that we could not afford to leave the matter in the hands of such law officers. I ask if any law officer has ever taken any steps in the State of Michigan to prosecute TRUMAN NEWBERRY for the crimes of which he was alleged to have been guilty.

Mr. SPENCER. Mr. President, will the Senator from Tennessee yield to me for a moment?

Mr. McKELLAR. I yield.

Mr. SPENCER. The Senator from Tennessee is so courteous and so much of a gentleman that I am surprised at the attitude which he now takes. He is wrong, first, in his fact. There never was any prosecution by the Government for the violation of a State statute of Michigan.

Mr. McKELLAR. That is exactly what I am complaining of.

Mr. SPENCER. There never was by the Federal Government or the State any prosecution for a violation of any State statute of Michigan. If the Senator would think for a moment he would know that the Federal Government could not prosecute for the violation of a State statute. The Government sought to prosecute for the violation of a statute which subsequently the Supreme Court declared was unconstitutional, and now the Senator comes before this body and complains of the fact that the State of Michigan itself did not institute any inquiry or commence any proceeding. I wonder why the State of Tennessee never indicted the Senator from Tennessee for bribery and corruption. I can tell the reason.

Mr. McKELLAR. Because the Senator from Tennessee was never guilty of it; that is why.

Mr. SPENCER. Exactly; the Senator from Tennessee has said exactly what I would have said the next moment. The reason why the people of Tennessee, who knew him and who knew the facts, never indicted him for bribery or corruption or fraud was because they knew that those things never existed with regard to him. That is precisely the reason why the people of Michigan and the courts of Michigan never took any action in the case of Senator NEWBERRY.

Mr. McKELLAR. Oh, Mr. President, a portion of the people of Michigan—and most of them were members of the same party of the Senator from Michigan—did indict TRUMAN NEWBERRY for that crime; they did prosecute him. He was prosecuted in a Federal court in Michigan, presided over by a Republican judge of the State of Michigan, with a jury the greater number of the members of which were Michigan men, and most of them from the Senator's own party. They found him guilty of a conspiracy under a Federal law, but under a Federal law which made the State statute a part of the Federal law.

Now, we know what the matter is. I say that the reason those Michigan gentlemen indicted and tried and found Mr. NEWBERRY guilty was because he was guilty, and it has never been divulged why the State authorities in the State of Michigan did not indict Mr. NEWBERRY for the very same offenses against the State of Michigan. I do not know why they did not, and I doubt if the Senator knows.

Mr. SPENCER. I have just told the Senator why. The reason is perfectly apparent. There were 83 counties in Michigan. There were State courts all over that State. If there had been any crime committed it would have been acted upon promptly. There was no crime committed and there was no action.

Mr. McKELLAR. Why was he indicted in the Federal courts in Michigan?

Mr. SPENCER. The Supreme Court of the United States so declared, the Senate of the United States has so declared, and now the senior Senator from Tennessee, upon the eve of his own political campaign, makes a statement to the contrary, and the reason why in Michigan there was no indictment, no legal proceedings in the State courts, was precisely the same reason why the Senator from Tennessee has not been indicted in his own State.

Mr. McKELLAR. Ah, if he was not guilty of a crime, and if there was no reason to believe he was guilty of a crime, why did the Michigan people indict him in the Federal court and try him there before a Republican judge and a Republican jury? If he was innocent, why did not the Michigan jury, composed almost entirely of Republicans, a jury of his own neighbors and friends, in his own community, presided over by a Republican judge, acquit him of the crime? They found him guilty. What excuse has the Senator to offer for that jury?

Mr. SPENCER. If the Senator wants an answer, he knows well where he can find it, and that is in the Department of Justice at Washington, under a Democratic administration, where a plan as nefarious and outrageous as was ever instigated had its origin, its encouragement, and, under Democratic stimulus, its final temporary success.

Mr. McKELLAR. Does the Senator from Missouri contend here that a Democratic Department of Justice wielded such power and influence over a Republican court and a Republican jury in Michigan as to have an innocent man indicted? Is that the contention? Is that the respect the Senator from Missouri has for the law courts of Michigan?

Mr. SPENCER. It was not the law courts of Michigan.

Mr. McKELLAR. I want to say to the senior Senator from Michigan that the words I used a while ago about the people of Michigan are not half so venomous, not half so critical, as the indictment the Senator from Missouri makes against the Federal courts of the State of Michigan and the juries in those courts.

Mr. TOWNSEND. Mr. President, I do not care to enter into any lengthy discussion of this matter, which has been disposed of, though I am fully prepared to do it. What I complained about were the statements of the Senator from Tennessee. He says now he had no reference to the people of our State but referred to the law officers.

Mr. McKELLAR. Just a moment, if the Senator will excuse me. I believe whenever the people of the State come to pass upon that question they will repudiate not only the beneficiary of what was done in this matter but they will repudiate the Senator from Michigan for having taken part and voted for it.

Mr. TOWNSEND. I care nothing about that.

Mr. McKELLAR. Yes; the Senator cares a great deal about it. That is why this attack was made upon me, a carefully prepared attack, which was written down before he came into the Chamber, and which he read to the Senate; a carefully prepared attack for political purposes, hoping that he could make some capital out of making an attack on a fellow Member of this body, which he knew was unfounded absolutely and ought never to have been made in this body without ever saying a word to the Senator from Tennessee, with whom he has been associated on a committee for years, without ever mentioning the fact that he spoke generally of the people of Michigan, without ever complaining of it——

The PRESIDING OFFICER. The Chair suggests to the Senator from Tennessee and to other Senators that they conform to the rule, and if the rule is again transgressed the Chair will enforce it promptly upon his own motion.

Mr. McKELLAR. I hope the Chair will do that.

Mr. TOWNSEND. Will the Senator yield to me?

Mr. McKELLAR. I yield to the Senator.

Mr. TOWNSEND. I rose, Mr. President, because the Senator from Tennessee did reflect upon the people of my State. I repeat his words:

I was wondering——

Mr. McKELLAR. Mr. President——

Mr. TOWNSEND. Will the Senator——

Mr. McKELLAR. I decline to yield to the Senator to reread the vile, untrue, and absolutely false language that he has already read to this body.

Mr. TOWNSEND. I am reading just the words——

Mr. McKELLAR. I object to being interrupted.

The PRESIDING OFFICER. The Senator from Tennessee declines to yield. The Senator from Tennessee will proceed in order.

Mr. SPENCER. Mr. President——

Mr. McKELLAR. I yield to the Senator from Missouri.

Mr. SPENCER. Will the Senator from Tennessee allow me to state that what the Senator from Michigan was about to read was the words of the Senator from Tennessee himself. Certainly he does not mean by his adjectives to characterize his own words? That is what the Senator from Michigan was about to read.

Mr. McKELLAR. If the Senator desires to read what I said, I am perfectly willing for him to do it.

Mr. TOWNSEND. That is all I wanted to read and nothing else. These are the words of the Senator from Tennessee:

I was wondering if he trusts the people of Michigan to be honest and fair in the matter of the election of United States Senators.

Those are the words of the Senator from Tennessee. He said that what I have said has been unprovoked. I made no reference to anything but the words of the Senator from Tennessee, which I thought were improper words to be used against the people of the State of Michigan. If the Senator will permit me I would like to answer one or two things, namely, about the officers——

Mr. McKELLAR. The Senator can do that in his own time whenever he gets ready. The Senator has made a statement here, carefully prepared, brought in and read, without ever saying anything to me what he expected to discuss on the floor and that I should be here, without telling me anything of the nature of any words that had been used. The statements that he has made as to me in connection with it I want to say are absolutely false.

The PRESIDING OFFICER. The Senator from Tennessee is out of order.

Mr. McKELLAR. I yield the floor.

The PRESIDING OFFICER. The Senator from Tennessee can not yield the floor, in view of the course the discussion has taken, with the statement that a statement by another Senator is absolutely false. That is in violation of the rules of the Senate. The statement is out of order and the Senator from Tennessee will take his seat and not proceed except in the manner prescribed by the rules on motion.

Mr. McCUMBER. Mr. President, some time last January the Senate passed judgment on whether or not Mr. NEWBERRY was entitled to a seat in the Senate. That ought to have settled the matter. The people of the State of Michigan had settled that matter before. I only rise at this point to say that if the Senate of the United States will allow the people of the State of Michigan to attend to their business, and then if the Senate of the United States will attend to its business—which business is the tariff bill now before it—I think we will better please not only the people of the State of Michigan but the people of every other State in the Union.

The real question before the Senate to-day is an amendment which has been offered to the tariff bill. We are entitled to a discussion and a vote upon that amendment. We ought not to waste the time of the Senate hour after hour and day after day in discussing matters which have no bearing on earth on the question at issue. I hope we may have a vote on the pending amendment.

Mr. UNDERWOOD. Mr. President, I merely desire to say, in answer to the Senator from North Dakota, that I agree with him. The work in connection with the tariff bill is becoming very laborious to me, as I am sure it is to every other Senator. I hope that extraneous matter will not come before the Senate in the future, but most of the extraneous matter which has come before us has originated on the other side of the Chamber in the way of resolutions or bills or the injection of outside questions. I am glad to help the Senator from North Dakota keep the tariff bill before the Senate without interruption until it is disposed of, but he must clean his own side of the carpet and we will try to help him on this side.

ETHEL WILLIAMS.

Mr. WATSON of Georgia. Mr. President, I ask unanimous consent for the present consideration of Senate bill 651, a little claim bill which will not provoke any discussion, I am sure. It has been unanimously reported from the Committee on Claims after a careful consideration of the case.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 651), for the relief of Ethel Williams, which was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $5,000 to Ethel Williams, of Atlanta, Ga., as full compensation for permanent injuries sustained in a motor-cycle accident at Camp Gordon, Ga., on May 2, 1920, which was caused by the negligence of a chauffeur driving a motor cycle, the property of the United States Army at Camp Gordon, Ga.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The READING CLERK. On page 17, line 12, strike out the word "manna" and the comma and insert in lieu thereof the word "manna" and a semicolon.

The amendment was agreed to.

Mr. McCUMBER. Mr. President, I think we have omitted one amendment. I do not think paragraph 29a has been agreed to.

The PRESIDING OFFICER. The Chair is informed that it was passed over at the request of the senior Senator from Utah [Mr. SMOOT].

Mr. McCUMBER. Very well.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The READING CLERK. On page 17, line 13, strike out the word "flowers" and the comma and insert in lieu thereof the word "flowers" and a semicolon.

The amendment was agreed to.

The next amendment of the committee was, on page 18, line 2, to strike out "25 per cent ad valorem" and insert in lieu thereof "3 cents per pound," so it will read:

Belladonna, digitalis, henbane, and stramonium, 3 cents per pound.

Mr. JONES of New Mexico. Mr. President, this is a new item in the bill. These drugs and herbs have never before been on the dutiable list or, so far as I know, mentioned in a tariff bill. It is true this is a small item, but at the same time it seems to me that something ought to be said as to why this was done.

These herbs are used as drugs. They are very common drugs, known perhaps to everybody in the country. Belladonna, digitalis, henbane, and stramonium are very common drugs, or, rather, they are in very common use, and this is the first time they have ever been put on the dutiable list. The rate of duty proposed by the Senate committee is 3 cents per pound. The rate fixed by the House is 25 per cent ad valorem. It is evident that somebody must have been interested in the item, but I can not find, either in the hearings before the Ways and Means Committee of the House or the Finance Committee of the Senate, any evidence at all.

There is some information on the subject in the summary of tariff information, but it is not very extensive. I find in looking it over that there is very little of these drugs or herbs produced in the United States. It seems that in some of the States they have been trying to grow these herbs in a modest way. In all of the States of the Union, I believe, it is stated that there have been only 274 acres of land employed in that production. I will just read what it says. Of course, it is unnecessary to read as to the importance of the drugs themselves, because they are in such common use, but here is all that is said about it in regard to production:

Experimental cultivation of these drugs has been carried on in the United States for a number of years, but has assumed commercial importance only since the commencement of the war. While their commercial value is small, nevertheless they are indispensable to the practice of modern medicine. Production of belladonna in 1918 was estimated at 166,000 pounds of herbs, stems, and leaves, and 22,000 pounds of roots. Sixty growers were engaged in its cultivation and utilized 274 acres. California, Michigan, Pennsylvania, and Indiana ranked in acreage in the order mentioned. Michigan has been the chief source of henbane. Stramonium grows wild in the southern Appalachians, where it has been collected to a limited extent. It has been cultivated in California and elsewhere. Digitalis is cultivated in California, Oregon, Virginia, South Carolina, and other States. It now grows wild in the Pacific northwest, where considerable quantities were collected during the war. Its production in 1917 was estimated at 10,000 pounds.

Owing to the care received in cultivation, domestic crude drugs are of superior quality to the imported articles, which grow wild in southern Europe and parts of Asia. But owing to the cheap labor employed in gathering the herbs, the imported drugs constitute the chief source of supply for domestic requirements. The domestic cultivation is not likely to be successful except in the hands of those possessing adequate equipment for proper curing and botanical knowledge of the characteristics of the drugs.

Import figures are available for 1914 only, when they were: Belladonna, 141,074 pounds of leaves and 65,886 pounds of roots; digitalis, 22,371 pounds, valued at $1,874; henbane, 136,429 pounds, valued at $10,609; and stramonium, 171,574 pounds.

Those are the only statistics we have regarding the items. I have been somewhat interested in looking over the prices which were reported by the so-called Reynolds Commission. Mind you, the House imposed a duty of 25 per cent ad valorem, and the Senate amends that by making it 3 cents per pound. Here is what we find in the Reynolds report regarding prices. There was one shipment from Germany of belladonna leaves, and it is reported that the foreign value, in United States currency, was 13.25 cents, with the landing charges, and so forth, with no duty on the article, and the selling price of that foreign article was 21 cents per pound. The selling price of the comparable domestic article was 18 cents per pound. So in that case we

have the foreign article selling higher by 3 cents than the domestic article.

However, as to the next item, of digitalis leaves, the foreign price was only 4.3 cents, and the importer of that commodity made a profit of 100 per cent, and sold the commodity at 10 cents, as against 12 cents for the comparable American product. In the case of the next item the facts are just about the same, only the foreign cost was 4½ cents. The facts as to the next item are about the same.

Then comes henbane. There was no shipment of that; there were no importations of henbane at all.

Then as to stramonium from Italy, the foreign cost was 12 cents, and it was selling at 15 cents, as compared with 14 cents, the price of the American comparable article.

Then there was another shipment from Germany which had a foreign cost of 11.5 cents, and the selling price was 14 cents, as against 12 cents for the domestic commodity. For another shipment the foreign price was 18½ cents and it sold at 20 cents, at a loss. There was no profit at all on it, and there was no comparable article.

It seems to me that, in the first place, we might as well consider whether any duty is desired on that at all; but if it should be desired, it strikes me that it ought to bear an ad valorem duty and not a specific duty of 3 cents per pound, because the foreign cost of these different products varies from 3½ cents to 18 or 19 cents per pound. If we put a duty of 3 cents per pound on those commodities, it would amount to about 80 per cent in some cases and in other cases to less than 20 per cent.

I first submit the question as to the propriety of putting a duty upon those herbs at all. They are indispensable, using the language of the Tariff Commission, in the modern practice of medicine; and it is evident that a domestic production can not be built up which will take care of the domestic requirements, at least at a reasonable price.

I am not going to make any serious comment on the matter. I merely wish to call the facts to the attention of the Senate in order that we may know what we are doing.

Mr. McCUMBER. Mr. President, the Senator from New Mexico states the situation truly when he says that some of these commodities, such as belladonna, are indispensable in the practice of medicine. We are beginning to raise the plant in the United States from which this article is made. I want to call the Senator's attention to the result of not being able to supply our market when the World War came on.

In 1913 the price of the belladonna leaf was 14 cents per pound; in 1916 it rose to $2 a pound—from 14 cents to $2 a pound in three years—the great increase, of course, being due to the war. We paid enough in those two or three years for the belladonna leaf which was necessary to use in the United States to have protected the American market for a hundred years. In the matter of the little duty that we have placed upon this commodity, we have tried to place the equivalent of about 25 per cent ad valorem. The price in 1914 was 14 cents, and probably the price will come down and remain at about that figure. It is less than that now, but I think that we may probably estimate that about 14 or 15 cents is a reasonable price, and a 3-cent duty upon a price of 15 cents would be only 20 per cent ad valorem.

I should be a little inclined to think—and I agree with the Senator from New Mexico—that it would be better to have an ad valorem duty of 25 per cent on all of these commodities, although such a duty would be higher than the proposed rates on some commodities and lower upon others.

Mr. JONES of New Mexico. It seems to me that they ought not to be classed together, because the price varies so much. Another point I should like to suggest is that the paragraph simply reads "belladonna and digitalis." I suppose the experts are satisfied with the language and that it will mean the herbs.

Mr. SMOOT. It covers both the root and the leaves.

Mr. JONES of New Mexico. It would seem to me that the herbs should be designated in some way. We get it in the form of an extract—that is, it is used in that way.

Mr. SMOOT. It is made from either the root or the leaves of the plant.

Mr. JONES of New Mexico. Yes.

Mr. SMOOT. When it is made into the extract it is called atrophine and not belladonna, but the word "belladonna" covers the roots as well as the leaves.

Mr. JONES of New Mexico. The point I make is as to whether or not it would cover merely the extract; but I suppose the experts have looked into that.

Mr. SMOOT. We changed the duty from an ad valorem to a specific, I will say to the Senator, in conformity with the policy as to all rates in the chemical schedule. Wherever possible, we made the duties specific. When prices return to normal—and the prices of these commodities are about normal—the price for belladonna root to-day being 12 cents and for the leaves 11 cents, while before the war, even in 1914, they were worth 14 cents—and they are probably not going to be any less—it is very much better to have a specific duty. The price of henbane is now about what it was before the war, 22 cents a pound, and 25 per cent on that valuation would be 5½ cents. Congress has appropriated money, to be expended through the Agricultural Department, to encourage the growth of these very herbs, and we thought that 3 cents a pound would be ample to protect the industry.

Mr. JONES of New Mexico. As I understand, if one article sells for two or three times as much as another, it must be very much more expensive to cultivate the one than the other.

Mr. SMOOT. It is not, though. It is just as easy to cultivate henbane as it is belladonna.

Mr. JONES of New Mexico. Then, will not everybody cultivate the higher priced commodity and not the lower priced one?

Mr. SMOOT. There is only a limited demand for the article, I will say to the Senator.

Mr. JONES of New Mexico. I do not understand the logic of the Senator, for, using the ordinary rules of economics, I should say that if a high-priced article could be produced at the same cost as a low-priced article everybody would engage in the cultivation of the higher-priced article.

Mr. SMOOT. Under certain conditions that would be true. If the same conditions applied all over the country for raising one as well as the other, then what the Senator says would be correct. So far as I am concerned, I care not whether the duty be fixed on an ad valorem basis or otherwise; but it seems to me that we ought to follow out the policy which we inaugurated of imposing upon the items in this schedule specific duties so far as possible.

Mr. JONES of New Mexico. It strikes me that this is one of the cases where, if the majority want to be consistent at all, they are forced to use the ad valorem basis of duty.

Mr. McCUMBER. If the Senator will allow me, I want to call his attention to the fact that prior to the war, under normal conditions, these commodities were all about the same price per pound. Therefore the 3 cents would be consistent, provided we get back to the normal prices which existed prior to the war.

Mr. JONES of New Mexico. Are they all about the same price now?

Mr. SMOOT. No.

Mr. McCUMBER. The duty proposed ranges from 20 to 25 per cent. At the present time henbane is exceedingly high, and, therefore, if we followed the ad valorem basis it would make a very much higher rate than would be imposed on the commodity under the specific rate.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 18, after line 2, to insert:

PAR. 33a. Cyanide: Potassium cyanide, sodium cyanide, all cyanide salts and cyanide mixtures, combinations, and compounds containing cyanide, not specially provided for, 10 per cent ad valorem.

Mr. McCUMBER. The other day I agreed that that amendment might go over until Tuesday morning.

The PRESIDING OFFICER. Without objection, the amendment will go over. The Chair hears no objection, and it is so ordered.

The next amendment was, on page 18, line 9, after the word "sulphate," to strike out "25 per cent ad valorem" and to insert "15 cents per pound"; in line 10, before the word "cents," to strike out the numeral "4" and to insert "3"; and in line 11, before the word "cents," where it occurs the second time, to strike out the numeral "6" and to insert "4," so as to read:

PAR. 35. Ethers and esters: Diethyl sulphate and dimethyl sulphate, 15 cents per pound; ethyl acetate, 3 cents per pound; ethyl chloride, 15 cents per pound; ethyl ether, 4 cents per pound.

The PRESIDING OFFICER. Without objection, the amendment is agreed to. The Chair hears none, and it is so ordered.

The next amendment of the Committee on Finance was, in line 12, before the words "per cent," to strike out the numeral "25" and to insert "30," so as to read:

and ethers and esters of all kinds not specially provided for, 30 per cent ad valorem.

Mr. McCUMBER. I ask that that amendment of the committee be rejected.

The PRESIDING OFFICER. Without objection, the committee amendment will be disagreed to. The Chair hears no objection, and it is so ordered.

Mr. WALSH of Montana. Mr. President, like some of the other items considered in this schedule, ethers and esters are used in medicine and surgery. Obviously we ought not to put a heavier burden upon commodities of that character than the necessities of the case require. I should like to inquire of the chairman of the committee what is the significance of the first amendment in the paragraph changing the duty from 25 per cent ad valorem to 15 cents per pound?

Mr. SMOOT. The price of diethyl sulphate is $1 and a duty of 25 per centum would be equivalent to 25 cents per pound. We have cut that rate down to 15 cents a pound. While I am on my feet, I will say to the Senator that on ethyl ether to which he has reference—for that is the only commodity that he could have reference to in this paragraph—we have reduced the duty from 6 cents a pound to 4 cents a pound; in fact, every duty proposed by the House committee on commodities in this paragraph has been reduced.

Mr. WALSH of Montana. That is from the House rate?

Mr. SMOOT. Yes.

Mr. WALSH of Montana. What is the change from the rate under existing law?

Mr. SMOOT. I will tell the Senator in just a moment.

Mr. McCUMBER. What was the question asked by the Senator, if I may inquire?

Mr. WALSH of Montana. I asked what the rates are under the present law?

Mr. McCUMBER. The equivalent rate is 17 per cent ad valorem.

Mr. SMOOT. The duty on ethyl ether in the present law is 4 cents, the same rate provided in the bill as reported by the committee.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The READING CLERK. In paragraph 36, page 18, line 18——

Mr. LA FOLLETTE. I ask to have paragraph 36 passed over.

The PRESIDING OFFICER. Without objection, the paragraph will be passed over. The Chair hears no objection, and it is so ordered. The Secretary will state the next amendment of the committee.

The next amendment of the Committee on Finance was, on page 19, line 5, after the word "formalin," to insert "2 cents per pound"; in line 6, after the word "paraformaldehyde," to insert "8 cents per pound," and in line 7, after the word "hexamethylenetetramine," to strike out "25 per cent ad valorem" and to insert "10 cents per pound"; so as to make the paragraph read:

PAR. 38. Formaldehyde solution or formalin, 2 cents per pound; solid formaldehyde or paraformaldehyde, 8 cents per pound; and hexamethylenetetramine, 10 cents per pound.

The amendment was agreed to.

The next amendment was, on page 19, after line 8, to strike out:

PAR. 39. Gelatin, glue, and glue size, 20 per cent ad valorem and 1½ cents per pound; manufactures, wholly or in chief value of gelatin; casein glue; isinglass; and other fish sounds, cleaned, split, or otherwise prepared, and agar-agar, 25 per cent ad valorem.

And to insert:

PAR. 39. Edible gelatin, valued at less than 40 cents per pound, 20 per cent ad valorem and 7 cents per pound; valued at 40 cents or more per pound, 20 per cent ad valorem and 15 cents per pound; gelatin, glue, glue size, and fish glue, not specially provided for, valued at less than 40 cents per pound, 25 per cent ad valorem and 1½ cents per pound; valued at 40 cents or more per pound, 20 per cent ad valorem and 15 cents per pound; casein glue, agar-agar, isinglass and other fish sounds, cleaned, split, or otherwise prepared; and manufactures, wholly or in chief value of gelatin, glue or glue size, 25 per cent ad valorem; and ossein, 10 per cent ad valorem.

Mr. McCUMBER. Mr. President, the senior Senator from Massachusetts [Mr. LODGE] desires that paragraph 39 should go over.

The PRESIDING OFFICER. Without objection, the paragraph will be passed over. The Chair hears no objection. The Secretary will state the next amendment of the committee.

The next amendment of the Committee on Finance was, on page 20, line 1, after the word "refined," to strike out "3" and insert "2," so as to make the paragraph read:

PAR. 40. Glycerin, crude, 1 cent per pound; refined, 2 cents per pound.

The amendment was agreed to.

The next amendment was, on page 20, line 6, before the word "and," to strike out "bromide" and to insert "bromide, 5 cents per pound"; and in line 7, before the word "cents," to strike out "10" and to insert "8," so as to make the paragraph read:

PAR. 43. Bromine, 5 cents per pound; and all bromine compounds not specially provided for, 8 cents per pound.

The amendment was agreed to.

The next amendment was, on page 20, line 9, before the word "cents," to strike out "3½" and insert "2½"; in line 10, before the word "cents," to strike out "2½" and insert "2"; in line 11, after the word "nitrate," to strike out "2½ cents per pound"; in the same line, before the word "resinate," to insert "and," and in the same line, after the word "resinate," to insert "3 cents per pound"; so as to make the paragraph read:

PAR. 44. Lead: Acetate, white, 2½ cents per pound; acetate, brown, gray, or yellow, 2 cents per pound; nitrate, arsenate, and resinate, 3 cents per pound; and all other lead compounds not specially provided for, 30 per cent ad valorem.

The amendment was agreed to.

The next amendment was, on page 20, line 15, after the word "forms," to strike out "25 per cent ad valorem" and to insert "2 cents per pound," so as to make the paragraph read:

PAR. 45. Licorice, extracts of, in pastes, rolls, or other forms, 2 cents per pound.

The amendment was agreed to.

The next amendment was, on page 20, line 16, to reduce the rate of duty on citrate of lime from 7 to 6 cents per pound.

Mr. McCUMBER. I ask that that may go over until the Senator from New Jersey [Mr. FRELINGHUYSEN] can be present.

Mr. JONES of New Mexico. Yes; that is rather an important item.

The PRESIDING OFFICER. Without objection, it will be passed over. The Chair hears no objection. The next amendment will be stated.

The next amendment of the Committee on Finance was, on page 20, line 18, after the word "chloride," to strike out "three-fourths" and insert "one-half"; in line 20, after the word "oxide," to insert "or calcined magnesia"; in line 21, after the word "pound," to insert "oxide or"; at the beginning of line 22, to strike out the word "use" and insert "use, three-fourths of 1 cent per pound," and in the same line to strike out "and calcined magnesite, including dead burned and grain, three-fourths of 1 cent per pound; and magnesite, crude or ground, one-half of 1 cent per pound"; so as to make the paragraph read:

PAR. 47. Magnesium: Carbonate, precipitated, 2½ cents per pound; chloride, one-half of 1 cent per pound; sulphate or Epsom salts, one-half of 1 cent per pound; oxide or calcined magnesia, medicinal, 7 cents per pound; oxide or calcined magnesia not suitable for medicinal use, three-fourths of 1 cent per pound.

The amendment was agreed to.

The next amendment was, at the top of page 21, to insert:

PAR. 47a. Manganese: Borate, resinate, sulphate, and all other manganese compounds and salts, not specially provided for, 25 per cent ad valorem.

Mr. KING. Mr. President, I should like some explanation of that, and the reason for the increase.

Mr. SMOOT. I will say that this item has been separated from the basket clause for statistical reasons. It is the same rate that we have put in the basket clauses all the way through. It has always been in the basket clause before, but for statistical reasons we now want it separated and put in a paragraph by itself.

Mr. KING. I know; but the rate has been increased from 15 to 25 per cent ad valorem.

Mr. LA FOLLETTE. That was not done for statistical reasons, I suppose.

Mr. SMOOT. No; but I will say to the Senator that it has always been in the basket clause in the past.

Mr. KING. The reasons may be sound for putting it in this particular basket clause, but what I am trying to get at is the reason for the increase in the rate. As I stated, in the Underwood bill these rates were 15 per cent.

The information respecting this subject in the survey is not very voluminous, but it is apparent from the statement that the product is of considerable importance. It appears that it is manufactured by a large number of domestic concerns; that manganese resinate is produced in the United States, as well as manganese sulphate and manganese borate. There may be some justification for some tariff, although the products of manganese—the borates, the resinates, the sulphates, and all other manganese compounds and salts—are of importance in our domestic life. These products are manufactured by a large number of concerns, among them the Harshaw, Fuller & Goodwin Co., of Cleveland, Ohio; and the borates are manufactured by a large number of companies, especially the Pacific Coast Borax Co.

The prices of all these commodities have been greatly increased, as I am advised, over the pre-war prices; and it would look as though the increase in the rate prescribed by the Senate provision was in the interest of those who manufacture this product, and to permit them to perpetuate the very high rates that now prevail.

In view of the fact that there is no testimony, as far as I can discover, and no reasons for these increases, it seems to me that the committee ought not to have made this wholesale increase from 15 to 25 per cent. That is approximately 70 per cent increase over the existing tariff rate. I should be very glad if the proponents of this rate would give any justification for it.

Mr. SMOOT. Mr. President, the committee did not want to put any specific rates upon these compounds and salts, because the prices of the borate and the resinate and the sulphate vary so widely.

Take resinate. Before the war it was 2 cents; to-day it is from 6 to 13 cents, according to the grade.

The sulphate is 11 cents to-day, and the pre-war foreign price was 3¼ cents.

The borate was about 9¼ cents before the war, and it is 22 cents to-day.

We thought, Mr. President, that instead of putting a specific duty on these products—we could hardly do it in the basket clause, anyway—we would have a 25 per cent ad valorem rate. In all of the basket clauses in this schedule applying to all of the salts and all of the esters we have kept the rate down to 25 per cent, and these items were in the basket clause before. We have provided the same rate here that is provided in all the other basket clauses for salts and compounds in the schedule, and this is simply to carry out that policy.

Mr. KING. Mr. President, may I inquire of the Senator if he has before him the pre-war price of manganese borate?

Mr. SMOOT. Yes; the pre-war price was about 9¼ cents.

Mr. KING. That was my understanding; and now it is from 32 to 36 cents.

Mr. SMOOT. No; to-day it is down to 22 cents in the United States.

Mr. KING. What is the date of the figures the Senator has? I have the date of April 24.

Mr. SMOOT. The Senator has the figures for chemically pure borate; but the price of the technical borate is 22 cents, and what comes in is the technical product.

Mr. KING. I was speaking of the chemically pure borate. The price of the technical borate is 22 to 26 cents.

Mr. SMOOT. That is right. That is what I stated.

Mr. KING. Then that is an increase of more than 250 per cent, or approximately that, above pre-war prices.

Mr. SMOOT. Yes; and that is why I wanted it to be here at an ad valorem rate, because I am quite sure the price is going to come down from the price to-day, and we did not want to put a specific duty on it at the price to-day.

Mr. KING. I agree with the Senator. I was not advocating a specific duty. I think it is advantageous, with many of these materials where there ought to be a fall, as there must be in many of these products, to maintain the ad valorem rate.

Mr. SMOOT. We are doing that. These are the salts of manganese, and they are carrying the same rate as all of the basket clauses of the salts and compounds of the other minerals. I do not think there ought to be two rates in those basket clauses in this schedule.

Mr. LA FOLLETTE. Mr. President, how does this rate compare with the Payne-Aldrich rate?

Mr. SMOOT. It is the same rate, I think, as the Payne-Aldrich rate.

Mr. LA FOLLETTE. Was the Payne-Aldrich rate a specific rate or an ad valorem rate?

Mr. SMOOT. An ad valorem rate.

Mr. LA FOLLETTE. How does the rate on sulphate, which, in plain parlance, is Epsom salts, compare?

Mr. SMOOT. Epsom salts is in paragraph 47.

Mr. LA FOLLETTE. That is the paragraph under discussion, is it not?

Mr. SMOOT. No; we are discussing paragraph 47a. While I am on my feet, I ask that the vote by which the amendment in paragraph 47 was agreed to be reconsidered, and then the paragraph passed over temporarily.

The PRESIDING OFFICER. Is there objection to the vote being reconsidered? The Chair hears none, and it is so ordered.

Mr. KING. May I say to my colleague that perhaps the application of a general rule in dealing with many of these basket-clause items, so far as possible, and so far as it would be just, should be followed; but my colleague, with his comprehensive knowledge of many items in this bill, knows that it is unfair to put so many items in the same basket clause.

Mr. SMOOT. That is the reason why we are taking these items out. They have always been in the basket clause before, and for statistical purposes we wanted them by themselves. In fact, it has been requested of the Treasury Department from different sources in the country that that be done, so the committee complied with those requests and put them in separately. I think they ought to be separate, because as to salts and compounds of all the other minerals in this schedule we had separate and distinct provisions, and they are all carrying the same rate.

Mr. KING. I was about to follow up that general observation with this, that for the same reason perhaps it may be felt that there ought to be, as nearly as possible, a comprehensive assignment of a comprehensive rate to many of these products which, while they are not generic, might come within cognate groups, and yet there are so many of these items which enter into the lives of the people, which are medicinal in character, or are used by such a large number of people, that to apply a sort of a uniform 25 per cent ad valorem rate, or, for that matter, a 15 per cent ad valorem rate, is bound to work injustice with respect to many of the items.

Mr. SMOOT. The compounds and salts, I will say to the Senator, are never used for medicinal purposes. They are either driers or solvents, and are used in the mechanical industries of the United States.

Mr. KING. When I was speaking about medicines I did not refer to those which come under this paragraph, because I know these manganese compounds are used for the purposes indicated by the Senator.

It does seem to me that the rate which has been suggested here is too high, and I am afraid that, in view of the enormous increases in the prices of these items over the pre-war prices the inclination will be to maintain these high levels. I think the rate ought to be reduced below that which has been suggested by the committee, and ought to be 15 per cent. Therefore I move to amend by striking out "25" and inserting "15."

Mr. SMOOT. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. SHEPPARD (when Mr. DIAL's name was called). I desire to announce that the junior Senator from South Carolina [Mr. DIAL] is paired with the senior Senator from Colorado [Mr. PHIPPS].

Mr. OVERMAN (when his name was called). Again announcing my pair as heretofore, and not being able to obtain a transfer, I withhold my vote.

Mr. STERLING (when his name was called). Making the same announcement as to my pair and its transfer as on the previous vote, I vote "nay."

Mr. UNDERWOOD (when his name was called). I transfer my general pair with the senior Senator from Massachusetts [Mr. LODGE] to the junior Senator from Rhode Island [Mr. GERRY] and vote "yea."

Mr. WATSON of Georgia (when his name was called). Making the same announcement as before, I withhold my vote.

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from New York [Mr. CALDER] with the Senator from Georgia [Mr. HARRIS];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from Wyoming [Mr. WARREN] with the Senator from North Carolina [Mr. OVERMAN]; and

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY].

Mr. McKINLEY. I transfer my pair with the Senator from Arkansas [Mr. CARAWAY] to the Senator from New York [Mr. WADSWORTH] and vote "nay."

Mr. DILLINGHAM. Making the same announcement as before, I vote "nay."

Mr. COLT. Making the same announcement as before, I vote "nay."

Mr. SHIELDS. I have a general pair with the junior Senator from Maine [Mr. HALE], who is necessarily absent. I transfer that pair to the senior Senator from Arizona [Mr. ASHURST] and vote "yea."

Mr. SIMMONS. Making the same announcement as to the transfer of my pair that I made on the last vote, I vote "yea."

Mr. WALSH of Montana. I transfer my pair, heretofore announced, to my colleague [Mr. MYERS] and vote "yea."

Mr. FLETCHER. I make the same announcement as to my pair and its transfer as on the last vote and vote "yea."

Mr. JONES of New Mexico. I transfer my pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED] and vote "yea."

The result was announced—yeas 15, nays 34, as follows:

YEAS—15.

Borah	King	Sheppard	Underwood
Fletcher	La Follette	Shields	Walsh, Mass.
Heflin	McKellar	Simmons	Walsh, Mont.
Jones, N. Mex.	Robinson	Swanson	

NAYS—34.

Broussard	Jones, Wash.	Moses	Spencer
Bursum	Kendrick	Nelson	Sterling
Capper	Keyes	New	Sutherland
Colt	Ladd	Newberry	Townsend
Curtis	Lenroot	Norbeck	Watson, Ind.
Dillingham	McCormick	Oddie	Weller
France	McCumber	Page	Willis
Gooding	McKinley	Shortridge	
Harreld	McLean	Smoot	

NOT VOTING—47.

Ashurst	Elkins	Lodge	Ransdell
Ball	Ernst	McNary	Rawson
Brandegee	Fernald	Myers	Reed
Calder	Frelinghuysen	Nicholson	Smith
Cameron	Gerry	Norris	Stanfield
Caraway	Glass	Overman	Stanley
Crow	Hale	Owen	Trammell
Culberson	Harris	Pepper	Wadsworth
Cummins	Harrison	Phipps	Warren
Dial	Hitchcock	Pittman	Watson, Ga.
du Pont	Johnson	Poindexter	Williams
Edge	Kellogg	Pomerene	

So Mr. KING's amendment to the committee amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 21, line 4, after the word "menthol," to strike out "25 per cent ad valorem" and to insert in lieu thereof "50 cents per pound."

Mr. JONES of New Mexico. Mr. President, I wish to make a brief statement regarding this item. It is just a question of whether you want to put a tax on a medicine or not. The rate now proposed by the Finance Committee is just the same as that of the present law.

Mr. SMOOT. It is just the same.

Mr. JONES of New Mexico. I do not understand, however, that menthol, which comes in from Japan, is in competition with the peppermint oil produced in this country.

Mr. SMOOT. No; it is not.

Mr. JONES of New Mexico. It is just a question whether you want to tax a medicine or not.

Mr. SMOOT. This is one-third of the rate the House put on it, and is exactly the same as the rate in the Underwood tariff law.

Mr. JONES of New Mexico. Yes; the Senator is quite right about that. If you want to tax it at all, I am inclined to think the rate is all right.

Mr. SMOOT. I want to say to the Senator that there is not such a speculative article in all the world as menthol. One day it will be down to $4, the next day it will be up to $8, and the next day it will be down to $5, and it is all controlled outside of the United States.

Mr. JONES of New Mexico. But putting a duty upon it will not change that situation.

Mr. SMOOT. No; it will not change that situation, but I think we had better get a little money out of it.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 21, line 7, after the word "oils," to strike out the word "animal."

Mr. KING. Mr. President, may I inquire whether it is the design of the committee to take care of animal oils in some other paragraph of the bill, or why do they recommend striking out the word "animal" here?

Mr. SMOOT. The word appears only in the heading of the paragraph; and I think myself there is nothing gained by striking it out and nothing lost by having it remain in. So far as the committee are concerned, I do not think the committee care whether it remains in or whether it goes out.

Mr. KING. I can see no particular signification; but striking it out would seem to indicate that perhaps they were dealing with this subject in some other paragraph.

Mr. SMOOT. No. I will ask that the Senate disagree to the amendment.

Mr. McCUMBER. Mr. President, I think it very proper to state that this was stricken out at the request of one of the members of the committee, who feared that the word "animal" might include a great many other oils which were not intended to come under that head. Of course, we understand that a fish is an animal, nevertheless when we are speaking of a fish we describe it as a fish rather than as an animal.

Mr. JONES of New Mexico. I am wondering whether it is proper to call a fish an animal.

Mr. SMOOT. There has been no trouble in the past about the matter, I will say to the Senator.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 21, line 7, to strike out the numeral "8" and insert the numeral "5," so as to read:

Sod, herring, and menhaden, 5 cents per gallon.

Mr. KING. Mr. President, the items now under consideration are sod, herring, and menhaden oils. The Senate committee have very wisely made a reduction from the House rate. I would like to inquire of some member of the committee with respect to their views upon paragraph 49. It occurred to me that with the high prices upon our domestic fats there could be no objection to permitting these fish oils, which are so important, to go to the people as cheaply as possible.

With reference to the three oils just referred to, under the tariff act of 1909 there was a rate of 6.8 cents per gallon, and under the act of 1913 a rate of 3 cents per gallon. The Senate committee now suggests a rate of 5 cents per gallon, so that it is an increase of considerably more than 50 per cent over the existing rate. I would like to ask the chairman of the committee if he has any explanation to justify that rate? Certainly the price of labor is not involved. Competition is not a question of importance. It would seem to me that the only object was to increase the price to the consumer, and obviously that increase was designed to benefit some one. Who is the person to be benefited by these high prices?

Mr. McCUMBER. It would take some time to find the data upon which we made the recommendation for the change, but I think, if I remember rightly, that this reduces it to about the same equivalent ad valorem that it was under the old law, about 25 per cent or not to exceed 25 per cent.

Mr. KING. Let me say to my good friend that the Underwood law carried a rate of 3 cents specific.

Mr. McCUMBER. But I say the 3 cents specific, under the price which it was prior to the war, would be about the same ad valorem that the 5-cent rate would be as a specific duty to-day. That is what I intended to say.

Mr. KING. Then, of course, it means that in fixing these rates we are to fix them with reference to the present domestic prices and upon the theory that we are to perpetuate these high levels. In other words, instead of fixing rates either ad valorem or specific upon pre-war levels or prices that would approximate them, we are erecting this high wall upon a theory that the war prices and the postwar prices—and many of the postwar prices exceed the war prices—are to be continued indefinitely. The bill is in the interest of the perpetuation of these high prices.

It does seem to me that the statement which was made yesterday by the learned Senator from Idaho [Mr. BORAH] was a very wise and very pertinent one. This is not the time for the preparing of a tariff measure, because the condition of prices is in a flux. Prices in the world are not fixed, some are rising and some are falling, depending entirely upon the conditions of the country and the capacity to get gold to buy the raw material abroad. It is impossible now to fix rates in a tariff law that would be just. They might be just to-day, but they would be very unjust in a month or in six months or a year from now.

If we write a tariff law now upon the theory of the present high prices, then manifestly we are contributing to the maintenance of the high prices and furnishing an excuse to manufacturers to maintain the high prices. It is an invitation to them not to reduce their prices. It is saying to them, "We will license you to continue these postwar high prices." That is a wrong theory. It seems to me it can not be defended.

I point to the fact that the oils to which I have referred are important in the lives of the people. I point to the fact that under the Underwood law the rate was 3 cents per gallon, and there was no complaint. The industry, so far as I can tell, has prospered, and yet without any reason whatever, except

that prices are now high, it is proposed to increase the rate about 60 per cent.

Mr. McCUMBER. Mr. President——

Mr. KING. I yield to the Senator from North Dakota.

Mr. McCUMBER. Does the Senator complain because we reduce whale oil from 8 cents, the Underwood tariff rate, to 5 cents under the pending bill, and does he accuse us of attempting to keep up the price because we reduced it 3 cents?

Mr. KING. We will deal with whale oil when we get to it.

Mr. McCUMBER. They are all in the one paragraph, and whale oil is a part of this paragraph. Some of these items we raised and some of them we lowered from the Underwood law rate. The Senator must not say it is done to maintain high prices any more than he should say that it is done to reduce the price in the next item.

Mr. KING. Of course, I do not desire to do the Senator an injustice, but I asked the reason, and he suggested as an answer that 3 cents per gallon bore about the same relation or ratio to prices——

Mr. McCUMBER. No; I did not say that was the reason which justified us in holding the rate. I stated that the fact, as I understand it in this instance, was that the rate would give us about the same ad valorem.

Mr. KING. That would be an argument—at least I regarded it as the only argument which the Senator had to offer—in response to my question about increasing the rate from 3 cents a gallon to 5 cents per gallon.

Let me ask the Senator if these oils are not used by the people, and if they are not important?

Mr. McCUMBER. Everything that is mentioned in the bill is used by the people.

Mr. KING. Oh, yes; more or less.

Mr. McCUMBER. If we are not going to tax anything used by the people I do not know where we would get any revenue.

Mr. KING. The Senator concedes that these oils are important in the lives of the people for manufacturing, if not for edible purposes.

Mr. McCUMBER. Certainly. All of them are more or less important; some more important than others.

Mr. KING. There is apparently no reason other than what the Senator has suggested—and if he says that is not the reason I shall not insist that it is—for raising the rate from 3 cents per gallon, the rate under the existing law, to 5 cents per gallon.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 21, line 8, to strike out "whale, seal, and" and insert in lieu thereof "whale and seal, 6 cents per gallon."

Mr. KING. As I understand the Senator, this is an increase of 1 cent per gallon over the existing rate.

Mr. SMOOT. That is true of whale oil.

Mr. KING. I wish to ask the Senator if there is any industry to be protected, if it is a new industry, if the question of labor is involved, or if neither of these questions enters into the consideration of the matter and as factors for determining the basis of the rate, will the learned chairman advise us as to the reason for the increase above the existing rate?

Mr. McCUMBER. I think we will need about all the money we get from it. It is not a heavy ad valorem duty. It is a very reasonable one.

Mr. KING. I move to amend by striking out the numeral "6" in line 8, on page 21, and inserting the numeral "5," so that it will read "whale and seal, 5 cents per gallon."

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Utah to the committee amendment.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question recurs on the committee amendment.

The amendment was agreed to.

The next amendment was, on page 21, line 9, to strike out "cod and cod liver, 12½ cents per gallon."

Mr. KING. I presume that is transferred to the free list?

Mr. SMOOT. That is correct.

Mr. KING. May I inquire whether it is taxed in any other form, in the form of food or in the form in which it appears under the designation "cod and cod liver"?

Mr. SMOOT. No.

Mr. KING. With the understanding that the product or products, cod and cod liver, found in line 9, page 21, are transferred to the free list and do not appear in another bracket or in any other basket, we are ready to have a vote on the committee amendment.

Mr. SMOOT. I will simply call attention to paragraph 1624, page 228, where my colleague will see that all cod and cod liver oils are free.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The next amendment was, on page 21, lines 10 and 11, to strike out "20 per cent ad valorem" and insert "5 cents per gallon," so as to read—

and all fish oils, not specially provided for, 5 cents per gallon.

Mr. KING. May I inquire of the chairman of the committee as to the reason for this increase? In the existing law the rate is 3 cents per gallon, and it has been increased in the pending bill to 5 cents per gallon. In the Payne-Aldrich tariff law the rate was 8 cents per gallon, and in the bill as passed by the House the rate is 20 per cent ad valorem. Under the Underwood law the rate was 3 cents per gallon, and in the Senate committee bill it is proposed to make the rate 5 cents per gallon. So there is an increase here of approximately 60 per cent over existing law. I ask the Senator what justifies the increase in the rate in this item?

Mr. McCUMBER. For revenue. The present rate would be equivalent to about 17 per cent ad valorem duty, which is a very low duty. We need a little more money now for the expenses of the Government than we needed when the Underwood law was enacted.

Mr. KING. May I inquire of the Senator if there is any other purpose than for revenue? Is there any new industry which the Senator is seeking to protect?

Mr. McCUMBER. Mr. President, there is a degree of incidental protection that necessarily goes with the imposition of the duty, but I do not think 17 per cent ad valorem is an excessive duty.

Mr. KING. I move to strike out the numeral "5" and to insert the numeral "3," in line 11, page 21, so that it will read "3 cents per gallon," which is the duty imposed under the existing law.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Utah to the amendment of the committee.

The amendment to the amendment was rejected.

Mr. KING. I wish to say to the Senator from North Dakota that the revenue derived from this duty will not be very much, because in 1921 the total imports of the commodity were less than 175,000 gallons, not for nine months alone, but for the entire year.

Mr. McCUMBER. I desire to call the attention of the Senator from Utah to the fact that there were over a million gallons imported in 1918.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 21, paragraph 49, line 15, after the word "animal," to strike out "oils" and to insert "oils, fats."

Mr. KING. I inquire of the Senator from North Dakota if he conceives the amendment embodied in the words just read as making any change in the bill as it came from the other House?

Mr. SMOOT. It makes no change whatever. The reason for the amendment is to make sure that fats fall in the same paragraph as grease; in other words, that the term "grease" as used in existing law shall include fats.

Mr. KING. Mr. President, we have in another paragraph in the bill a provision in respect of tallow, upon which a specific rate is imposed.

Mr. SMOOT. But this is "not specially provided for," while tallow is specially provided for.

Mr. KING. Is it the intention to differentiate this fat from tallow fat, which is provided for in another place?

Mr. McCUMBER. Yes.

Mr. KING. So that we may have the understanding as to just what is comprehended by the word "fat," which is found here, may I ask the Senator to what particular character of fats does he think this word in line 15 would apply?

Mr. McCUMBER. It applies to all fats except those which are specifically provided for in other paragraphs of the bill.

Mr. KING. Does the Senator think that it would fall in any basket clause in this proposed law, aside from paragraph 49, if this amendment were not offered?

Mr. McCUMBER. This is the basket clause itself.

Mr. KING. Would it be comprehended in any other paragraph?

Mr. McCUMBER. It certainly would not be. It is expected that this language here will cover all kinds of fats, with the exception of those which are specifically mentioned in other sections of the bill.

Mr. SMOOT. Fat is a solid, while grease is a liquid or an oil. Therefore the question arose in the minds of the Tariff Commission whether it would not be better to insert this language so that no question might arise as to the real meaning of the term "grease," as to whether it was a liquid or a solid.

Mr. KING. I have no objection to the amendment if we may know what is comprised within it and that there is no duplication in some other paragraph of the bill.

Mr. President, when we come to offer amendments to the bill regularly—and I may not offer them now to the provisions where there are no amendments tendered by the committee—I shall offer an amendment to this provision of the bill as to the ad valorem rate.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 21, paragraph 50, line 17, after the words "castor oil," to strike out the numerals "4½" and to insert the numeral "3."

Mr. JONES of New Mexico. Mr. President, I ask that paragraph 50 and paragraph 50a both go over. I have some data on the subjects embraced in those paragraphs which I desire to present.

Mr. McCUMBER. I think that we may as well let those paragraphs go over, if the Senator desires.

The VICE PRESIDENT. The paragraphs will be passed over.

Mr. FLETCHER. If the Senator from North Dakota will allow me, I have here some comments by the Cotton Oil Press of February, 1922, which bear directly on the matter of the duty on cottonseed oil especially, and I should like to have them put into the RECORD. I think it may be advantageous to have these data from the Cotton Oil Press inserted at this time. Of course, this matter will only be relevant later, but it may just as well go into the RECORD now. I should, therefore, like to have it inserted in the RECORD, if there is no objection.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

CRUSHERS' ASSOCIATION OPPOSES TARIFF—NEW ORLEANS SPECIAL MEETING DECLARES AGAINST DUTIES ON FOREIGN VEGETABLE OILS AND INSTRUCTS OFFICIALS TO IMPRESS ITS VIEWS ON CONGRESS.

At the special meeting of the Interstate Cotton Seed Crushers' Association, held according to the call of the president at the Grunewald, New Orleans, La., Wednesday, January 4, the following resolutions were adopted by a nearly unanimous vote:

"*Resolved*, That we are opposed to a tariff on foreign vegetable oils and oil seeds in the permanent tariff bill, believing that such a tariff would prove a detriment to the farmer and to our industry; and

"*Resolved*, That our officers, either directly or through appropriate committees, present to Congress these our resolutions and advocate legislation accordingly."

On a separate motion the following additional resolution was adopted:

"*Resolved*, That referring to the above resolutions, it is suggested to our associated State organizations that they take similar action."

The above resolutions were adopted after the convention had been in session all day and into the early evening, and the tariff question had been discussed in all of its ramifications and from all angles. About 100 members were present in person at the meeting and approximately 250 more were represented by proxies.

Following roll call President Grogan read the call for the meeting, which had been made at the request of the commerce relations committee of the association, following its meeting in Washington, December 15.

A. G. Kahn, chairman of the commerce relations committee, presented its report, and for the purpose of getting the question before the meeting moved that the Interstate Cotton Seed Crushers' Association record itself as opposed to the imposition of duties upon foreign vegetable oils in the permanent tariff bill. Instead of speaking further to his own motion, Mr. Kahn suggested that the floor be given to the gentlemen whose arguments and presentation of facts and figures before the committee at its Washington meeting, which had convinced all of the committee, some of which had previously been protariff, that the tariff was detrimental to the industry.

The most important addresses were delivered by John Aspegren and F. M. Barnes, who covered the subject in all its phases, illustrating their arguments by statistical tabulations shown by stereopticon on a screen. They replied to many questions asked from the floor, and when they had finished it was evident from the discussion that many who came as determined advocates of the tariff, and with instructed proxies in their pockets to vote against a removal of the tariff, had been convinced they had been wrong in their conclusions.

A few refused to see the light, but it is safe to state that there were very few in the convention hall of the former protariff men who were not satisfied that a vegetable-oil tariff was injurious to farmers and crushers alike. Many regrets were expressed that those who had sent instructed proxies had not withheld their instructions and allowed their holders to vote them according to their convictions after hearing the arguments.

In accordance with the resolutions adopted, President Grogan appointed the following special committee to come to Washington and present them to the Senate Finance Committee: P. S. Grogan (chairman), J. J. Lawton, A. G. Kahn, F. M. Barnes, John Aspegren, and R. F. Crow.

Before leaving New Orleans it was ascertained by wire that the Senate Finance Committee would give the interstate committee a special hearing on January 9. On that date the delegation appeared and President Grogan presented the subject as follows:

"Mr. Chairman and gentlemen of the Committee on Finance, we have the honor as the committee of the Interstate Cotton Seed Crushers' Association to present for your consideration the following resolutions adopted at the regular called meeting of the association in the city designated as its principal place of business in its corporate charter, namely, New Orleans, La., on January 4, 1922, namely:

"'*Resolved*, That we are opposed to a tariff on foreign vegetable oils and oil seeds in the permanent tariff bill, believing that such a tariff would prove a detriment to the farmer and to our industry: And be it further

"'*Resolved*, That our officers, either directly or through an appropriate committee, present to Congress our resolutions and advocate legislation accordingly.'

"In accordance with the last paragraph this committee was appointed.

"The cottonseed industries of the country consist of many branches, divisions, and ramifications. Our products feed your beef and dairy cattle on which you are so dependent; at every meal you yourself eat our shortenings. In your homes you use soaps in your kitchens and in your baths—soaps made from the by-products of refined cottonseed oil. You ride in automobiles the tops and upholsteries of which are made from linters. These same linters were the basis of American explosives that won the war.

"I merely wish to emphasize the importance and magnitude of the industry we represent.

"Beginning with the lowly cotton seed, which, in the memory of you gentlemen, was a costly nuisance, we have developed it into a thousand products, the most important of which is cottonseed oil and the products made therefrom. We have created a world-wide demand for these products, and we have come to pay the southern farmer in some years the enormous sum of $350,000,000 for the seed. So you can well see that our industry is one that deserves recognition.

"This industry is nationally represented by the Interstate Cotton Seed Crushers' Association, which comprises the majority of the crude crushing establishments in every Southern State, over 400 out of the 500 running and reporting this season, besides which there is affiliated with us the refining and various other marketing and by-products concerns.

"After these opening remarks, pointing out to you the importance of our industry, I want to add that, while I am president of the association represented and as such head the delegation, I have delegated two of the members of the committee to speak to you more fully on our subject—each on a different phase of our problem. We have concentrated ourselves down to these two addresses, in order not to take too much of your time. Gentlemen, I introduce to you Mr. R. F. Crow, of Houston, Tex."

Following a few preliminary remarks, Mr. R. F. Crow, of the interstate committee, read and presented to the Finance Committee the following brief:

Brief and arguments of Interstate Cotton Seed Crushers' Association, the national organization of the oil mill products trade. To the Committee on Finance, United States Senate. Presented at tariff hearings, H. R. 7456, by the president and a special committee of the association, January 9, 1922, concerning foreign vegetable and animal oils, oil seeds, and oleaginous materials in general, as embodied in paragraphs 49 and 50, Schedule 1, and paragraphs 1620 and 1626 of the free list of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, as passed by the House of Representatives on July 21, 1921, and referred to the Senate Committee on Finance, July 22, 1921.

To the Committee on Finance.

GENTLEMEN: We have the honor as the official organization of the cottonseed crushers of the South, and all component elements of the cottonseed industry, to petition you that all so-called protective duties on the oleaginous materials named in the caption of this brief be eliminated from the permanent tariff bill as finally drawn, and especially the articles of soya-bean oil, peanut oil, cottonseed oil, coconut oil, palm oil and palm-kernel oil, sesame oil, copra, soya beans, peanuts, palm kernels.

This action is made necessary by the fact that cottonseed oil is produced in such volume within the cottonseed-producing States of the South that it is a prime essential that an export market at reasonable and competitive prices be assured and available for the normal exportable surplus of cottonseed oil produced. Unless such an export market at reasonable and competitive prices be assured, we shall be unable to pay the southern farmer a reasonable and competitive price for his cotton seed.

The production of crude cotton seed oil, the product of cotton seed, varies with the production of cotton, seasonal conditions which influence the oil content of the seed, and conditions governing the quantity of seed crushed in proportion to the quantity of seed produced.

While the southern farmer is primarily interested in getting a reasonable and competitive price for his seed, our whole industry is equally interested in obtaining for him such a price, because unless he obtains such price for his product a great deal of the seed production will be wasted by being thrown on the ground instead of being marketed to the oil mills in the South. Hence the higher the price of seed is for the southern farmer the larger will be the amount of seed available to be crushed by us, and our interests and those of the southern farmer in a reasonably high and competitive price for cotton seed are identical.

The production of crude cotton seed will range from 1,200,000,000 pounds annually to 1,800,000,000 pounds, under normal or approximately normal conditions.

In due proportion to the amount of cottonseed oil produced is the amount which must be exported, and the exportable surplus which must find sale in the export markets of the world ranges from 10 to 25 per cent, dependent upon conditions as before named.

Despite the fact that the cotton crop of 1921 does not far exceed 8,000,000 bales, we find that even with a production of oil from the quantity of seed procured from this yield of cotton that an export market is required to relieve the domestic market.

The Interstate Cotton Seed Crushers' Association has never before declared itself on the subject of the Fordney tariff. Confronted now with the imminent probability of the entire loss of our European export markets due to the peculiar position in which the cottonseed industry is placed by duties embodied in the emergency tariff as signed by the President in May, 1921, we ask that in considering the case of cottonseed oil in connection with the permanent tariff that no duties be levied upon foreign animal and vegetable oils and oil seeds, and especially those previously enumerated in this brief.

When the emergency tariff was first discussed in January, 1921, the records of commerce revealed that we exported in the month of January of cottonseed oil over 60,000,000 pounds to the countries of Europe. Six months after the passage of the emergency act we find our exports to Europe reduced to somewhere between 5,000,000 and 10,000,000 pounds monthly. During those six months some oil went out sold to

Europe before the passage of the emergency tariff, but from now on we have no such sales to rely on, and we are confronted with the stern realities. The reason for the falling off in the export demand is not a lesser demand in Europe, but because the European buyer has turned away from our cottonseed oil and is buying instead, and is importing instead, millions of pounds of competitive oils and oleaginous materials, especially from the Orient.

—

CRUSHERS ASK REMOVAL OF OIL TARIFF.

The efforts of the officials of the Interstate Cotton Seed Crushers' Association to convince Congress that a permanent tariff on vegetable oils would be a detriment to southern farmers and to the cottonseed products industry, in accordance with the resolution adopted at the special meeting of the association at New Orleans January 4, has not been confined to the formal presentation of the resolutions and the brief and argument of the special committee of the association to the Senate Finance Committee January 9. Copies of the brief were mailed to every Member of Congress as well as to all members of the association and to the daily and agricultural press.

During the week of January 23 another special committee appointed by President Grogan and consisting of A. G. Kahn, chairman, Little Rock, Ark.; John Aspegren, Portsmouth, Va.; H. M. Tucker, vice president Southern Cotton Oil Co.; Lyman N. Hine, president American Cotton Oil Co.; D. R. Coker, Hartsville, S. C.; R. F. Crow, Houston, Tex.; and Louis N. Geldert, of Washington, called on many Senators and Representatives at their offices at the Capitol and wherever possible make a verbal presentation of opposition to the tariff. In all cases a short printed statement of the case was left with the Congressmen. This committee was everywhere received with courtesy, but its reception varied greatly in other respects, according to the personality and prejudices of those called upon. The experience of the week was a liberal education in politics and diplomacy.

It was sought to impress Congressmen by these calls with the fact that high prices paid to farmers for cotton seed invariably bring a larger percentage of seed to the mills, and that low prices cause seed to be withheld from the market, and that the majority of the crushers are in direct contact with the farmers and know their problems and are cooperating with them in solving those problems. The fact was stressed that the tariff on vegetable oils has acted as an embargo and removed American buyers from the oriental market, leaving that buying in the hands of concentrated European buying combinations who are able to name their own low prices; and that this country, having a tremendous exportable surplus of oils and fats, has been compelled to sell its commodities in European markets at the same low value artificially placed on oriental oils; furthermore, that in view of the low price at which Europe has been able to buy oriental oils, due to lack of competitive buying, Europe has substituted oriental oils for American cottonseed oil usually sent there, and that we have lost the export outlet.

Congressmen were reminded that the placing of a tariff on vegetable oils from the Orient does not remove them from competition with our cottonseed oil in the world markets of oils and fats, but that by removing American buying competition in the Orient the price of oriental oils is depressed and thereby all other oils and fats are depressed, including the price of cotton seed. It was impressed upon them that oriental oils should be allowed to flow into their natural channels in this country—the soap kettles—instead of being forced into unnatural ones in Europe, and that our surplus cotton oil, the premier edible oil of the world, should be allowed to go to Europe for edible purposes there, instead of being forced into low-grade channels in this country to take the place of low-grade oriental oils, and thus put cottonseed oil back 20 years in its uses and consequent values.

As the tariff depreciates the value of cotton oil and of cotton seed, the committee urged Congressmen to use their votes and influence to prevent continuance of the conditions that have been created by the emergency tariff act, and to have soya-bean oil, peanut oil, coconut oil, and cottonseed oil placed on the free list, together with oil seeds from which those oils are expressed. In the words of John Aspegren, "Please give us protection against a protection that is harmful instead of helpful."

The next amendment of the Committee on Finance was, on page 22, paragraph 51, line 25, before the words "per cent," to strike out the numerals "25" and to insert the numerals "35," so as to make the paragraph read:

PAR. 51. Alizarin assistant, turkey red oil, sulphonated castor or other sulphonated animal or vegetable oils, soaps made in whole or in part from castor oil, and all soluble greases; all of the foregoing in whatever form, and used in the processes of softening, dyeing, tanning, or finishing, not specially provided for, 35 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, I should like to have some statement as to why that increase of duty has been reported.

Mr. SMOOT. I will frankly say to the Senator that the increase is proposed because of the increase in the duty on castor oil. Castor oil is a component of alizarin assistant and turkey red oil, and, on account of the increased duty on castor oil, we have given a compensatory rate on alizarin assistant.

Mr. JONES of New Mexico. I observe that under existing law the importations of alizarin amount really to nothing. I will read from page 160 of the Summary of Tariff Information. The production of this article in this country is quite large. The Summary of Tariff Information says:

Production: These products are manufactured by various firms in this country specializing in chemicals used in the textile industry and by the large textile manufacturers. The production of turkey red oil in 1914 was 11,681,884 pounds (about 1,370,000 gallons), valued at $820,491.

Imports of alizarin assistants have shown a gradual increase prior to the war from 97,097 gallons, valued at $38,600, in 1910, to 186,234 gallons, valued at $72,430, in 1914. The imports since then have decreased until in 1918 only 24 gallons were imported.

Then we find that during the postwar period, in 1919, there was a considerable quantity imported, 46,915 gallons, and the unit value was 69 cents. In 1920 there were imported only 282 gallons, valued at $204, and the duty collected, at 25 per cent, was $51. For nine months of 1921 the amount imported was only 1,229 gallons. Of the other soluble greases in the same paragraph and bearing the same rate of duty, in 1918 there were imported 4,830 pounds; in 1919, 575 pounds, on which we collected a duty of $27; and in the first nine months of 1921 651 pounds were imported.

There is such an enormous difference between the domestic production and the importation that it seems to me a duty of 25 per cent is sufficient, and, in the absence of any further information than I have, it looks to me as if this increase were simply an increase because the committee were in the "increasing" spirit.

Mr. SMOOT. I will say to the Senator that the rate in the present law is 25 per cent ad valorem. The Committee on Finance increased the rate of duty on castor oil in this bill over the rate carried by existing law, and certainly in that case the Senator will agree that we ought to increase the ad valorem rate on the commodity which is made from castor oil. That is why the increase of 10 per cent over the rate in the existing law was provided. If it had not been for that, we would have made the rate just exactly the same as that in the Underwood-Simmons law.

Mr. JONES of New Mexico. Has it been figured out that the 10 per cent additional duty on alizarin assistant is merely a compensatory duty for the additional duty put upon castor oil?

Mr. SMOOT. It has.

Mr. JONES of New Mexico. I have no doubt it was figured probably in a rough way. Of course, the Senator says that was the purpose for which it was done, but where the domestic production is so enormous and the imports, both before and since the war, have been negligible, I am not convinced, I will say to the Senator, that the duty should be increased from 25 per cent to 35 per cent.

Mr. SMOOT. The change was called to the attention of the committee by the Tariff Commission. They state:

Attention is called to the adjustment of rates between alizarin assistant, the duty on which is 25 per cent ad valorem in this paragraph, and castor oil, the raw material, upon which the duty is 4½ cents per pound in paragraph 50. Castor oil, No. 3, in barrels, was quoted at 10½ cents per pound on December 12, 1921, and has not been quoted at less than 8 cents during 1921. The duty on castor oil is, therefore, equivalent to about 45 per cent ad valorem, as against a duty of 25 per cent ad valorem on alizarin assistant, which is 80 to 90 per cent castor oil.

So the Senator will see that we are not giving as much as the Tariff Commission recommended.

Mr. JONES of New Mexico. The Senator will bear in mind that during 1919 the unit value of alizarin assistant imported was 69 cents a gallon, in 1920 it was 72 cents, and in 1921, 58 cents. It seems to me that there is absolutely no relation there.

Mr. SMOOT. Ninety per cent of alizarin assistant is castor oil.

Mr. JONES of New Mexico. Yes; I understand that, but the value of the castor oil does not compare, it seems to me.

Mr. SMOOT. In what way does the Senator mean it does not compare?

Mr. JONES of New Mexico. I mean it does not compare with the prices which are given. If castor oil is used, its price would have to be increased to increase to any great extent the value of alizarin assistant. However, we have gotten the Senator's idea about it. I do not think what has been said here will be of much assistance to the people who use this commodity. I do not think they will be quite convinced as to why all this has been done.

Mr. SMOOT. With castor oil at 12 cents, I will say to the Senator, or even 10½ cents, a duty of 3 cents will amount to 33⅓ per cent on the castor oil alone, and 90 per cent of that is alizarin assistant.

Mr. KING. May I inquire of my colleague if we ought not to direct our efforts to securing cheaper castor oil?

Mr. SMOOT. That is a question for the Senate to decide.

Mr. KING. That is the vice of this tariff. When we ask for a certain rate, as is asked in this instance, my good friend the senior Senator from Utah says that castor oil constitutes such a very large constituent part of the finished product of alizarin assistant that, as we have a high tariff on castor oil, we must give a high rate upon this product. That is what I object to.

Suppose that we deal with the primary article first and lower the rate on that, and then when we address ourselves to the intermediate or to the advanced product or to the finished product we can take into account the fact that we have lowered the rate upon the primary or fundamental product utilized in the construction of the intermediate or the finished product, and thus reduce the rate upon the finished or the intermediate prod-

uct. If, however, you begin to build your house with the chimney, of course, you are going to perpetrate many injustices, if you do not kill a good many people in the process. It would be wiser to build from the foundation, and dispose of the primary commodities and the primary compounds and the primary and fundamental elements, and put the prices as low as we can there. Then, when we address ourselves to the intermediates or to the finished products, we will have a substantial foundation upon which to build.

Mr. SMOOT. Mr. President, of course we have to read this bill backward, as we do every bill——

Mr. KING. Like the Japanese language.

Mr. SMOOT. Because of the fact that generally the finished product falls in the chemical schedule, and all the raw materials follow afterwards. The castor bean has been put upon the dutiable list for revenue purposes. We put a duty of half a cent on the castor bean. The castor bean, then, of course, being taxed for revenue purposes, raised the rate on castor oil. Castor oil is 80 per cent of alizarin assistant, and so there has to be a compensatory duty clear through.

Mr. KING. Let us put the castor bean on the free list, then, and we can reduce these prices on the finished products that are so essential to the people.

Mr. SMOOT. That is one way to say it, but——

Mr. LA FOLLETTE. It is not said that way in the bill.

Mr. SMOOT. I will say to the Senator that this is not very much used by the people.

Mr. LA FOLLETTE. Just a little here and a little there.

Mr. JONES of New Mexico. Mr. President, I observe that we have not yet fixed the duty on castor oil.

Mr. SMOOT. No; the Senator asked that it go over.

Mr. JONES of New Mexico. That is in paragraph 50, which has gone over.

Mr. SMOOT. Yes; the Senator asked that it go over.

Mr. JONES of New Mexico. I ask that paragraph 51 may go over, also, because it would hardly be decent to pass on paragraph 51 upon the theory that we are going to increase the duty on castor oil in paragraph 50, which has been passed over.

NAVAL OIL RESERVES.

Mr. LA FOLLETTE. Mr. President, as the paragraph under consideration is related in some degree to oil, I want to submit to the Senate in all seriousness a communication which has reached me with regard to Teapot Dome, in Wyoming. I am going to read the letter and the inclosure which accompanies it in order that in so far as possible I may emphasize it and secure the attention of Senators to it, especially the members of the Committee on Public Lands and Surveys, who are to conduct an investigation into the leasing of Naval Reserve No. 3 to private interests:

TULSA, OKLA., *May 5, 1922.*

Hon. ROBERT M. LA FOLLETTE,
Member United States Senate, Washington, D. C.

DEAR SIR: I have the honor to say to you that on yesterday the directors and advisory committee of the National Association of Independent Oil Producers held a meeting and adopted the following attached protest against the policy of the Government in opening for exploitation the naval reserves of the United States.

The president of the association was authorized to appoint a committee of experienced oil men to render you and the Senate committee, which has in charge the investigation of this policy, such assistance as you or the committee may feel in need of in the analysis and study of the contracts between the Government and the interests which have secured the leases upon the naval reserves.

The National Association of Independent Oil Producers is composed of numerous local associations throughout the United States, among them being associations in Oklahoma, Kansas, Texas, Indiana, West Virginia, Pennsylvania, and Kentucky.

Yours very truly,
NATIONAL ASSOCIATION OF INDEPENDENT OIL PRODUCERS,
By W. H. GRAY, *President.*

The following, which I will now read, came as an inclosure in the letter:

TULSA, OKLA., *May 5, 1922.*

To the Senate of the United States, Washington, D. C.:

The National Association of Independent Oil Producers, representing substantially all the independent oil producers of the United States, desires to enter its protest:

First. Against the policy of the Secretary of the Interior and the Secretary of the Navy in opening the naval reserves at this time for exploitation.

Second. Against the method of leasing public lands without competitive bidding, as exemplified in the recent contract entered into between Secretary Fall of the Interior and Secretary Denby of the Navy and the Standard Oil-Sinclair-Doheney interests.

Third. Against the policy of any department of the Government of the United States entering into a contract of any character whatsoever, whether competitive or not, which would tend to continue or perpetuate a monopolistic control of the oil industry of the United States or create a monopoly on the sale of fuel oil or refined oil to the Navy or any other department of the Government.

For the following reasons:

There exists no emergency or necessity which would warrant the opening of the naval reserves at this time for exploitation in order that the Navy might be supplied with the various grades of oil required by it, there being already above ground and in storage in the United States the greatest amount of oil that has been in storage in the history of all times.

The prices of fuel oil at the seaboard are lower than they have been in years, and there is an abundant supply.

The oil industry of the United States is just now convalescing from the greatest depression it has ever suffered, the daily production now being the largest in its history, and, therefore, the turning over of Government lands to the large pipe-line interests for exploitation will have the direct result of depressing the price of crude oil without in any way relieving the people of the onerous and burdensome high prices of refined products.

The policy of opening the naval reserves at this time is at variance with the policy announced by President Harding last year in requesting the Ways and Means Committee of the House to place crude oil on the free list. The President expressed the idea at that time that it should be the policy of the Government of the United States to encourage the development of oil resources in neighboring and foreign countries by the capital of the United States, with a view to utilizing their petroleum resources in this country, thus conserving and husbanding our own petroleum resources for our future protection and industrial upbuilding.

The delivery of the naval reserves of the United States to the Standard Oil-Sinclair-Doheney interests constitutes a return to the era of land-grabbing and carpetbagging whose hydrohead of iniquity was crushed by the policy of President Roosevelt almost a decade ago.

Shortly after the discovery of oil in the Indian Territory, now known as the State of Oklahoma, efforts were repeatedly made to grab the entire petroleum resources of the State under large blanket leases, and there were men at that time in high offices—cabinet members and lesser politicians—in great swarms who favored these grants. The independent oil producers spent many days at Washington fighting this attempted monopoly; and in order to prevent the monopoly of these lands by a few large companies the Secretary of the Interior, by order of President Roosevelt, issued a regulation that no corporation or individual would be allowed to hold at any one time more than 4,800 acres of restricted Indian land under leases, thus giving the smallest producer an opportunity to enjoy the possibilities of this, the greatest light oil producing area the world has ever known.

The rules of the department were subsequently amended so that all leases in what is known as the Osage Nation should be put up at public auction and sold to the highest bidder. In this connection we would cite the fact that during the last sale only a few weeks ago a 320-acre tract was sold for a bonus of approximately two and a half million dollars in cash and a one-sixth royalty. This sale was made to two companies not identified with any Standard Oil or pipe-line interest, thus demonstratng clearly that there is ample independent capital to develop the petroleum resources of the Government without granting these rights to monopolistic interests.

The Secretary of the Interior is now in the position of having one policy in Wyoming and another in Oklahoma with reference to Indian lands. The policy with reference to Indian lands in the Osage Nation, by which these lands are disposed of in small tracts to the highest bidder, has proven highly satisfactory to the entire oil industry and very profitable to the Indians, and therefore the independent oil industry is at a loss to understand why the Secretary of the Interior would adopt an altogether different and contrary policy in the disposition of lands in California and Wyoming.

We ask that the committee appointed by your honorable body investigate the contracts above referred to with a view to determining whether or not they tend to perpetuate a monopolistic control of the oil industry of the United States, and whether or not they tend to violate the spirit of the antitrust laws of this country, and whether or not the effect of these contracts will be to create a monopoly of the oil trade with the Navy.

We wish to express our appreciation and thanks to the Members of the Senate who have in the past and are now interesting themselves in behalf of the conservation of our national resources and the protection and perpetuation of the independent oil industry of this country.

Respectfully submitted.

NATIONAL ASSOCIATION OF INDEPENDENT OIL PRODUCERS,
By W. H. GRAY, *President.*

I do not propose to take the time of the Senate at this late hour to make comment upon this important communication. It comes from a very representative body of men, men who are experts in this field of investment and production. I am receiving a large number of communications of like character. I shall at an early time lay them before the Senate with some observations touching this very important subject.

PRICES OF CRUDE OIL AND GASOLINE.

Mr. McKELLAR. Mr. President, this morning I asked unanimous consent to have Senate Resolution 292 with reference to the oil situation considered. I renew my request for unanimous consent for the immediate consideration of the resolution.

Mr. SMOOT. I shall have to object to the adoption of the resolution. I suggest, however, that the Senator have it referred to the Committee on Commerce. There are two similar resolutions before that committee now.

Mr. McKELLAR. Yes; there are two resolutions which have been sleeping there for some time and nothing has been done with them. The committee has not reported them out. I have just talked with the chairman of the committee, and he says no steps have been taken in regard to them.

This is a matter of vital importance. The oil interests of the country are raising the price of gasoline to the consumer, and, naturally, they want to continue to do it, and I desire to have the matter investigated. If they are in a combination for the purpose of raising the price of gasoline, when the supply of crude petroleum is greater than ever before, when the stocks on hand are greater than ever before, and the price is lower than it was some time ago, when the price of gasoline was even

lower than it is, there ought to be an investigation. In other words, while the stocks of crude oil on hand are very large and growing larger, apparently, according to the figures, the price of gasoline is steadily increasing and been increasing all over the country. All the companies are increasing the price of gasoline in like amount, and it seems to me that the Senate of the United States ought to know something about it.

There have been two resolutions passed and nothing has been done with them. This is a very simple resolution, and it seems to me that it will require nothing but an investigation. It does not go further than that, and I hope no objection will be raised to it.

Mr. ROBINSON. Mr. President, considering the nature of the investigation which is called for in the resolution proposed by the Senator from Tennessee, which was read this morning during the course of some debate that was had on the matter, I can not discover any necessity for a prolonged inquiry by a committee of the Senate to determine the advisability of having the investigation.

If any facts existed which made it advisable in the public interest to postpone action upon the resolution until a committee of the Senate which has before it similar resolutions can determine the necessity for the investigation, I would have no objection to the committee having jurisdiction of the matter making the inquiry, but it seems to me that the facts as stated by the Senator from Tennessee and the provisions of the resolution are of such a simple nature that the Senate can determine for itself, without an inquiry by any committee, whether it is desirable to make the investigation. I believe that an investigation ought to be made, and I hope that the Senator from Utah will permit the consideration of the resolution at this time.

Mr. SMOOT. I want the investigation made, but there is no need of having a resolution before one committee for an investigation and another committee having before it two resolutions to make a similar investigation.

Mr. ROBINSON. No such procedure as that is contemplated or is likely to result. If this resolution passes, the investigation which will take place under the resolution will obviate the necessity for further investigation by the same or different committees. The point of the matter is to get action.

Mr. SMOOT. That is exactly what I want.

Mr. McKELLAR. We are taxing the American people to a very large extent because of lack of action.

Mr. SMOOT. I would like to hear from the chairman of the Committee on Commerce, to which the other two resolutions have been referred. They are of the same character, calling for the same information.

Mr. McKELLAR. I have not copies of them, but they are quite different in character. The inquiry proposed by me is an inquiry to examine into the stocks and prices of oil, and the combinations that exist in regard to it, if any.

Mr. JONES of Washington. Two resolutions have been referred to the Committee on Commerce with reference to this matter, but those resolutions have not been urged before the committee especially. The junior Senator from Utah [Mr. KING] offered a resolution, and the Senator from Oklahoma [Mr. HARRELD] introduced one, I think, before the holidays. The Senator from Oklahoma had to go to a hospital for some time. I have advised both those Senators that whenever they desire a hearing before the committee, at which they could make a showing as to the necessity for those investigations, I would be glad to call the committee together. If any resolution is referred to the committee which the proposer desires to have considered by the committee promptly, the committee will be glad to consider it.

I desire to say, for myself, the mere fact that a resolution is introduced and referred to my committee calling for an investigation which would mean the expenditure probably of a lot of money and the taking of a lot of time, does not, in my judgment, warrant the committee in taking it up, but we are ready to give consideration to any facts which may be presented to the committee showing the desirability of having an investigation made.

Mr. McKELLAR. Mr. President, I have the resolutions before me, one introduced by the Senator from Oklahoma [Mr. HARRELD], Senate Resolution 38, which was introduced August 23, 1921, and by its own provision has expired by limitation without action. It does not direct the committee to make the investigation, but it directs that the Federal Trade Commission shall report to this body the result of its investigations not later than December 15, 1921. That resolution is not at all the same as the resolution proposed by me, and besides nothing has been done with it.

This resolution might stay there for another year without action being taken. What I would like to have is action. I think we all realize that some investigation should be made of this matter, and made at once.

I call attention to the resolution that was introduced by the Senator from Utah [Mr. KING]. It was introduced July 27, 1921, and no action at all has been taken on it. It is entirely different from mine. The gravamen of that resolution is that the price of crude petroleum has been greatly depressed, but there is no corresponding drop in the price of gasoline. In one way, that might be construed as somewhat similar to mine, but the conditions I complain of have to a very large extent arisen since that time. While the price of crude oil has been going down, as stated in my resolution, the price of gasoline has gone up about 4 cents in the last few weeks, or it may be a few days, certainly within a recent time. It is a very unusual thing, with the price of crude oil depressed as never before and the stocks on hand very large, that the price of gasoline all over the country should be going up and the price raised by all the companies. It rather indicates that there is some agreement or understanding about it.

If the resolution the immediate consideration of which I have asked is passed, the matter will be attended to at once and something will be done; but if it is referred to the committee, and takes the same course the other two resolutions have taken, there will be nothing done.

Mr. JONES of Washington. Mr. President, I do not like the statement the Senator makes. I have stated the reason why the committee did not act.

Mr. McKELLAR. Of course, the Senator from Washington is absolutely blameless. Nothing has been done to press them by the gentlemen who introduced the resolutions.

Mr. JONES of Washington. I am not seeking to get the Senator's resolution for our committee, but——

Mr. McKELLAR. The Senator is not to blame in the matter at all.

Mr. JONES of Washington. If the resolution is referred to our committee and the Senator will come before the committee, the investigation will be held.

Mr. McKELLAR. I know the Senator would take care of the matter, but in the multitude of business before the Senate these two resolutions have been lost track of. It has been nearly a year since they were offered, and nothing has been done. I want action on the part of the Senate. It seems to me that we are all of one mind. The Senator from Utah [Mr. SMOOT] says he thinks an investigation ought to be had. Why not let us have it? Why should anybody object to an investigation which we all admit should take place? I hope that neither the Senator from Utah nor any other Senator will object, but that this resolution will go through. No possible harm can be done by its adoption.

Mr. SMOOT. What committee is it proposed shall make the investigation?

Mr. McKELLAR. It is to go to the Committee on Manufactures.

Mr. SMOOT. Why not let it go to the Committee on Commerce?

Mr. ROBINSON. I believe the jurisdiction properly lies in the Committee on Manufactures.

Mr. LA FOLLETTE. That committee is not particularly busy now.

Mr. McKELLAR. I think it should go to the Committee on Manufactures, and the chairman of that committee says that committee is not particularly busy at this time. It is a matter which ought to be taken care of at once, and there ought to be action at once.

An increase in price of 4 cents a gallon on gasoline means an enormous tax on the American people, and if the price is being raised improperly, and if it can be remedied by an investigation by this body, we ought to have the investigation promptly made. We should not let that condition go on. Here is an opportunity to take care of the matter. The Committee on Manufactures is not busy; it will prosecute the matter, and it will report its findings to the Senate. I hope no Senator, under those circumstances, will interpose an objection.

Mr. SMOOT. If the Senators who introduced the other two resolutions are not going to do anything toward asking for their consideration, then I have no objection at all to the passage of this resolution, but I thought it was perfectly useless to have three resolutions before the Senate at once looking to the same end. I am perfectly willing that the resolution shall be adopted, because nothing has been done in regard to the matter. I do not care where the investigation goes, but I do not want two committees of the Senate making an investigation of the same subject at the same time.

The VICE PRESIDENT. Does the Senator from Tennessee make a request?

Mr. McKELLAR. I ask unanimous consent for the immediate consideration of Senate Resolution 292.

The VICE PRESIDENT. Is there objection?

The resolution was considered by unanimous consent and agreed to, as follows:

Resolved, That the Committee on Manufactures, or any subcommittee thereof, be, and it is hereby, authorized and instructed to investigate and report to the Senate as early as possible:

1. The stock of crude oil on hand at the refineries in the United States for the years 1920, 1921, and 1922.
2. The price of crude oil during the various months in said years.
3. The stock of gasoline on hand during the said years 1920, 1921, and up to date in 1922.
4. The relation of prices of gasoline during said years to the prices of crude oil.
5. Whether or not the recent increase in the price of gasoline has been by some companies, or whether there has been any uniformity in the prices demanded by all of the companies.
6. Whether these prices have been put in at the same time or at substantially the same time.
7. Whether there has been any understanding or agreement between various companies to raise the prices.
8. Whether there is any natural reason for the increase of prices of gasoline.
9. And all such facts as bear upon the present increase of prices of gasoline in view of the decreased price of crude oil.

MOTHERS' DAY.

Mr. HEFLIN. Mr. President, on to-morrow, the second Sunday in May, the Stars and Stripes will be displayed on all our Government buildings. In 1914 Congress, by the adoption of a resolution introduced by me, designated the second Sunday in May as Mothers' Day, and provided that the President should require Federal officials to display our country's flag on all Government buildings in honor of the mothers of America.

It is, indeed, fitting, Mr. President, that one day in every year should be set apart in which the whole people can pay to the mothers of our country the tribute of their love.

I desire to read at this juncture a poem written by Lucien Lamar Knight, of Georgia:

WOMAN.

Woman, to thy tender keeping God has given this command:
Rear the childhood of the Nation, nurse the young hope of the land,
Teach the principles of virtue, lift the manly brow of youth
Till it scorns each baser triumph for the laurels of the truth.

Never leave thy little kingdom; never sacrifice its crown;
Though your realm be but a cottage, keep it ever, 'tis thine own.
Let no trespasser invade it; from its door let hate be hurled,
For the teachings of the fireside rule the forums of the world.

'Tis thy mission to be gentle, meek in spirit, undefiled,
For the Nation's growth is rooted in the nurture of the child.
Fountain spring of all our greatness—back of yonder beetling dome—
Lies America's true secret, in her poet's "Home, Sweet Home."

She who rocks a Nation's cradle, with a mother's holy hand,
Writes its statutes, rears its armies, peals its thunders of command.
She who whispers "Now I lay me" to the childhood at her knee,
Reigns the queen of the Republic, guards the court of liberty.

RECESS.

Mr. CURTIS. I move that the Senate now take a recess.

The motion was agreed to; and the Senate (at 5 o'clock and 3 minutes p. m.), under the order previously entered, took a recess until Monday, May 15, 1922, at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

SATURDAY, *May 13, 1922.*

The House met at 12 o'clock noon, and was called to order by Mr. WALSH as Speaker pro tempore.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Our blessed heavenly Father, lead us in Thy own way. In the depths of Thy love and in the mystery of consecrated motherhood may we find the holiest meaning. The foregleams of "Mother's Day" are kissing us. They tell us of the uttermost of human love. Give us to feel the warmth and glow of mother's benediction. Her's was a conscious integrity, which is the seal of character. She taught us that there is no joy so tranquil and refreshing as that which flows from a pure life. O keep us in the sanctity of her faith and sacrifice. If on earth, may she have our tenderest love and devotion. If in heaven, O may the light of her glory be reflected on us as she walks in closest fellowship with the angels. Let the morning brightness of her immortal soul fill all our hearts. To the last day of our earthly pilgrimage make us rich and joyous with her grateful and beautiful memory. In Thy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. JOHNSON of Washington, for 10 days, on account of illness;

To Mr. COLTON, for two days, on account of important business;

To Mr. BANKHEAD, for an indefinite period, on account of death in the family; and

To Mr. WYANT, from May 15 to May 18, on account of official business.

ARKANSAS.

Mr. JACOWAY rose.

The SPEAKER pro tempore. For what purpose does the gentleman from Arkansas rise?

Mr. JACOWAY. Mr. Speaker, I ask recognition for the purpose of stating that on June 16, 1922, Arkansas will have been incorporated into the Federal Union for a period of 86 years. In other words, on the 16th day of June next will be Arkansas' Federal birthday. During this time she has wrought wondrously and well. She has achieved those things of which all Arkansans are justly proud, and the history of this achievement we want to publish to the world at large. While her accomplishments in the past have been commented upon with great approval and commendation by the country at large, and have been more than gratifying, yet at the same time all Arkansans have more than a strong and an abiding faith that her achievements and the history she will write in the future will far exceed that of the past in all those things that go into the making of a truly great Commonwealth. It is destined that her status will be equal to the greatest in every respect and which will serve as a national model worthy of the emulation by each of her sister States and second to none. Mr. Speaker, with what I have said as a short preamble I ask unanimous consent to extend my remarks in the CONGRESSIONAL RECORD by making certain observations and detailing in part a portion of the wonderful history of that State from which I come and which in part I have the great honor to represent in the halls of national legislation. In things undertaken and carried to a successful consummation the name of Arkansas ranks high on the scroll, yet when all the facts relative to this proud State are known and appreciated for their full, just, and honest worth convinced will be the minds of all that Arkansas has been rightly named "the wonder State of the Union."

The SPEAKER pro tempore. The gentleman from Arkansas asks unanimous consent to extend his remarks in the RECORD by inserting some observations on the entry of Arkansas into the Federal Union. Is there objection?

There was no objection.

Mr. JACOWAY. Mr. Speaker, this data, based largely on Government statistics, was compiled by the Arkansas Advancement Association, an organization of the foremost business men of the State and not operated for commercial purposes. It is with pleasurable pride I make certain recitals about my native State and to commend the patriotism and State pride of those compiling this wonderful data about a wonderful State, to the end that those who essay to speak of her except in terms most worthy, she will prove by the record that over all criticism an eternal traverse has been written. Only two classes of people speak of Arkansas except with praise. These two classes are those who are densely ignorant or morbidly envious.

SEVERAL HUNDRED INTERESTING FACTS ABOUT ARKANSAS.

(Pronounced Ar-kan-saw, the French rendition of the Sioux "U-gakhpa," meaning "Down-stream People.")

THE NATION'S WONDER STATE.

Arkansas is the home of an intelligent, prosperous, contented, and loyal people. It is developing with more rapidity than other States, because it offers superior attractions for the man of moderate means who desires to possess a home and raise his family in ideal surroundings. Arkansas is not a wilderness, neither is it a frontier State. It is shown by Government statistics to be one of the most healthful in the United States. There are no swamps nor large bodies of standing water, and pure water is plentiful in all communities.

Arkansans are law-abiding people, the percentage of crime in this State being considerably less than the average in the United States. Arkansas is ambitious for the welfare of its youth, and excellent schools are provided. Even in the most sparsely settled communities there is an opportunity for all children to secure a common-school education. The United States has many big men and women holding responsible positions who secured their entire education in Arkansas. If it is peace and prosperity you are looking for, Arkansas is your haven.

SIXTY TREES OF COMMERCIAL IMPORTANCE THAT GROW IN ARKANSAS.

Loblolly pine, shortleaf pine, red cypress, red cedar, black walnut, butternut, pecan hickory, shagbark hickory, bitter pecan hickory, mockernut hickory, pignut hickory, cottonwood, river birch, beech, chinquapin, red oak, pin oak, Texan oak, black oak, Spanish oak, blackjack oak, water oak, willow oak, white oak, post oak, bur oak, overcup oak, swamp white oak, cow oak, white elm, winged elm, slippery elm, hackberry, red mulberry, Osage orange, magnolia, cucumber tree, yellow

poplar, sassafras, red gum, sycamore, black cherry, coffee tree, honey locust, black locust, holly sugar maple, red maple, box elder, buckeye, basswood, tupelo, black gum, flowering dogwood, persimmon, blue ash, black ash, white ash.

ALPHABET OF ARKANSAS MINERALS.

Actinolite, aegirite, agalmetolite, agate, agarie mineral, albite, allophane, almandite, alum, alumite, amethyst, amphibole, anatase, andradite, anglesite, ankerite, antimony, apatite, aphrodite, aplome, arkansite, asbolite, argonite, asphaltum, augite, aventurine quartz, azurite.

Barite, batholomite, basanite, bauxite, bindhilhite, bismite, bismuthinite, black jack, blue vitrol, bog iron ore, bolirite, bowenite, branunite, brooklite, brucite.

Calcite, cement, cerussite, chalcopyrite, chalk, chert, chrysolite or olivine, cinamon stone, clay, coal, cobalt, cocolite, copper, copperas, copper carbonite.

Diamonds, dog-tooth spar, dolomite.

Eleotite.

Fahlunite, feldspar, firoite, frelbergite, fuller's earth.

Galena, gas, garnet, geyersite, gold, gothite, granite, graphite, gravel, gypsum, glass sand.

Hematite or iron, hydrotitanite, hyperthene.

Idocrase, iolite.

Jamesonite, jasper, jeffersite.

Kaolin or kaolinite.

Labradorite, lead, lignite, limestone, limonite, lithographing stone.

Manganese, magnetite, marble, marcasite, marmatite, melanite, melanterite, mellite.

Novaculite.

Ochre, octahedrite, orl, onyx, opal, orthoclase or potash feldspar, ozarkite.

Pealite, pearls, peridotite or diamond bearing rock, petroleum, pinite, pyrite, phosphate, prophyllite, pyroxene, pyrrhotite.

Quartz.

Rootsite, rutile.

Sandstone, schloromite, serpentine, siderite, silicious sinter, silver, slate smithsonite, smoky quartz, soapstone, spahlerite, stibnite, shale.

Talc, thuringite, tin pyrites, travertine, tripoli.

Uranium.

Variscite, vermilion.

Wad, waverlite, water, whetstone or novaculite.

Yerkon.

Zinc, zinkenite.

Arkansas is the one State that annually reproduces its invested capital, its annual products exceeding the value of all its property. Arkansas property was assessed in 1919 at $588,161,000, and the value of its products that year, according to Government statistics, was $698,313,000.

Arkansas has an area of 33,610,000 acres, with only 9,239,000 acres in cultivation. Three-fifths of its land is yet unimproved.

Arkansas has an abundance of cheap fuel—natural gas, crude oil, anthracite and semianthracite smokeless coal, lignite, and wood in practically inexhaustible quantities.

Arkansas has never known a total crop failure, or a famine.

Arkansas ranks twenty-fourth in population, twenty-sixth in land area, and twentieth in total value of its crops. Arkansans are energetic.

Arkansas devotes a greater acreage to strawberries than any other State, 15,100 acres in 1920. Strawberries net as high as $1,200 per acre in Arkansas.

Arkansas Nancy Hall sweet potatoes have an unexcelled flavor which gives them the world for a market. Even Alaska bought Arkansas Nancy Halls by the carload in 1921.

Arkansas grows two crops of Irish potatoes annually, usually on the same ground.

Arkansas ranks third in the production of rice and first in yield per acre and quality. Arkansas in 1921 produced over 5,000,000 bushels.

Arkansas is exceeded by only one State in the acreage of canteloupes, and now excels Colorado, the home of the Rocky Ford.

Arkansas won more medals at the Panama-Pacific Exposition in horticulture and agriculture than any other State.

Arkansas has originated and named 58 varieties of apples, and stands fifth in the production of barreled apples.

One Arkansas county, Mississippi, had an agricultural production valued at $17,000,000 in 1919.

One Arkansas plantation produced and marketed $974,639 worth of cotton and cotton seed in 1919. This plantation, in addition, marketed 22 carloads of wheat, 12 cars of hogs, and 5,474 bushels of corn, besides producing corn and hay sufficient to maintain stock needed to cultivate 15,000 acres. This plantation is in Mississippi County. Its 1921 crop exceeded $1,000,000.

Live stock can be raised in Arkansas at a minimum cost, as it can be pastured 10 months of the year. Mild winters make large stock barns unnecessary.

Arkansas, according to the 1919 United States census, had live stock valued at $30,083,950, annual dairy products of $13,445,124, and an annual production of chickens and eggs of $16,245,102, an increase of 100 per cent in 10 years.

Arkansas lands produce from three to seven cuttings of alfalfa annually. The cut is about one ton per acre and sells for $20 per ton or more on the field, and without baling. The first cutting is made in April, the last in October, sometimes in November.

Arkansas has the largest peach orchard under one management in the world—the Bert Johnson orchard contains 4,150 acres. Elbertas from this orchard brought as high as $4.50 per bushel in 1921.

Arkansas has, according to War Department statistics, 2,401 miles of navigable rivers. There are thousands of miles of swift mountain streams, capable of generating sufficient electricity to supply every manufacturing plant in the State with cheap power.

Farmers in the rice belt of Arkansas paid more income tax than farmers of any similar area in the United States in 1919.

America's greatest producer of grape juice is erecting large factories in Arkansas, attracted to the State by the superior quality of its grapes.

Point Comfort XIV, a Logan County Hereford bull, was grand champion in 1914. Fairlad Fairfax, an Ashley County Hereford bull, has been eight times southern grand champion.

Mammoth Spring has a flow of 864,000,000 gallons daily. It supplies water for the operation of manufacturing enterprises and lighting several small cities, and is the source of picturesque Spring River. This spring flows 600,000 gallons of water a minute—more than Chicago uses for all purposes. The flow never varies, and the temperature is the same winter and summer.

Arkansas red wheat makes the whitest, fluffiest flour of any soft wheat in the world, and is best adapted for soft wheat milling.

One Arkansas flour mill has run night and day for five years, a record not equaled by any other mill in the United States.

Arkansas had the first national reserve—Hot Springs. This is the only self-supporting Government reservation. It is the world's most noted resort. There are 48 thermal springs, with an average flow of radioactive waters of over 1,000,000 gallons daily, ranging from 102 to 147 degrees Fahrenheit and averaging 142 degrees.

Arkansas has a population of 1,752,000, with only 14,000 foreign-born citizens.

Arkansas farmers devote one-fourth of their tillable land to the production of cotton, a crop which annually brings over $100,000,000 to the State.

Arkansas ranks second in the production of long-staple cotton. Long-staple cotton brings a premium of as high as 50 cents a pound.

Arkansas cotton has been awarded first prize at every national or international exposition at which it has competed—Philadelphia, New Orleans, Buffalo, Chicago, St. Louis, and San Francisco.

Arkansas has an annual rainfall of 48.03 inches, and irrigation is unnecessary except in the growing of rice, a crop which must be kept flooded until the harvest season.

Arkansas has more automobiles on its farms than any New England State.

Arkansas County, Ark., has more tractors on its farms than any other county in the world.

Arkansas has a growing season of 193 days in the extreme northwest, which is gradually increased to 242 days in the southern portion.

Arkansas rains are heavy in the spring and light in the autumn, a favorable distribution for growing and harvesting of crops.

Arkansas' summer temperature ranges from 73.8 degrees in the mountainous northwest to an average of 81.7 degrees in the extreme southern portion. The average winter temperatures range from 36.9 degrees in the northwest to 46.6 degrees in the south.

Arkansas' summer resorts amid the beautiful scenery of the Ozarks show a summer average maximum temperature from 84 to 88 degrees and an average daily minimum of 65 to 68 degrees. Think about these resorts, with their sparkling spring water and cool breezes when the hot summer days come.

Arkansas farms can produce in any section of the State a crop of wheat and follow it with a crop of corn, and peas sowed in the corn mature before frost, making three feed crops in one year on the same ground.

Arkansas has the largest apple vinegar factory in the world.

Arkansas has the largest apple-drying establishment in the world.

Arkansas with its oil fields in Union County under development since January 10, 1921, will soon rank third in production of oil, producing now 75,000 barrels daily. An average of 15 wells is brought in weekly.

Arkansas has as extensive fields of lignite as are known in any State.

Arkansas has the only producing diamond mines in North America. Diamonds weighing 20¼ karats have been found in the Pike County fields. Arkansas diamonds are produced in commercial quantities and are one point harder than those of Australia and South Africa. As brilliancy is dependent upon hardness, the Arkansas diamond is the world's finest. An eastern company, capitalized at $10,000,000, installed a modern plant, costing $200,000, in the field in 1921.

Arkansas is the only State where pearl fishing is a permanent and profitable industry. The finest fresh-water pearls, selling up to $7,500, marketed in the past decade came from Arkansas streams.

Arkansas has eight button factories, consuming 9,000 tons of mussel shells annually. The finest pearl buttons are manufactured from these.

Arkansas produces 92 per cent of the bauxite, the ore from which aluminum, artificial abrasives, and alum are derived, that is mined in the United States.

The plantations of John M. Gracie, the world's largest individual cotton producer, are in Arkansas.

Practically all of the aluminum cooking utensils used in the United States to-day—100 per cent of those manufactured in America—have their origin in the Arkansas bauxite mines of Saline County.

An Arkansan is national president of the Tau Kappa Alpha, the honorary debating fraternity.

Waterworks systems all over the United States secure their alum for water purification from Arkansas bauxite. The paper-making industry and the manufacturers of popular-priced baking powders are also dependent on Arkansas bauxite for their alum.

Arkansas produces large quantities of antimony. This metal is used as an alloy in type metal, babbit, and other antifriction metals, and in enamels, varnishes, and paints.

Arkansas has three extensive gas fields: Sebastian-Crawford, Johnson, and Union Counties. Natural gas is supplied at from 10 cents per thousand cubic feet for factories to 25 cents per thousand feet for domestic use, according to the distance from the wells. Twenty thousand cubic feet of gas is equal to a ton of coal. Arkansas factories, therefore, obtain the equivalent of lump coal at $2 a ton.

Arkansas has a law which prohibits the consumption of more than 20 per cent of the daily flow of a gas well, thus insuring a supply of this economical fuel for many years to come.

Arkansas has a gas well which has produced in heat units the equivalent of over 100,000 tons of coal.

Arkansas factory towns are absolutely smokeless, and travelers on Arkansas trains escape the smoke nuisance, as Arkansas coal is smokeless.

Arkansas has gas wells which have yielded more than 2,000,000,000 feet of gas each and still make over 1,000,000 feet daily. These wells have been flowing steadily for five years.

Arkansas has vast deposits of asphalt which are as yet practically undeveloped.

Scientists assert that the largest prehistoric implement factory was located in Hot Spring County. Excavations show that a sufficient amount of novaculite was removed at Magnet Cove to equip a nation with arrow heads, battle axes, and stone implements.

Arkansas has enough gravel adapted to road building to connect every home in the State with an excellent highway.

Arkansas has pure glass and in inexhaustible quantities. Seven large factories, using natural gas as a fuel, manufacture this into window glass, lamp chimneys, bottles, and mirrors.

Slate suitable for composition roofing, in four colors—black, gray, green, and red—is to be had in Arkansas in quantities sufficient to cover every building in the States of New York, Pennsylvania, and California, with the cities of Chicago, Detroit, Boston, Cleveland, Cincinnati, and St. Louis thrown in for good measure.

Iron pyrites containing 50 per cent of sulphur, used in the manufacture of sulphuric acid, is found in commercial quantities in Arkansas.

Lead is mined in six Arkansas counties.

Arkansas has an unusual variety of brick, pottery, and fire clays. The famous Niloak pottery, with its many beautiful shades and colors, sold in art and jewelry shops all over the world, is manufactured from Saline County kaolin. Hot Spring County has large fire-brick plants.

Four Arkansas counties produce zinc.

Arkansas has two extensive beds of manganese. In Independence and Polk Counties large plants for its reduction are soon to be erected.

Arkansas has rich beds of marl.

Arkansas deposits of phosphate rock are sufficient in quantity to fertilize for many years every farm in America.

Arkansas has one of the geological wonders of the world in Magnet Cove, Hot Spring County. All the world's foremost collections of minerals contain a Magnet Cove exhibit, rare minerals being found there which have never been discovered elsewhere.

Arkansas has mountains of limestone and manufacturers advertise their calcium carbonates as 99¾ per cent pure, with a chemical analysis to prove their assertion.

Arkansas produced 1,313,668,000 feet of pine lumber in 1920. The cut of pine for all purposes, including fuel, exceeded 3,000,000,000 feet.

Arkansas has marble, white, black, and gray, which will take as high polish as the famous Italian marble. The Batesville marble was used in constructing the State capitol at Little Rock, the United States penitentiary at Fort Leavenworth, the Oklahoma City high school, the First Presbyterian and First Christian Churches in St. Joseph, Mo., the Farmers and Merchants Bank at Bedford, Iowa, the pylons at the entrance to University City, St. Louis, and hundreds of mausoleums and public buildings over the United States.

Arkansas soft pine is indorsed by the Government as the finest type of short-leaf pine grown in the United States. This is the only Southern pine upon which white enamel may be used with a certainty that it will not discolor nor will the grain raise. Arkansas soft pine costs one-third less than hard woods used for white enamel finish.

Arkansas soft pine was awarded a premium of $3 per thousand feet by the Government when prices were set in 1918. Arkansas yellow pine for interior finish is a favorite in northern markets, and brings $5 to $10 per thousand over the native pines.

Arkansas leads in the production of red gum lumber. This wood takes a polish which makes it difficult to distinguish it from mahogany. It is largely used in the manufacture of pianos and furniture. Arkansas cuts 200,000,000 feet of red gum a year.

Arkansas has a large number of mills which supply cedar lumber for the manufacture of lead pencils.

College crews place their hope of victory on Arkansas manufactured oars. The United States and English Navies are heavy purchasers of Arkansas oars. The two largest boat-oar factories in the United States are located in Arkansas—De Valls Bluff and Des Arc.

All the woodwork about the leading sewing machine of the United States comes from mills operated upon the extensive holdings of this company in Poinsett County.

Arkansas supplies the ash and hickory from which a majority of tool and agricultural handles, both in America and Europe, are manufactured.

Hubs, spokes, and bodies for automobiles are largely manufactured from Arkansas timbers.

Cypress lumber is produced in Arkansas to the extent of 50,000,000 feet a year.

Golf sticks, shuttles, and bobbins for cotton mills and lasts for shoemakers are manufactured from Arkansas persimmon.

Hundreds of millions of feet of elm, cottonwood, tupelo, and sycamore are consumed in Arkansas annually in the manufacture of baskets, crates, boxes, and veneer for furniture.

The round crate generally used in the shipment of bananas originated in Arkansas and is largely manufactured from Arkansas veneer.

Arkansas has 129 species of native trees. Sixty of these produce useful commercial wood.

Arkansas mills furnish the veneer from which trunks, advertised as indestructible, are manufactured.

Arkansas has two of the largest screen-door factories in the United States.

Arkansas, according to the 1920 census, has $138,818,000 invested in manufacturing plants, turning out products valued at $200,313,000 annually, an increase of 138 per cent in five years.

Arkansas cuts annually 150,000 feet of osage orange, the most highly priced wood produced in the United States.

Arkansas leads in the production of oak staves for tight barrels.

Arkansas has two of the largest plants in the world where railroad ties and piling are given a creosote treatment.

Arkansas has one factory which produces 60,000,000 feet of oak flooring, molding, and lumber annually, a record not equaled elsewhere. Other factories increase the output to over 100,000,000 feet.

The collapsible onion crate, used almost exclusively in the shipment of Bermuda onions, originated in Arkansas.

Arkansas has the most inviting field for the apiarist. The clover pastures and wild flowers produce the best honey.

Arkansas has a larger variety of wild nuts than any other State—walnut, hickory nut, pecan, filbert, chinquapin, and chestnut. Several hundred cars of pecans are shipped annually.

The second largest hardwood market in the world is located at Helena.

Arkansas' crop of wild berries is unexcelled—blackberries, dewberries, and huckleberries. Muscadine and several kinds of grapes grow in profusion, and Arkansas farmers are unable to gather and preserve more than a small portion of the crop.

Game, from the squirrel to deer, abounds in Arkansas, though large game is rapidly disappearing. There is still excellent quail and duck shooting during the open season.

Arkansas has a seaport—Helena—with a harbor with a minimum stage of 50 feet of water. This is the head of navigation for ocean-going vessels on the Mississippi River.

The El Dorado oil fields in Union County have 400 producing oil wells and 15 gassers. The oil wells range from 100 to 8,000 barrels daily.

Arkansas's crude oil from the El Dorado fields shows a gravity test of from 18 to 37.5 at 60°.

Arkansas' farm wealth has increased 300 per cent in 10 years.

Natural gas in the El Dorado fields will distill 2 gallons of gasoline per thousand cubic feet.

Arkansas has in its three natural gas fields many wells which produce an average of 25,000,000 feet of gas daily.

Arkansas has the highest mountain between the Alleghenies and the Rockies—Mount Magazine, 2,863 feet high.

Arkansas has two large furniture manufacturing centers—Fort Smith and Little Rock—and their product is shipped to all parts of the world.

Arkansas has a model law governing State banks. Bank depositors are as thoroughly safeguarded as though there was a State bank guaranty law.

Arkansas bank savings have shown a steady increase with each bank report, the increase in seven years being over 300 per cent.

Arkansas banks show an increase of 100 per cent in individual deposits since March 1, 1914.

Arkansas banks more than doubled their resources in the same period. Is there another State that can show over 100 per cent increase in seven years?

Arkansas has public-school property valued at $20,000,000, and raises $8,000,000 annually by taxation for the support of its public schools.

Arkansas has a strong State Teachers' Normal College and four well-equipped State agricultural schools.

Arkansas has 10 denominational schools and colleges, seven of which are well endowed, and all are ranked as standard colleges.

Arkansas is rapidly consolidating its rural school districts, thereby making possible the establishment of strong schools with high-school advantages.

Arkansas has a State Agricultural Mechanical and Normal College for Negroes. It also has three denominational colleges for Negroes.

Arkansas rural schools are offering vocational educational courses, teaching agriculture and domestic art.

Gilsonite, a rare mineral used in making glossy paints for automobile bodies, is a recent discovery in Arkansas.

Insulator brackets used by telegraph and telephone companies all over the United States are manufactured from Arkansas hardwood.

Arkansas leads in the production of oak railroad ties.

The largest nugget of zinc ever taken out in one piece, weighing 70 tons, was quarried in Marion County in 1893. A small piece of this, weighing 12,400 pounds, was exhibited at the Chicago World's Fair, and after taking a first premium for purity was placed on exhibition in the Field Museum, Chicago.

Arkansas produced the largest nugget of lead ever mined. It weighed 2,400 pounds and was mined in Marion County. It was exhibited at the St. Louis Exposition.

Arkansas has a marble which is elastic, bending under pressure, and rebounding when the pressure is released. This elasticity enables the stone to adapt itself to variable climates without disintegration. It is quarried in Independence County in large quantities.

Batesville marble, quarried in Arkansas, is more dense and compact than granite, therefore absorbs less moisture. It is fine grained and is especially adapted to the sculptor's chisel.

The largest block of marble quarried in Arkansas weighed 220 tons. It came from near Batesville, Independence County.

Arkansas has a chain of mountains extending along the entire western border, over 2,000 feet above the surrounding plain, which shelter the remainder of the State from the cold waves and blizzards experienced north and west of them.

An Independence County boy has a six-year average of 92½ bushels of corn to the acre.

The facility of the University of Arkansas holds degrees from 65 different colleges and universities.

Over 65 per cent of Arkansas school graduates continue their education at the State university.

Seventeen members of the faculty of the University of Arkansas are listed in the latest edition of Who's Who.

The University of Arkansas is one of the few colleges in the United States employing a trained dietitian, thereby safeguarding the health of the students through a balanced diet.

The University of Arkansas maintains an extension service in agriculture and home economics by which 750,000 people were reached in 1921.

Arkansas' university, through its agricultural experiment station, has issued more bulletins during the past five years than similar institutions of other States in the South.

The University of Arkansas conducts instructions by mail in agriculture, engineering, and the liberal arts and sciences.

Students from the University of Arkansas are accepted in the leading universities with full credit for the work performed.

Arkansas planters originated the plan of a cooperative system of accounting whereby an expert accountant supervises the bookkeeping for a number of large plantations.

Arkansas has 5,240 miles of railroad, networking the State like a street railway system.

Arkansas has a compulsory education law and every child between the ages of 6 and 15 years is compelled to attend some school.

Arkansas has begun to develop its water power. Work is progressing on two projects which call for the expenditure of $20,000,000.

Arkansas supplied 76,241 men in the World War. One of the first soldiers wounded in action was an Arkansan.

Arkansas furnished 25 general officers to the Confederate Army.

Arkansas companies bore the brunt of fighting in the Mexican War.

Arkansas soldiers were decorated for gallantry in action in all major operations of the World War.

Arkansas counties, Phillips, St. Francis, and Green, were first to go over the top in war loan campaigns. Arkansas was always among the first to subscribe its quota in war activities.

Arkansas' leading newspaper, founded in 1819, is the oldest paper published west of the Mississippi River.

Diamond Cave, in Newton County, is considered by tourists to be the world's most beautiful cave.

Arkansas has invested more in proportion to its wealth and population in good roads than any other State.

Arkansas improvement districts have never defaulted on the payment of bonds or interest.

Arkansas laws are conservative with relation to foreign capital.

Arkansas has the longest pontoon bridge, the longest single-span bridge, and the longest concrete bridge in the world.

Arkansas scenery is as attractive as any in the United States, and automobile roads lead through these sections.

Arkansas' rate of taxation is exceptionally low.

Arkansas supplies manufacturing plants all over the United States, where excessive temperatures are produced, with fire brick. It has the greatest heat resisting properties of any clay known, standing a test of 3,303 degrees without fusing.

Arkansas is credited by noted church leaders as standing first in Sabbath observance.

Arkansas is a fisherman's paradise. Its lakes and streams abound in game fish.

Albert Pike, America's most illustrious Mason, reached the zenith of his career while a resident of Arkansas.

The poet laureate of Masonry, Fay Hempstead, is a native Arkansan. Masonry has known but two others, Robert Burns and Robert Morris.

Two of the three founders of the Sigma Nu fraternity were Arkansans.

All executive heads of the $50,000,000 educational drive of the Southern Methodist Church were Arkansas men.

Arkansas has practically an inexhaustible supply of fuller's earth, a mineral used for refining and bleaching cottonseed oil and lard compounds. Superior to the best English fuller's earth, it is replacing the imported product.

Mary McCormic, the successful prima donna of the Chicago Grand Opera Co., is an Arkansas girl whom Mary Garden is featuring this season.

The United States Geological Survey estimates the supply of oil in the El Dorado field at 525,000,000.

Arkansas has chalk cliffs in Little River County rivaling the famous cliffs of Dover, which supply America with chalk. A company, capitalized at $1,000,000, was organized in 1921 to quarry these vast deposits.

Granite Mountain, just south of the city limits of Little Rock, could supply the building needs of the whole United States for years to come with the highest quality of that material.

Arkansas was the first State to pass the bone dry law.

The only man ever invited to address the New York Lodge of Elks, not a member of the lodge, was an Arkansan.

Arkansas has 1,584 square miles of anthracite and semianthracite smokeless coal. It has been mined at the rate of 4,000,000 tons annually, and it will take 350 years to exhaust the supply. The annual output is valued at approximately $9,000,000.

Arkansas stands second among the 48 States in National Guard organization.

There is no race suicide in Arkansas. Statistics show that births double the number of deaths.

The agricultural extension service of the University of Arkansas enrolled 26,664 members in the boys and girls' agricultural clubs in 1921.

A member of an Arkansas corn club holds a record of 172½ bushels of corn to the acre.

There were enrolled in 1921, 3,446 men in field-crop demonstration work under the supervision of county agents in Arkansas. They cultivated 30,144 acres, raised 25 different kinds of field crops, and through the demonstrations increased the yield $706,229.

Arkansas laws permit the organization of cooperative associations for the selling of farm products.

There are 446 clubs for home demonstration work in Arkansas, with 9,000 girls enrolled, and 332 women's clubs, with 8,881 members.

All school expenses of 236 girls of home demonstration clubs were paid through money earned in club work.

Arkansas is rapidly eliminating the fever tick by dipping the cattle of the State.

Authors of several of the best selling books of the year are Arkansas women.

Arkansas has supplied two chairmen for the Democratic National Committee, and the chairman of the last Democratic National Convention was a native Arkansan.

Arkansas has supplied an Attorney General for the United States—Augustus H. Garland.

Arkansas men have been president of national bar, educational, archæological, good roads, funeral directors, millers, independent oil refiners' associations, and other national bodies.

Student expenses are lower at the University of Arkansas than any similar State institution.

Arkansas men are operating heads of several trunk line railroads.

Arkansas men are chief executive officers of several of New York's largest commercial and financial institutions.

Many of the leading writers on scientific, social, and economic problems are Arkansans.

Arkansas is the native State of two celebrated screen comedians.

Arkansans have been members of the Metropolitan Opera Co., and a Little Rock girl has a leading part in this year's Follies.

An Arkansas woman is listed among the successful scenario writers.

Arkansas was represented at The Hague peace conference, the late Judge U. M. Rose being a delegate from the United States.

Arkansas is the first State to adopt a blind or afflicted child and to provide through legislative appropriation for the maintenance of this foundling in an eastern hospital.

Arkansas has copper deposits in a number of counties.

Arkansas produces a high grade of tripoli.

Silver mines were operated extensively in Arkansas many years ago. These mines are now being reopened.

An Arkansas farmer averaged 90 bushels of oats per acre this year.

Two native Arkansans participated in the 1921 world series—Aaron Ward, second baseman of the New York Americans, and Earl Smith, catcher of the New York Nationals.

An Arkansan, James P. Clarke, was President pro tempore of the United States Senate, and his statue is in the Hall of Fame.

Two Arkansas counties, Benton and Washington, rank first in apple production in the world. These counties have 5,000,000 apple trees.

One Arkansas town, Rogers, shipped 150 cars of evaporated apples in 1919.

An Arkansas physician, Dr. J. T. Clegg, jr., of Siloam Springs, was the first to isolate leprosy bacilli, thereby making possible control or cure of this dreaded disease.

The Ancient Concatenated Order of Hoo Hoo, a national fraternal organization of lumbermen, was founded in Arkansas.

Arkansas is mountainous in the western portion. The eastern portion is a vast alluvial plain, as fertile as the valley of the Nile. The valleys between the mountains are equally as fertile. The plateaus and mountain tops produce wonderful crops, and the hillsides are favored for Arkansas's unexcelled orchards.

Arkansas turned back to the Government in September, 1918, 1,000,000 pounds of sugar, or one-fourth of its monthly allotment, that the soldiers might have more sweets. This was more than any other nine States turned back in response to the call. The Government converted this sugar into candy, thereby increasing it to 2,000,000 pounds, and gave Arkansas credit on the printed label of each package distributed overseas.

Arkansas returned 40,567 barrels of flour to the Government, more than the other 47 States combined, when requested to do so by military authorities.

Siloam Springs ships an express car of cream every day.

Black walnut for gunstocks and furniture is plentiful in Arkansas.

All railroads operating in Arkansas serve pure spring water on their trains.

Arkansas has the largest sorghum factory in the world, at Fort Smith.

Arkansas has artesian water in many sections of the State, the wells often being less than 300 feet in depth.

Arkansas produces yellow ochre of the finest quality in commercial quantities.

Arkansas has, in Garland, Montgomery, and Pike Counties, deposits of manganese oxides sufficient to manufacture half the dry paints used in the United States.

Arkansas has a distinct advantage over other truck-growing Commonwealths due to its proximity to market. It is less than 24 hours from Chicago, Detroit, Cincinnati, Louisville, Kansas City, Omaha, and St. Louis, and most of these cities are reached in an overnight run by express trains.

Arkansas ships radishes, lettuce, beans, cucumbers, tomatoes, and other early vegetables by the carload.

Arkansas has a rare earth that, when ground and applied to heated iron, causes it to "case harden" so hard that the best file will not cut it. What is it?

Arkansas has a large deposit of red marble in Marion County.

Arkansas has lithograph stone in Newton and Searcy Counties that is superior in quality to any other in the United States, and the equal of the imported stone.

Arkansas has large deposits of soapstone in Pulaski County, classed as the best in the world.

Arkansas has an immense deposit of gypsum.

Arkansas deposits of talc are equal in quality to those of France.

Arkansas has in Faulkner County a deposit of almost pure epsom salts.

Arkansas has produced some of the most successful evangelists in the world.

Arkansas has many cold springs which have radio-active water, particularly those of Benton County.

Arkansas has more springs whose waters have medicinal properties than any other State.

Arkansas has the honor of raising the largest apple the horticultural records show. It was grown in Benton County, and weighed 29 ounces.

Boys' and girls' corn, cotton, and pig clubs in Arkansas are self-financing. Many other States are now using this successful system.

Arkansas equals any State in the yield per acre of lespedeza, one of the leading hay crops and soil builders.

Arkansas supplies more watermelon seed than any other State.

Arkansas has nurseries that buy peach seeds by the carload for the production of trees for grafting.

Arkansas has seed houses that ship tomato and sweet potato plants in carload lots.

Arkansas is now shipping in large quantities the honey-dew melon, and its quality is such that in a few years it will be a leader in this also.

Arkansas produces a blightless pear.

Arkansas rivers supply millions of tons of the finest quality of building sand.

Arkansas is the only State with a natural cold storage. It has a cave of considerable size that is used for this purpose.

Arkansas girls have been class leaders in the foremost eastern schools. The president of the 1921 class of Bryn Mawr was an Arkansas girl. Honors have been conferred on Arkansas girls at Smith and Vassar for their scholastic attainments.

Arkansas has at Hot Springs a bathhouse row with 18 bathhouses that represents an investment of several million dollars. It is the finest in the world, and all is under Government supervision.

Arkansas soil is especially adapted to the growing of red and burr clover. The yield is large and the annual crop a valuable one.

Arkansas has a spring on the Government reservation at Hot Springs that analyzes 100 per cent pure. The water of many of its springs is so pure it is used in prescriptions and in batteries.

Arkansas has two forest reservations—the Ozark and Arkansas—containing 4,000,000 acres. Excellent roads have been constructed through them and the scenerey is wonderful.

Arkansas's oil field—El Dorado—stands first in initial production of any field for light high-gravity oil.

Arkansas has one peach orchard which produces one peach for every man, woman, and child in the United States.

Arkansas has mountains of saponite, the natural cleanser. This is the only deposit in the United States. It is similar to commercial cleansers which are mixed by an expensive process.

Arkansas has more pure-bred swine than New York, Pennsylvania, California, and Michigan, and only 12 States have more than the Government census gives to Arkansas.

Arkansas has 11 oil refineries.

Arkansas has developed an oil field containing 30 square miles in one year, a record for the world.

Arkansas has a natural bridge.

Arkansas is constructing 4,539 miles of improved highways, with 2,246 miles completed, ranging in cost for $3,000 to $58,000 per mile. There was expended in 1921, $52,000,000 on Arkansas roads. The total cost will exceed $80,000,000, and a conservative estimate shows, an increase in adjoining land values of over $500,000,000.

Arkansas banks have supplied money without interest to boys who desired to purchase pure-bred swine, and have purchased pedigreed cattle which were sold to farmers on their own terms. Arkansas, with such forces assisting the farmer, is rapidly becoming a leading live-stock State.

Arkansas produced one of the leading portrait painters of the United States, Louis Betts, of Chicago.

Arkansas was the birthplace of Edward Mims, one of the foremost English professors of the United States.

Arkansas has sent missionaries into nearly every foreign field, and Bishop Logan H. Roots, of Hankow, China, is a native of Arkansas.

Arkansas has three Episcopal bishops, more than any other State except New York.

Arkansas has produced a machine which shreds the top of growing oats, wheat, barley, and rice, removing the grain and leaving the stalk standing. The grain is less injured than by threshing, and the process is more economical.

The United States Government maintains an Army and Navy hospital in Hot Springs, also a free bathhouse.

The Masonic fraternity and the Independent Order of Odd Fellows have commodious homes at Batesville for the care of their widows and orphans.

An Arkansas photographer has taken four medals in foreign countries, and many in the United States, on his workmanship.

Arkansas raised 75,000,000 bushels of corn, 10,000,000 of oats, 2,000,000 of Irish potatoes in the fall crop, and 10,000,000 of Nancy Hall sweet potatoes, according to Government crop experts, in the year 1921.

Arkansas has one of the six southern colleges with a million-dollar endowment, Hendrix College, at Conway. The General Education Board of New York has contributed $325,000 to this institution, and the balance of the endowment was raised among prominent Methodists of the State.

Four-fifths of the people of Arkansas live on farms or in towns of less than 2,500 population.

Arkansas land was worth an average of $14.13 per acre, according to the Government census of 1910. That was an increase of 100 per cent over the previous decade. The average in 1921 is $35 per acre.

Arkansas is located in the center of the United States.

Arkansas is traversed by the trunk lines of five great railroads.

Arkansas is drawing immigration as much from the West as from other sections, demonstrating that persons who have been looking the United States over for an ideal location have turned back to Arkansas for it.

Arkansas offers wild land to-day at prices less per acre than the same character of land, though improved, rents for per annum.

Marble outcroppings, without a single quarry, are to be seen for over 100 miles on White River.

Arkansas has Mexican onyx in great quantities.

Arkansas took first prize in a beauty contest in which 10,000 young women from all parts of the United States participated. Arkansas also captured third prize.

Arkansas was the first Southern State to ratify the suffrage amendment. It had previously granted partial suffrage to women.

An Arkansan was awarded a medal at the Panama-Pacific Exposition for superiority of tone and workmanship on violins made by him. These violins are made in Arkansas of Arkansas woods.

Arkansas shows a better average yield in sweet potatoes, sorghum cane, tobacco, cotton, and carrying capacity of pasturage land than any Southwestern State. It also shows a higher per cent in the improvement of farm lands. No State excels it in fertility of soil.

Arkansas had in 1919 cut-over land from which the merchantable timber had been removed 13,893,000 acres. These lands have been known to produce $200 per acre the first year in cultivation, and with many deadened trees still standing in the field.

Half the cotton land of Arkansas will produce long-staple cotton. New varieties of long-staple cotton which will yield good crops in the uplands are being introduced.

Arkansas has 175,000 acres in rice. Rice produces a greater net income per acre than the gross return from other grains. Arkansas produces an average of 10 bushels more per acre of rice than any other State.

Only about 5 per cent of the prairie lands in the rice district is devoted to this grain, showing the possibilities of the industry. Arkansas has probably 5,000,000 acres of land adapted to rice culture.

Rice growing requires the smallest amount of human labor per acre of any grain crop.

Power pumps, many electrically operated, throw an average of 2,000 gallons of water a minute on the rice fields. There is an unlimited quantity of water within a few feet of the surface to supply the necessary 20 inches of water in addition to the rainfall.

Two crops of oats can be raised in one year on the same ground in Arkansas.

Arkansas offers ideal conditions for the raising of sheep and goats. It ranks second in the production of goats in the United States. They are great land clearers.

Arkansas has over 200,000 acres in peanuts, most of the crop being used as stock feed.

Arkansas grew the largest Elberta peaches on record. A number averaging 23 ounces each were exhibited in Washington County in 1913. Four of these peaches filled a basket of a six-basket crate.

The Independent Order of the B'nai B'rith maintains a large hospital in Hot Springs.

Arkansas averages over 150 bushels per acre in sweet potatoes, but yields of 300 bushels are common, and there are authentic records of 600 bushels being produced on a measured acre.

Arkansas cattle and hogs hold top records at St. Louis stock yards.

Arkansas brood sows have in many instances earned from $1,000 to $2,000 per annum for their owners. Two litters a year is customary.

Arkansas has counties which ship an average of five cars of eggs each week. There are also counties which ship from three to five cars of poultry every week. Arkansas is a great winter egg-producing State.

Over half the counties of Arkansas are adapted to commercial peach growing and only about one-twentieth of the available land is now being utilized for this purpose.

Plums grow wild in every part of Arkansas.

Figs are produced extensively in the southern part of the State, the trees yielding two crops a year.

Arkansas's alluvial lands are protected from overflow by thousands of miles of levee.

Arkansas's annual crop production is fifty times greater than the price Jefferson paid to Napoleon for the entire Louisiana Territory.

The United States Geological Survey reports that Arkansas zinc mines yield an average mill recovery of practically double that of mines in other States. The average per cent of concentrates recovered from mine-run Arkansas ores is 7.35. The sulphide ore, or jack, is uniformly free from iron and assays 63 to 65 per cent metallic zinc.

The famous Bowie knife originated in Arkansas. The first knife of this kind was manufactured by James Black, a blacksmith, from a design supplied him by James Bowie.

Arkansas lands, suitable for fruit growing and excelling in fertility that of western States, can be secured at from $10 to $50 per acre, as compared to $300 to $500 in the West. The land upon which the Highland Orchard grows was originally purchased for less than $10 per acre. This is now worth easily $1,000 an acre.

Fruit ripened after being harvested lacks the delicious flavor of fruit ripened on the tree. Arkansas is close enough to the markets to permit tree ripening of its fruits.

Arkansas Elberta peaches bring from $1.50 to $2.50 per bushel more than peaches from any other section of America.

Arkansas land rents, according to Government statistics, are higher in proportion to land values than any other State. The productiveness of the soil warrants this.

There grows wild in Arkansas the pawpaw, often termed "the poor man's banana." This is being domesticated with the expectation of it becoming a very popular fruit.

Arkansas has fewer unmarried men, in proportion, than other States, according to Government statistics. This builds homes.

The majority of Arkansas peach orchards are small, averaging 40 acres, making cooperative marketing a profitable system. Arkansas peach orchards bear in the third year and yield from 200 to 300 bushels per acre in the fourth year.

Arkansas apple orchards require eight years in reaching maturity, but the trees of the Ozark region are longer lived than those of any other section and are most resistant to disease. Arkansas apples are famed for their high color and delicious flavor. Returns of $1,000 per acre on Arkansas apples are not uncommon.

Arkansas strawberries are especially adapted to newly cleared land, making the new farm profitable in its first year.

Arkansas cherries average $600 an acre a year for the growers.

Arkansas horticultural products have become so well known for their superior quality that they are in demand in all markets and bring a higher price than those from other States offered at the same time.

Arkansas, according to Government estimates, has 75,000,000,000 board feet of merchantable timber yet to be cut.

Arkansas produces large quantities of wood wool, a high grade excelsior, which is used for automobile upholstery. Its excelsior is also used by mattress makers all over the United States.

An Arkansan invented the only successful can labeler in commercial use. A Chicago baking powder company is labeling a half million cans a day with this machine.

The Chi Omega Sorority, one of the largest college secret societies for women, was organized in Arkansas.

Two regular players on the Center College football team are Arkansans—Kubale, at center, and Armstrong, the team captain, at halfback.

Arkansas has the largest psychological clinic to test mental ability in vocational work in the United States.

Arkansas has the only laboratory of the United States Internal Revenue Service in the South.

Arkansas, with 75 counties, has only 4 that are nonproductive of useful minerals.

John Pearson, an Arkansan, was the inventor of the Colt's revolver.

The Methodist Episcopal Church South has established a summer assembly for the Southwestern States at Fayetteville.

The author of The Tavern, one of the successful plays of the year, is a native of Arkansas.

The admiral of the Pacific Fleet, United States Navy, is an Arkansan.

Arkansas has fewer undertakers in proportion to its population than any other State.

Artificial light is seldom used during working hours in Arkansas. The days are largely clear and twilight extends well into the evening.

Arkansas boxes manufactured from cottonwood, cypress, and sycamore are in demand in all sections of the United States because they are free from stain and color.

Rotary cut veneer of red gum, if selected to show grain and figure, so closely resembles Circassian walnut that only experts can tell the difference.

Arkansas red gum, properly stained, can not be told from white oak, cherry, or mahogany.

Arkansas cottonwood has largely replaced the high-priced yellow poplar for the manufacture of wagon beds.

The Mosaic Templars, the leading national negro fraternal and benefit association, was founded by two Arkansas negroes.

Arkansas leads all States in the production of hickory.

Babe Ruth hits his home runs with a bat made from Arkansas ash. Baseball bats are manufactured in Arkansas and practically all the leading manufacturers of bats secure their raw material from this State.

Arkansas leads all States in the production of persimmon lumber, one-fifth of the entire cut in the United States comes from Arkansas.

Former Gov. Frank O. Lowden, of Illinois, owns two plantations in Arkansas aggregating 32,000 acres. Mr. Lowden traveled extensively in search of good land before buying, and says: "Nowhere did I find an opportunity for the purchase of farming land equal to that of the alluvial section of Arkansas."

Fish from Arkansas lakes bring an average of 3 cents a pound in New York over fresh-water fish from other sections.

Five large Arkansas rice mills are operated cooperatively by the growers.

Arkansas has mountains of quartz which show every color of the rainbow in reflecting the sun's rays. A more beautiful sight was never pictured.

An Arkansas mill originated the cedar-lined closet, which is delivered ready to set-up.

An Arkansas concern prints admission tickets for all the big circuses and play houses.

One Arkansas county gave 20 cars of corn in a recent campaign to feed starving Europe. This is four more than given by any other county in the United States.

One Arkansas plantation has shipped 100,000 bushels of corn annaully. One-third of this corn graded No. 1 and the balance No. 2. Northeast Arkansas corn grades higher than that of any other State.

In Mississippi County 85,000 bales of high-grade cotton was raised on 75,000 acres in 1921.

EXPLANATION.

Mr. TOWNER. Mr. Speaker, I ask unanimous consent to proceed for five minutes.

The SPEAKER pro tempore. The gentleman from Iowa asks unanimous consent to proceed for five minutes. Is there objection?

Mr. GARNER. On what subject?

Mr. TOWNER. In regard to the correction of the RECORD of yesterday.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. TOWNER. Mr. Speaker, on yesterday an amendment was offered to the then pending bill, which was discussed at considerable length. After the chairman of the committee [Mr. MCKENZIE] had spoken on the bill also at considerable length, with two or three extensions of time—after he had closed, the presiding officer, myself being in the chair, stated that the debate was closed on the amendment. After that the gentleman from Alabama [Mr. OLIVER] said, "Mr. Chairman, I ask for

recognition"; and then the RECORD shows, as printed here, that he added, "I move to strike out the last word."

Now, the Chair did not hear that last statement. There is no question but that the gentleman from Alabama [Mr. OLIVER] did so state; but so sure was I that the gentleman did not make that statement that I asked the Reporter to examine his notes, and he states that the gentleman from Alabama did make it. Afterwards the gentleman from Alabama asked unanimous consent to proceed for five minutes, and that was granted, so that he had the time. But I did not want the RECORD to state or to show that knowingly I had refused to recognize him when he moved to strike out the last word.

In that connection I desire simply to state in a very few words the rules that we observe in regard to recognition. When an amendment is presented in the Committee of the Whole House on the state of the Union there is five minutes allotted to the mover or the supporter of the amendment, and five minutes to some person who is opposed to it, and that is all of the time allotted to debate. At any time after that the chairman can of his own volition declare that debate is closed. However, as a matter of course, as all gentlemen understand, the debate is very frequently extended considerably beyond that; in fact, it is very rarely closed in just one speech for and another against.

There is a further method by which recognition is claimed, and that is by a motion to strike out the last word. Now, that is in fact the presentation of an amendment, and anyone who thus presents an amendment in that form, even though it is merely pro forma and it is expected that it will be withdrawn, is entitled to recognition, and that is extended also to a motion to strike out the last two words and sometimes even to a motion to strike out the last three words. Those are always really the presentation of amendments and entitle those who make them to recognition by the Chair. Of course, if I had known that the gentleman from Alabama was making such a motion the Chair would have given him recognition.

I desire to make that statement both on account of the fact that the gentleman from Alabama is entitled to it, and also because of the fact that I think the RECORD ought to be clear as to what the Chairman holds in regard to the conduct of debate on amendments offered in Committee of the Whole House on the state of the Union.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had passed with amendment the bill (H. R. 2193) to amend the act entitled "An act to prohibit the importation and use of opium for other than medicinal purposes," approved February 9, 1909, in which the concurrence of the House of Representatives was requested.

The message also announced that the Vice President had appointed Mr. JONES of Washington and Mr. HARRIS members of the joint select committee on the part of the Senate, as provided for in the act of February 16, 1889, as amended by the act of March 2, 1895, entitled "An act to authorize and provide for the disposition of useless papers in the executive departments," for the disposition of useless papers in the Treasury Department.

POST OFFICE APPROPRIATION BILL—CONFERENCE REPORT.

Mr. SLEMP. Mr. Speaker, I call up the conference report on the Post Office appropriation bill, and ask unanimous consent that the statement be read in lieu of the report.

The SPEAKER pro tempore. The gentleman from Virginia calls up the conference report on the bill H. R. 9859, the title of which the Clerk will read.

The Clerk read as follows:

Conference report to accompany the bill (H. R. 9859) making appropriations for the Post Office Department for the fiscal year ending June 30, 1923, and for other purposes.

The SPEAKER pro tempore. The gentleman from Virginia asks unanimous consent that the statement may be read in lieu of the report. Is there objection?

Mr. STEENERSON. Mr. Speaker, for the moment I would like to reserve all points of order on the report. I do not expect to make them, but I understand they should be reserved before the reading of the statement.

The SPEAKER pro tempore. The gentleman is correct. The gentleman from Minnesota reserves all points of order on the conference report. The request of the gentleman from Virginia [Mr. SLEMP] is to have the statement read in lieu of the report. Without objection, the statement will be read.

There was no objection.

The statement accompanying the conference report was read.

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9859) making appropriations for the Post Office Department for the fiscal year ending June 30, 1923, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 12, 13, 14, 18, 25, 35, 36, 44, 46, 50, 56, and 57.

That the House recede from its disagreement to the amendments of the Senate numbered 19, 23, 37, 39, 41, 43, 47, and 48; and agree to the same.

Amendment numbered 15: That the House recede from its disagreement to the amendment of the Senate numbered 15, and agree to the same with an amendment as follows: In lieu of the matter stricken out by said amendment insert the following: "assistant superintendent, $2,750"; and the Senate agree to the same.

Amendment numbered 16: That the House recede from its disagreement to the amendment of the Senate numbered 16, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$28,750"; and the Senate agree to the same.

Amendment numbered 20: That the House recede from its disagreement to the amendment of the Senate numbered 20, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "four hundred and seventy"; and the Senate agree to the same.

Amendment numbered 21: That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,482,800"; and the Senate agree to the same.

Amendment numbered 22: That the House recede from its disagreement to the amendment of the Senate numbered 22, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,545,800"; and the Senate agree to the same.

Amendment numbered 24: That the House recede from its disagreement to the amendment of the Senate numbered 24, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$424,500"; and the Senate agree to the same.

Amendment numbered 26: That the House recede from its disagreement to the amendment of the Senate numbered 26, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$101,000,000"; and the Senate agree to the same.

Amendment numbered 27: That the House recede from its disagreement to the amendment of the Senate numbered 27, and agree to the same with an amendment as follows: Omit the matter stricken out and inserted by said amendment; and the Senate agree to the same.

Amendment numbered 28: That the House recede from its disagreement to the amendment of the Senate numbered 28, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert "and"; and the Senate agree to the same.

Amendment numbered 29: That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$4,765,000"; and the Senate agree to the same.

Amendment numbered 30: That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$4,000,000"; and the Senate agree to the same.

Amendment numbered 31: That the House recede from its disagreement to the amendment of the Senate numbered 31, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$11,750,000"; and the Senate agree to the same.

Amendment numbered 33: That the House recede from its disagreement to the amendment of the Senate numbered 33, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$725,000"; and the Senate agree to the same.

Amendment numbered 34: That the House recede from its disagreement to the amendment of the Senate numbered 34, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$70,200,000"; and the Senate agree to the same.

Amendment numbered 38: That the House recede from its disagreement to the amendment of the Senate numbered 38, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$90,000,000"; and the Senate agree to the same.

Amendment numbered 42: That the House recede from its disagreement to the amendment of the Senate numbered 42, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,300,000"; and the Senate agree to the same.

Amendment numbered 45: That the House recede from its disagreement to the amendment of the Senate numbered 45, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,000,000"; and the Senate agree to the same.

Amendment numbered 49: That the House recede from its disagreement to the amendment of the Senate numbered 49, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,150,000"; and the Senate agree to the same.

Amendment numbered 51: That the House recede from its disagreement to the amendment of the Senate numbered 51, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$12,850,000"; and the Senate agree to the same.

Amendment numbered 53: That the House recede from its disagreement to the amendment of the Senate numbered 53, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$86,900,000"; and the Senate agree to the same.

The committee of conference have not agreed upon amendments numbered 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 17, 32, 40, 52, 54, 55, 58, 59, 60, and 61.

STATEMENT.

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9859) making appropriations for the Post Office Department for the fiscal year ending June 30, 1923, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conference committee and submitted in the accompanying report:

On Nos. 12, 13, 14, and 15: Provides for an additional assistant superintendent at $2,750 in the office of the First Assistant Postmaster General in lieu of an additional assistant superintendent at $3,000 as proposed by the Senate and a clerk in charge at $2,250 as proposed by the House.

On No. 16: Corrects the totals for the office of the First Assistant Postmaster General.

On No. 18: Strikes out the appropriation of $52,000, inserted by the Senate, for the rent of a building in the District of Columbia for the Division of Equipment and Supplies, and for gas, electric power, light, fuel, and expense of removal of such division from its present quarters.

On No. 19: Appropriates $5,000 for the payment of cash rewards for any invention or suggestion of improvement or economy in device, design, or process applicable to the Postal Service, as proposed by the Senate.

On No. 20: Provides for 470 post-office inspectors instead of 520, as proposed by the Senate, and 420, as proposed by the House.

On Nos. 21 and 22: Corrects the totals for salaries in the office of the chief inspector.

On No. 23: Provides that the appointment of additional inspectors shall be made upon certification of the Civil Service Commission, as heretofore practiced, as proposed by the Senate.

On No. 24: Appropriates $424,500 instead of $474,000, as proposed by the Senate, and $375,000, as proposed by the House, for traveling expenses of inspectors, inspectors in charge, the chief post-office inspector, and four clerks.

On No. 25: Appropriates $43,000,000, as proposed by the House, instead of $43,300,000, as proposed by the Senate, for compensation to postmasters.

On No. 26: Appropriates $101,000,000 instead of $103,000,000, as proposed by the Senate, and $100,000,000, as proposed by the House, for compensation to clerks and employees at first and second class post offices, including substitutes for clerks and employees absent without pay.

On Nos. 27, 28, and 29: Appropriates $4,765,000 for compensation to watchmen, messengers, and laborers at the rates fixed by law instead of $4,999,600 for 986 at $1,350 each and 2,530 at $1,450 each, as proposed by the Senate, and $4,530,000 for 500 at $1,350 each and 2,625 at $1,450 each, as proposed by the House.

On No. 30: Appropriates $4,000,000 instead of $4,250,000, as proposed by the Senate, and $3,900,000, as proposed by the House, for allowances to third-class post offices to cover the cost of clerical services.

On No. 31: Appropriates $11,750,000 instead of $12,000,000, as proposed by the Senate, and $11,600,000, as proposed by the House, for rent, light, and fuel for first, second, and third class post offices.

On No. 33: Appropriates $725,000 instead of $775,000, as proposed by the Senate, and $700,000, as proposed by the House, for miscellaneous items necessary and incidental to post offices of the first and second classes.

On No. 34: Appropriates $70,200,000 instead of $70,500,000, as proposed by the Senate, and $70,000,000, as proposed by the House, for pay of letter carriers at offices already established, including substitutes for letter carriers absent without pay, City Delivery Service.

On No. 35: Appropriates $1,500,000, as proposed by the House, instead of $1,300,000, as proposed by the Senate, for village delivery service.

On No. 36: Appropriates $900,000 as proposed by the House, instead of $950,000 as proposed by the Senate, for car fare and bicycle allowance.

On No. 37: Appropriates $7,000,000 as proposed by the Senate, instead of $6,500,000 as proposed by the House, for mail-messenger service.

On No. 38: Appropriates $90,000,000, instead of $93,000,000 as proposed by the Senate and $86,000,000 as proposed by the House, for inland transportation by railroad routes.

On No. 39: Provides, as proposed by the Senate, that not exceeding $500,000 of the appropriation for inland transportation by railroad routes may be expended for mail-messenger service in lieu of payments to railroad companies for side and terminal service.

On No. 41: Appropriates $44,580,000 as proposed by the Senate instead of $43,600,000 as proposed by the House, for salaries in the Railway Mail Service.

On No. 42: Appropriates 1,300,000, instead of $1,400,000 as proposed by the Senate and $1,200,000 as proposed by the House, for manufacture of adhesive postage stamps, special-delivery stamps, books of stamps, and for coiling of stamps.

On No. 43: Appropriates $5,000,000 as proposed by the Senate, instead of $4,500,000 as proposed by the House, for manufacture of stamped envelopes and newspaper wrappers.

On No. 44: Appropriates $4,365,000 as proposed by the House, instead of $4,500,000 as proposed by the Senate, for payment of limited indemnity for the injury or loss of pieces of domestic registered matter, insured and collect-on-delivery mail.

On No. 45: Appropriates $1,000,000, instead of $1,500,000 as proposed by the Senate and $900,000 as proposed by the House, for miscellaneous equipment and supplies, office of the Fourth Assistant Postmaster General.

On No. 46: Strikes out the language, inserted by the Senate, providing that not exceeding $500,000 of the appropriation for miscellaneous equipment and supplies, office of the Fourth Assistant Postmaster General, shall be available for the purchase and shipment of post-office equipment for use at first, second, and third class post offices.

On No. 47: Appropriates $376,500, as proposed by the Senate, instead of $350,000, as proposed by the House, for rental, purchase, exchange, and repair of canceling machines, etc.

On No. 48: Provides, as proposed by the Senate, that not exceeding $26,500 of the appropriation for rental, purchase, exchange, and repair of canceling machines, etc., office of the Fourth Assistant Postmaster General, shall be expended for completing the purchase and installation of one letter-distributing machine, if upon test such machine is found by the Postmaster General to be satisfactory and efficient, and for no other purpose.

On No. 49: Appropriates $2,150,000, instead of $3,050,000 as proposed by the Senate and $2,050,000 as proposed by the House, for the purchase, manufacture, and repair of mail bags, etc.

On No. 50: Strikes out the language, inserted by the Senate, providing that $1,000,000 of the appropriation for the purchase, manufacture, and repair of mail bags, etc., may be used for the purchase of canvas from the Atlanta Penitentiary.

On No. 51: Appropriates $12,850,000, instead of $12,950,000 as proposed by the Senate and $12,750,000 as proposed by the House, for inland transportation by star routes (excepting service in Alaska), including temporary service to newly established offices.

On No. 53: Appropriates $86,900,000, instead of $87,185,000 as proposed by the Senate and $86,800,000 as proposed by the House, for pay of rural carriers, substitutes for rural carriers on annual and sick leaves, clerks in charge of rural stations, and tolls and ferriage, Rural Delivery Service, and for the incidental expenses thereof.

On No. 56: Strikes out section 4, proposed by the Senate, amending the act of June 5, 1920, classifying postal employees.

On No. 57: Strikes out section 5, inserted by the Senate, providing that no part of the moneys appropriated or made available by this act shall be used or expended for the purchase, acquirement, or repair of any commodity, article, or thing which, at the time of the proposed purchase, acquirement, or repair can be manufactured, produced, or repaired at the nearest available Government arsenal or navy yard of the United States for a sum less than it can be purchased, acquired, or repaired otherwise.

The committee of conference did not agree upon the following amendments of the Senate:

On No. 1: Providing for 126 clerks at $1,800 each in the office of the Postmaster General, instead of 118 clerks at $1,800, as proposed by the House.

On No. 2: Providing for 86 clerks at $1,400 each in the office of the Postmaster General, instead of 78 clerks at $1,400, as proposed by the House.

On Nos. 3, 4, and 5: Providing for two assistant map mounters at $1,000 each, instead of one assistant map mounter at $1,000, as proposed by the House.

On Nos. 6 and 7: Providing for three carpenters at $1,200 each, instead of one carpenter at $1,200, as proposed by the House.

On Nos. 8 and 9: Providing for three painters at $1,000 each, instead of one painter at $1,000, as proposed by the House.

On No. 10: Providing for six chauffeurs at $1,000 each.

On Nos. 11 and 17: Correcting the totals for the office of the Postmaster General and First Assistant Postmaster General.

On No. 32: Providing that the Postmaster General may use not exceeding $10,000 of the appropriation for rent, light, and fuel for first, second, and third class post offices, for adjusting claims arising under section 1 of the act approved March 3, 1885, and providing further, that hereafter a lease shall not cease or terminate when a post office can be moved into a Government building unless the Postmaster General deems it to be in the interest of the public service.

On No. 40: Providing an appropriation of $1,900,000 for the operation and maintenance of airplane mail service between New York, N. Y., and San Francisco, Calif., via Chicago, Ill., and Omaha, Nebr., including necessary incidental expenses and employment of necessary personnel.

On No. 52: Providing that the Postmaster General be authorized and directed to ascertain conditions arising from contracts in the star-route, screen-wagon, and other vehicle service entered into prior to January 1, 1918, with a view to determining whether any adjustment should be made in the compensation for the fiscal years ended June 30, 1918, June 30, 1919, June 30, 1920, and June 30, 1921, and make a report of his findings to the Congress not later than the first Monday in December, 1922.

On No. 54: Providing that the joint commission authorized under section 6 of the act approved April 24, 1920, be continued until June 30, 1923, to complete the investigation and to prepare a detailed report containing a summary of its findings thereof, and such recommendations as to legislation as it may deem proper; and providing further, that said commission shall not expend a greater sum than $125,000 during the fiscal year 1923.

On No. 55: Providing that the paragraph of the act entitled "An act to reclassify postmasters and employees of the Postal Service and readjust their salaries and compensation on an equitable basis," approved June 5, 1920, providing for leaves of absence, be amended to read as follows:

"Hereafter employees in the Postal Service shall be granted 15 days' leave of absence with pay, exclusive of Sundays and holidays, each fiscal year, and sick leave with pay at the rate of 10 days a year, exclusive of Sundays and holidays, to be cumulative for a period of three years, but no sick leave with pay in excess of 30 days shall be granted during any three consecutive years. Sick leave shall be granted only upon satisfactory evidence of illness, and if more than two days the application therefor shall be accompanied by a physician's certificate."

On No. 58: Providing an appropriation and authorizations for appropriations for Federal aid in road construction.

On No. 59: Providing an appropriation of $513,911.50 for the transmission of mail by pneumatic tubes in the city of New York, including the borough of Brooklyn of the city of New York.

On No. 60: Providing an amendment to the act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1922, and for other purposes, approved March 1, 1921, which amends the act to reclassify postmasters and employees of the Postal Service and readjust their salaries and compensation on an equitable basis, approved June 5, 1920, extending the provisions of that act to such postal employees and substitute postal employees who were in the Postal Service on October 1, 1920.

On No. 61: Corrects the section number.

C. B. SLEMP,
MARTIN B. MADDEN,
T. U. SISSON,
Managers on the part of the House.

The SPEAKER pro tempore. The gentleman from Minnesota [Mr. STEENERSON] has reserved points of order on the conference report. The gentleman from Virginia [Mr. SLEMP] is recognized for one hour.

Mr. ROSSDALE. Mr. Speaker, is the presentation of this matter to be confined to one hour?

The SPEAKER pro tempore. The gentleman from Virginia has an hour.

Mr. ROSSDALE. I have an item which I wish to present.

Mr. SLEMP. The discussion of the item that the gentleman is interested in will come later.

Mr. MADDEN. What does the gentleman desire to present?

Mr. ROSSDALE. The tube item.

Mr. MADDEN. That will come up after the conference report is disposed of.

Mr. ROSSDALE. Is it to have only an hour altogether?

Mr. MADDEN. We do not have anything to do with setting the time. The rules of the House set the time. The gentleman will have an opportunity to be heard later. This will not be reached until after the conference report is disposed of.

Mr. STEENERSON. This is not a part of the conference report. The item the gentleman refers to will come up as a separate proposition after the conference report is disposed of.

Mr. SLEMP. Mr. Speaker, on the part of the conferees of the House I beg to make the following statement regarding the results of the conference between the House and Senate on the Post Office appropriation bill.

The bill as passed by the House carried an appropriation of $554,264,375. The bill as passed by the Senate carried an appropriation of $623,773,536.50, an increase of $69,309,161.50, of which, however, $50,000,000 was for roads, leaving a net increase of $19,309,161.50 for postal facilities over the amount fixed by the House. There was only one House item decreased in the Senate bill, that being the item of village delivery, but the Senate conferees receded on that and the House provision for village delivery is retained.

The bill as agreed to by the conferees carries an appropriation of $564,719,625, an increase of $10,455,250 over the House bill, made up as follows:

Office of Second Assistant Postmaster General	$5,480,000
Air Service	1,900,000
Additional clerk hire	1,000,000
Stamped envelopes	500,000
Stamps	100,000
Watchmen, messengers, and laborers	235,000
Increase in allowances to third-class offices	100,000
Increase in rent, fuel, and lights	150,000
Pay of letter carriers	200,000
Increase in star routes	100,000
Pay of rural carriers	100,000
Expenses of joint commission	125,000
Total	9,990,000

The balance of $465,250 is composed of a number of small items, general adjustments between the attitude of the House and the Senate.

Now, as to the Second Assistant Postmaster General's item of $5,480,000 increase, I want to say to the gentlemen of the House that the item carried in the bill as it passed the House was $86,000,000 for this service. That was the amount fixed by the Second Assistant Postmaster General specifically as the amount necessary to pay for railway mail transportation. After the tragic death of the Second Assistant Postmaster General it was some little time before the vacancy was filled and another Second Assistant appointed. Meantime the postal receipts have shown a very remarkable increase. The increase in the various months ranged from 4 per cent to 7.4 per cent. The increase in the postal receipts for the month of April, 1922, over April, 1921, is 7.4 per cent. The annual expenditure that is being made on that item now is at the rate of $90,000,000. The Post Office Department think that perhaps they will need that amount, $90,000,000, on account of the increased postal business, as now evidenced by the monthly increase in business, and conferees accepted the $90,000,000 instead of the $86,000,000

originally stated, though the present Second Assistant Postmaster General states that he will make every effort to bring the amount down to the House figures of $86,000,000. That accounts for $4,000,000 of the $5,480,000 increase. The sum of $980,000 is accounted for by the correction of a mistake made in the original estimate by the Post Office Department, they having asked for a certain sum for railway mail pay before they had the number of men absolutely on the list, and the $980,000 corrects that mistake.

The sum of $500,000 is for mail messenger service to take the place of service carried on by the railroads.

These increases were requested by the postal officials without knowledge of the subject. The Second Assistant states the additional amount that will be needed in order to avoid incurring a deficit next year.

The items for clerk hire were increased $1,000,000. The House carries an appropriation of $100,000,000. The Senate asked for $103,000,000, so we compromised by adding $1,000,000, or a 1 per cent increase.

Similarly the other items can be explained. I may add in that connection that the department is entering into a very thorough investigation of the clerk situation in the country as well as of other branches of the department, and we are confident that the administration of this great department will meet the needs of the public service and also the demands of the taxpayers for economy.

The conferees are in disagreement as to various items mentioned in the statement. The bill carries an increase of 50 post-office inspectors. We have now 420 post-office inspectors. The department made a request for 100 additional inspectors. We felt, and I think the department rather agrees with us, that they can not absorb more than 50 post-office inspectors at this time.

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. SLEMP. Yes.

Mr. STAFFORD. At some time before the gentleman concludes I would like to inquire as to some of the amendments that have been agreed to, but I do not wish to disturb the gentleman at this time. I wish him to conclude his statement.

Mr. SLEMP. I shall be glad to yield to the gentleman.

Mr. STAFFORD. At the conclusion of the gentleman's statement.

Mr. SLEMP. There is no doubt that the work to be done by the post-office inspectors has greatly increased in recent years. In the Postal Service there are 320,000 employees. There are over 50,000 post offices. Complaints of various kinds reaching the department from all over the country literally run into the hundreds of thousands, and all of these complaints are looked after, and this entire personnel of 320,000 employees, with 50,000 post offices, are to be looked after by the small number of 420 men. I dare say it is the smallest personnel, considering the range and extent of its activities, of any force in any department of the Government. I have no doubt that we Members of the House add greatly to the work of the inspectors. When we do not know a situation just as we think we ought to, we ask for an inspector, and away he goes to make a report.

We find that there are over 45,000 cases before the Post Office Department now uninvestigated, and the department states that it would require the entire force of 420 men which we now have about nine months to clean up the arrears without making any provision for new investigations.

There were various items of legislation adopted by the Senate, most of which have been considered by the Post Office Committee of the House and the Senate, and I will yield later to the distinguished chairman of the committee to have him explain those items. Briefly, the items of legislation are, first, the appropriation of $1,900,000 for the Air Service which was requested by the Postmaster General, and the service has demonstrated beyond a doubt that the transportation can be carried on through the year with a little loss of life. These legislative items will be brought up later, and the same with respect to the pneumatic tubes and the road situation.

In reviewing the road situation as a benefit to good roads the House will have to decide whether they wish this committee to carry on the roads proposition as between the House and the Senate. I think the matter has been handed over to the chairman of the Good Roads Committee for such recommendation as he wishes. I will now yield to the gentleman from Wisconsin.

Mr. STAFFORD. I wish to inquire the purpose of Senate amendment 39, in which the House recedes, providing not exceeding $500,000 of the railway transportation item may be expended for mail messenger service in lieu of the payment to the railroad company.

Mr. SLEMP. The Post Office Department has started to replace the delivery service by railroads wherever it is possible to do it at less expense.

Mr. STAFFORD. Is this for the purpose of relieving the railroads of the burden of the obligation of transferring the mail where the station is located within a quarter of a mile of the post office?

Mr. SLEMP. No.

Mr. MADDEN. If the gentleman will yield to me.

Mr. SLEMP. I yield.

Mr. MADDEN. In the consideration of this matter it was demonstrated beyond question that a large saving could be made by letting it to private contractors. It does not relieve the railroad of any responsibility they are called on to assume under the law. There are cases where this side service is left to the railroad companies where they have to go beyond a certain distance.

Mr. STAFFORD. Where we pay additional compensation to the railroads for their service.

Mr. MADDEN. They are letting the contracts at a very much lower rate, I think, than the railroads are willing to continue it, and they say they will save $750,000 a year.

Mr. STAFFORD. Are these contracts which the department is contemplating to enter into a four years' contract or annual contract?

Mr. MADDEN. I do not know about that.

Mr. STAFFORD. So far as the messenger service is concerned, as a general proposition it is a four years' contract. I don't know whether this would be an annual or four-year contract.

Mr. SLEMP. I may add further to what the gentleman has said, that the Post Office Department has worked out the proposition by which they expect to make an allowance for the postmaster so that the postmaster can deliver this at a less rate.

Mr. STAFFORD. The statement of the gentleman from Illinois is quite a surprise in saying that the department can enter into a contract cheaper than a private employer can. The gentleman has made the statement, but the general rule does not support that position. Usually the Government has to pay much more by reason of the red tape, and so forth, than would a private employer. That is axiomatic.

Mr. MADDEN. I am giving you what the Post Office Department says. They say by giving permission to extend the contract service to private contractors, instead of the railroad, they will be able to let the contracts at a very much lower rate than they pay the railroads for carrying the mail on the side service, and that they will save $750,000.

Mr. STAFFORD. The gentleman has had a large experience in awarding contracts and in observing contracts awarded by the Government. I think he will agree that usually private contractors are better situated and get better contracts than the Government can.

Mr. STEENERSON. Will the gentleman yield? I will say, at the request of the department the Post Office Committee held hearings on this very item. I do not know whether the gentleman has got clearly in his mind what the item means. Under the space plan law the railroad companies furnish this service, and the Interstate Commerce Commission, when the question of rates came up, decided that they were entitled to additional pay, and I think it was about a million dollars a year. Since that time the railroads have performed the service, and the pay is included in the railway mail appropriation. Now, the department has asked for this legislation because they believe they can employ this messenger service between the depot and the post office for less than the Interstate Commerce Commission has allowed the railway companies, and I have a letter on that subject written to the secretary of the joint commission by Mr. Stewart, which I would like to have inserted in the RECORD.

The SPEAKER pro tempore. The gentleman from Minnesota asks unanimous consent to extend his remarks in the RECORD by printing a letter. Is there objection?

There was no objection.

The letter is as follows:

POST OFFICE DEPARTMENT,
SPECIAL ASSISTANT TO THE ATTORNEY GENERAL,
Washington, May 11, 1922.

Mr. F. C. RIEDESEL,
Secretary Post Office and Post Roads Committee,
House of Representatives.

MY DEAR MR. RIEDESEL: Herewith find copy of the Interstate Commerce Commission report and decision in the Railway Mail Pay case. You will note the order follows page 120, and the act of 1916 is found on page 81 and following.

On page 86 you will find the provision in the act of 1916 to the effect that the existing law for the determination of mail pay, except as modified by the act, shall continue in effect until the commission shall make its finding.

You will also find on page 85 a provision that the carriers are required to transport the mails in the manner, under the conditions, and with the services prescribed by the Postmaster General.

Before the act of 1916 and during its effectiveness prior to the decision of the commission side and terminal service was required of the railroad companies under the Postal Laws and Regulations. (See sec. 1346, 1913 edition.) This requirement was never changed, the railroads performing the service as so provided. For this service they were not specifically compensated in addition to their regular pay prior to the decision of the commission, but this service was required as a part of the service for which they were regularly paid. This service is such a service as the act of 1916 provided in the sections to which I have referred you as continuing in effect until the commission might make its findings and as a condition or service prescribed by the Postmaster General and required of the railroad companies.

When the case was before the commission both the department and the railroads were agreeable to a separation of this service and a statement of specific pay therefor. The railroads were not given additional pay, but were given the pay for this specific service and it was not included in the service for which the regular line pay was allowed.

Sincerely yours,

JOSEPH STEWART.

Mr. STAFFORD. Will the gentleman yield further? I wish to call the gentleman's attention to Senate amendment 48, providing for the purchase of a letter-distributing machine, at a cost not to exceed $26,500.

My attention has never been heretofore called to any machine providing for letter distribution. Will the gentleman give the House some idea of what is the purpose of this machine?

Mr. SLEMP. Mr. Speaker, a contract was entered into for the purchase of the machine back in about 1909, and the people who made this machine have spent about $300,000 in endeavoring to perfect it. I have not personally seen the machine, but I am told that it consists of a long table about 4 feet wide and 20 or 25 feet long, with various hands and arms, with a keyboard and wire attachments. You press a button and a hand reaches out and picks up a letter and deposits it in the Milwaukee box or the Chicago box.

Mr. STAFFORD. Does the hand read the writing when it picks up the letter?

Mr. SLEMP. Oh, no. The man who operates the keyboard is the one who operates the hand.

Mr. STAFFORD. One might possibly think it was some sort of a finger-print device.

Mr. SLEMP. I suppose one would have to use the fingers, but the Fourth Assistant Postmaster General, who is very much interested in trying out the machine as a matter of experiment, states that if a number of them are purchased, and it works out correctly, thousands of clerks may be saved. It is a labor-saving device in the interest of economy.

Mr. RANKIN. Mr. Speaker, will the gentleman yield?

Mr. SLEMP. Yes.

Mr. RANKIN. The gentleman from Virginia said something in his statement about the village delivery, and I did not understand just exactly what the statement was.

Mr. SLEMP. What I said was that the Senate passed the bill, cutting out the $200,000 which was restored in the House, but the Senate conferees have receded, and so we have the House provision.

Mr. RANKIN. So that delivery will be continued for the next year.

Mr. SLEMP. Yes. Mr. Speaker, I yield 15 minutes to the gentleman from Minnesota [Mr. STEENERSON].

Mr. KINCHELOE. Mr. Speaker, before the gentleman begins will he yield to me to prefer a unanimous-consent request, as I have to leave the city? My colleague, Mr. ROUSE, who is not only a member of the Post Office and Post Roads Committee but is a member of the Joint Postal Commission, is unavoidably absent. Senate amendment No. 54 is in disagreement. That provides for the perpetuation of this commission at an expenditure of not to exceed $125,000 for the next year.

Mr. STEENERSON. This is not to be taken out of my time, is it, Mr. Speaker?

The SPEAKER pro tempore. It is, if the gentleman yields?

Mr. SISSON. Mr. Speaker, I suggest that by unanimous consent the gentleman ask permission to extend the remarks of Mr. ROUSE in the RECORD.

Mr. SLEMP. I yield one minute to the gentleman from Kentucky.

Mr. KINCHELOE. Mr. Speaker, on behalf of Mr. ROUSE I ask unanimous consent that he be permitted to extend his remarks in the RECORD by placing therein an itemized statement of expenditures of this joint commission, amounting to a little over $200,000.

The SPEAKER pro tempore. The gentleman from Kentucky asks unanimous consent that his colleague, Mr. ROUSE, be permitted to extend his remarks in the RECORD by placing therein an itemized statement of the expenditures of the Joint Postal Commission. Is there objection?

There was no objection.

The statement of Mr. ROUSE is as follows:

Mr. ROUSE. Mr. Speaker, Senate amendment to the Post Office appropriation bill is as follows:

SEC. 2. That the joint commission authorized under section 6 of the act approved April 24, 1920, entitled "An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1921, and for other purposes," is hereby continued until June 30, 1923, to complete the investigation and to prepare a detailed report containing a summary of its findings thereof, and such recommendations as to legislation as it may deem proper: *Provided*, That the said commission shall not expend a greater sum than $125,000 during the fiscal year 1923.

If this entire appropriation of $125,000 is not denied, $100,000 of it should be, leaving $25,000 to be used by the commission. This commission has spent from the date of its organization up to the 1st of March, this year, over $208,000, and since the 1st of March I suppose it has spent $10,000 additional.

It has always been my opinion that the commission was created for one purpose only, and that for the reestablishment of the old, obsolete, inadequate, rusty, worn-out pneumatic tubes. A majority of the commission has recommended the reestablishment of the tubes, and that work is now completed. The commission now undertakes to suggest an investigation by post-office officials of the cost of handling certain classes of mail. This work is under the direct supervision of Mr. Joseph Stewart, who was Second Assistant Postmaster General during the administration of President Taft. Mr. Stewart is the special attorney for the Post Office Department and has held this position since he ceased to function as Second Assistant Postmaster General. No man is better qualified to do this work than General Stewart. He has every means at his command. The Postmaster General can assign to him the entire inspection service to assist in this work and any number of post-office employees. The post-office inspectors can furnish more information regarding this subject than can be obtained from all of the engineers in the country. It is my opinion that this appropriation is not needed and that the entire amount should be denied. In order to show the House and the country where over $208,000 has been spent, I present an itemized account of the expenditures up to the 1st of March of this year. This statement is furnished me by Senator TOWNSEND, the chairman of the commission:

MARCH 23, 1922.

Hon. A. B. ROUSE,
House of Representatives, Washington, D. C.

DEAR MR. ROUSE: Complying with your request, I have had the secretary of the joint commission prepare an itemized statement of the disbursements of the commission from the date of its organization, May 15, 1920, to March 1, 1922. This covers the entire life of the commission to the 1st of the present month.

As you know, we now have only two engineers employed with the post-office officials in making an ascertainment of cost of all classes of mail. It is my purpose within the next month or two to reduce this to one engineer, if the commission agrees with me.

Very truly yours,

CHAS. E. TOWNSEND.

RECAPITULATION.

May 17, 1920, to July 1, 1920, expenses from $10,000 appropriation:		
Commission		$967.15

Mr. STEENERSON. Mr. Speaker, I am in favor of the conference report. Before it comes to a vote I should like to explain the anomalous situation which exists between the two Houses on account of the rules that have heretofore been adopted. The Committee on Appropriations of the House has jurisdiction of all appropriation bills, including the Post Office appropriation bill. That committee appoints a subcommittee of three to do the work. The Senate has adopted a rule that when the Post Office appropriation bill comes up for consideration three members of the Senate Committee on Post Offices and Post Roads shall be ex officio members of the Committee on Appropriations, and there is a like rule in respect to other appropriation bills. These three members took charge of the whole work of preparing the appropriation bill for the Post Office Department, and under the rules they have to appoint members of the Committee on Post Offices and Post Roads of the Senate on the conference committee. In this case the Senate appointed five members of the Post Offices and Post Roads Committee of the Senate as conferees, whereas the House conferees consist of this subcommittee of three members. It has long been the principle underlying the rules of this House that there shall not be legislation on appropriation bills. Therefore, we have the rule that legislation is subject to a point of order, the theory being that so-called riders on appropriation bills are conducive to poor legislation. Practice, however, demonstrates that it is absolutely impossible to keep all legislation out of appropriation bills, because in a great many instances the appropriation and the limitation on the appropriation and the object for which it is to be used are so closely interwoven that they can not be separated. If we were to construe the rule strictly, we would exclude a great many items in this conference report that are now considered purely appropriating items. I call attention to this fact, especially for the reason that the subcommittee on this bill, headed by the gentleman from Virginia [Mr. SLEMP] and the chairman of the committee [Mr. MADDEN], were courteous enough to call the attention of the House Committee on the Post Office and Post Roads to the fact that the Senate had included a large number of legislative items in the appropriation bill, and on these legislative items they profess that they were not sufficiently advised and thought the Committee on the Post Office and Post Roads of the House might have some ideas that would be of value to them in dealing with the matter. They expressed the desire that these legislative items put on the appropriation bill by the Senate should be considered by my com-

mittee. I called the committee together, consisting of 21 members, and we had more than a quorum there at these various meetings considering these items. We held hearings. We called the department officials up to explain the legislative items, and in many cases we found that the department had presented them to the Senate committee because of the emergency that had recently arisen.

I questioned them as to why they did not bring these legislative items before the House Committee on the Post Office and Post Roads, so that we could prepare a bill and put it through Congress, and in most cases they explained that it was an emergency, and they went before the Senate committee and asked for appropriations which embraced these legislative provisions. In some instances the legislative part of it was so closely interwoven with the appropriating part that it was practically impossible to separate them.

For instance, here is an item usually carried for clerk hire, but the fact is that they needed chauffeurs. They had no authority to employ chauffeurs, so they asked for legislation that would do away with the detail of clerks for chauffeurs, because they can hire chauffeurs cheaper than the highly trained and skilled clerks in this item, and instead of paying clerks they could thus pay chauffeurs. Well, it is perfectly proper, and the Committee on Post Offices and Post Roads have no objection to it and recommend it be adopted, but it shows how closely the appropriating part of an item and the legislative part are interwoven. There are several of those cases that have been included in the conference report. There are some that are of doubtful nature—for instance, amendments numbered 19, 23, and 46. But, as I have already stated, it is not my desire or the desire of the Post Office Committee to object to those. However, I may say there is a very serious question whether they should not have been brought before the House like these other legislative items, so the House would be given an opportunity to vote them up or down as independent propositions. As it is now, they are included in the conference report, and if the point of order is made and sustained to one it would send the whole report back again; but, inasmuch as my committee has approved, we do not want to take that course, but in justice to the rights of the House I thought it was my duty to explain that hereafter they ought to be more careful in including in a conference report things which Rule XXI forbid. That rule says when it is a legislative item subject to a point of order, then it shall not be included in the conference report, but reported as an independent proposition. Now, this is purely technical in this case, because the item, in our opinion, is meritorious and ought to be passed, and therefore it is not intended to make any point upon it except that the rights of the House are somewhat encroached upon by the fact it is included in the conference report instead of reported as being in disagreement.

Now, there are other items that have a peculiar position, I think, half a dozen items on which legislation was proposed by the Senate of great importance. For instance, there is a proposition to authorize the Post Office Department to purchase furniture and ship it and supply rented quarters. As it is now, the Postmaster General has no authority to furnish equipment to post offices that are rented or in rented quarters. The owner of the building must furnish that, and in many instances, in a large city especially, these real estate men have not facilities for buying furniture except to buy it at the retail price. The department had a special investigation of this subject and came to the conclusion that they could get better terms for rented postal stations and branch post offices if they had the authority to furnish the equipment, if they so desired.

Mr. SLEMP. If the gentleman will allow me to interrupt, I will yield him more time because it is a very interesting subject. I think I approve of everything the gentleman says, but we found when we came to the appropriation of $500,000 the gentleman refers to that could only apply to the item of rent, and so forth.

Mr. STEENERSON. Rent, fuel, and light.

Mr. SLEMP. With those leases that expired during the next fiscal year. Now, the total cost, rent, fuel, and light for leases expiring the next fiscal year is $608,000, and the Post Office Department came along with the proposition to spend $500,000 on furniture alone for leases.

Mr. STEENERSON. I was not discussing the merits of the item. Your committee probably did right.

Mr. SLEMP. And when the explanation was made to the Senate conferees they receded.

Mr. STEENERSON. There are other items, however, which were submitted to my committee which we think should become law on account of the difficulty of getting bills through here. I have half a dozen bills on the calendar, and have had for two or three months, but on account of the high privilege of these appropriation bills these minor legislative bills are set aside, and we can not expect to get anything except through this channel now open. If the Subcommittee on Appropriations for the Post Office Department insists, as they naturally would, that there should be no legislation at all on an appropriation bill and fight that to the utmost and get the Senate to yield, of course it will often happen that you will not get any legislation when you ought to have it.

There are several cases of that kind. We, of course, can not change it, but we thought when we were called into consultation by the courtesy of these gentlemen and held hearings and took testimony to determine whether a legislative provision was wise, we thought, of course, it would count for something, but the conferees took our advice, yet they disagreed to the Senate amendment and thought in doing so they accomplished a great victory. If they had followed our advice they would have yielded to the Senate. We feel as if we did not have any authority after all, and that our recommendation did not go very far. We are reminded of the epitaph in the Chiltenham graveyard:

> If so soon that I am done for,
> I wonder what I was begun for.

Because it seemed as if our work did not amount to anything. I do not blame the subcommittee on this bill, but I am simply calling attention to it for the purpose of showing the anomaly that now exists and the contradictory things that result.

The SPEAKER pro tempore. The time of the gentleman from Minnesota has expired.

Mr. SLEMP. I yield three minutes more to the gentleman.

Mr. STAFFORD. Will the gentleman yield?

Mr. STEENERSON. Yes.

Mr. STAFFORD. Has the gentleman's committee at any time in the recent past considered the claim made by one of the Assistant Postmasters General that under the present leasing system authorizing leasing of quarters for 20 years we are paying by that method in the 20-year period ten times the cost of the building and the real estate which the Government is using?

Mr. STEENERSON. We had a special investigation of that subject of leasing, by the joint commission and by postal experts that we obtained in New York. The opinion was that the long-term leases gave us the cheapest rent.

Mr. STAFFORD. There is no question that a lease of 20 years gives better terms for the Government than a 10-year lease, but the Assistant Postmaster General has called attention to the fact that the best terms they could secure for the 20-year period would amount to ten times the cost of the building and the real estate which the Government used.

Mr. STEENERSON. The gentleman's information is erroneous.

Mr. STAFFORD. I read it in the New York Times a few days ago.

Mr. STEENERSON. The gentleman has in mind a lease that is not made yet, but which they are talking of making, at the Pennsylvania terminal in New York. If it is not right, the Postmaster General and his assistant can turn it down at any time.

Mr. STAFFORD. Will the gentleman yield further?

Mr. STEENERSON. Allow me to finish this answer.

The gentleman seems to indicate in his question that that is the general practice throughout the United States. We get rent as cheap as possible.

Mr. STAFFORD. In conference with the officials of the Post Office Department they have called my attention to the high rentals they are obliged to pay, when, if they had authority under the law to purchase real estate and erect the necessary improvement, it would save the Government millions and millions of dollars.

Mr. STEENERSON. They always save by words, but by deeds never. I would like to say this, that if you bring in a bill, for instance, to have the Government purchase this land in New York City which they have negotiated for for a year and finally get down to $2,000,000 as a purchase price—if you purchase that through an act of Congress making appropriation, and then appropriate $6,000,000 for the building, it has got to be done through the regular channels. It has got to be in the public building bill, and you know if New York gets $8,000,000 of appropriation many others will have to be provided for.

Mr. STAFFORD. Moorhead, Minn., wants $100,000.

Mr. STEENERSON. No; they have a building already.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. SLEMP. Mr. Speaker, I move the adoption of the conference report.

The SPEAKER pro tempore. Does the gentleman from Minnesota [Mr. STEENERSON] withdraw his reservation of the point of order?

Mr. STEENERSON. Yes.

The SPEAKER pro tempore. The question is on agreeing to the conference report.

The conference report was agreed to.

The SPEAKER pro tempore. The Clerk will report the first amendment.

The Clerk read as follows:

Amendment No. 1: Page 2, line 18, strike out "18" and insert "26."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to amendment No. 1.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 2: Page 2, line 19, strike out "78" and insert "86."

Mr. SLEMP. Mr. Speaker, I move that the House insist upon its disagreement to Senate amendment No. 2.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 3: Page 2, line 24, after the figures "1,200," insert the word "two."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to Senate amendment No. 3.

Mr. STAFFORD. Will the gentleman yield in that particular?

The SPEAKER pro tempore. The gentleman from Virginia moves that the House insist on its disagreement to Senate amendment No. 3.

Mr. SLEMP. Yes; I yield to the gentleman from Wisconsin.

Mr. STAFFORD. I notice this is a very important amendment, involving an additional map mounter. What was the reason they did not agree that they should have an additional map mounter?

Mr. SLEMP. In the first place, we did not have any authority to do so, and, in the second place, and the same in regard to this item, that the conferees themselves rather accepted the views of the House Committee on Appropriations. They can get along without some of these positions.

Mr. STAFFORD. I question the first statement, that the committee did not have any legislative authority. There is provided in the bill authorization for one or two of a certain character of employees, and it is certainly within the jurisdiction of the conferees to agree to an additional number.

Mr. SLEMP. I will say to the gentleman that we were firmly convinced that these additional employees were not necessary.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Virginia that the House insist on its disagreement to Senate amendment No. 3.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 4: Page 2, line 24, after the word "map," strike out the word "mounter" and insert "mounters, at."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to amendment No. 4.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 5: Page 2, line 25, after the figures "1,000," insert the word "each."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to the amendment.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 6: Page 3, line 14, after the figures "1,600," strike out "one" and insert "three, at."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to Senate amendment No. 6.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 7: Page 3, line 14, after the figures "1,200," insert the word "each."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to Senate amendment No. 7.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 8: Page 3, line 16, after the figures "1,200," strike out "one" and insert "three, at."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to Senate amendment No. 8.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows.

Senate amendment No. 9: Page 3, line 17, after the figures "1,000," insert the word "each."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to amendment No. 9.

The SPEAKER pro tempore. The gentleman from Virginia moves that the House insist on its disagreement to amendment No. 9. The question is on agreeing to that motion.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows.

Senate amendment No. 10: Page 3, line 19, after the word "each" insert "six chauffeurs, at $1,000 each."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement.

The SPEAKER pro tempore. The gentleman from Virginia moves that the House insist on its disagreement to amendment No. 10.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows.

Senate amendment No. 11: Page 3, line 24, strike out "$1,798,730" and insert "$1,885,730."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement on this amendment.

The SPEAKER pro tempore. The gentleman from Virginia moves that the House insist on its disagreement to this amendment.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows.

Senate amendment No. 17: Page 5, line 23, strike out the figures "$1,902,880" and insert "$1,940,630."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement to Senate amendment No. 17.

The SPEAKER pro tempore. The gentleman from Virginia moves that the House insist on its disagreement to Senate amendment No. 17. The question is on agreeing to that motion.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

Senate amendment No. 32: Page 13, line 2, after the figures, insert: "*Provided*, That the Postmaster General may use not exceeding $10,000 of this appropriation for adjusting claims arising under section 1 of the act entitled 'An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1886, and for other purposes,' approved March 3, 1885: *And provided further*, That hereafter a lease shall not cease or terminate when a post office can be moved into a Government building unless the Postmaster General deems it to be in the interest of the public service."

Mr. SLEMP. Mr. Speaker, I move that the House recede from its disagreement to amendment No. 32 and agree to the same with an amendment which I send to the Clerk's desk.

The SPEAKER pro tempore. The gentleman from Virginia moves that the House recede from its disagreement to amendment No. 32 and agree to the same with an amendment, which the Clerk will report.

The Clerk read as follows:

Senate amendment No. 32: Mr. SLEMP moves that the House recede from its disagreement to the amendment of the Senate No. 32, and agree to the same with amendment, as follows: In lieu of the matter inserted by said amendment insert the following: "*Provided*, That the Postmaster General may use not exceeding $10,000 of this appropriation for adjusting claims arising under section 1 of the act entitled 'An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1886, and for other purposes,' approved March 3, 1885: *And provided further*, That that part of the act approved March 3, 1885 (23d Stat. L., p. 386), which provides that a lease for premises for use as a post office shall cease and terminate whenever a post office can be moved into a Government building, is hereby repealed."

Mr. SLEMP. Mr. Speaker, I yield to the gentleman from Minnesota [Mr. STEENERSON] for the purpose of permitting him to explain that amendment.

The SPEAKER pro tempore. The gentleman from Minnesota is recognized for five minutes.

Mr. STEENERSON. Mr. Speaker, the matter that I want to explain is the last paragraph—that repeals the clause in the existing law—that it is mandatory on the department to include a cancellation clause in every lease in the event that a public building is built, as stated there. The department has found that very often it is difficult to get reasonable rent terms with that clause in; and it was testified in regard to this proposed post-office building in New York City that it would make a difference of many thousand dollars—I think, something like $200,000—in a 20-year term. This is a permanent building, and there is no object in having that clause in there. If the owner desires to borrow money on the mortgage, he would have to pay a higher rate.

It was explained to the Committee on the Post Office and Post Roads of the House that the department desires this legislation. I drew a bill. That bill was reported favorably, and it is now on the calendar. It is identical with this provision; and the Senate simply took the provision of my bill and put it on this appropriation bill. The department is of the opinion that it will save them a good deal of money. Of course, I think we ought to concur in the amendment.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Virginia to recede and concur with an amendment.

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. SLEMP. Yes.

Mr. STAFFORD. I have been furnished privately with some information as to what is included under the first part of the proposed amendment. I wish to ascertain whether there is any limit on this $10,000 expenditure. Section 1 of this act is all-pervading, which includes the whole Post Office appropriation act of that year—1886.

Now, this authorization of $10,000 for adjusting claims arising under that section is broad enough to pay any character of claim whatsoever.

Mr. STEENERSON. I would like to explain that to the gentleman.

Mr. STAFFORD. I would be glad to have an explanation, either from the chairman in charge of the bill or from the gentleman from Minnesota.

Mr. STEENERSON. The appropriation was made originally to enable the department to pay for the actual time a building was occupied which had become untenantable, and it was desired to vacate it; but there are some claims left. The original appropriation has lapsed and the money has gone into the Treasury. This $10,000 was to enable them to pay claims.

Mr. STAFFORD. Section 1 is the whole appropriation act for the fiscal year 1886. I have the act before me, and I make the criticism that the phraseology here is not limited to any one claim.

Mr. MADDEN. He will not need to use more than $10,000.

Mr. STAFFORD. He may not need to use more than $10,000, but the enabling provision should be limited to that character of claim.

Mr. STEENERSON. Here is what was stated before the committee:

> The CHAIRMAN. That is simply quoting the old law.
> Mr. SPILMAN. No, sir. The law gives the Postmaster General authority to withhold the payment of rental when premises occupied by a post office become unfit for occupancy. When they become in that condition, he has authority to withhold the payment of rental. There are a number of cases for several years past where the department has declared premises unfit and has withheld rent and refused to occupy the premises further. Having occupied the premises, the department owes the lessor something for the use of them, and in a number of instances the period of adjustment antedates the life of the appropriation. That is to say, it occurred during a time after the available appropriation had expired by limitation of law. This amendment here provides $10,000 for that purpose. It provides that $10,000 may be utilized in adjusting those claims where the period of adjustment antedated any live appropriations available for the purpose of paying them. That provision was not asked for by the department, but the department does not object to it, and we have such claims.

Mr. STAFFORD. Will the gentleman permit? There is nothing in the act providing for the continuance of the Postal Service that authorizes the payment of claims. I have listened very attentively to the gentleman on several occasions, when he has objected to the Committee on Appropriations taking jurisdiction of matters that do not pertain to that committee. Yet here the gentleman is holding a hearing on a matter which rightfully belongs to the Committee on Claims and not to the Committee on the Post Office and Post Roads. These are stale claims, hoary with age, and the gentleman is holding hearings on them rather than the Committee on Claims, which properly has jurisdiction of them.

Mr. STEENERSON. The only reason we held hearings was because of the cancellation clause of the appropriation.

Mr. STAFFORD. Is there anything you dissent from? The gentleman stated that he approved of all these items.

Mr. STEENERSON. There are two classes. One relates to the old claims and one relates to the cancellation clause in leases that had been handled by the department. I explained both of them, and they had the sanction of the Committee on Appropriations.

Mr. MADDEN. One merges into the other.

Mr. STEENERSON. Yes. The gentleman from Wisconsin is entirely too technical.

Mr. STAFFORD. Oh, no. I still insist that there is nothing in the act of 1886 authorizing the department to pay claims. Under this phraseology this $10,000 could be paid for any character of authorization carried in the Post Office appropriation act of that year. No one can controvert that who has examined the act.

Mr. STEENERSON. They say they owe this money, but the appropriation has lapsed.

Mr. STAFFORD. There are a million claims of people to whom the Government owes money, claims which have arisen since the foundation of the Government.

The SPEAKER pro tempore. The question is on the motion to recede and concur with an amendment.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

> Amendment No. 40: Page 15, after line 15, insert:
> "For the operation and maintenance of airplane mail service between New York, N. Y., and San Francisco, Calif., via Chicago, Ill., and Omaha, Nebr., including necessary incidental expenses and employment of necessary personnel, $1,900,000."

Mr. SLEMP. Mr. Speaker, I move that the House recede and concur in Senate amendment 40.

The SPEAKER pro tempore. The gentleman from Virginia moves that the House recede from its disagreement to Senate amendment 40 and concur in the same.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

> Amendment No. 52: On page 21, after line 19, insert: "And the Postmaster General is authorized and directed to ascertain conditions arising from contracts in the star-route, screen-wagon, and other vehicle service entered into prior to January 1, 1918, with a view to determining whether any adjustment should be made in the compensation for the fiscal years ended June 30, 1918, June 30, 1919, June 30, 1920, and June 30, 1921, and make a report of his findings to the Congress not later than the first Monday in December, 1922."

Mr. SLEMP. Mr. Speaker, I move that the House insist on its disagreement.

The SPEAKER pro tempore. The gentleman from Virginia moves that the House insist on its disagreement to Senate amendment 52.

The question being taken, on a division, demanded by Mr. ARENTZ, there were—ayes 45, noes 2.

Accordingly the motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment.

The Clerk read as follows:

> Amendment No. 54: Page 22, after line 18, insert:
> "SEC. 2. That the joint commission authorized under section 6 of the act approved April 24, 1920, entitled 'An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1921, and for other purposes,' is hereby continued until June 30, 1923, to complete the investigation and to prepare a detailed report containing a summary of its findings thereof, and such recommendations as to legislation as it may deem proper: *Provided*, That the said commission shall not expend a greater sum than $125,000 during the fiscal year 1923."

Mr. SLEMP. Mr. Speaker, I move that the House recede and concur in Senate amendment 54.

Mr. STAFFORD. Mr. Speaker, in examining the original law I notice that this postal commission was to make its report to Congress by March 1, 1921. In the statement that was prepared at the instance of one of the minority members of this commission, the gentleman from Kentucky [Mr. ROUSE], it is stated that $208,000 have been expended up to date by this commission. Now, what is it under the original authorization of this commission which prevents them from making their report? I see the vice chairman of the commission is here. I see other members of the commission. Before the gentleman replies, may I read the record of the authorization of this commission? You have spent $208,000 up to date. You want another $125,000, and yet the original authorization called for you to submit your report on March 1, 1921, more than a year ago. It says:

> The commission shall investigate all present and prospective methods and systems of handling, dispatching, transporting, and delivering of

mails and all the facilities therefor, and especially all methods and systems which relate to the handling, delivery, and dispatching of the mails in the large cities of the United States.

Under the scope of that authority what has prevented the commission from making its report? It is now nearly two years since its authorization.

Mr. SLEMP. I yield to the gentleman from Minnesota [Mr. STEENERSON], the vice chairman of the Joint Postal Commission.

The SPEAKER pro tempore. The gentleman from Minnesota is recognized for five minutes.

Mr. STEENERSON. The joint commission has already made three reports to Congress of the progress of its work. It has undertaken a very extensive task, and we have recommended various measures, some of which have been put into effect by the department and others have been the basis of legislation.

The particular reason for the continuance of the commission at the present time is that the demand has long been manifest for further knowledge in regard to the revenue derived from the different kinds of mail, from the different classes of mail, and in reference to the expense of handling and transporting these various classes of mail. In the House committee we tried to get some action in that regard by the department, but finally they preferred to have the joint commission have supervision over it, for the reason that it would give it a better credit to have some outside organization take part in the work. The joint commission has employed efficiency engineers to cooperate with the experts of the Post Office Department to make an inquiry.

This investigation or these inquiries will be carried on and will be completed next fall. It involves the weighing and counting of the mails in nearly all the post offices of the country. When that work is done we expect to be able to tell you what the cost of handling and transporting, as well as the revenue derived from the different kinds of mail matter that passes through the mail is. We know that we are losing $80,000,000 a year, and that can not be properly remedied by an increase of postage until we know what number of pieces and the weight of the different kinds of mail matter is. Mr. Joseph Stewart is the acting head of this inquiry. He conducted the inquiry of a similar nature—the only one that has ever been made in this country—in 1907. That was 15 years ago, and since then conditions have changed. He showed that he was a very able man in that kind of work. We spent $220,000 for that work alone. We are employing a great many individuals in this inquiry, and the expense will only be $75,000.

Mr. STAFFORD. Will the gentleman yield?

Mr. STEENERSON. Yes.

Mr. STAFFORD. Where is the authority for this commission to carry on the work of this character?

Mr. STEENERSON. I think under the act the language is sufficient.

Mr. STAFFORD. I question it seriously. I question that it gives you authority to pursue this investigation.

Mr. STEENERSON. The joint commission consists of five Senators and five Representatives. The gentleman from Michigan [Mr. TOWNSEND] is the chairman and I am the vice chairman, and we considered this matter very carefully and decided by reason of the general language of that law that we had the authority. This work ought to be done, and I know the gentleman desires it to be done.

Mr. STAFFORD. I do not wish to break in on the work of the commission, but I question whether it has any authority. There is no limit of time here when the commission is to report. You are asking for $125,000, and does not the gentleman think, in fairness to the House, there should be some limit as to the time when the commission should cease work and cease the expenditure of the public funds?

Mr. STEENERSON. There is a limitation.

Mr. STAFFORD. Where is the limitation—you are authorized to expend $125,000, but where is the limitation?

Mr. STEENERSON. The gentleman will find that it is limited to June 30, 1923, when the commission shall complete the investigation and prepare a detailed report containing a summary of its findings and recommendations. We expect to have the work finished by that time.

Mr. STAFFORD. Where is this limitation?

Mr. STEENERSON. On line 23, page 22.

Mr. SLEMP. Mr. Speaker, I yield five minutes to the gentleman from Mississippi [Mr. SISSON].

Mr. SISSON. Mr. Speaker, in regard to the item now under consideration I have not raised any objection except as to the amount of money. It seems to me as if the amount carried is in excess of the amount of work that is going to be done. It seems to me that the sum of $50,000 or $75,000 would be all that was needed to do this work. In fact, it is doubtful if the people will ever get any benefit from this expenditure. But the chairman of the committee is one of the conferees, and he insists that he wants to do the work, and in order to do it it would require $125,000. I do trust that the House will understand that this is the end of this commission. I did not know before that when you appointed a commission made up of Members of the House and the Senate that it is nearly as hard to choke off as it is to choke off a commission composed of outsiders. I have never known a commission to fix a boundary, to build a monument, or to build a memorial that it did not take two or three times as long to complete the work as contemplated, because when the job is completed Othello's occupation is gone and the commission knows this and can always find reasons to keep right on. In other words, it looks like we are "commissioned" to death. There is not a Member of this House who can tell to-day the number of commissions in existence and on the pay roll. It happens here that these commissioners are Members of the House and the Senate, but the employees are not, and it strikes me that the commission has spent too much money for the amount of good that the American people are getting out of it. Let us hope that this appropriation will end this piece of extravagance.

The SPEAKER pro tempore. The question is on the motion to recede and concur.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will read the next amendment.

The Clerk read as follows:

Page 23, line 4, insert section 3, as follows:

"SEC. 3. That the paragraph of the act entitled 'An act to reclassify postmasters and employees of the Postal Service and readjust their salaries and compensation on an equitable basis,' approved June 5, 1920, providing for leaves of absence, be amended to read as follows:

"'Hereafter employees in the Postal Service shall be granted 15 days' leave of absence, with pay, exclusive of Sundays and holidays, each fiscal year, and sick leave with pay at the rate of 10 days a year, exclusive of Sundays and holidays, to be cumulative for a period of three years, but no sick leave with pay in excess of 30 days shall be granted during any three consecutive years. Sick leave shall be granted only upon satisfactory evidence of illness and if more than two days the application therefor shall be accompanied by a physician's certificate.'"

Mr. SLEMP. Mr. Speaker, I move that the House recede and concur in the Senate amendment 55.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment 58: Page 24, after line 15, insert section 6, as follows:

"SEC. 6. That for the purpose of extending, continuing, and further carrying out the provisions of the Federal highway act, approved November 9, 1921, and all other acts amendatory thereof or supplementary thereto, there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, $50,000,000 for the fiscal year ending June 30, 1923; and the sum of $65,000,000 is authorized to be appropriated for such purposes for the fiscal year ending June 30, 1924; and the sum of $75,000,000 is authorized to be appropriated for such purposes for the fiscal year ending June 30, 1925; and the sum of $7,500,000 is authorized to be appropriated for the survey, construction, reconstruction, and maintenance of forest roads and trails for the fiscal year ending June 30, 1924; and the sum of $7,500,000 is authorized to be appropriated for the survey, construction, reconstruction, and maintenance of forest roads and trails for the fiscal year ending June 30, 1925."

Mr. SLEMP. Mr. Speaker, I move to recede and concur with the following amendment:

The Clerk read as follows:

In lieu of the matter inserted by the Senate insert the following:

"That for the purpose of carrying out the provisions of the act entitled 'An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes,' approved June 11, 1916, and all acts amendatory thereof and supplementary thereto, there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the following additional sums, all such sums to be expended in accordance with the provisions of such act:

"The sum of $65,000,000 for the fiscal year ending June 30, 1923.

"The sum of $75,000,000 for the fiscal year ending June 30, 1924.

"PAR. 2. For the purpose of carrying out the provisions of section 23 of the Federal highway act, approved November 9, 1921, there is hereby authorized to be appropriated for forest roads and trails, out of any money in the Treasury not otherwise appropriated, the following additional sum, to be available until expended, in accordance with the provisions of said section 23: The sum of $6,500,000 for the fiscal year ending June 30, 1924.

"PAR. 3. For the purposes of this section and of the acts heretofore making appropriatons to aid the States in the construction of rural post roads the term "bridges" includes railroad grade separations, whether by means of overhead or underpass crossings.

"PAR. 4. That if any State, for a period of one year from the date the Secretary of Agriculture approves, or has heretofore approved, a road project, shall fail to put under contract such road project, the Secretary of Agriculture may require the said State to submit one or more projects to replace the said project; and if the said State shall fail to submit such other projects within the time set by the Secretary of Agriculture for the State to act, the Secretary of Agriculture may order the sum of money allotted to the said road project returned to the general road fund, and he shall then reapportion said sum of

money among all the States as provided by the Federal highway act and all amendments thereto.

"PAR. 5. Section 5 of the act entitled 'An act to provide appropriations for the Post Office Department, and for other purposes,' approved February 28, 1919, is hereby amended to read as follows: 'That the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved June 11, 1916, is hereby amended to provide that the term 'rural post roads,' as used in section 2 of said act, shall be construed to mean any public road, a major portion of which is now used, or can be used, or forms a connecting link not to exceed 10 miles in length of any road or roads now or hereafter used for the transportation of United States mails, excluding every street and road in a place having a population, as shown by the latest available Federal census, of 2,500 or more, except that portion of any such street or road along which the houses average more than 200 feet apart: *Provided*, That section 6 of said act be further amended so that payments which the Secretary of Agriculture shall make, from sums appropriated under the provisions of this act or any act amendatory thereof or supplemental thereto for the fiscal year ending June 30, 1923, shall not exceed $12,500 per mile exclusive of the cost of bridges of more than 20 feet of clear span: *Provided further*, That the payments which the Secretary shall make from sums appropriated under the provisions of this act or any act amendatory thereof or supplemental thereto, after the fiscal year ending June 30, 1923, shall not exceed $10,000 per mile exclusive of the cost of bridges of more than 20 feet of clear span: *Provided further*, That the limitation of payments herein provided shall apply to the public-land States, except that the same is hereby increased in proportion to the increased percentage of Federal aid authorized by section 11 of the act entitled 'An act to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved November 9, 1921.'

"PAR. 6. Section 24 of the act entitled 'An act to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," ' approved November 9, 1921, is amended to read as follows: 'That in any State where the existing constitution or laws will not permit the State to provide revenues for the construction, reconstruction, or maintenance of highways, the Secretary of Agriculture shall continue to approve projects for said State until five years after November 9, 1921, if he shall find that said State has complied with the provisions of this act in so far as its existing constitution and laws will permit.'

"PAR. 7. If any officer, agent, or employee of the United States, or any officer, agent, or employee of any State or Territory, or any person, association, firm, or corporation, or any officer or agent of any person, association, firm, or corporation shall knowingly make any false statement, false representation, or false report as to the character, quality, quantity, or cost of the material used or to be used, or the quantity or quality of the work performed or to be performed, or the cost thereof in connection with the submission of plans, maps, specifications, contracts, or cost of construction of any project submitted for approval to the Secretary of Agriculture under the provisions of the Federal highway act, or shall knowingly make any false statement, false representation, or false report, or claim for work or materials for the construction of any project approved by the Secretary of Agriculture under said Federal highway act and all amendments thereto, or shall knowingly make any false statement or false representation in any report required to be made under said Federal highway act or acts supplementary thereto with the intent to defraud the United States shall, upon conviction thereof, be punished by imprisonment not to exceed five years or by a fine not to exceed $10,000, or by both fine and imprisonment within said limits.

"PAR. 8. If any provision of this section, or the application thereof to any person or circumstances shall be held invalid, the validity of the remainder of the section and the application of such provision to other persons or circumstances shall not be affected thereby.

"PAR. 9. That all acts or parts of acts in any way inconsistent with the provisions of this section are hereby repealed."

Mr. HAYDEN. Mr. Speaker, I reserve a point of order.

Mr. SLEMP. I yield five minutes to the gentleman from New York [Mr. DUNN].

Mr. DUNN. Mr. Speaker, Senate amendment No. 58 was put on as a rider to this Post Office appropriation bill, and seeks to appropriate money for roads without the matter having been presented to either the Committee on Post Offices and Post Roads or to the Roads Committee of the House. Two weeks ago the House passed a road bill practically 8 to 1. The provisions of that bill were very liberal and the amount therein provided for was very generous. If the Committee on Roads has no rights in this matter, the House Roads Committee might as well be discontinued and disbanded. I hope that the motion of the gentleman from Virginia [Mr. SLEMP] will prevail and that House bill 11131 may be substituted for Senate amendment No. 58.

Mr. SLEMP. Mr. Speaker, I yield 15 minutes to the gentleman from Mississippi [Mr. SISSON].

Mr. SISSON. Mr. Speaker, I yield to the gentleman from Texas [Mr. RAYBURN].

Mr. RAYBURN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER pro tempore. Is there objection?

There was no objection.

Mr. RAYBURN. Mr. Speaker, I desire to place in the RECORD a statement of my record with reference to legislation affecting the farming and agricultural classes and a brief review of some other things accomplished by me as a Member of Congress.

I have supported and worked for the passage of the following bills:

Exemption of farmers' organizations from operation of the Sherman antitrust law, or, in other words, that no farmer organization would be held to be a violation of the antitrust law.

The Lever Agricultural Act, to extend educational facilities to farm boys and girls.

The income tax law, requiring wealth to bear its proportion of taxation.

Federal reserve act, to expand the volume of currency and to allow farmers to borrow money from banks on notes secured by staple agricultural products and on improved farm lands. If this law had been administered as Congress intended when it was passed, it would have been even a greater boon to all the people than it has been.

Standardization of cotton and grain in the interest of the producer.

Standardization of warehouses, so that farmers could borrow money on their warehouse receipts.

Underwood tariff, reducing tariff on necessities and putting many articles that the farmer uses on the free list, including agricultural implements, barbed wire, and bagging and ties.

The ship purchase act, to provide ships to carry American products to all the markets of the world.

Cotton futures act, to curb gambling in cotton and to regulate the transactions of the cotton exchange.

Farm loan act—established system of 12 farm-loan banks, one of which is located at Houston, Tex. System affords farmers opportunity to borrow money to be used in purchasing and improving homes, at low rate of interest and long terms of payment. The most recent statement of the Farm Loan Board shows that more than $500,000,000 has been loaned by the system in the United States and more than $55,000,000 of which has been loaned by the Houston (Tex.) Farm Loan Bank.

War Finance Corporation—a bill to enlarge and extend the facilities of the War Finance Corporation and enable it to make advances to banks, cooperating organizations of farmers, and other financing institutions, to assist in production of farm products and live stock and help in the orderly marketing of same. Under this bill already more than $300,000,000 in loans have been made for agricultural and live-stock purposes, and the sum is increasing from day to day and has done much to help the situation in the agricultural and live-stock States.

Farm organization bill: This bill, usually referred to as the Capper-Volstead bill, makes broad and liberal provisions for the organization of farmers in the following language:

Persons engaged in the production of agricultural products, as farmers, planters, ranchmen, dairymen, nut or fruit growers, may act together in associations, corporate or otherwise, with or without capital, in collectively processing, preparing for market, handling, and marketing in interstate and foreign commerce, such products of persons so engaged.

Such associations and their members may make the necessary contracts and agreements to effect such purpose.

If there ever was the slightest doubt about the complete authority of the farmers to organize and bargain collectively that doubt has now been entirely removed.

Farm-loan bonds, authorizing the Secretary of the Treasury to purchase farm-loan bonds, to establish farm-loan markets, and to encourage and assist farm-loan banks.

Good roads, providing Federal assistance in improvment of highways.

Federal Trade Commission: I was a member of the subcommittee of the Committee on Interstate and Foreign Commerce, chosen by the committee to write, and did write, the law creating the Federal Trade Commission. This commission was created to investigate and regulate the unfair practices of big business and to try to give small business a fair chance.

Vocational education act, providing for practical education, to cooperate with States, and to provide for training of teachers in vocational subjects.

Exempting labor organizations from prosecution under the Sherman antitrust law.

The Clayton antitrust law, prohibiting interlocking directorates; defining and expanding the provisions of the Sherman law, thereby providing protection to legitimate business.

Readjustment of salaries of Post Office employees.

For all laws to extend Rural Route Service.

National prohibition and all laws to make its operation effective.

The Budget system, providing for one appropriating committee and rigid economy in Government expenditures, declaring that Government should be on a business and not political basis.

For forcing Federal reserve banks to give long-time credit on agricultural loans.

Immigration laws: I have voted for immigration laws that would keep out of this country dangerous and vicious alien elements who would destroy our Government and make it a place unfit for ourselves and future generations to live in.

I have voted for every measure looking toward licensing farmers and producers to organize for mutual benefit and pro-

tection, and have urged at all times the necessity of farmers organizing.

The Sheppard-Towner maternity bill.

The soldier bonus bill.

I have voted against all measures that tended toward a military despotism or building up of a military caste in the United States.

Rayburn stock and bond bill: I introduced a bill for the regulation of the issuance of stocks and bonds by railroad corporations during my first term as a Member of Congress. This bill passed the House practically unanimously, but was held up in the Senate and not passed during that session. In the succeeding session of Congress I reintroduced the bill; but the war came on in Europe and so upset matters that it was not pushed to passage that session. In each succeeding Congress I reintroduced the bill, and it was enacted into law in 1920 as a part of the Esch-Cummins bill. This law provides that hereafter no railroad company can issue new stocks or bonds without the approval of the Government, prohibits interlocking directorates, and will squeeze the wind and water out of stocks and bonds of railroad corporations. If this law had been in operation in the past we would never have had all the disgraceful wrecking of railroads, such as the New Haven, Rock Island, and many others.

Cummins amendment: The Cummins amendment to the Carmack amendment, sometimes called the Cummins-Rayburn amendment, as I introduced a bill identical with the one that Senator CUMMINS passed in the Senate, and had it first reported to the House, but the Senate having passed the bill first, I called up the Senate bill instead of my own, nd it was passed practically unanimously. Before the passage of this bill the railroads would place certain restrictions in a bill of lading limiting their liability for losses and damage to property, and by these provisions—that the shipper rarely ever saw—would limit the liability for property losses and damage. This bill provides that, regardless of any provision that is placed in a bill of lading, the shipper may recover the full amount of the damage, which has saved the shippers of the country since it was passed untold thousands of dollars.

Transportation act: I voted for the transportation act which provided much new legislation and returned the railroads to private ownership. There was one of three things to do at that time. One was to keep the railroads in the hands of the Government; another, to let them go back in their chaotic condition without new legislation; or, still another was the passage of the transportation act. I am unalterably opposed to Government ownership of railroads. I was unalterably opposed to a five-year extension of Government control for many reasons, principal among them was that it was an intolerable drain upon the Treasury of the United States. During Federal control with the highest rates at that time ever known we had to appropriate out of the Treasury $1,750,000,000 to make up the deficit for the operation of the railroads. When the railroads were turned back the Government was running a little in excess of a million dollars a day behind paying expenses. If I had voted against the transportation act, I would have voted against a bill that contained the entire provisions of the Rayburn stock and bond bill and more provisions to make the railroads deal honestly with the public than any bill ever provided for. The transportation act is not the cause of the present high freight rates. Freight and passenger rates at the present time are too high and must come down. I was the first man in either branch of Congress who, on the floor, denounced the present high rates. Some members of the railroad unions are going around trying to create prejudice against me, especially among farmers, by saying that I am responsible for the high freight rates, having voted for the transportation act, but an examination of the facts will prove that 86 per cent of all of the increase of rates in 1920 over 1916 was paid to railroad labor. I will give the full figures to prove this:

In 1916 the railroads collected from the people from all sources, including passenger and freight traffic, the sum of	$3,596,000,000
Total wage paid employees in 1916	1,506,960,000
In 1920 the railroads collected from the people from all sources, including passenger and freight traffic, the sum of	6,171,000,000
Total wage paid employees in 1920	3,742,486,000
The cost of transportation in 1920 over 1916	2,575,000,000
The cost of labor in 1920 over 1916	2,235,526,000

It is false to say that the transportation act took away from the State commission power over rates. Whatever power was taken away from State commissions was in the decision of the Supreme Court in the Shreveport case, handed down several years before the passage of the transportation act.

Priorities shipment bill: I was by the Committee on Interstate and Foreign Commerce placed in entire charge of this bill and engineered it through the House. It gave the Government during the war priority of service in all materials belonging to the Government and used by the Army and the Navy, which bill expedited tremendously the movement of Government property during that time.

The war-risk insurance: I had charge of all war-risk legislation and all amendments thereto while the Democrats were in power, which included the full period of the war. This bill was one of the greatest constructive and just acts of war legislation and was the most liberal ever passed by any government in the history of the world for taking care of service men, and especially the disabled ones and the dependents of those who were disabled or killed. After the war was over, I introduced a bill for increased compensation for disabled ex-service men. This bill became the law as part of what is now known as the Sweet bill.

Mr. SISSON. Mr. Speaker, so far as the good roads amendment of the Senate is concerned, I may say that I am very strongly in favor of legislation and appropriation at this session of Congress. There are some things about the Senate amendment which would be objectionable to the House and some items in the House bill that perhaps are objectionable to the Senate. In order to facilitate and guarantee both legislation and appropriation your conferees feel that by adopting the House bill, 11131, as an amendment of the House to the Senate amendment No. 58, and in lieu of it, it will bring before the conferees both the House bill and the Senate amendment, and that something then can be worked out which would be satisfactory to both bodies and which will guarantee that we will get not only at this session of Congress authorization for good roads but also an appropriation.

I would not be captious about either one of the bills, because it is evident that in a bill with several items covering as large territory and carrying as much money as a road bill must carry, covering a territory so great as the United States, there are bound to be some features that some individual Member will object to. Your conferees did the very best they could with the Senate in an effort to agree with their bill, but not having the House bill before them, of course Members will realize the difficulties under which we worked. By the acceptance by the House of the House bill as an amendment to the Senate amendment the whole matter will go to conference, and I am sure that the mental attitude of the conferees in reference to good roads legislation and an appropriation at this session of Congress is such that the House may feel certain that it will get more speedy and prompt action by taking this course. I think the two other House conferees agree with me that this is the best method of obtaining legislation at this time. It is also fair to say that the House and its views should be in conference, so that the House views may be impressed upon the Senate conferees, and that can not be done successfully unless the motion of the gentleman from Virginia be agreed to.

Mr. Speaker, I do not believe that anything means quite so much to the rural districts as the development of good roads. There are certain sections of every district, certain sections of every State, where the property values are not concentrated, where the property values are small in proportion to the area and the miles of roads, so much so that even the legislation we have now does not grant the relief to those sections to which, perhaps, they are entitled; but under this Federal legislation, by the appropriation of money out of the State and the Federal Treasuries for these roads, we can get a continuous road through the entire State, covering not only the prosperous sections of the State but also those sections of the State where taxation would be burdensome. No road is any better, in my judgment, than the poorest spot in the road. You can not carry a greater load to town than you can get over the worst spot in the road. Federal aid, together with State and county aid, gives, in my judgment, an ideal method of raising money for roads. I think I am expressing the sentiment of the conferees when I make that statement. The rural districts are being depopulated of a great many of their very best young men by reason of the fact that country life is not attractive. I do not believe in any socialistic methods, but I do believe that it devolves upon us as a Congress and upon the State legislatures to look after this matter of country life. I know that such a sentiment may elicit a sardonic smile from the man who represents a great city, and he may say that he does not care anything about country life or the farmers or about agriculture, but I want to say to him, if there be such in this House, that he will be the first to starve.

No nation is greater than its agriculture; it can not be. Every philosopher, every great thinker, every statesman worthy of note to-day, whether he lives in the city or in the country, realizes the great problem we have before us, and that is to keep

our very best people on the farm. This has been true in the past and will be true in the future if we do our duty here. You can not blame the young man if he leaves the country and goes to the city, when in the country he has none of the comforts of the age and has all of the hardships and none of the luxuries. If the Federal Government lends itself to assist in building up rural districts, then the Government is doing more to strengthen its future than by adopting any other course. It would be interesting indeed, if I had the time, to go into the history of the past and show that all of the thinkers have dwelt upon this question and have laid emphasis upon the fact that the cause of the dissolution of the great nations of the past has been the destruction of rural life.

Mr. Speaker, as one of your conferees, I join with the others in the hope that we will get legislation and appropriation sufficient to carry out the program of these States within the next current fiscal year. If this motion be agreed to, your conferees will exercise all of their power to obtain the provisions of the House bill. We do not represent ourselves; we represent the House. It is not my individual view that I shall endeavor to impress upon the conferees of the Senate but the view of the House. A conferee is not permitted to represent his individual views. It is his duty as an officer of this House, as the attorney of this House, to get as nearly as possible the House bill, and if this goes into the Post Office bill as an amendment, in lieu of the Senate amendment No. 58, your conferees will do all they can to get the Senate conferees to accept the House view. I hope the motion of the gentleman from Virginia will be agreed to and that when this comes back to conference we will be able to bring back to the House a proposition satisfactory to both bodies.

Mr. SLEMP. Mr. Speaker, I yield five minutes to the gentleman from New York [Mr. LONDON].

Mr. LONDON. Mr. Speaker, the gentleman from Mississippi [Mr. SISSON] did an injustice to those Members who come from large cities and who do take a national view of the question of good roads. As usual, the gentleman from Mississippi was very anxious to assure the House that he was not affected by socialistic doctrine or infected with the socialistic virus. No one will accuse him of harboring any progressive thought.

The very able and genial gentleman from Mississippi says that he is opposed to socialism. That does not prevent him from favoring national appropriations when it will benefit the agricultural elements, such as an appropriation out of the Treasury of the United States for good roads for the good of the Nation. The socialist insists that all of our legislation should be guided by the ideal to serve the entire Nation, the entire community, society as a whole. The very origin of the word indicates it. Society as a whole must undertake those things which are beyond the capacity of the individual. The gentleman from Mississippi indorses the principle so far as good roads are concerned. Let us be grateful for that.

Good roads are the very basis of civilized life. Civilization started with those cities which had a natural road, a natural highway furnished by the ocean. Rome, Constantinople, London, Hamburg, and in America New York, Boston, San Francisco are among the fortunate cities for whom nature has built a highway. They became centers of civilization in the past, and they are great centers of civilization to-day.

Let us build roads where there are no roads. The life of the farmer must be made more tolerable. [Applause.] I was startled some 15 years ago when examining statistics of insanity to find first on the list, numerically, were the wives of farmers. Next came brokers, stock brokers, naturally, being engaged in an insane occupation, and third, lawyers. The wives of farmers were first on the list, and the explanation of that was the lonesomeness, monotony, and hardship of their lives. Good roads will enable the various parts of the community to come together, will enrich the life of the agriculturist, and will benefit the remotest sections of the country. No appropriation can be too large for such a purpose. [Applause.]

Mr. SLEMP. Mr. Speaker, I yield three minutes to the gentleman from Alabama [Mr. ALMON].

Mr. ALMON. Mr. Speaker, the Committee on Roads, of which I have the honor to be a member, reported to the House the 5th of April a bill providing for an authorization of $65,000,000 for the next fiscal year and $75,000,000 for national aid to roads for the second fiscal year and provided other amendments. About 10 days ago that bill was passed, under suspension of the rules, by an almost unanimous vote in this House, only 31 votes being against it. That bill is now proposed as an amendment to the amendment offered by the Senate. I am in favor of the amendment which has just been offered by the gentleman from Virginia, not that I think the amount is sufficient but the best we can get at this time. I favored authorization for a larger appropriation as a member of the Committee on Roads, but this was the most that could be secured, and the President, in addressing the Congress at the beginning of the session, called attention to the fact that it was now a part of our national policy to furnish national aid to roads. We have been spending about $100,000,000 a year. I was in hopes that the majority would agree to a larger appropriation for each of the next few years, but owing to the fact there is a large amount unexpended, it may be that these amounts carried by this amendment will be sufficient to carry on this most important work. The Senate amendment only provides for an authorization of $50,000,000 for the next fiscal year and $55,000,000 for the following fiscal year. The House bill we passed 10 days ago, and which is now offered as an amendment, carries $25,000,000 more of national aid to roads than the Senate amendment, and for that reason I am in favor of it. It is not as much as I think it should be, but it is the most we can get. I do not exactly approve of this plan of the Senate taking away from us and from the Committee on Roads all jurisdiction in the way of legislation——

Mr. MADDEN. I want to say to my friend we do not approve it, either, but we did have a great deal of anxiety of getting the House's views before the conferees. We would prefer to have had the Committee on Roads go to conference rather than ourselves.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. SLEMP. I yield the gentleman two additional minutes.

Mr. ALMON. I understand the views of the House conferees to be just as has been stated by the gentleman from Illinois [Mr. MADDEN], and I think they have acted wisely in pursuing this course in the making of this motion, and I trust the House will adopt the motion made by the gentleman from Virginia [Mr. SLEMP]. I would like to know, if it is not improper that I may ask, if the House may have the assurance from the House conferees that there will not be any change in this amendment, so far as the amounts are concerned, without giving the House an opportunity to express itself upon it.

Mr. MADDEN. I want to say to the gentleman I am for the House bill, and, of course, it is subject to such modification as we may have to make in a compromise——

Mr. ALMON. The question that I am asking is, If it is proper, will the Members of the House have the assurance of our conferees that there will not be any reduction in the amounts carried in this amendment without the House having an opportunity to pass upon it?

Mr. MADDEN. If there is to be any we will come back.

Mr. ALMON. That is satisfactory.

Mr. SLEMP. Mr. Speaker, I ask for a vote.

The SPEAKER pro tempore. The question is on the motion to recede and concur with an amendment, the gentleman from Arizona reserving the point of order.

Mr. HAYDEN. Mr. Speaker, I withdraw the reservation.

The question was taken, and the motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Amendment 59: Page 25, after line 8, insert:

"SEC. 7. For the transmission of mail by pneumatic tubes or other similar devices in the city of New York, including the borough of Brooklyn of the city of New York, at an annual rate of expenditure not in excess of $18,500 per mile of double line of tubes, including power, labor, and all other operating expenses, $513,911.50: *Provided*, That the provisions not inconsistent herewith of the acts of April 21, 1902, and May 27, 1908, relating to the transmission of mail by pneumatic tubes or other similar devices, shall be applicable hereto: *Provided further*, That either party to the contract for the transmission of mail by pneumatic tubes or other similar devices may apply to the Interstate Commerce Commission at any time after October 1, 1922, and before July 1, 1923, for a revision of this rate, its decision to be effective after July 1, 1923, but in no case shall the rate exceed $19,500 per mile."

Mr. STEENERSON. Mr. Speaker——

Mr. SLEMP. I move the House recede from its disagreement to the Senate amendment and agree to the same with an amendment.

The SPEAKER pro tempore. The Clerk will report the amendment.

The Clerk read as follows:

Mr. SLEMP moves that the House recede from its disagreement to the amendment of the Senate numbered 59, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following:

"SEC. 5. For the transmission of mail by pneumatic tubes or other similar devices in the city of New York, including the borough of Brooklyn of the city of New York, at an annual rate of expenditure not in excess of $17,000 per mile of double line of tubes, including power, labor, and all other operating expenses, $472,243."

Mr. STEENERSON. Mr. Speaker, I have a preferential motion. I move to recede and concur in the Senate amendment.

The SPEAKER pro tempore. The gentleman from Minnesota moves to recede and concur in the Senate amendment.

Mr. SLEMP. Mr. Speaker, I yield 10 minutes to the gentleman from Illinois [Mr. MADDEN].

The SPEAKER pro tempore. The gentleman from Illinois is recognized for 10 minutes.

Mr. STEENERSON. Mr. Speaker, I did not yield the floor.

The SPEAKER pro tempore. The gentleman is not entitled to it. The gentleman from Virginia [Mr. SLEMP] controls the time notwithstanding the gentleman from Minnesota [Mr. STEENERSON] makes a preferential motion.

Mr. SLEMP. I did not understand that he asked me for recognition, and so I yielded to the gentleman from Illinois.

Mr. STEENERSON. As the time is to be controlled by the gentleman from Virginia [Mr. SLEMP], I presume he will distribute it fairly, but I got the impression, after conferring with both of these gentlemen, that after we got to this item I would be entitled to make my motion and control the time.

The SPEAKER pro tempore. The gentleman from Virginia [Mr. SLEMP] controls the time for one hour, and at any time within that time he can move the previous question.

Mr. STEENERSON. I supposed the motion, being preferential, had nothing to do with the conference report and that it gave me the floor. I think that is the rule.

The SPEAKER pro tempore. The Chair would state that the rule and the practice are that when a conference report has been presented to certain items in a bill that still remain in disagreement the gentleman in charge of the conference report continues in charge of the items in disagreement and all motions made relating thereto. Preferential motions are entitled to be made, but the gentleman in charge of the bill still retains the floor and can move the previous question at any time.

Mr. MADDEN. I would be perfectly willing to let the gentleman from Minnesota take the floor first.

Mr. STEENERSON. No. I do not want to take the floor first. I want to take it first and last. I want to open and close debate on this item.

Mr. SLEMP. I have no objection to the gentleman speaking.

Mr. STEENERSON. It is understood that I may follow those who speak against it?

Mr. SLEMP. I do not know as to the time. We have one hour at our disposal, and I hope the gentlemen will be as modest as to time as possible.

Mr. ROSSDALE. This is a big item.

Mr. MADDEN. No; this is a small item.

Mr. ROSSDALE. It means much to some of us.

Mr. STEENERSON. Mr. Speaker, I would prefer to have the gentleman from Illinois [Mr. MADDEN] take his 10 minutes, and I can follow.

Mr. SLEMP. Mr. Speaker, I yield 10 minutes to the gentleman from Illinois [Mr. MADDEN].

Mr. MADDEN. Mr. Speaker, for a good many years the question of the use of tubes was in dispute, and the Congress finally decided to take them out. Investigations recently made have caused the recommendation to be made by the Joint Commission on Postal Affairs for the restoration of tubes in the city of New York. If there is any justification for tubes anywhere, it is in that city, especially between the City Hall Square and Forty-second Street. The tubes, I do not hesitate to say, are not the utilitarian proposition that a great many people believe them to be. They are only 8 inches outside diameter, and only a certain number of letters can be put in the carton that is carried in the tubes. Tubes in the city of New York within the points indicated in my previous statement would probably carry not to exceed one-half of 1 per cent of the total mail. They would not take a truck off the street anywhere in the United States, but they would perhaps advance the delivery of letters between the points where tubes run, and to that extent they would probably be useful.

The law under which tubes may be utilized in the movement of the mail was passed in 1902, if I recall. It provides that not to exceed $17,000 per mile per annum shall be paid for the use of tubes. The amendment which the conferees have offered, on the motion of the gentleman from Virginia [Mr. SLEMP], strikes out the item inserted in the bill by the Senate providing for $18,500 and $19,500 and inserts $17,000, the amount provided by the law. Now, I do not believe there ought to be any more paid for the use of these tubes than the law authorizes.

It may be said, and probably will be said, that $17,000 a mile is not enough. I wish to call the attention of the House to this situation.

In the examination of the postal authorities before the Subcommittee on Deficiencies of the Appropriations Committee, over which I presided myself, we were told this, that the reason $18,500 a mile was demanded was that the tube company is unable to supply the money with which to put the tubes in running order, and that before they could operate the tubes at all $150,000 would have to be advanced by somebody. And the postal authorities, liberal with somebody else's money, finally concluded that the way to reach that situation was to give them $1,500 a mile more than the law allows, and the prospect of a further $1,000 a mile more than the law allows, and thereby enable them to borrow the $150,000 which they needed. Now, I contend that no one has any right to come to the Government and ask the Government to make a contract with them for the sale of a commodity unless they have the commodity to sell. Now, what is it they are trying to sell? Tube service, is it not? They admit themselves that they have not got any tubes that are fit to function unless the Government of the United States furnishes the money to make them function. Now, are you willing to do that?

Mr. BARBOUR. Will the gentleman yield?

Mr. MADDEN. I will.

Mr. BARBOUR. Are they owned by a private corporation or by the Government?

Mr. MADDEN. They are owned by a private corporation, or possibly two or three corporations; I do not know which.

Mr. BARBOUR. They were originally for the purpose of doing a parcel business?

Mr. MADDEN. For doing a parcel business in most of the places, and when they found that that was not successful they turned it over to the Government. I think in the city of New York these tubes were probably originally installed for postal purposes.

Mr. BARBOUR. The Government has no ownership of them?

Mr. MADDEN. The Government has no ownership of them and expects to use them only under contract.

Now, if there is any doubt about what I say in connection with this added price I will just read what the testimony shows. Mr. Perkins was before our committee, and he testified to something like this:

The tubes cost the tube company $16,100 a mile to operate.

I do not know whether the $16,100 a mile includes interest on the investment or not.

These figures were submitted to us in detail by the tube company. We submitted them to the New York post office to check over the figures and see whether or not the cost of each item was justified. The New York post office reported to us that as far as they could tell those figures were all right. There is an item of $150,000 which the tube company would have to have to put their tubes in operation. It was a question of how they could raise that money. The tube company has no money in its treasury, and they will have to secure money from the banks.

I said:

And we are going to furnish them the capital?

He said:

No.

I said:

That is equivalent.

He said:

We are going to furnish them with margin. The only asset they would have is the contract.

I said:

They have not got that yet?

And he replied:

No.

And then I said:

If we are going to take into account the amount of money necessary to restore the tubes, how much is it?

And he said:

One hundred and fifty thousand dollars.

I asked:

That we propose to advance them?

And he said:

No; to enable them to borrow.

They proposed to enable them to borrow it by adding $1,500 a mile to the rental which the Government of the United States would be called upon to pay.

Now, the law is explicit. It says $17,000 a mile, and not more, shall be paid, and there never was a case when the tubes were in existence and operation where a contract was let in excess of $17,000 a mile.

Mr. DALLINGER. Mr. Speaker, will the gentleman yield?

Mr. MADDEN. Certainly.

Mr. DALLINGER. I would like to ask the gentleman from Illinois if it is not a fact that the cost of operating, particularly the cost of labor, has gone up since 1902?

Mr. MADDEN. It does not make any difference whether the cost has changed or not. The law is the thing which governs; the law is the thing by which we must be guided. And I want to submit this question to the House: Are you, who are speak-

ing for the American people, willing to put your hands into the pockets of the people and take $1,500 a mile out of their pockets to pay somebody because they have not got the means to put the thing they want to sell in order when the law itself says that $17,000 a mile is the price; that it shall be no more; that that is the limit? [Applause.]

Mr. STEPHENS. Mr. Speaker, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. STEPHENS. How many miles of tubes are there?

Mr. MADDEN. Twenty-eight miles in New York.

Mr. SLEMP. Mr. Speaker, I yield 15 minutes to the gentleman from Minnesota [Mr. STEENERSON].

The SPEAKER pro tempore. The gentleman from Minnesota is recognized for 15 minutes.

Mr. STEENERSON. Mr. Speaker, if I did not know the gentleman from Illinois [Mr. MADDEN] well, I would be greatly surprised at the statements that he has made.

Mr. MADDEN. Does the gentleman deny the facts that I have stated?

Mr. STEENERSON. I do. The gentleman has stated that these tubes carry only one-half of 1 per cent of the mail.

Mr. MADDEN. Of all the mail.

Mr. STEENERSON. Yes. The testimony of the engineers and the experts, both now and formerly, is that of the 14,000,000 pieces carried per day 8,000,000 pieces were letters.

Mr. MADDEN. That is 8,000,000 pieces of first-class mail that the gentleman is talking about. I am talking about all the mail.

Mr. STEENERSON. They state that they carried on an average 5,000,000 pieces—letters—per day. They were able to carry 10,000,000 a day if the tubes were run at full capacity. Now, the postage on 5,000,000 letters a day amounts to $100,000, or over $30,000,000 a year. That is the revenue. How much revenue do you get for the other mail that you carry for 3 cents a pound? On the first-class mail, which is the mail we ought to expedite, we are collecting 84 cents a pound instead of 3 cents a pound. What does this postage of 2 cents a letter mean but that we should have expedition?

Well, the gentleman from Illinois says they carry only one-half of 1 per cent. He means of the total weight or tonnage of the mail. But he is mistaken about that. Undoubtedly he does not know what he is talking about [laughter], because if you figure out that number of letters you will find that it amounts to more, a great deal more, even in weight, than one-half of 1 per cent of the total weight of the mail.

But the gentleman from Illinois makes all these assertions not based on evidence. He wants you to take his word for it. He is a busy man. He can not do all these things himself. The recommendations to restore these tubes have come from every civic organization in the city of New York and from the people who have been served by them, the merchants' associations, the business organizations, all the clubs, the aldermen, and every civic body; and the experts that we employ, nearly 20 of them, old employees, experienced men, superintendents of mail in the stations where the tubes were, testified to the amount of business that they did. They were unanimous in recommending the restoration of these tubes.

Now, as to the cost. The gentleman from Illinois talks about "reaching down into the Treasury" as if we were trying to rob the people. What is the revenue of the city of New York postal district? Fifty-three million dollars a year, on which we have $26,000,000 a year net profit. The service of these tubes expedites the mail, according to the testimony, from 2 to 24 hours in every instance. New York is the neck of the bottle through which the mail for the whole United States passes. If you expedite the mail through the city of New York you tre rendering a service to the people of your own State, to the people of Minnesota, and to the people of Iowa, to the people of Ohio, and to the people of Washington and Oregon, because you are expediting the journey of every missive that goes through the mail. It is not a local proposition.

I can not understand why the gentleman from Illinois should come here and put up his own assertions against the statements of the experts in the Postal Service to the contrary. There was once a personal-injury lawyer out in Minnesota that used to have on his staff expert witnesses who would testify to almost everything. A certain lawyer was nominated for judge whom he did not like, and he said, "My gracious, if that man is going to be made judge I will have to take all my witnesses and move to Duluth." [Laughter.] But if the gentleman from Illinois had been that lawyer, then he would have said, "I will move; but I do not need any witnesses; I will just testify myself." [Laughter.]

If I had the time, I would read to you the book that he presents to you here, containing the hearings had before the Committee on Appropriations on the deficiency bill, where he himself examined postal experts of 20 years' experience, men who saw these tubes in operation and whose business it was to see their operation. You will find that two-thirds of what is printed in this book consists of the gentleman's own questions. He does not examine witnesses like other people; he testifies. His questions are answers. [Laughter.] I have known his methods for many years. I will be glad to print that testimony. Read that book and read through three pages of his examination of these witnesses. Mind you, he says, "This is not testimony." He says, "Give us evidence." He says that to men of many years' experience. He said, "You can not expect to get money out of the Treasury by such statements," and so forth.

One witness said it saved the Government $400,000, or something like that, in automobile service, motor trucks. He was asked how he knew, and he said, "Because they put on that many more trucks when they took the tubes out." That did not satisfy the gentleman. He repeated that they did not reduce the number of trucks; now, the fact is that the tubes economize the service. It will cost less to run the Postal Service if the mail is handled through the tubes than it does when trucks are exclusively employed for the purpose.

Mr. MADDEN. Will the gentleman yield?

Mr. STEENERSON. I have not the time. If the gentleman will get me time, I will yield. These tubes saved $300,000 or $400,000 in trucks. They saved $140,000 for guards. If you send the mail underground in tubes you have no mail robberies. As it is now, you must have clerks and marines to watch the registered mail, because the registered mail is very largely made up of shipments of currency from the reserve banks, hundreds of thousands and millions of dollars. If you send the mail through a tube underground, no robber can get it.

Last fall one truck was robbed of $2,000,000 in registered mail. When there is a snowstorm in New York the whole motor-truck system is demoralized and the whole mail is delayed. If you have these tubes, they can be worked to their full capacity to carry the United States mail to its destination. It is a most economical proposition, according to the testimony of these men, Mr. Lubin and Mr. Kelly and Mr. McGurty, all old employees there in the city of New York. Do you suppose the Postmaster General would take their testimony, as he has taken it, and recommend this as an economical proposition unless he was sure of what he was doing? It is a proposition that is profitable to the people. Do you suppose the Postmaster General would ask us to pass this proposition if it was an absolute fraud? He certainly must mean what he says. He ought to know something about it.

Mr. MADDEN. Excuse me. Did I say this was a fraud?

Mr. STEENERSON. No. I did not mean that. This is a very desirable postal utility. It is valuable. It expedites the mail. So far as cost is concerned, it is true, as the gentleman said, that originally the law provided, some 20 years ago, that it should be $17,000 a mile. Since then the wages of postal employees have increased from 25 to 100 per cent. The gentleman said he did not know how much it cost. Here is the statement of Mr. Morgan, postmaster at New York, that it will cost $16,100 per mile to operate the tubes. The investment is from $3,000,000 to $4,000,000, so that it is a very moderate income on that investment at this rate. If you fix the amount at $17,000, it means the denial of the tubes. Do you suppose those people in the city of New York are incompetent to know their own welfare? Do you think they would be here asking for the reestablishment of these tubes, which can carry 10,000,000 letters a day and which serve 26 postal stations in the city of New York—do you suppose they would be here asking for this if it was not a desirable thing to have? Now, just think. The estimated cost of operating these tubes is $16,100 per mile of double tubes per annum, or $451,900. In an office that handles 8,000,000 letters a day, where the net income is $26,000,000 per annum, or more than $2,000,000 a month, should you not have some regard for the people who pay the postage?

It seems to me that in all fairness you should vote for this motion to recede and concur in the Senate amendment at the figures that the Postmaster General has recommended. It is so much more reasonable to do that, because there is a provision in the Senate amendment by which either party can go before the Interstate Commerce Commission and demand an inquiry into what it is worth. We trust the Interstate Commerce Commission to determine the pay of the railroads. We trust them to determine the pay of the envelope manufacturers, and the Interstate Commerce Commission saved the United States $6,000,000 by reason of their arbitration in favor of the Government. We can trust them. What we want is a fair price, and the Government can get that determination or the

tube company can get it inside of the period described here six months or a year after the tubes are installed.

I hope you will not be led away by the personality of my friend [Mr. MADDEN] and his great influential position as chairman of the Appropriations Committee. He does not really know about these tubes. I do not believe he has ever examined them.

Mr. MADDEN. I do not want to raise a controversy with the gentleman——

Mr. STEENERSON. No; if the gentleman has examined them I will take his word for it and I will take back my statement.

Mr. MADDEN. I do not want to raise any controversy with the gentleman, but I think I know as much about the tubes as he does, and more than the engineers that the commission has employed, because I made a personal investigation.

Mr. STEENERSON. Of course, they are babes compared with the scientific engineering knowledge that the gentleman possesses, but we ordinary men have got to take the word of the men who handle the mail, and we have done so. Now, it being a fact that you have here a statement of the cost of operation—and with labor at only $4 a day it amounts to $16,100 per mile per year—if you put this at $17,000, there will be nothing to pay taxes, there will be no return, and it will be impossible to operate the tubes. Everything else has almost doubled in price. These people would be anxious to resume if it were profitable at that figure.

Mr. PAIGE. Will the gentleman yield?

Mr. STEENERSON. I yield to the gentleman from Massachusetts.

Mr. PAIGE. Is it not a fact that Postmaster General Hays looked into this matter and was perfectly satisfied that these figures were fair? And is it not also true that Postmaster General Work has gone into these figures in detail and thinks that they are perfectly fair and ought to be accepted?

Mr. STEENERSON. That is absolutely correct. I may say that no one at this late day will come up and dispute it, because investigations conducted by joint commissions was so thorough—we had the assistance of the best engineers we could find in New York—we went into the details, we assembled together the old employees, the superintendent of mails, men that operated the machinery, and it was established beyond question by the evidence that this was a utility which ought to be continued.

I recently asked the Postmaster General to send me an expression of his views on the subject, and I quote the following from his letter to me:

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., March 29, 1922.

Hon. HALVOR STEENERSON,
Chairman House Committee on the Post Office and Post Roads,
Washington, D. C.

MY DEAR MR. STEENERSON: The investigation by the department of the transmission by pneumatic tubes of mail in the city of New York (including Brooklyn) convinces the department that the reestablishment of that service in the city of New York (including Brooklyn) will, among other things, expedite the delivery of the letter mail and will increase the regularity and reliability of the transmission of that mail.

The department is convinced from this investigation that the Senate amendment to H. R. 9859 will make it possible for the department to improve its present postal service in New York City (including Brooklyn) by bringing to that service greater expedition, regularity, and reliability in the transmission of letter mail, and that this improvement in service is reasonably worth more than the cost will amount to under a contract made within the limitations of the proposed act.

* * * * * * *

The department approves the proposed legislation and recommends its enactment into law.

* * * * * * *

Sincerely yours,

HUBERT WORK,
Postmaster General.

Mr. SLEMP. Mr. Speaker, I yield 10 minutes to the gentleman from Mississippi [Mr. SISSON].

Mr. SISSON. I wish to reply to what my friend, Colonel STEENERSON, said about the chairman of the Committee on Appropriations not knowing anything about tubes. I want to say that I think he is entirely mistaken if he assumes that the gentleman from Illinois does not know more about tubes than any man in this House. In the first place, they have had the service in Chicago. During the time this matter was in controversy the gentleman from Illinois was on the Committee on the Post Office and Post Roads. He went all through that fight, and then besides he is a practical man, has been a successful man, capable of attending to his own business, and when a man is capable of attending to his own business and is successful, when he devotes his time to public duties, as does the gentleman from Illinois, he is capable of attending to the Government business.

The gentleman from Illinois, as I understand, is supporting the amendment of the gentleman from Virginia. The gentleman's amendment is to pay these people the amount of money that this Congress has authorized by law. Seventeen thousand dollars a mile is the limit. If you can make a contract for less than that the Government ought to do it and give the benefit of the reduction to the taxpayers.

Now, all I know about it is the evidence and what was brought out in the debate when Congress abolished the tubes several years ago; but the only controversy here seems to be so far as those who favor the tube service is whether or not Congress is going to authorize the amount of money to pay the loss of the people since the service was discontinued. In other words, they are contending here that because the Government discontinued that service, because the service has been discontinued and the tubes have not been in use for some time, it will require a great amount of money to put them in shape again, and that the Federal Government in some mysterious way should assume the liability for that. These tubes are owned by certain stockholders in the East and this whole matter urged by them. If the conditions prevailing now are anything like those that prevailed four or five years ago when the service was abolished, then the service ought not to be reestablished.

The testimony of the witnesses then and the testimony of the witnesses now, it seems to me, show a very poor return for the amount of rent that the Government will invest in these tubes. They ask here for $513,000—the rent of the tubes. Now, the tubes only supplied a very small portion of the territory in the great city of New York—what they call the congested area. It is contended, but I do not think it can be substantiated by the facts, that by paying this rental you save some money. I have been unable to believe that, because the amount of mail carried is so slight—one-half of 1 per cent of the total weight of the mail—not the total amount of money-paying mail, for only the high-class mail goes through the tubes, but if you take the total amount of mail that is hauled it shows that that which goes through the tubes is only about one-half of 1 per cent. The cities have Government-owned screen-wagon service. The wagon service belongs to the Government; whether you haul the wagon full or empty it costs the Government the same amount of money to maintain, and it will not reduce the present wagon service a cent. So this $513,000 is an extra expense. Why?

Now, there can be but one reason why Congress should put back the tube service costing $513,000, and that is to facilitate the transportation of mails, for it will unquestionably cost $513,000 more in New York than it now costs. The testimony taken for several years back shows that these tubes do not save time but that time is actually lost by the use of the tubes. Colonel STEENERSON relies a great deal on the testimony of experts. I do not depend much on experts. I have expressed my views on experts in this House before. I can prove one thing by an expert and then get experts on the other side to show there is not a word of truth in what the first expert says. The people who actually handle the mail—not experts but those who do the work—contend that the number of men necessary to prepare the mail for the tubes, getting ready to put the mail into the tubes, and then the men necessary to get the mail out of the tubes and distribute it again, that this extra service of preparing the mail for the tubes and taking it out of the tubes, actually causes a loss of time in transmitting the mails. Of course, the motive behind this legislation is the interest of these people who have their money invested in the tubes. It, with them, is not the question of expediting the mails but boosting their stock.

I do not complain of these men for trying to get their money out of it, but I do blame Congressmen being duped and made tools of these stockholders to get money out of the Treasury of the United States to boost their stock. I do contend that as far as the business of the mail is concerned there is nothing in it. If this mail service in New York was a private business, those who owned it would laugh at this tube crowd. If you would take out of this fight the propaganda and pressure of the people who have stock in these tubes, there would be nothing then to cause all this agitation in the city of New York. Of course it is the business of the chamber of commerce and the other organizations of the city to get into the city all the activities they can for the business of the city, to get everything they can to increase the pay roll, but Congress is not interested in that unless it is clearly shown that money can be saved in the service or the service very much improved.

This amendment ought not to be agreed to and should be rejected by the House. I fear it will not be rejected, because, while it saves money to defeat it and does the mail service no good to adopt it, to reject the amendment means the loss to the stockholders of the tube company. Gentlemen, think and act honestly and you will defeat this amendment.

Mr. LOWREY. Mr. Speaker, will the gentleman yield?

Mr. SISSON. Yes.

Mr. LOWREY. It was stated that the $1,500 a mile is to enable this company to borrow money to put the tubes in order. If all of the organizations of the city are behind them, demanding this, why is it that they can not borrow that money from individuals in New York and not have to come to the Government instead?

Mr. SISSON. That, of course, I can not tell, but this much I do know. They contend that without the $1,500 a mile they can not run these tubes. That is the testimony here. If $1,500 a mile will make the tubes a success, there ought not to be a particle of trouble in getting that money from private individuals in the city of New York.

The SPEAKER pro tempore. The time of the gentleman from Mississippi has expired.

Mr. SLEMP. Mr. Speaker, I yield 10 minutes to the gentleman from New York [Mr. ROSSDALE].

Mr. ROSSDALE. Mr. Speaker, before I proceed further I want to answer the points that were made by the previous speakers, one by the gentleman from Illinois [Mr. MADDEN], wherein he stated that only one-half of 1 per cent of the weight of mail is first-class mail. If the gentleman has that information, he has something that no one else has, for the very simple reason that the Post Office Department has never separated the actual weight of the first, second, third, and fourth class mail, and any estimate as to what the total weight of mail is in New York is just a guess. No one knows how much of the total weight of mail in New York is first class, second class, third, or fourth class; we do know the number of pieces. An average count of the number of pieces of mail matter mailed in New York was recently made, and 53 per cent of the total number of pieces of mail matter was found to be first-class letter mail.

Mr. CLARKE of New York. Mr. Speaker, will the gentleman yield?

Mr. ROSSDALE. Yes.

Mr. CLARKE of New York. As I understand it the gentleman's observation comes from actual experience and service, spread over a great number of years in the Postal Service, in contrast with the theory of the gentleman from Illinois.

Mr. ROSSDALE. I was a clerk in the New York post office for 10 years. I have worked alongside of these tubes. I knew then, and I know to-day, barring a few changes in the time of dispatch, the time of the arrival and of the closing of every mail in the city of New York. I know the splendid service these tubes can render, and I can only say, speaking as an old-time post-office man, that every man and woman in the New York post office believes as I do in tube mail transportation. In fact, only the other day one of them said to me, "Congressman, what is the matter with Congress; why are they continuing to send first-class mail through the streets in those wagons?" I tried to explain the matter, and I tried to give the state of mind of the Members of Congress on matters like this; but I do not know whether I succeeded or not.

It is a mystery to every practical post-office man why the Government continues to send first-class letters and packages with valuable contents, sometimes amounting to millions of dollars, through the streets of New York, through those overcrowded sections of the city, subjecting the mail to all the hazards of theft and delays in that great city, when you can safely shoot them through the tubes at great speed and without any delays or losses.

The gentleman also stated that $17,000 was rental. It is not only rental, for the bulk of that expense is operation. I have the figures here, as follows:

OCTOBER 4, 1921.

Estimate and cost of operation September 1, 1921. New York postal pneumatic tube system; 28 double miles, connecting 26 stations; 49 terminal sets; 6,780 hours' operation per year; 20 hours daily; 10 hours Sunday.

LABOR.

1. Superintendent	$3,500
2. Inspectors (3)	6,600
3. Power inspector	2,000
4. Shop foreman	2,000
5. Telephone operators and dispatchers (3)	4,700
6. Stenographer	1,400
7. Repairmen (3)	4,800
8. Shopmen (5)	7,000
9. Operators (136, at $1,400; 136, at $1,500)	190,400
	222,400

REPAIRS.

1. Carriers	$15,000
2. Tube machinery	3,000
3. Power plant	1,500
4. Tube line	2,500
	22,000

POWER.

1. Electricity	114,000
2. Steam	30,000
	144,000

MISCELLANEOUS.

1. Telephone	5,000
2. Oil and waste	3,000
3. Supplies	2,000
4. Traveling	500
5. Office rent	500
6. Legal	5,000
7. Insurance	2,500
8. Taxes	30,000
9. Salaries	15,000
	63,500

SUMMARY.

Labor	222,400
Repairs	22,000
Power	144,000
Miscellaneous	63,500
$16,100 per mile, or total	451,900

It takes a large number of men to operate these tubes and the tube company must pay for this operation. They submitted their cost of operation to the postal authorities. They are earning 6 per cent, not on their investment but on the actual cost of operation.

Mr. STEENERSON. The items are, labor, $224,000——

Mr. ROSSDALE. Yes; I have that here. We have been paying to the tube company for rental and operation of those tubes in New York and Brooklyn $17,000 per mile per annum since 1907. We paid $17,000 from 1907 to 1918. In Heaven's name, is there anybody who really thinks that you can keep a large number of men employed, especially skilled mechanics, and purchase material, with the additional upkeep of complicated machinery in 1922 and 1923, for the same amounts as you could in 1907? It can not be done, and I do not see why we should try to force these people to run a thing below cost. They are perfectly willing to submit the matter of cost of operation and compensation to the Interstate Commerce Commission and have that commission decide the rate of compensation, and agree to abide by the decision. I have here a letter from the Postmaster General to Senator TOWNSEND, as follows. I read:

DECEMBER 13, 1921.

Hon. CHARLES E. TOWNSEND,
United States Senate.

MY DEAR SENATOR: Referring further to the tube matter, my letter to you of December 1, 1921, and particularly replying to your letter of December 12.

The question which it contains is one which is difficult to answer. The elements of safety to the mails, relief and safety from traffic congestion, expedition, etc., are very hard to evaluate. In addition to that, we find ourselves in a period of readjustment, so that a figure which might be reasonable now might not be reasonable five years from now. However, having all these elements in mind, I desire to say that the department believes that it would be warranted at this time in making a contract for a period of 10 years at an annual rate not to exceed $19,500 per mile for a 20-hour day service. The department would be very glad to undertake to negotiate such a contract with the Pneumatic Tube Co.

However, under all the circumstances, and especially in view of the uncertainty of present conditions, it is our opinion that the fairest plan would be that suggested in my letter of the 1st; i. e., to let the tube service be immediately resumed in New York and Brooklyn, as recommended by the Joint Postal Commission, at the old price of $17,000 per mile, with the provision that either the Post Office Department or the Pneumatic Tube Co. may appeal to the Interstate Commerce Commission for a revision of the rate if either party can present facts which would indicate that the existing contract is not reasonable. It would be part of the contract that in making this revision the Interstate Commerce Commission would not make its decision retroactive; that they should make the decision within six months of the time that the request was made; that the decision should be rendered on the value of the service the Tube Co. is performing for the Post Office Department and not on the appraised value of the tubes; and that no revision should make the maximum rental to the Post Office Department for a 20-hour service more than $19,500 per mile per year. If the service be curtailed or increased, the maximum limit should be decreased or increased proportionately.

While this is unusual, yet in our opinion it is not an abortive allocation of responsibility, as the Interstate Commerce Commission is the recognized rate-making party. It rather leaves the matter in the Government's own hands through this agency. It was through an arrangement of this kind that we were enabled to make a saving in our contract for stamped envelopes of $16,876,194.80 over the rate which would have prevailed if we had not had an opportunity to adjust it with changing costs.

Attached hereto is a letter from Postmaster Morgan, of New York, giving in detail the saving in motor transport service which would be effected if the tube service was resumed. You will note that his conclusion is that the total saving would be about $416,000. Also is attached the figures which the New York Pneumatic Tube Co. have given us on the cost of operating the tubes under varying circumstances at present prices. If the Post Office Department should supply the power which is required by the Pneumatic Tube Co. at cost it is believed

that the cost of running on a 20-hour day may be reduced to approximately $410,000 or $420,000, which is about $15,000 per mile. In addition there is an item of between $100,000 and $150,000 which the tube company must expend to put the tubes in condition for operation and a further item of approximately $50,000 for unusual expenses the first year.

Sincerely yours, WILL H. HAYS.

He quotes this letter from the postmaster of New York, as follows:

OCTOBER 8, 1921.

Hon. WILL H. HAYS,
Postmaster General, Washington, D. C.

MY DEAR MR. HAYS: Referring to your letter of October 5, relative to the number of trucks which would be eliminated in the Motor Transport Service if the pneumatic tubes were restored and with regard to the estimate of the amount of mail which the tubes would speed up, I beg to advise that careful consideration has been given to the subject, and the following conclusions are submitted:

With the restoration of the tubes and the elimination of some of the half hourly trips of the Motor Vehicle Service and revision of the wagon schedules to a less frequent basis, considerable saving in cost for transportation would be effected, as indicated by the following data, which relates only to the stations that were formerly connected by pneumatic tubes:

DAILY NUMBER OF MOTOR TRIPS.

Present	1,083
Proposed	569
Decrease (0.474 per cent)	514

DAILY MILEAGE.

Present	4,592.4
Proposed	2,273.1
Decrease (0.505 per cent)	2,319.3

DAILY HOURS OF SERVICE.

Present	1,188
Proposed	680
Decrease (0.427 per cent)	508

COST AT $1.58 PER HOUR.

Present	$1,884.12
Proposed	1,078.35
Decrease (0.428 per cent)	805.77

It is figured that the use of 32 motor trucks could be dispensed with, resulting in a saving of $270,000 per annum for motor-vehicle operation. There would also be a considerable saving in clerk hire, as the number of pouches dispatched and received would be materially reduced. It is estimated that 104 clerks now assigned to dispatching duties could be detailed to other work if the tubes are reestablished. The saving would be as follows:

Motor trucks	32
Annual cost for operating trucks	$270,900
104 clerks, at $1,400 per annum (entrance salary)	145,600
Total	416,500

From a count taken in October, 1917, it was indicated that approximately 5,000,000 letters were transported daily by the tubes during the tube hours—4 a. m. to 11 p. m. From a tabulation made in May, 1921, for the Joint Commission on Postal Service it was shown that approximately 500,000 letters for delivery at New York, N. Y., could have been advanced daily in delivery by tube service from 2 to 15 hours on week days and from Saturday to Monday nearly 40 hours.

It was also shown that a daily average of over 68,000 letters dispatched to other post offices would be expedited by tube service. It is my opinion that the figures for May, 1921, are very conservative, and that a much larger number of letters would be expedited in delivery and dispatch by pneumatic-tube transportation.

The count was taken May 12 and 13, 1921, during a light season of the year, and with change of methods whereby the stations would make distribution of collection mails instead of concentration at the general post office and terminal stations, the number expedited would be greatly increased. Before the tubes were discontinued this office made from 6 to 7 deliveries on residential routes and 7 deliveries on business routes. At present there are but 4 deliveries in residential territory and 6 in business districts. If additional deliveries are restored, such as the 6 p. m. delivery in residential localities, a large number of letters would be expedited in delivery by tube service. The more frequent deliveries that are made, the greater increase in volume of letter mail expedited by tube service. I believe that with safety it can be estimated with pneumatic-tube service restored over 1,000,000 outgoing and incoming letters would be advanced daily. The delivery of daily papers would also be expedited, as such matter was transported in the tubes when they were in operation, and the employees would also be benefited, as much mail would be speeded in dispatch, reaching the stations hours in advance of the present method of transportation by motor vehicles, thereby reducing the force required for night work.

The delivery of special-delivery letters would be advanced, and that service would be more extensively used for local delivery if the pneumatic tubes were restored. At this office more than 15,000 special delivery articles are delivered daily and approximately an equal number are dispatched to other post offices. The delivery of many "specials" to other cities would also be advanced and the service greatly improved.

With kind personal regards, I am

Sincerely yours,

E. M. MORGAN, *Postmaster.*

The postmaster at that time, October 8, shows a saving of $416,000. The gentleman from Illinois said that it would not take a single truck from the streets of New York. Under his signature the postmaster of New York states that it will take 32 trucks from the streets, and that the annual saving resulting therefrom would be $270,000. To this the postmaster adds an additional item of 104 clerks, at an entrance salary of $1,400 per annum, amounting to $145,000. That makes a total of $416,000.

Mr. SLEMP. Mr. Speaker, I yield the gentleman five minutes additional time.

Mr. ROSSDALE. Mr. Speaker, this letter was written by the postmaster of New York to the Postmaster General, and by him submitted to the Joint Postal Commission in October. Since then there was a $2,000,000 robbery on the streets of New York, and it became necessary for the Post Office Department to place armed guards on motor vehicles carrying valuable mail. There are now approximately 145 men assigned to riding on these wagons, guarding the mails, and the cost of that is approximately $200,000 in pay costs.

I have here shown a saving of over $616,000 in cost of operation and this item in the bill is only for $513,911.50. Last year the mail wagons in New York killed 7 people and seriously injured and maimed 99 people. There were hundreds of other accidents. The cost to the Government for repairs of automobiles due to these accidents was over $17,000.

The following is a list of accidents and delays to motor vehicles in a single year of operation:

LIST OF DELAYED AND BROKEN-DOWN MOTOR VEHICLES, 1920.

Delayed trips represent cases where trucks have arrived 15 or more minutes late at stations and terminals. These delays were caused, on the most part, by the poor operating condition of the fleet and repairs required on streets, delays in getting away from the garage because trucks not in condition, or no trucks available at the time scheduled for leaving, chauffeurs late, poor street conditions in bad weather.

Failed trips represent cases where there have been no trucks available to make the trip, or where a truck has broken down on duty and there has been no truck to substitute for that truck's work. Emergency service is frequently supplied in these cases.

Partly performed trips represent those cases where a truck has broken down, met with an accident or the like, and where the mail is transferred to another truck substituted to complete the trip.

Nonscheduled trips represent cases where a truck is scheduled "dead" from one point to another, but carried mail in the instances indicated.

These delays in the motor-vehicle service represent also a certain number of trains missed, with a resultant delay to the mails of from 2 to 11 hours.

In December, 1920, there were 24 accidents, 5 wrecks, and 8 breakdowns.

In November, 1920, there were 22 accidents, 5 wrecks, and 4 breakdowns.

In October, 1920, there were 25 accidents, 8 wrecks, and 9 breakdowns.

In September, 1920, there were 34 accidents, 5 wrecks, and 37 breakdowns.

In August, 1920, there were 28 accidents, 3 wrecks, and 33 breakdowns.

In July, 1920, there were 31 accidents, 2 wrecks, and 18 breakdowns.

In June, 1920, there were 28 accidents, 3 wrecks, and 33 breakdowns.

In May, 1920, there were 29 accidents, 3 wrecks, and 22 breakdowns.

In April, 1920, there were 46 accidents, 3 wrecks, and 27 breakdowns.

In March, 1920, there were 40 accidents, no wrecks, and 62 breakdowns.

In February, 1920, there were 29 accidents, 5 wrecks, and 8 breakdowns.

In January, 1920, there were 64 accidents, 3 wrecks, and 7 breakdowns.

Accidents cover mishaps costing from $5 to $150 to repair and are exclusive of breakdowns.

Wrecks cover such accidents as collisions with "elevated" posts, other cars, turning over in ditch, etc., the effect of which is to demolish part of the car and the costs of which run from $150 to $1,000.

Breakdowns cover mechanical and construction faults, such as broken crank shafts, drive shafts, rear ends, etc., rather than mishaps which can be attributed to poor driving.

Report of accidents and mishaps[1] occurring in motor-vehicle service at New York, N. Y., through operation of Government-owned vehicles from January 1 to October 31, 1920.

1920	Damage $25 or more.	Damage less than $25.	No damage to mail truck.	Mishaps.	Personal injury.	Fatal injury.	Total.	Total damage.
January	9	38	35	59	13	.....	154	$1,465.75
February	7	38	31	33	7	.....	116	870.95
March	3	30	50	29	15	3	130	1,146.25
April	3	37	42	41	14	.....	137	1,228.25
May	2	24	47	24	6	.....	103	1,505.75
June	8	22	46	28	4	.....	108	1,208.50
July	4	32	38	9	15	.....	98	440.50
August	8	28	42	16	12	.....	106	3,491.00
September	11	27	50	26	8	1	123	4,538.75
October	7	21	42	4	5	3	82	1,628.50
Total	62	297	423	269	99	7	1,157	17,524.20

[1] Mishap: Damage to Government property only. Accidents: Both.

And that is another item to be added to the total sum that would be saved by tube operation.

I want now to bring to the attention of the House a serious condition of affairs that exists in the large cities, especially New York. I have not any doubt but that motor-vehicle operation is the cause of the continuous thefts and robberies that have been going on within the last few years. Of course, I can understand why the Post Office Department does not come out and state plainly to the people and inform Congress that they can not protect the mails in the great city of New York and in other large cities, and, indeed, they can not. According to the figures of the Post Office Department, 8,000 pieces of mail matter are being lost or stolen in New York City every day. In 1918 we appropriated for indemnities for loss of registered mail $1,330,000. After the tubes were abandoned and we had to run the mail by motor vehicle on the streets of the city, we find that the Post Office Department had to come to Congress in 1919 for an appropriation of $2,186,493.45 for indemnities.

In 1920 the increased appropriation for indemnities for mail robberies jumped to $4,350,000, and Congress appropriated this enormous sum to pay for these increased mail depredations without knowing the reasons for this tremendous increase. In 1921 we appropriated $4,200,000, and in the present bill, this bill we now have under consideration here, we are appropriating $4,500,000 for that purpose, and Third Assistant Postmaster General Irving Glover informed me the other day that the department had requested an additional deficiency appropriation for another million for this year. In other words, when the *tubes* were abandoned the registered mail indemnities jumped from $1,300,000 to $5,500,000 per annum in a period of four years. And, gentlemen, that does not represent the entire loss. Oh, no; that merely represents the amount Uncle Sam was liable for by reason of the insurance feature. The great banks and trust companies that send large sums of money through the mail insure through private companies, and the actual loss no one can tell exactly—it may be between fifteen and twenty million dollars. I do not know the exact amount of these losses; the Post Office Department does not know either; at least they profess not to know, as a matter of policy. I do know, and the record proves, that these losses are mounting higher and higher, and we must stop it. Tube transportation of mail will cut down indemnity appropriations by millions of dollars. It is not the fault of the postal authorities that these thefts occur. They are doing all that is humanly possible to stop them, but they can not adequately protect first-class mail from either open or concealed depredations as long as motor-vehicle transportation is legislated for them.

Mr. MADDEN. Will the gentleman yield?

Mr. ROSSDALE. If the gentleman will give me additional time.

Mr. MADDEN. I have not control of the time.

Mr. ROSSDALE. I can not yield; I have not the time. Now, gentlemen of the House, it does seem to me that we owe a duty to protect the mails in New York.

Post Office Inspector J. J. Gibney in a report to the department dated January 27, 1921, concerning the heavy losses of registered mail in July and August, 1920, concludes with the following statement:

> In submitting this data we would again call your attention to the fact that it is our belief that mail is being taken day in and day out from both open and closed trucks, and that the front and back doors of the closed trucks are being used for this purpose.

The idea of running wagons and trucks through the streets of the city laden with precious and valuable mail matter is an invitation to every thief, to every yegg and crook, to come into New York and go and help themselves, and judging from the record they have made some wonderful hauls.

I want to make a comparison of truck time and tube time from one portion of the city to another. This schedule shows:

Pneumatic-tube schedule No. 7—Comparison of truck and tube time, 1918.

All figures taken from Post Office Department schedules. Truck time as of August, 1918; tube time as of August, 1916.

From Station P, in the lower part of the city of New York, to Station L, at One hundred and twenty-fifth Street, the truck time is 123 minutes and the tube time is 27 minutes. Now, gentlemen, anybody who has handled mail knows that the delay of a letter five minutes, if you miss a closing, may mean the delay of another day for that particular letter to reach the particular town to which it is destined. If it is going to Europe it may mean missing the ship and the delay of a week. When you have a system already installed, that has given satisfaction for 20 years, whereby we can expedite the mails even at rush hours, to go back to the antiquated system of mail trucks, seems to me to be absurd. When the tube service was discontinued in 1918 the Postmaster General, who urged the withdrawing of the appropriation, said that it would merely require a 15 per cent increase in automobiles. Now, what happened? The annual increase was 51 per cent within six months. It is interesting to note what actually happened when the tube service was discontinued, June 30, 1918.

I quote from the report of Inspectors H. McQuillan and C. E. Crowell, New York division, dated April 6, 1919, to inspector in charge, New York, N. Y.:

Under date of January 18, 1919, the First Assistant advised that the postmaster had submitted revised schedules that showed an increase of 51 per cent in the motor-vehicle service over the schedules in effect May 13, 1918, and necessitating the employment of 121 additional chauffeurs.

Under date of January 24, 1919, we addressed a communication to the postmaster requesting him to please inform us why it was necessary to increase the service 51 per cent over the schedule in effect last May and to employ 121 additional chauffeurs.

He replied, stating in part:

This increased service was due to the discontinuance of the pneumatic tubes, which necessitated 1,971 trips being scheduled on December 16, 1918, instead of 1,299 trips on May 13, 1918, and that the increased wagon service naturally resulted in a corresponding increase in the number of chauffeurs required.

From the above it will be seen that instead of increasing the motor-vehicle service only 15 per cent, as stated by the First Assistant, it was actually necessary to increase it 51 per cent within six months after the abolition of the tube service in New York City. Twenty-five per cent increase in the service was made July 1, 1918, when the tubes were discontinued, and 26 per cent additional at various dates up to December 16, 1918.

This is the report of the inspectors the department had sent to New York. Since then it has continually increased, and it will keep on increasing.

Mr. MADDEN. Up to that time they had the mail service by contract.

Mr. ROSSDALE. Yes; it was by contract.

In 1919, a year after the tubes were discontinued, 11 registered mail packages were lost in New York City, and a loss of $234,715.15 in one year would have been saved had this registered mail been dispatched by pneumatic tubes instead of by motor vehicles, wrote the inspector detailed by the department to investigate the sudden increase.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. ROSSDALE. I have not the time. Previous to 1919, when we had the tube operation, the tubes only lost one piece of registered mail matter. That was one piece in six years, and it did not involve a financial loss—only one letter in six years. A year later, 1920, they increased so much that the department either could not or cared not to make public the extent of increased losses.

You can see the difference in the following comparison of the number of delays by tube service and motor vehicle. The number of letters dispatched from all stations in New York City on January 7, 1921, shows that the—

Average number of pouches per trip equals	5.48
Average number of letters per pouch equals	820
Average number of letters per trip equals	4,492

These figures being the averages of 4,705 motor-vehicle trips.

The delays and failures in motor-vehicle service reported for various periods are not confined to any one district, but are for the entire city. The average number of letters per trip as given above (4,500) is for the entire city. The tables in pneumatic tube Schedule No. 4 show the failures and delays in motor-vehicle service in New York City for the fiscal year ending June 30, 1920, and the failures and delays due to the storm of February 20 and 21, 1921.

For the fiscal year ending June 30, 1920:

Motor-vehicle trips failed	52,944
Motor-vehicle trips delayed	20,580
Total	73,524

At 4,500 letters per trip, this is the equivalent of 330,858,000 letters delayed by the motor-vehicle service in one year. The pneumatic tubes delayed 84,500 letters in one year. For each letter delayed by the tubes 3,915 letters are delayed by the motor-vehicle service.

On February 21, 1921, due to a severe snowstorm—

Motor-vehicle trips failed	539
Motor-vehicle trips delayed	564
Total failed and delayed	1,103

At 4,500 letters per trip, this is equivalent to 4,963,500 letters delayed by motor-vehicle service in one day, or fifty times as much mail as the tubes delayed in 365 days. The record of delayed letters by tube is 1 in every 45,000,000 letters.

The tubes are not affected by conditions that cripple the motor-vehicle service.

The above figures are official and tell of motor-vehicle inefficiency. Now let us see what is the record of the pneumatic tubes.

From all the data available on the subject we conclude that a capacity of 8 pounds or 400 letters to the container, an interval of dispatch of 10 seconds, and a speed in the tube of from 25 to 30 miles an hour can reasonably be taken as representing normal conditions in actual practice. This is equivalent to 2,400 letters per minute or 144,000 letters per hour that can be dispatched from any one station.

In the last year of operation the tubes in New York City and Brooklyn handled approximately 5,000,000 letters a day; they were not, however, used to their maximum capacity.

On Tuesday, December 3, 1912, 27,243 containers of original mail (not relays) were dispatched through the tubes in New York City in 20 hours, with a total capacity of 10,897,200 letters.

On Tuesday, December 9, 1913, 27,166 containers of original mail, with a total capacity of 10,846,400 letters, were dispatched.

On Wednesday, August 1, 1917, 29,066 containers of original mail, with a total capacity of 11,626,400 letters, were dispatched. (See pneumatic-tube schedule No. 2.)

It is therefore evident that the tubes were capable of handling 10,000,000 letters a day if called upon to do so.

First-class letter mail should have preference over all other classes of mail. Note the difference in the following examples from one of the most important stations in my city:

In the case of a railway mail dispatch from the City Hall Station to the Grand Central Terminal Station, New York City,

the schedule time by motor vehicle is 45 minutes and the schedule time by tube when in operation was 10 minutes.

Therefore 400 letters (or the first container) would reach the Grand Central Terminal 10 minutes after the dispatch by tube began.

The capacity of the tube being 2,400 letters per minute, the mail would arrive at the Grand Central Terminal as follows:

400 letters 10 minutes after dispatch begins.
2,800 letters 11 minutes after dispatch begins.
5,200 letters 12 minutes after dispatch begins.
7,600 letters 13 minutes after dispatch begins.
10,000 letters 14 minutes after dispatch begins.
12,400 letters 15 minutes after dispatch begins.
24,400 letters 20 minutes after dispatch begins.

This is equivalent to 24 pouches of mail with an average of 1,000 letters to the pouch that would have arrived at the Grand Central Terminal and be partially separated and pouched before the motor vehicle was half way between City Hall and Grand Central Stations.

At the end of 30 minutes 48,400 letters, or 48 pouches of mail, would have reached the Grand Central Terminal, and the motor vehicle would still be 15 minutes away, and by the time the motor vehicle arrived 84,400 letters, or 84 pouches of mail, would have been delivered by tube. Post-office officials estimate that it required 30 minutes to pouch the mail for train dispatch after receipt of same by tube. On this basis approximately 33 per cent of the dispatch would have been pouched and ready for train dispatch before the employees at the Grand Central Terminal could have started to handle the mail delivered by motor vehicle.

It has been stated here to-day that tube service entails an increased number of operations and is an added expense in clerk hire. The following is a comparison of the actual steps in handling first-class mail for railway dispatch when forwarded by tube and by motor vehicle:

DISPATCHED BY TUBE.	DISPATCHED BY MOTOR VEHICLE.
1. Tie out mail into bundles on distribution case.	1. Tie out mail into bundles on distribution case.
2. Bundles taken from distribution case to container.	2. Bundles taken from distribution case to pouches.
3. Bundles placed in containers.	3. Bundles placed in pouches.
4. Containers locked.	4. Pouches locked.
5. Containers dispatched.	5. Pouches taken to truck platform.
6. In transit in tube.	6. Pouches checked on dispatcher's bill.
7. Containers emptied on separating table at terminal.	7. Pouches loaded on truck.
8. Bundles separated and pouched.	8. In transit by truck.
9. Pouches locked.	9. Pouches unloaded at terminal.
10. Pouches checked.	10. Pouches checked.
11. Pouches taken to platform or chute.	11. Pouches separated for trains.
12. Pouches put on train.	12. Pouches put on trains.

It will be noted that the number of steps or operations is the same in either case; that the first four operations are common to both methods of dispatch; that the dispatch by tube begins at the fifth operation, while the dispatch by motor vehicle does not begin until the eighth operation; therefore the dispatch by tube begins before the dispatch by motor vehicle, the amount of time gained being dependent on the time consumed in operations 5, 6, and 7 under dispatch by motor vehicle. This time will vary with the volume of dispatch and the conditions prevailing at each station, but could hardly be accomplished in less than five minutes under the most favorable conditions.

Mr. SLEMP. Mr. Speaker, I yield the gentleman five minutes additional time.

Mr. ROSSDALE. It has been stated that there is an element of doubt of the efficacy of the tube service. There is always an element of doubt about a subject that is in dispute, and I submit the statement made by ex-Postmaster General Will Hays at a hearing of the Joint Postal Commission.

There is an element of doubt in everything. Just how fast and how much the improvement will be with the reinstallation of the tubes is hard to say, but, basing the opinion—and a man's opinion is just as good as the reason for it, and no more—but basing the opinion on the investigation of the commissions and engineers and department's experts—the hearings of the commission, our own investigations, our own negotiations over a period of several months, and personal inquiry and contact—it was my conclusion, when the tubes were suggested by the commission, that they should be reinstalled if it could be done at a price that was right, and that is still my conclusion, and my conclusion is, further, that this price is right.

It is as low as we can get. I think the additional service is worth this amount. I do not think they can do it any cheaper. I still think, as I have thought and shall continue to think, that a failure to reinstall is an error, and we are not doing everything that looks reasonably proper to do in the development of the Postal Service. Remember New York is the neck of the bottle, seriously so, and other mail is hung up all over this country when they are slowing it up in New York, and if we err at all we ought to err in service. That is, we ought to do more instead of less when a thing is as important as that. It is analogous to war—we do not criticize war expenditures. We have just got to do business. It is up to us to get every postal facility reasonably expected to improve the service. It is up to us, and it is charged to us to get it as cheaply as possible, and if a case comes along in the future of the service where it is a case of service or expense, give the service. That applies to this and everything else. Until I die I will be saturated with the magnitude and the importance of this mail service in this country. I wish I had had nothing all my life but to work at it. It is always a question of service for this whole thing. Of course, there is an unreasonable expense to which we can not go. It would not pay to run an airplane to San Francisco to pick up one special delivery.

I think that the amount for the tubes should be in this appropriation.

Mr. Speaker, the tube system is earnestly petitioned by everybody in my city—the board of aldermen, the State legislature, merchants' association, chamber of commerce, all political parties, all public societies, organizations, and all citizens from every walk and station in life. Although the tube system does not extend to that part of New York City in the Borough of the Bronx, which I have the honor to represent, I am nevertheless contending for this item in the appropriation bill, because it will improve the mail conditions of the Bronx, and I hope that the system will eventually be extended to my district that they may share in its benefits.

It is not possible to present here all of the arguments of postal officials who are charged with the responsibility of supervising the Postal Service. I have quoted from a number of reports of inspectors who are trained post-office men, who know the subject thoroughly. I have quoted Postmaster Morgan, of New York, who is acknowledged a great postmaster. He knows the Postal Service as well, if not better, than any living man. It is significant that Postmaster Morgan, Postmaster General Work, the Joint Postal Commission, the Bureau of the Budget, and the President of the United States all urge the restoration of tube service, and I hope that the House will concur in the Senate amendment. [Applause.]

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. ROSSDALE. Mr. Speaker, I ask unanimous consent to proceed for five minutes more.

The SPEAKER pro tempore. The time is in control of the gentleman from Virginia.

Mr. ROSSDALE. I ask unanimous consent to revise and extend my remarks. [Applause.]

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The extension of remarks referred to are here printed in full as follows:

Mr. ROSSDALE. Mr. Speaker, it was on January 11, 1922, my colleague, the Hon. BASCOM SLEMP, of Virginia, chairman of the subcommittee on appropriations in charge of the Post Office appropriation bill, reported the annual bill for his committee to the House for consideration. In presenting the bill Chairman SLEMP said in part:

Mr. Chairman, the subcommittee on appropriations to whom was referred the Post Office appropriation bill began work immediately on the reassembling of Congress the early part of December, and continued their labors practically without intermission until this week, when we are reporting the bill to this committee. It is the largest bill in point of money that will be presented to Congress. It has in its service a number of employees greater than exist in the entire personnel of the Army and Navy of the United States combined. It is a service that reaches every home, every individual, and every business. It knows no discrimination as to race, color, religion, or condition of servitude. To do service is its motto. It operates through the dead hours of night; it is going when dawn steals over the earth as when night closes it in darkness; it defies wind, rain, storms, and blizzards. It is equally active in sunshine or in cold. With equal impartiality it brings all messages of hope, love, or news. It is a service of which the American people are proud, and without which, or even an impairment of which, our civilization would be thrown backward. Contemplating the service from this standpoint, having the same enthusiasm for its personnel and its accomplishment as held by the men who are now conducting its affairs, the subcommittee began and pursued its investigations.

I want to indorse what the distinguished gentleman from Virginia said of the postal employees and of the Postal Service at that time and add my contribution of regard for that great service and for the great army of 330,000 men and women who comprise the service. It is a wonderful system, reaching to and from everywhere. Because of the regularity and continuity of its operation, few note its remarkable perfection.

Mr. Speaker, during the late World War, when all systems of communication and transportation bended and cracked because of the pressure placed upon them by the stress of the great con-

flict, when railroad and steamship lines, when telegraph and telephone systems gave way under the strain, the Postal Service kept up the even tenor of its accustomed service. Hence it is fitting that to the motto of that service—"Neither rain or snows nor heat or cold nor gloom of night stays these silent couriers from the swift completion of their appointed rounds"—we add, "nor wars upon the land, beneath the seas, or in the skies."

It is a great service, and is second to no other Government department in the hearts of our people. Upon its uninterrupted and efficient operation the interests of all our people must depend. In like manner the Government must depend upon the rank and file of postal employees to obtain the uninterrupted and efficient operation of the service. Postmasters General and postmasters would hopelessly fail in their tasks if it were not for the splendid cooperation of the employees which is inspired by the pride of occupation that goes with service in the Post Office Establishment.

The Post Office Department in its service to the people of the United States represents the nearest approach to perfect organization that I know of. Under such circumstances it is only natural that postal employees should be imbued with the spirit of organization. The post-office employees have that spirit and they have developed their organizations to a greater degree than the employees in any craft or industry.

The postal employees' organizations have contributed much toward the betterment and improvement of the Postal Service and the welfare of the employees, and the work of the United National Association of Post Office Clerks merits commendation. This organization was originally organized in 1885, and has operated under the present title since 1899. Since that year it has held annual conventions at which resolutions of far-reaching benefit to the service have been adopted. Each year its officers prepare a memorial which is submitted to the Postmaster General. This memorial is based on resolutions adopted at their convention. I was a member of this association years ago when I was employed in the service and I know that many of these resolutions were the means of initiating action by supervisory department officials because of the evident worth of these recommendations. Indeed, I am glad to say that many of the thoughts and ideas contained in such resolutions have been enacted into law by Congress in the past. In presenting these collective thoughts of many of the great rank and file of postal employees I do so with the hope that the Post Office Department and Congress will continue to give consideration for the adoption of these suggestions for betterment of the service outlined in the appended document:

Brief and memorial of the legislative and administrative program of the United National Association of Post Office Clerks, adopted at the Charleston convention September 5–8, 1921.

PART I.

The twenty-first convention of the United National Association of Post Office Clerks, held at Charleston, W. Va., September 5–8, 1921, adopted resolutions as hereinafter described urging certain remedial legislation and the modification of various departmental orders.

PLEDGE OF LOYALTY.

The convention enthusiastically and unanimously adopted resolutions pledging their fealty, loyalty, devotion, and whole-hearted cooperation to President Warren G. Harding in all his labors.

The convention adopted similar resolutions directed to our beloved and distinguished chief, Postmaster General Will H. Hays.

POSTAL SAVINGS SYSTEM.

A resolution was adopted indorsing the recommendation of the Postmaster General for certain modifications and amplifications of the regulations governing the Postal Savings System and commending same to the favorable consideration of Congress, so that the great Postal Savings System could be extended and result in greater benefits to the American people.

EFFICIENCY RATING SYSTEM.

A resolution was also adopted urging a complete revision of the efficiency-rating system in the interests of both the service and the employees in the service.

RETURN RECEIPT FOR REGISTERED MAIL MATTER.

A resolution was also adopted urging that the practice of issuing free return-card receipt for registered mail be discontinued and in lieu thereof a fee of 1 cent be required for all such return receipts.

COURT OF APPEALS.

The convention also adopted a resolution indorsing the bill introduced by Representative MADDEN, of Illinois, proposing to establish a court of appeals for all Federal civil-service employees.

CREDIT FOR PENALTY OR FRANKED MATTER.

The convention adopted a resolution urging the enactment of legislation giving proper credit in dollars and cents for all service rendered by the post-office establishment to the other departments of the Government, this credit to be so developed that all franked or penalty matter will be charged the same rates of postage as is charged for other mail matter, and that such charges be debited to the different departments and be carried as a credit in the accounts of the Post Office Department.

DISAPPROVAL OF DROP-LETTER RATE OF 1 CENT.

The convention adopted a resolution disapproving of any effort to establish a 1-cent rate of postage for drop letters.

SENIORITY.

A resolution was adopted urging that in the event of all things being equal that seniority alone be the determining factor for the promotion or assignment to preferential positions for all clerks.

The convention also heartily indorsed the order of the department directing that all new entrants to the clerical force, whether by original appointment or through transfer from some other service, shall be assigned to the mailing division.

BONDING BY DEPARTMENT.

The convention adopted a resolution urging the establishment by the department of a bureau for the bonding of all employees by the department itself at the expense of the employees.

WELFARE WORK IN POST OFFICE.

The convention adopted a resolution indorsing the program for welfare work in the post office, as put forth by the national president in a brief submitted to the Postmaster General on May 2, 1921.

PARAMOUNT ISSUE—NIGHT SERVICE.

The convention adopted as the paramount issue a resolution urging the establishment of a differential in time for all night service. To have all service between 6 p. m. and 6 a. m. computed on a basis of 45 minutes to the hour.

RECLASSIFICATION.

Clerks to be divided into five grades: Grade 1, $1,600; grade 2, $1,700; grade 3, $1,900; grade 4, $2,100; grade 5, $2,300.

Clerks to progress by annual promotion from grade 1 to grade 5.

Two grades of special clerks: Grade 1, $2,400; grade 2, $2,500.

All clerks in the fifth automatic grade, in first and second class post offices, and who have served 15 years in the service to be promoted automatically into the special clerk grade 1, and in first-class offices, all special clerks who have served three years in special clerk grade 1 to progress automatically to special clerk grade 2.

TIME IN EXCESS OF EIGHT HOURS.

Overtime for services in excess of eight hours per day to be compensated for at the rate of time and one-half of the employees' salaries as fixed by law.

VACATIONS.

Extension of the annual leave with pay so as to grant a vacation of 30 days in each fiscal year.

SICK LEAVE.

Amendment of the act approved June 5, 1920, providing a 10-day sick leave annually so that postal employees shall be given sick leave each year with pay not to exceed 30 days.

PAYMENT OF SALARIES.

The annual salaries to be divided into 52 equal parts, one of such parts to be paid to the employees each Saturday during the year.

MONEY-ORDER INDEMNITY FUND.

Establishment of an indemnity fund from which to pay losses for money orders wrongfully paid through fraudulent identification.

TIME ALLOWANCE FOR SCHEME STUDY.

Mail distributors to be allowed 2 hours daily within 8 in 10 for necessary scheme study.

COMPENSATORY TIME.

The amendment of the section of the act approved June 5, 1920, providing for the granting of compensatory time off for Sunday and holiday service, so that such compensatory time for Sunday service shall be granted on 1 of the 6 days following the Sunday of service and on 1 of the 30 days following service on a holiday.

HOLIDAYS.

Reenactment of the provision formerly contained in section 284 of the Postal Laws and Regulations under which postmasters were authorized to observe all holidays in their respective States.

UNNECESSARY CASE EXAMINATIONS.

The elimination of scheme study and case examinations for all clerks except those employed for at least two hours daily in mail distribution.

TRANSFER OF CLERKS TO CARRIER SERVICE.

The amendment of that portion of the act approved June 5, 1920, authorizing the Postmaster General to transfer a clerk from the clerical to the carrier force, and vice versa, so that no such transfer can be made without the consent of the employees transferred.

RETIREMENT.

The amendment of the retirement act approved May 22, 1920, to provide for optional retirement after 30 years of service and also to provide for the increase of the annuities paid under this act.

CONCLUSION.

In support of the foregoing resolutions and petitions the association submits herewith arguments drawn up in a memorial and entertains the earnest hope that the same will receive your valued consideration.

PART II.

MEMORIAL.

SERVICE IMPROVEMENTS REQUIRING CONGRESSIONAL ENACTMENT.

PARCEL POST PERISHABLE MATTER.

Parcel post perishable matter invariably receives special-delivery treatment without paying such special-delivery fee. The convention realized that by the very nature of things parcel post perishable matter should be delivered as expeditiously as possible; but oftentimes if such matter was held for the regular delivery or the first delivery trip after its receipt at a given office it is more than likely that such matter would have to be destroyed. To prevent just this destruction it has been the custom in most post offices to deliver this parcel post perishable matter by special messenger and charge the expense thereof to auxiliary service. This class of mail matter is receiving service for which neither the sender nor recipient is paying. The convention felt that appropriate regulation covering this question would be welcomed by all postal employees and at the same time would result in much credit to the service. It was suggested that all parcel post perishable matter be required to be sent special delivery and that the fee for such service be increased from 10 to 25 cents.

DISPATCH OF SPECIAL-DELIVERY PARCEL POST MATTER.

The association was of the opinion that a prolific source of complaint against the special-delivery service would be removed if paragraph 2, section 853, Postal Laws and Regulations, was amended to provide for the dispatch of special-delivery parcel post matter under a distinctive tag, label, sack, or pouch.

SERVICE IMPROVEMENT THROUGH ADMINISTRATIVE ORDER.

INSURED PARCEL POST MATTER.

The convention thought the losses reported in the insured parcel post matter exceeded all the bounds of reasonable expectations. The fault and responsibility for this appears to be failure of the department to provide safeguard for this class of mail matter. Insured parcel post matter is given no additional treatment by the Postal Service. It is handled exactly the same as ordinary parcel post matter. The acceptance under such conditions of an insurance fee comes dangerously near accepting payment without rendering the service for which the payment is made. If necessary, the insurance should be raised. All insured parcel post matter should be dispatched and forwarded in distinctive sacks, pouches, or hampers, and it is further recommended that all such parcel post packages should be forwarded, or when forwarded should be accompanied, with a waybill. The convention felt certain that if some such system was adopted that the losses in this branch of the service would be immediately reduced at least 95 per cent and that the result in credit to the department which must come from satisfied patrons and satisfactory service would more than compensate for the slight additional cost to the department that these changes would entail.

SUGGESTED IMPROVEMENTS IN WORKING CONDITIONS POSSIBLE OF ACCOMPLISHMENT THROUGH ADMINISTRATIVE ORDER.

NIGHT WORK IN POST OFFICES.

Night work is generally conceded to be such service as is rendered after 6 p. m. and prior to 6 a. m. The major portion of this night work must be performed by post-office clerks. In other industries they have recognized the hardships of night work by establishing a differential, either in hours of service or in compensation, for such night service.

The difficulty, disadvantages, and distressing conditions imposed upon the employees by the excessive night work required in the post offices has concerned the minds of postal officials for many years. Recognizing these hardships, they have sought for some method or medium whereby such night work might be reduced. Chief among these has been an effort to induce the public and the business interests to deposit their letters in the post offices in the early afternoon. Mail-early campaigns have been inaugurated and conducted by postmasters and Postmasters General for the past 20 years without success. The reason that these campaigns have met with so little success is because it is not practical for the business interests to cooperate with the postal officials to any great degree in a matter of this kind.

If the success of the mail-early campaigns depended upon the interests who periodically deposit from 100 to 500,000 first-class pieces of mail matter, the problems would be easily solved. However, such mailers do not make up the vast volume of mail matter which the post offices must handle. This may seem paradoxical, but it is none the less true. The great volume of mail matter, that which flows into the post offices between 4 p. m. and 7 p. m., originates in the small business houses, which may average from 10 to 100 letters per day. By the very nature of things such interests can not be induced to deposit such mail in the post offices any earlier than they are now doing.

The advisory committee to the Joint Congressional Postal Salary Commission recommended to the department that a differential be established in the post office which would make 45 minutes equivalent to 1 hour's service. In other words, they recommended six hours night work equivalent to eight hours daywork. In indorsing the recommendation of the advisory committee the association made the following statement:

"The association is glad to note the recommendation of the advisory committee in reference to the service exacted of post-office clerks at night—i. e., that 45 minutes of employment should be credited as 1 hour for all work performed between the hours of 6 p. m. and 6 a. m. The excessive night work exacted of post-office clerks has been one of the most discouraging elements of such employment. It denies to the clerks all of the ordinary social recreations. It takes away from him the priceless comradeship of his family and exacts from him physical and mental effort during the hours when his vitality is at its lowest ebb. The differential, as recommended, is a measure of relief for which the association has striven for years. The adoption of this recommendation will, it is believed, compensate in a great measure the clerks who must necessarily perform service at night and it is in like measure believed that it will make the Postal Service attractive to men of ability, and directly and indirectly must prove a potent factor in promoting efficiency among the employees and in the character of service rendered to the people. For these reasons the association entertains the earnest hope that the department will adopt the recommendation above referred to as to night work."

We have tried for many years to obtain some recognition of the hardships of night work through legislation, but without success. We feel now that the same thing could be accomplished through an administrative order issued by you. The 8-in-10-hour law, approved August 24, 1912, and which became effective March 4, 1913, contains no inhibition against the Postmaster General prescribing the number of hours that would constitute a day's work, except that such day's work shall not exceed 8 hours in 10 consecutive hours. I therefore believe that you have authority under the existing law to prescribe the number of hours of service after 6 p. m. and prior to 6 a. m. that would constitute the equivalent of 8 hours' service between 6 a. m. and 6 p. m. For these reasons the association earnestly hopes that the question will receive your favorable consideration, confident that if put into practice it would have a far-reaching effect in promoting the welfare of the employees and of the Postal Service.

UNNECESSARY CASE EXAMINATIONS.

Case examinations should not be required of post-office clerks who have served faithfully and have passed their fiftieth birthday, nor of those clerks who rendered faithful service for 25 years or more, and certainly not of clerks who are employed in the financial and executive divisions of the post offices.

Convinced that the conditions which inspired the department to issue the order requiring case examinations of all clerks, regardless of the division of the post office in which they were employed, had ceased to exist, and realizing the grave hardship which this order has imposed upon the older clerks and those employed in the financial and executive divisions, the association would respectfully request that this order be modified as follows:

Case examinations not to be required of any clerk who has been in the service 25 years or more.

Case examinations not to be required of any clerk 50 years of age or over.

Case examinations to be required of clerks only who are actually employed in the distribution of the mails for not less than two hours daily.

LOOKOUT GALLERIES.

The association deplores the practice of some supervisory employees in using the lookout galleries, placed in post offices, it is understood, for the sole purpose of detecting crime, as a means to spy upon the employee and in other ways make his position most disagreeable and embarrassing. We feel that no good can come out of such a condition; that it not only destroys the morale of the employees but it is absolutely destructive of all efficiency and creates a most bitter resentment for the supervisors. For these reasons the association earnestly hopes that the department will issue an appropriate order that would eliminate this practice in all post offices.

STOP WATCHES.

The association learns with amazement that some supervisory officials throughout the service contrary to existing law hold examinations and test the clerks under their supervision with a stop watch. This practice is not only forbidden by Congress, but it is forbidden also by all the ethics that should exist between employees, both supervised and supervisors, in any Government department. We feel that nothing but disaster could come from the continuance of this practice and the convention requests the department to issue the necessary instructions so that this practice will be stopped forthwith.

THE ADVISABILITY OF WEEKLY PAYMENT OF SALARIES.

In the outside industrial world the generally accepted method of paying wages is in weekly periods and while employers may feel that this method is more expensive than less frequent payment would be, they, the employers, almost unanimously agree that the beneficial results to the employee and to the service which they render to the employer more than compensates for the additional expense.

At each annual convention of the association a resolution has been unanimously adopted urging the department to institute the weekly salary table, together with a stipulation that all salaries should be paid in cash.

We do not feel that the subject could be better covered than it was covered in a memorial which we presented to the former Postmaster General, to the Congress, and to the Joint Congressional Salary Commission and we, therefore, submit hereunder a reproduction of that statement:

"The association believes that the semi-monthly payment of salaries is not conducive to a contented personnel, that it subjects the employees to needless discomfort and to the additional expenses of conducting their household affairs on a credit basis, and the association petitions the commission to consider the advisability of reconsidering the division of the annual salaries of postal employees into 52 weekly parts and the payment of such employees upon performance of service of one of such parts each Saturday throughout the year."

SEATS FOR DISTRIBUTORS.

Nothing has caused so much unnecessary suffering, nerve-racking monotony, and physical disability as the action of many postmasters in compelling distributors to stand at all times while on duty.

The average mail distribution case does not permit the clerk to move more than 1 foot in either direction. To compel the man or woman to stand in one spot for 4-hour periods is destructive not only to their efficiency but to their health. If these clerks are permitted to relieve the strain on their feet for short periods it would make for a better quality of work from such clerks, while at the same time it would conserve their health.

It almost seems irrelevant to bring this question up in this brief. But the concession asked for, I am convinced, will never be generally granted until the department promulgates an order instructing postmasters accordingly.

TIME ALLOWANCE FOR SCHEME STUDY.

Post-office clerks assigned to the distribution of the mail are required to memorize schemes of distribution; such schemes average some 5,000 facts, and in the regular course of things and in the constant changing of regular schedules, post office, and routes, compel also that such clerks constantly study in order to maintain their proficiency. The Post Office Department also requires such clerks to pass, at least once a year, a very rigorous case examination. No allowance has ever been provided for the clerks of whom this study is exacted. The association feels that where a clerk is compelled to work eight hours a day in the post office and to devote additional time at home to study that he is indirectly performing service for which he receives no compensation. The association therefore believes that some provision for this scheme study should be made, and respectfully urges the department to favorably consider and recommend suitable legislation that will provide a certain portion of the time required daily of distributing clerks shall be devoted to study periods.

SUGGESTED IMPROVEMENTS IN WORKING CONDITIONS REQUIRING CONGRESSIONAL ENACTMENT.

RETIREMENT.

Perhaps the greatest piece of legislation accomplished in behalf of postal employees has been the enactment into law of the civil service retirement bill. This is a measure of justice for which the United National Association of Post Office Clerks has persistently striven for 30 years. It is not all that we could desire. It is not, by any means, a perfect law. It does, however, recognize the principles that "the laborer is worthy of his hire," and that if he devotes his entire life to the service of his Government he should not, and must not, be cast aside when age and infirmity of age come upon him.

The association feels that the annuities granted under the present retirement law are woefully inadequate and impose upon the employee more than his fair proportion of the burden of this legislation through excessive deductions from his salary. We feel that placing deductions at 2½ per cent was determined upon the old basic salary of $1,200. The annuities paid were also based upon the old basic salary of $1,200 and provides for the payment of 60 per cent of such salary, or $720 per annum. We believe that the conditions which have prevailed in the Postal Service for years past did not permit the employees to provide for the time when infirmity and incapacitation would come upon them. We feel that to compel such employees to retire under the meager sum

of $720 per year compels them to suffer much distress and agony of mind. The association also feels that employees in the Government service, who render faithful service for 30 years, should be given the privilege of being retired if they so desire. For these reasons the association adopted resolutions urging the amendment of the present retirement act to provide for a service pension of 30 years, optional with the employee, and for an increase in the annuities paid under such act to conform to the provisions of the bill introduced by Senator Townsend, which reads as follows:

"To amend the act approved May 22, 1920, entitled 'An act for the retirement of employees in the classified civil service, and for other purposes.'

"*Be it enacted, etc.*, That section 2 of the act of May 22, 1920, being an act entitled 'An act for the retirement of employees in the classified civil service, and for other purposes,' be, and the same is hereby, amended by increasing the amount of the annuities for class A 60 per cent, class B 65 per cent, class C 70 per cent, class D 80 per cent, class E 90 per cent, and class F 100 per cent."

SALARIES OR COMPENSATION—THE STRUGGLE FOR A LIVING WAGE.

The question of most concern to postal employees is and has been, of course, the woefully inadequate salaries paid, the noncommercial value of the experience which they gain in the Postal Service, and the utter lack of opportunity for advancement.

The maximum salary of post-office clerks was not increased from 1883 to 1918. True, there were never many clerks receiving the maximum salary prior to 1907, but the fact remains that in the first classification of post-office clerks, which occurred in 1883, the maximum salary was placed at $1,400. The salaries were reclassified in 1907, when the clerks were divided into six grades, with automatic promotion of $100 annually and with a maximum of $1,200. However, two grades of special clerk were provided at that time, which continued the old maximum at $1,400. In 1918 the maximum salary for clerks in the automatic grades was increased to $1,500 and in 1920 to $1,800.

The inadequate salaries paid during all the years since the original classification compelled most of the post-office clerks to practice the utmost frugality and self-denial. Few among them knew that savings banks existed, or were able to provide for themselves or their families beyond the barest necessities of life. So it was that in 1918, when the postal employees received an increase in their salaries, they found themselves little better off than they were before, because of the changed conditions and because of the everlasting overhanging debts that they were forced to incur. The same was true when the classification act, approved June 5, 1920, went into effect, and the same is true to-day.

The association asked the Postal Salary Commission for a reclassification as follows:

"We ask that clerks in the first and second class post offices be divided into five classes with a minimum salary of $1,600 and a maximum of $2,300, with annual progression as follows: Grade 1, $1,600; grade 2, $1,700; grade 3, $1,900; grade 4, $2,100; grade 5, $2,300.

"We ask that in offices of the second class there be provided one grade of special clerk at $2,400.

"That at offices of the first class there be provided two grades of special clerk: Grade 1, $2,400; grade 2, $2,500.

"We ask that at offices of the second class all clerks who have been in the service for 15 years shall automatically progress to the first grade of special clerk at $2,400; that at offices of the first class all clerks who have been 15 years in the service shall automatically progress to the first grade of special clerk at $2,400; and that all special clerks in grade 1 shall automatically progress to grade 2 after serving three years' satisfactory service in grade 1, the lower grade."

We believe that if such legislation were recommended to Congress by the department it would promptly be enacted into law, and we also believe that if such a classification were enacted into law it would attract a much higher caliber of men into the service, would raise the standard of efficiency of the employee and of the character of service rendered to the people, and would insure to post-office clerks a living wage on which they might maintain themselves and their families in health and reasonable comfort.

INSURANCE AGAINST SALARY LOSS DUE TO SICKNESS.

The postal employees' organizations were the real pioneers in the erection of sick benefit societies supported and maintained by the postal employees themselves. Fraternal societies had such auxiliaries for many years, but the average industry or craft generally gave assistance to a sick fellow worker through the medium of passing the hat or the subscription list. Twenty-five years ago the subscription list was never out of the post office. Between pay days there were often more than a dozen lists passed around. It was to eliminate this humiliating practice that the Post Office Clerks' Association created the first sick benefit fund in New York City, about 1892.

This idea has since spread all over the country, and there are few of our local or State branches that have not got such an auxiliary.

These funds are maintained entirely from monthly dues paid by the members, and in some cases through assessments. The average sick benefit amounts to $9 per week for a period of 13 weeks in any one year. The amount paid out in sick benefits by the combined sick benefit auxiliaries of this association alone is hard to estimate. New York City ranges between $12,000 and $14,000 annually. Other cities maintain a corresponding average; so that it would be safe to say that the aggregate amount paid out in sick benefits so far would exceed $1,000,000.

These funds are a constant and heavy drain upon the meager resources of the postal employees. In looking over statistics on this subject I find many of the large employers who provide for the contingency of sickness by purchasing and encouraging the employees to purchase health insurance. This insurance, of course, costs considerably more than the total dues exacted from members of the sick benefit societies. At the same time the benefits are considerably greater, and the employee, through such insurance, is relieved of all anxiety.

All the arguments that could apply to sick insurance can also be extended to life insurance. The same is true of this feature of insurance, which is maintained by most of the postal organizations.

At best the postal employees operate their sick and death benefit societies with great duplication of work and expense and with distressing uncertainty.

In studying the above phase of conditions of employment in the Postal Service, I can not help but feel the great benefits that would accrue both to the employees and to the Postal Service if legislation could be obtained whereby sick and death benefit insurance could be provided for postal employees on the same basis as these features were provided for members of the naval or military forces of the United States under the war-risk insurance legislation.

I am confident that at least 80 per cent of the postal employees, and certainly 80 per cent of the post-office clerks, would gladly welcome the opportunity to purchase such protecttion, providing the protection would come from the Government. And for this reason I earnestly hope in the interest of the welfare of the postal employees that you will give this matter your very earnest consideration.

TIME IN EXCESS OF EIGHT HOURS.

Because of the many hardships imposed upon the clerical force, because of the excessive overtime, and because the association believes that such overtime is caused by the practice of many postmasters of attempting to operate their respective offices with an insufficient force, the association respectfully urges as a most effective method of reducing such overtime to the absolute minimum the enactment of legislation that will provide for the payment of all necessary overtime at the rate of 50 per cent in excess of the pro rata salary of the employees involved.

HOLIDAYS.

The association desires to call to the attention of the department amended section 284 of the Postal Laws and Regulations granting compensatory time for the services performed on certain holidays to employees of first and second class offices. In enacting this amendment the Congress omitted the authority formerly contained in the original section which permitted postmasters to observe as holidays in addition to the specified days such other days as might be set apart by the proclamation of the governors or by the statutes of the States in which the post offices might be located. The association has found that the interpretation of this section by the department is an inhibition to postmasters to observe any holidays as such except the seven days specified in the law. This works a most serious hardship on the postal employees while at the same time it renders no benefits to the public or to the communities wherein such other holidays are observed. The association therefore respectfully urges that appropriate legislation be recommended that will cause the restoration to postmasters of the privilege of granting holidays to the postal employees when such holidays are observed in their respective States or communities.

FINANCIAL LOSS SUSTAINED BY POST-OFFICE CLERKS BECAUSE OF THE ABSENCE OF ANY AUTHORITATIVE DEFINITION OF TRUE IDENTIFICATION.

The association believes that the absence of a definite rule defining "true identification" in the payment of money orders works a hardship on the employees often causing financial loss and indirectly tends to cast discredit upon the service. This condition automatically decreases the salaries of the clerks involved. For this reason many clerks of superior ability and of a natural aptitude for this branch of the service hesitate to accept or seek such assignment.

The existing law on this subject would, if followed literally by the money-order clerks, cause no end of confusion and annoyance to the patrons of the Postal Service. Where a paying clerk does not know personally the person applying for the payment of a money order, he must accept the ordinary means of identification in order to establish the fact that he is making the proper payment. If the person to whom the money is paid is a fraud and has obtained the identification papers through theft or otherwise, and while the paying clerk has taken every possible precaution, he none the less loses the amount of money he paid to this fraudulent person. As stated above, this practice is a very serious menace to the efficiency of the money-order system, and the association would respectfully urge the department to make a suitable recommendation to the Congress for the establishment of an indemnity fund from which these losses could be paid. The association further believes that wherever a paying clerk has taken every possible precaution in these matters and that an investigation conducted by a post-office inspector results in such inspector recommending that such clerk be not charged with this loss, that in all such cases the amount involved shall be paid from the indemnity fund referred to.

PAYMENT FOR TIME IN EXCESS OF EIGHT HOURS PER DAY AT THE RATE OF TIME AND ONE-HALF OF THE EMPLOYEE'S SALARY AS FIXED BY LAW.

The clerical force acknowledges that at some periods of the year overtime is absolutely necessary. But the opinion appears unanimous that the greater portion of overtime is occasioned by the practice in many offices of undermanning the service in the interest of economy. The association deprecates such practices and contends that, while it may be possible to show certain percentage of economies in administration thereby, the loss occasioned by the replacement of sick employees and the loss and depreciation of efficiency does not warrant continuation of the practice and converts the apparent economies into a substantial loss to the department. The association gratefully appreciates the department's attitude and discouragement of this practice and desires only to assist the department in the fullest possible sense. The association appreciates the immense benefits accruing to the employees through the enactment of the 8 in 10 hour law and wishes at all time the spirit and letter of the law were unqualifiedly enforced. The association disavows and disapproves the employment of the provisions of such law to add to the employee's income. The association further believes the conditions above cited in reference to the undermanning of the service would be corrected and the necessity for overtime entirely disappear if a penalty were placed upon such overtime. The association therefore respectfully urges the department's favorable recommendation and indorsement of the remedial legislation whereby employees compelled to work in excess of eight hours per day shall be compensated for such overtime at the rate of time and one-half of the pro rata salary as fixed by law.

THIRTY-DAY VACATIONS.

The association respectfully requests the department to renew the recommendation to the Congress providing a 30-day annual leave of absence with pay for post-office clerks and city letter carriers as incorporated in the reports and recommendations of the honorable Postmasters General George von L. Meyer and Frank H. Hitchcock submitted December, 1906, and repeated in the reports submitted December, 1907. The association believes that such 30 days' annual leave would prove a paying proposition to the department in the improved health and resultant uninterrupted services of the employees and the inevitable promotion of efficiency. The association further believes such 30 days' annual leave could be granted without materially increasing the financial burdens of the department, and respectfully invites the department's attention to existing provisions of law providing such a period for recuperative purposes for most other civil-service employees, Federal, State, and municipal.

THIRTY DAYS' ANNUAL SICK LEAVE.

From data considered by the convention, it was learned that the percentage of sickness among the clerical forces was out of all proportion to the normal expectations. The length of the periods of such enforced absences were shown to be varied, very few being under one week and equally few exceeding one month. The average appeared to be about five days in duration. The association recognizes there are

many causes for this excessive amount of sickness that are, perhaps, beyond the control of the department; but the association is also of the opinion that it is within the power of the department to recommend legislation that would inevitably remove some of the more flagrant causes of this condition. The association believes implicitly in the axiom that "An ounce of prevention is worth a pound of cure," and in its handmaiden, "A stitch in time saves nine." The association desires to place these truths before the department.

The mutual sick benefit societies conducted by the employees throughout the country require in most cases that a member be absent from duty at least one week before he is allowed to draw any sick benefit. The average benefits paid approximate $9 per week. Accurate figures of the amounts so paid by these societies are not available, but a conservative estimate of the expenditures of one of the largest branches of the association for the fiscal year ending June 30, 1918, would place the figure at $12,000. The postal employee feeling indisposed, knowing absence will result in the immediate loss of full salary, and realizing the requirement of the sick benefit society of one week's sickness before benefits can be claimed, continues at work and neglects to take corrective measures of prevention in time.

The slight indisposition through such neglect develops into a condition when the employee is no longer able to continue at work, and in the natural order of things attacks the individual in his constitutionally weakest part, causing a prolonged absence from duty and oftentimes developing into a chronic affection of the health of the individual. Conversely, if the employee was free from the fear of losing salary he could immediately employ the necessary precautions and corrective measures and in most cases would return to work within two days.

This desirable condition would automatically insure to the department a saving of many thousands of dollars now required to replace the sick employees and to retrain the new employees. It would insure the *continuity* and the uninterrupted application of the services of its efficient, trained employees. It would relieve the minds of the employees from a most distressing burden of worry and make them contented, considerate, and painstaking in their efforts to add credit to the service according them as employees a like measure of consideration. The association is convinced that contented employees mean efficient employees, and that this measure primarily for the benefit of the employees would, in its application, best promote the Postal Service itself. The association accordingly entertains the very earnest hope that the department, in its wisdom, may recommend to the Congress the enactment of legislation providing leave of absence with pay on account of sickness of not exceeding 30 days in each fiscal year.

CONCLUSION.

The hardships suffered by post-office clerks are practically universal and identical in all sections of the country, and the great majority of all postal employees are remaining steadfast to the service because of the hope of better things which was inspired in them by your accession to the exalted office you so signally occupy.

The association desires to express its appreciation of the very great privilege and the unprecedented privilege granted to postal employees to present to you their troubles and their cares, and to express its implicit confidence that the future, the happiness, and peace of mind of all postal employees will be safeguarded in your keeping.

Respectfully submitted.

C. P. FRANCISCUS, *President.*
JOHN J. GROGAN, *Secretary.*

Excerpts from brief presented to Postmaster General Will H. Hays.

WELFARE WORK IN POST OFFICES.

[By C. P. Franciscus, president United National Association of Post Office Clerks, May 2, 1921.]

Because of the great magnitude of the Postal Service, employing as it does over 300,000 men and women and reaching into every city and hamlet in the United States, welfare work in the Postal Service to be genuinely effective and to do the maximum of good must of necessity be confined to those things or features which will extend benefits either in improved working conditions or environment to the great majority, if not in fact all of the employees in the post offices.

For the above reasons I shall not attempt to include in my observations reference to the social welfare work generally carried on by private industrial corporations, but shall confine this brief to an outline of the administrative orders and congressional enactments that would promote the welfare of all post-office employees to the very maximum.

The outstanding feature of all welfare work and the chief motive actuating those directing it appears to be, and no doubt is, solicitude for the health and comfort of the employees, a desire to eliminate in so far as possible economic waste caused by sickness and the removal of all just causes for disaffection, thus reducing, in so far as possible, resignations and insuring continuity of service, interest, and enthusiasm in the work, and loyalty to the employer.

The health and comfort of the employees could be best advanced by the promulgation of appropriate administrative orders relative to the subjects enumerated below.

CLEANLINESS, SANITATION, VENTILATION, AND LIGHTING.

Existing conditions in many post offices are not only unclean, insanitary, improperly lighted, and without ventilation of any kind but they are, as a matter of fact, an absolute and continual menace both to the health of the employees and to the community in general. With such conditions the environment must be such as to destroy the enthusiasm, the loyalty, and the efficiency of those who must perforce remain in them.

Personal cleanliness could be readily obtained if the employees in all post offices were afforded proper facilities to make such a thing possible, together with individual lockers wherein they could keep necessary changes of clothing, towels, etc.

Cleanliness of post-office workrooms and furniture could also be readily obtained by supplying each post office with a sufficient number of unskilled laborers to do this work.

Cleanliness of equipment could be easily obtained if all equipment were disinfected at specified periods.

This would necessitate the establishment of various cleansing stations throughout the United States paralleling, for instance, the 15 division headquarters of the Railway Mail Service. It would also very probably cost considerable money. This expenditure, however, it is believed, would in effect prove to be an economy through the resulting saving that must accrue to the department because of the prevention of disease and sickness, and the reduction of absences for these causes, and the untold wealth represented by a healthy, happy, contented, and necessarily efficient personnel.

Ventilating systems have become so highly developed and are obtainable at so slight a cost as to leave no excuse for the employment of any great number of men and women in a building not equipped with such a system.

Sanitation is also a matter vitally related to good health, the prevention of disease, etc., and, like ventilation, it is a science most highly developed in these days. The most improved systems could and should be installed in every post-office building.

The problem of furnishing proper light for post-office workrooms and the least harmful artificial light falls heaviest upon the Post Office Department. For those who are employed during the daylight hours this problem should be easily solved by a proper arrangement of the desks, separation cases, and other equipment, so that light could be obtained directly from the windows or a glass roof. Part of this problem could also be solved by not employing the clerks in basements or subbasements and permitting no workroom, rest room, or swing room to be located beneath the street level. It is just as feasible to have workroom 10 stories above the ground as it is to have it one or two stories below the ground.

The problem of artificial lighting is intensified in post offices because of the abnormal amount of work that must necessarily be performed by the clerical force after 6 p. m. and prior to 6 a. m. For this reason the most improved systems, those that have been tried out and shown to be the least harmful, such as the indirect lighting systems, could and should be installed in every post-office workroom.

With these systems established the environs of the average postal employee would of necessity add much to his enthusiasm for his work and considerably increase his efficiency and productivity.

COOPERATIVE SOCIETIES.

The idea of forming cooperative societies long ago became general among postal employees. These societies have operated with considerable success and have had wonderful results in increasing the purchasing power of the dollar and thereby reducing the cost of living.

Cooperative stores or societies, however, to be successful, must have a large clientele. The small society, with possibly less than 200 members, can not compete with the average chain store in the line of foodstuffs. Manufacturers of clothing, shoes, and apparel of any kind will not, as a rule, make any concessions to the small cooperative store. Hence we find very little of this work being done in the small cities, while in most of the larger cities the cooperative stores operated by the postal employees do a greater volume of business, are conducted more economically, and save more money for their patrons than do similar stores conducted and operated by the employees of outside corporations or industries.

To cite just one example, the Metropolitan Life Insurance Co.'s cooperative store did a total business during the last year of $160,000, while the New York post office employees' cooperative store, during the same period, did a total business of $250,000. At the same time the post office store is only one of several conducted in the terminals and stations attached to the New York post office.

The midday lunch has occupied the attention of outside employers to a great degree. Careful study has been made of this question, with the result that many of the employees, because of the expense, were unable to provide a proper lunch for themselves, and many others lost considerable time in preparing to go out for the lunch and in resuming their duties thereafter. For these reasons private corporations have found that they obtained a much better quality of work during the after-lunch period in all cases where the facilities for obtaining such lunch at a small cost, and in some cases at no cost to the employees, were made available.

The Metropolitan Life Insurance Co., of New York, placed the cost of serving the midday meal to the employees at the home office at $640,000 during the past year. Other corporations have had a similar experience.

The cooperative store, operated by the employees in the New York post office, conducts a cafeteria service, providing a light dunch, consisting of sandwiches, cake, pie, coffee, ice cream, etc., at a very slight cost and at a cost which is easily 60 per cent below what the same luncheon would cost in a restaurant.

The postmaster at Boston, Mass., has inaugurated the service of a midday lunch to the employees, consisting of soup, meat, vegetables, bread, butter, and coffee, at an average cost of 21 cents.

The postmaster at Washington has also arranged for the serving of a lunch, consisting of practically the same menu as the Boston menu, at a cost averaging 25 cents.

The same condition applies to the post office at St. Louis, Mo., and no doubt in many other of the large first-class post offices throughout the country.

The natural conclusion from the above is that the postal employees seem to be considerably ahead of other employees in this manner.

CONCLUSION.

In offering the above suggestions I have been mindful of your sincere desire to obtain concrete information that will enable you, in administering the office of Postmaster General, to advance as far as possible the interests, the welfare, and the happiness of the employees in the Postal Service, while at the same time the interest and welfare of the American people shall not be sacrificed.

I am confident that if the above suggestions were put into practice the Postal Service of the United States would not only be the biggest business institution in the world but it would also be the model governmental department in its treatment of its employees, in the efficiency of its service, and in the satisfaction of its patrons—a business institution that private enterprises and all other governments might with profit emulate. For these reasons I trust that the foregoing will merit your esteemed consideration.

In conclusion, I desire to express my sincere appreciation of the facilities placed at my disposal and of the assistance and information given to me in this work by Dr. Lee H. Frankel, director of welfare work of the Metropolitan Life Insurance Co.; to Miss La Fatra and Miss Boyle, Dr. Frankel's assistants; to Mr. S. J. Cuddihy, of the Literary Digest; and to Dr. D. R. Garland, welfare director of the National Cash Register Co.

Mr. STEENERSON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

Mr. SLEMP. Mr. Speaker, I yield five minutes to the gentleman from New York [Mr. GRIFFIN].

Mr. GRIFFIN. Mr. Speaker, the New York Herald under date of May 10 has this dispatch from Postmaster General Work:

The postal receipts for April amounted to $22,098,846. The New York City post-office receipts amounted to $4,476,003, an increase of over 100 per cent over April of last year and being one-fifth of the total revenues of the United States.

Mr. STEENERSON. Mail revenues?

Mr. GRIFFIN. Yes; one-fifth is derived from the New York district.

Mr. MADDEN. Oh, no; it can not be. If it is one-tenth it is doing very well.

Mr. GRIFFIN. It is for one month.

Mr. MADDEN. It can not be. There is possibly a mistake some place, because everybody knows the best they ever did was——

Mr. CLARKE of New York. Might not the mistake as well be with you as there? [Laughter.]

Mr. MADDEN. It is impossible. They only get $250,000,000 a year——

Mr. GRIFFIN. I am merely giving it for what it is worth. This is the dispatch of Postmaster General Work. It covers only one month—perhaps an unusual month—but even though the postal revenue of the New York district is one-tenth of the total postal revenue of the entire country, that is still a gigantic figure and ought to entitle New York to some consideration. The postal revenues of the New York district help to pay for rural postal delivery throughout the country—a service which has never been, and perhaps never will be, self-supporting—and it comes with very bad grace to split hairs over the trifling cost of extending to New York the slight measure of relief to be afforded by the pneumatic-tube service.

This amendment proposes only $513,911.50 for the mail tubes. Compare that, gentlemen, with the receipts of the New York district. It is less than one-hundredth of the receipts of that office; and we should not begrudge the tube service to a metropolis which contributes so generously to the support of the postal service of the entire country.

Before the tube service was discontinued, on June 30, 1918, we had mail delivery in the residential section six and seven times per day. After the discontinuance of the tube service the deliveries dropped to four a day and the deliveries in the business sections of the city have been curtailed from seven down to six per day. This embarrasses the business not only of the city but of the entire country.

The city of New York is a commercial metropolis and the business plexus of the United States; and you are indirectly promoting your own business welfare by facilitating the business of the country's greatest business center.

Mr. STEPHENS. Why did they abolish this system?

Mr. GRIFFIN. The Lord knows; I do not. If I had my way about it I would have the Government take charge of these tubes. It is an incongruous thing to have the Government, in its important Post Office Department, have employees under the employ of private contractors. The tubes are an incident to the Postal Service. They ought to be controlled by the Government itself. They are as much a part of the Postal Service as the mail trucks. But if we can not have the Government, in its present attitude, assume the responsibility of taking the courageous stand to provide that these tubes shall be controlled by the Government, then let us have the tubes by any means, and let us not be picayunish or mean about it. This amendment provides specifically that it is within the discretion of the Postmaster General whether he shall pay $18,500 or $17,500 per mile. The proviso states "not in excess of $18,500 per mile." He can pay that or any less sum. Let us give him credit for the business acumen not to pay any more than the conditions warrant.

On the motor-truck proposition I presume the gentleman from Illinois [Mr. MADDEN] would be willing to take the statement of Postmaster Morgan in a letter to Postmaster General Hays, dated October 8, 1921, in which, among other things, he stated that 32 motor trucks would be taken off the streets of the city of New York, at an annual saving of $416,500. Now, the appropriation for the tubes is only $513,000. In other words, the pneumatic service, with all its manifest advantages, will only involve a slight outlay of——

The SPEAKER pro tempore. The time of the gentleman from New York has expired.

Mr. GRIFFIN. Well, make the calculation for yourself.

Mr. SLEMP. Mr. Speaker, I yield two minutes to the gentleman from Massachusetts [Mr. DALLINGER].

Mr. DALLINGER. Mr. Speaker, one of the greatest blows to the efficiency of the Post Office Department was the discontinuance of the pneumatic tubes in the large cities. We felt it in my section of the country. We want them restored. As a first step we want this appropriation restoring them in New York City. The amount which the Senate amendment provides simply pays the absolute operating expenses, without any profit to the owners of the tubes.

Mr. MADDEN. I deny that.

Mr. DALLINGER. This amount which the Senate amendment provides was asked for by the President of the United States in a letter addressed to the President of the Senate dated January 20 of this year. It is asked for by the Post Office Department. The efficacy of the tubes has been repeatedly proved by commission after commission of experts appointed by Congress for the express purpose of investigating the whole question in all its bearings. The result of the adoption of the motion of the gentleman from Virginia [Mr. SLEMP] would be that there will be no tubes operated in New York City. I was talking with the Postmaster General only last night, and he said that with a contract price of $17,000 per mile the company can not operate the tubes, and that $18,500 is the smallest amount it can be done for. Every Member of this House who wants to see the pneumatic tubes restored in New York City, with the great saving to the Government and the still greater increased convenience to the public, will vote against the amendment of the gentleman from Virginia and in favor of the motion of the gentleman from Minnesota to recede and concur in the Senate amendment exactly as it is. [Applause.]

The SPEAKER pro tempore. The time of the gentleman from Massachusetts has expired.

Mr. SLEMP. Mr. Speaker, I would like to clarify the atmosphere a little bit about this tube proposition. I supposed that the point dividing us was as to whether we would have tubes or not. I am on the side of the tubes. The only question is how much money we should appropriate. The gentleman who has just taken his seat made an error in his statement. I read from the Budget estimate. Here is what it says. There is no mistake. It says:

It is estimated the actual cost of operation will be approximately $16,100 per mile.

Now, that is what it will cost to operate these tubes.

Mr. DALLINGER. That is the estimate.

Mr. SLEMP. That is the estimate by the Budget officer, and that is what we are acting on. That is the cost of operating the tubes. We used to run those tubes and make money at $17,000 per mile. My amendment provides $17,000, or a profit of $1,000 per mile.

Mr. DALLINGER. Will the gentleman yield?

Mr. SLEMP. Let me make my statement. There are 27 miles involved. Our proposition is a profit of $27,000. Their proposition is $2,500 per mile. Multiplying that by 25 miles, and you get what their proposition is. We know they can operate at a profit with a cost of operation of $16,000 per mile. We guarantee them a profit of $27,000 as an experiment. This proposition has been before Congress for over 30 years. In 1918 it was vetoed by the President. There is a lot of difference of opinion about it. The weight of authority is for it. I had great difficulty in making up my mind. I know we are on the safe side. It is for you to determine whether you want to save $40,000 in the operation of those tubes or throw it away. Therefore I hope my amendment will prevail.

I move the previous question, Mr. Speaker.

The SPEAKER pro tempore. The gentleman from Virginia moves the previous question on the pending motion.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Minnesota [Mr. STEENERSON] that the House recede and concur in Senate amendment No. 59.

The question was taken, and the Speaker pro tempore announced that the noes seemed to have it.

Mr. STEENERSON. Division, Mr. Speaker.

The House divided; and there were—ayes 41, noes 39.

So the motion to recede and concur in Senate amendment No. 59 was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Amendment No. 60: Page 26, line 1, insert:

"SEC. 8. That the provisions of that paragraph of the act entitled 'An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1922, and for other purposes,' approved March 1, 1921, which amends the act to reclassify postmasters and employees of the Postal Service and readjust their salaries and compensation on an equitable basis, approved June 5, 1920, and which provides that postal employees and substitute postal employees who served in the military, marine, or naval service of the United States during the World War and have not reached the maximum grade of salary shall receive credit for all time served in the military, marine,

or naval service on the basis of one day's credit of eight hours in the Postal Service for each day served in the military, marine, or naval service and be promoted to the grade to which such postal employee or substitute postal employee would have progressed had his original appointment as substitute been to grade 1, shall be amended by adding the following: 'shall apply to such postal employees and substitute postal employees who were in the Postal Service on October 1, 1920.'"

Mr. SLEMP. Mr. Speaker, I move that the House recede from its disagreement to amendment No. 60 and agree to the same with an amendment which I send to the Clerk's desk.

The SPEAKER pro tempore. The Clerk will report the amendment.

The Clerk read as follows:

Mr. SLEMP moves that the House recede from its disagreement to the amendment of the Senate No. 60 and agree to the same with an amendment as follows: In lieu of the figure "8," in line 1 of the matter inserted by said amendment, insert the figure "6."

The SPEAKER pro tempore. The question is on the motion to recede and concur with an amendment.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Amendment No. 61: Page 26, line 2, strike out the figure "2" and insert in lieu thereof the figure "9."

Mr. SLEMP. Mr. Speaker, I move to recede and concur with the following amendment.

The SPEAKER pro tempore. The Clerk will report the amendment.

The Clerk read as follows:

Mr. SLEMP moves that the House recede from its disagreement to Senate amendment No. 61 and agree to the same with an amendment as follows: In lieu of the figure "9," in line 22 of the matter inserted by said amendment, insert the figure "7."

The SPEAKER pro tempore. The question is on agreeing to the motion of the gentleman from Virginia.

The motion was agreed to.

Mr. SLEMP. Mr. Speaker, I move that the House agree to the further conference asked for by the Senate.

The SPEAKER pro tempore. The gentleman from Virginia moves that the House agree to the further conference asked for by the Senate. The question is on agreeing to that motion.

The motion was agreed to.

The SPEAKER pro tempore. Without objection, the Chair will appoint the following conferees on the part of the House: Mr. SLEMP, Mr. MADDEN, and Mr. SISSON. Is there objection?

There was no objection.

AMERICAN RED CROSS HEADQUARTERS.

Mr. LUCE. Mr. Speaker, I ask unanimous consent to take from the Speaker's table Senate Joint Resolution 43, insist upon the amendments of the House, and agree to the conference asked for by the Senate.

The SPEAKER pro tempore. The gentleman from Massachusetts asks unanimous consent to take from the Speaker's table Senate Joint Resolution 43, insist upon the amendments of the House, and agree to the conference asked for by the Senate. The Clerk will report the resolution by title.

The Clerk read as follows:

Senate joint resolution (S. J. Res. No. 43) to grant authority to continue the use of the temporary buildings of the American Red Cross headquarters in the city of Washington, D. C.

The SPEAKER pro tempore. The Clerk will report the House amendments.

The Clerk read as follows:

Amendment No. 1: Strike out the preamble.

Amendment No. 2: Page 2, lines 8 and 9, strike out "within such time as may hereafter be provided by Congress" and insert "not later than December 31, 1924."

The SPEAKER pro tempore. Is there objection?

Mr. GARNER. May I ask the gentleman who is the conferee on the Democratic side?

Mr. LUCE. The gentleman from Georgia [Mr. PARK].

Mr. GARNER. Has the gentleman talked with him about the matter?

Mr. LUCE. Yes.

Mr. GARNER. It is agreeable to him?

Mr. LUCE. It is.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. Is there objection to the Chair appointing conferees? [After a pause.] The Chair hears none, and the Chair appoints the following conferees on the part of the House: Mr. FESS, Mr. LUCE, and Mr. PARK.

Mr. HADLEY rose.

The SPEAKER pro tempore. The gentleman from Washington [Mr. HADLEY] is recognized.

Mr. STAFFORD. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER pro tempore. The gentleman from Wisconsin makes the point of order that there is no quorum present. The Chair will count.

Mr. GARNER. I suggest to the gentleman from Washington that he let his matter go over until Monday.

Mr. MONDELL. Mr. Speaker, I believe there is nothing further on the Speaker's table that requires attention.

The SPEAKER pro tempore. If the gentleman from Wisconsin will withhold his point of no quorum, the Chair wishes to submit some unanimous-consent requests.

Mr. STAFFORD. I will withhold it.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. OLIVER, for one week, on account of a visit on business.

To Mr. EVANS, until June 12, 1922, on account of important business.

To Mr. BULWINKLE, for 10 days, on account of business.

To Mr. DOUGHTON, for one week, on account of important business.

VISIT TO QUANTICO.

The SPEAKER pro tempore. The Chair is handed the following communication from the Secretary of the Navy, addressed to the Speaker, which the Chair will ask the Clerk to read.

The Clerk read as follows:

MAY 13, 1922.

Hon. FREDERICK H. GILLETT, M. C.,
House of Representatives, Washington, D. C.

MY DEAR MR. SPEAKER: It gives me much pleasure to inform you that the visit of the Members of the House to the Marine Corps post at Quantico, Va., which was postponed on account of bad weather, will take place on Thursday, the 18th instant.

The *Mayflower* has been assigned by the President to be used for the trip to Quantico and return, and will sail from the navy yard at 8.30 a. m. on the above-mentioned date.

Will you please bring this invitation to the attention of each Member of the House, as I am exceedingly desirous that a large number of the Members should take advantage of this opportunity to visit Quantico.

With best personal wishes, I am,

Very sincerely yours,

EDWIN DENBY,
Secretary of the Navy.

ADJOURNMENT.

Mr. MONDELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 17 minutes p. m.), the House adjourned until Monday, May 15, 1922, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. MADDEN: Committee on Appropriations. H. R. 11645. A bill making an appropriation to enable the Department of Justice to investigate and prosecute war frauds; without amendment (Rept. No. 1008). Referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. MADDEN: A bill (H. R. 11645) making an appropriation to enable the Department of Justice to investigate and prosecute war frauds; committed to the Committee of the Whole House on the state of the Union.

By Mr. MURPHY: A bill (H. R. 11646) authorizing the construction of a bridge across the Ohio River near Steubenville, Ohio; to the Committee on Interstate and Foreign Commerce.

By Mr. FREAR: Concurrent resolution (H. Con. Res. 56) providing for the rejection or expulsion of Senators or Representatives in certain cases; to the Committee on Rules.

By Mr. SHAW: Joint resolution (H. J. Res. 324) appropriating $500,000 for repairing and restoring levees on the Illinois River that have been destroyed or seriously injured by recent floods, and for other purposes; to the Committee on Appropriations.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALMON: A bill (H. R. 11647) granting an increase of pension to John S. Edmonds; to the Committee on Pensions.

By Mr. BEGG: A bill (H. R. 11648) granting an increase of pension to James F. Mitchell; to the Committee on Pensions.

By Mr. GENSMAN: A bill (H. R. 11649) granting a pension to Alexander Seals; to the Committee on Invalid Pensions.

By Mr. JOHNSON of Washington: A bill (H. R. 11650) granting a pension to Alva C. Cooper; to the Committee on Pensions.

By Mr. MONDELL: A bill (H. R. 11651) granting a pension to Annie E. Thompson; to the Committee on Invalid Pensions.

By Mr. A. P. NELSON: A bill (H. R. 11652) granting a pension to Nicholas G. Penfound, jr.; to the Committee on Pensions.

By Mr. PATTERSON of Missouri: A bill (H. R. 11653) granting a pension to James D. Spencer; to the Committee on Invalid Pensions.

By Mr. SWANK: A bill (H. R. 11654) granting a pension to Louis Winbray; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5586. By Mr. CHALMERS: Petition of the Religious Liberty Association, relative to House bill 9753; to the Committee on the District of Columbia.

5587. By Mr. CLAGUE: Petition of residents of Blue Earth County, State of Minnesota, requesting Congress not to pass House bill 9753 or any other Sunday bill, such, for example, as House bill 4388 or Senate bill 1948; to the Committee on the District of Columbia.

5588. By Mr. CULLEN: Resolution adopted by the Merchants' Association of New York, indorsing The Hague rules, 1921, for application to the foreign commerce of the United States; to the Committee on the Merchant Marine and Fisheries.

5589. By Mr. HOCH: Resolution adopted by the Presbytery of Emporia, meeting at Peabody, Kans., indorsing Senate Joint Resolution 31, proposing a constitutional amendment to promote uniform laws on the subject of marriage and divorce; to the Committee on the Judiciary.

5590. Also, resolution adopted by the Presbytery of Emporia, meeting at Peabody, Kans., indorsing House Joint Resolution 131, proposing an amendment to the Constitution prohibiting polygamy and polygamous cohabitation in the United States; to the Committee on the Judiciary.

5591. Also, resolution adopted by the Presbytery of Emporia, meeting at Peabody, Kans., indorsing House bill 9753, to secure Sunday as a day of rest in the District of Columbia; to the Committee on the District of Columbia.

5592. By Mr. KETCHAM: Petition of residents of Benton Harbor, Mich., protesting against House bill 9753; to the Committee on the District of Columbia.

5593. Also, petition of residents of Bangor, Mich., protesting against House bills 9753 and 4388 or Senate bill 1948; to the Committee on the District of Columbia.

5594. Also, petition of residents of Covert, Mich., protesting against House bill 9753; to the Committee on the District of Columbia.

5595. Also, petition of citizens of Benton Harbor, Mich., protesting against House bill 4388 or Senate bill 1948; to the Committee on the District of Columbia.

5596. By Mr. KISSEL: Petition of the Rice Leaders of the World Association, New York City, N. Y., relative to House bill 10159, introduced by Mr. Volstead; to the Committee on the Judiciary.

5597. Also, petition of the Women's International League for Peace and Freedom, Washington, D. C., relative to a Russian Commission; to the Committee on Foreign Affairs.

5598. Also, petition of the City of New York Board of Estimate and Apportionment, New York City, N. Y., relative to appropriations for public improvements; to the Committee on Appropriations.

5599. By Mr. A. P. NELSON: Petition of Milwaukee Chapter, American Institute of Banking, heartily approving the construction of the St. Lawrence deep waterway; to the Committee on Interstate and Foreign Commerce.

5600. By Mr. RAKER: Petition of J. E. Beuleson, of Spruce Pine, N. C., urging a fair protective tariff for the mica industry; to the Committee on Ways and Means.

5601. Also, petition of the board of directors of the California Alpine Club, protesting against the transfer of the Forest Service and the national forests from the Department of Agriculture to the Department of the Interior; to the Committee on Agriculture.

5602. By Mr. SMITH of Michigan: Petition of the Farm Bureau of Barry County, Mich., against reduction of appropriation for extension work in agriculture; to the Committee on Agriculture.

5603. By Mr. WEBSTER: Resolution adopted by the Presbytery of Spokane, Wash., indorsing H. R. 9753, a bill now pending in Congress to secure Sunday as a day of rest in the District of Columbia, and urging its early consideration and passage by Congress; to the Committee on the District of Columbia.

5604. Also, petition of a number of residents of Spokane and other cities of the State of Washington, opposing the passage by Congress of H. R. 9753, H. R. 4388, or S. 1948, measures providing for changes in the Sunday observance laws of the District of Columbia; to the Committee on the District of Columbia.

5605. Also, resolution of the Presbytery of Spokane, Wash., indorsing Senate Joint Resolution 31, a measure now pending in Congress proposing a constitutional amendment authorizing Congress to enact uniform laws on the subject of marriage and divorce, and urging its early consideration and passage by Congress; to the Committee on the Judiciary.

5606. Also, resolution of the Presbytery of Spokane, Wash., indorsing House Joint Resolution 131, a measure now pending in Congress proposing a constitutional amendment prohibiting polygamy and polygamous cohabitation in the United States, and urging its early consideration and passage by Congress; to the Committee on the Judiciary.

SENATE.

MONDAY, *May 15, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

PETITIONS AND MEMORIALS.

Mr. ROBINSON presented resolutions of the Arkansas State Federation of Labor, favoring the granting of a soldiers' bonus to be financed by the issuance of noninterest-bearing Treasury notes, which were referred to the Committee on Finance.

He also presented a resolution of the Arkansas State Federation of Labor, favoring the issuance of noninterest-bearing Treasury notes to be legal tender for all debts, public and private, such notes to be retired by taxing land values, which was referred to the Committee on Finance.

He also presented a resolution of the Arkansas State Federation of Labor, favoring making railroads abide by the decisions of the Wage Labor Board, and justifying strikes by employees to enforce the spirit of the law or to protect the interest of employees, which was referred to the Committee on Interstate Commerce.

Mr. MYERS presented a memorial of sundry citizens of Waco, Mont., and vicinity, remonstrating against the enactment of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

Mr. CAPPER presented petitions of the History Club and the Gunsaulus Chautauqua Literary and Scientific Circle, both of Kansas City, Kans., praying for the enactment of legislation creating a department of education, which were referred to the Committee on Education and Labor.

He also presented the petition of E. H. Lindley, chancellor, and members of the faculty of the University of Kansas, at Lawrence, Kans., praying that scientific apparatus used for educational purposes be placed on the free list in the pending tariff bill, which was referred to the Committee on Finance.

Mr. WILLIS presented a resolution of the Mount Vernon (Ohio) Real Estate Board, protesting against the extension of the so-called Ball rent act in the District of Columbia, which was referred to the Committee on the District of Columbia.

He also presented the petitions of C. H. Miller, of Woodburn, and sundry other citizens of Woodburn, Payne, Paulding, and Latty; Newton Hays and sundry other citizens of Oakwood; C. A. Krick and sundry other citizens of Paulding; Henry Weidner and sundry other citizens of Toledo; and Homer L. Smith and sundry other citizens of Paulding, all in the State of Ohio, praying for the imposition of a tariff duty of $2 per hundred pounds on imported Cuban sugar, which were referred to the Committee on Finance.

He also presented the petition of John W. Hoffman, president, and members of the faculty of the Ohio Wesleyan University, at Delaware, Ohio, praying for the passage of the so-called Dyer antilynching bill, which was referred to the Committee on the Judiciary.

Mr. SHORTRIDGE presented a memorial of sundry citizens of Hughson, Calif., and vicinity, remonstrating against the enactment of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

He also presented a resolution adopted by the Men's Club of the Methodist Church of Morgan Hill, Calif., favoring the enactment of legislation to deport aliens violating the Federal and State prohibition and narcotic laws, which was referred to the Committee on Immigration.

He also presented resolutions adopted by the Presbytery of Los Angeles, at Los Angeles, Calif., favoring amendments to the Constitution prohibiting polygamy and providing for uniform marriage and divorce laws, which were referred to the Committee on the Judiciary.

He also presented a resolution adopted by the Los Angeles Presbytery, at Los Angeles, Calif., favoring the enactment of legislation providing for Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

ALASKA FUR-SEAL SKINS.

Mr. ASHURST, from the Committee on the Judiciary, to which was referred the resolution (S. Res. 287) directing the Secretary of Commerce to furnish the Senate information as to sales of fur-seal skins under direction of the Secretary of Commerce, and copies of contracts relating thereto, reported it without amendment.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SPENCER:

A bill (S. 3607) to define the availability of a deficiency appropriation for support of Indian schools; to the Committee on Indian Affairs.

By Mr. NELSON:

A bill (S. 3608) to correct the military record of James Johnson (with an accompanying paper); to the Committee on Military Affairs.

By Mr. SHORTRIDGE:

A bill (S. 3609) for the relief of F. J. Belcher, jr., trustee for Ed Fletcher; to the Committee on Claims.

By Mr. SPENCER:

A joint resolution (S. J. Res. 197) appropriating $2,000,000 to be expended by the Secretary of Agriculture in furnishing free seed for the relief of destitute flood sufferers on the Mississippi River, its tributaries, and other rivers within the United States; to the Committee on Agriculture and Forestry.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the House had passed a bill (H. R. 10972) to readjust the pay and allowances of the commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service, in which it requested the concurrence of the Senate.

The message also announced that the House agreed to the report of the committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 9859) making appropriations for the Post Office Department for the fiscal year ending June 30, 1923, and for other purposes; receded from its disagreement to certain amendments of the Senate to the said bill; receded from its disagreement to certain amendments of the Senate and concurred therein each with an amendment, in which it requested the concurrence of the Senate; insisted upon its disagreement to certain amendments of the Senate; agreed to the further conference requested by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. SLEMP, Mr. MADDEN, and Mr. SISSON were appointed managers on the part of the House at the further conference.

The message further announced that the House insisted upon its amendments to the joint resolution (S. J. Res. 43) to grant authority to continue the use of the temporary buildings of the American Red Cross headquarters in the city of Washington, D. C., disagreed to by the Senate; agreed to the conference requested by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. FESS, Mr. LUCE, and Mr. PARK of Georgia were appointed managers on the part of the House at the conference.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (H. R. 4069) authorizing the Secretary of the Interior to sell certain lands on the Wind River Reservation, Wyo., and it was thereupon signed by the President pro tempore.

NAVAL OIL RESERVE LEASES.

Mr. LA FOLLETTE submitted the following resolution (S. Res. 294), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That Senate Resolution 282 is hereby amended by adding at the end of said resolution the following:

"The said committee is hereby authorized to sit and perform its duties at such times and places as it deems necessary or proper and to require the attendance of witnesses by subpœnas or otherwise; to require the production of books, papers, and documents; and to employ counsel, experts, and other assistants, and stenographers at a cost not exceeding $1.25 per printed page. The chairman of the committee, or any member thereof, may administer oaths to witnesses and sign subpœnas for witnesses; and every person duly summoned before said committee, or any subcommittee thereof, who refuses or fails to obey the process of said committee or appears and refuses to answer questions pertinent to said investigation shall be punished as prescribed by law. The expenses of said investigation shall be paid from the contingent fund of the Senate on vouchers of the committee or subcommittee, signed by the chairman and approved by the Committee to Audit and Control the Contingent Expenses of the Senate."

PRICES OF CRUDE OIL AND GASOLINE.

Mr. LA FOLLETTE submitted the following resolution (S. Res. 295), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That Senate Resolution 292 is hereby amended to read as follows:

"*Resolved*, That the Committee on Manufactures, or any subcommittee thereof, be, and it is hereby, authorized and instructed to investigate and report to the Senate as early as possible:

"First. The stocks of crude oil, gasoline, and other petroleum products at refineries or elsewhere in the United States at the end of each month for the years 1920, 1921, and 1922, and the holders or owners thereof.

"Second. The prices of crude oil, gasoline, and other petroleum products during the several months of said years and their relations to each.

"Third. Whether or not the recent increases or other recent changes in the prices of gasoline or of other petroleum products have been made generally or uniformly by all companies, and whether there have been marked local differences in the price changes made.

"Fourth. The profits of companies refining and marketing petroleum in the United States for the years 1920, 1921, and the first half of 1922.

"Fifth. Whether there is any natural reason for the changes of prices of crude oil, gasoline, and of other petroleum products, or whether there has been any understanding or agreement between various oil companies to raise or depress prices, or whether there are any conditions of ownership or control of oil properties or of refining and marketing facilities in the industry in any part of the country, or branch of the business, which prevent effective competition.

"Sixth. And all such facts as bear upon the recent changes in prices of crude oil, gasoline, or other petroleum products, or upon any other of the foregoing matters.

"The said committee is hereby authorized to sit and perform its duties at such times and places as it deems necessary or proper, and to require the attendance of witnesses by subpœnas or otherwise; to require the production of books, papers, and documents; to employ counsel, experts, and other assistants; and to employ stenographers at a cost not exceeding $1.25 per printed page. The chairman of the committee, or any member thereof, may administer oaths to witnesses and sign subpœnas for witnesses; and every person duly summoned before said committee, or any subcommittee thereof, who refuses or fails to obey the process of said committee or appears and refuses to answer questions pertinent to said investigation, shall be punished as prescribed by law. The expenses of said investigation shall be paid from the contingent fund of the Senate on vouchers of the committee or subcommittee, signed by the chairman and approved by the Committee to Audit and Control the Contingent Expenses of the Senate."

HOUSE BILL REFERRED.

The bill (H. R. 10972) to readjust the pay and allowances of the commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service was read twice by its title and referred to the special committee of five Senators appointed under the provisions of Senate Resolution 240, agreed to February 16, 1922.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, the pending question being on the amendment of the committee, in paragraph 51, alizarin assistant, etc., on page 22, line 25, to strike out "25" and insert "35" before the words "per centum."

Mr. KING. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Broussard	Colt	Dial
Ball	Bursum	Culberson	Dillingham
Borah	Capper	Cummins	du Pont
Brandegee	Caraway	Curtis	Edge

Elkins	Kendrick	Nicholson	Sterling
Fletcher	Keyes	Norris	Sutherland
France	King	Oddie	Swanson
Frelinghuysen	Ladd	Overman	Townsend
Gerry	La Follette	Page	Underwood
Glass	Lodge	Pomerene	Walsh, Mass.
Gooding	McCormick	Rawson	Walsh, Mont.
Hale	McCumber	Robinson	Watson, Ga.
Harreld	McKinley	Sheppard	Watson, Ind.
Harris	McLean	Shields	Weller
Harrison	McNary	Shortridge	Williams
Heflin	Moses	Simmons	Willis
Johnson	Nelson	Smoot	
Jones, N. Mex.	New	Spencer	
Jones, Wash.	Newberry	Stanley	

Mr. DIAL. I wish to announce that my colleague [Mr. SMITH] is unavoidably detained. I ask that this announcement may continue through the day.

The PRESIDENT pro tempore. Seventy-three Senators having answered to their names, a quorum is present.

Mr. McCUMBER. I ask that we may go back to paragraph 46, on page 20, citrate of lime, where the committee proposes to strike out "7" and insert "6," so that the paragraph will read:

Lime, citrate of, 6 cents per pound.

Mr. KING. I suggest to the Senator, if I may be pardoned, that that paragraph and the amendment in lines 10 and 11, in paragraph 1, on page 2, where the committee proposes to increase the rate on citric acid from 12 to 18 cents per pound, are so closely assimilated that the two should be considered and discussed together.

Mr. JOHNSON. Mr. President, the suggestion of the Senator from Utah is eminently correct. We passed over last week the portion of paragraph 1 found on page 2, lines 10 and 11, providing for a rate of 18 cents per pound on citric acid, and then subsequently paragraph 46, on page 20, line 16, providing for 6 cents a pound on citrate of lime. The relation between the two items requires that they should be considered together.

Mr. President, this is one of the instances where the policy of protection is most appealing. Not only is it appealing because it conserves an industry, but because, too, the demonstration is absolute and complete that the protection endeavored to be accorded by these rates does not in reality meet the difference in labor costs between the production abroad and the production at home.

At the beginning of the very brief discussion in which I wish to indulge in this matter, permit me to say that there is a grave difference of opinion in the State of California concerning the appropriate rates and duties that ought to be fixed upon these products. All, however, are agreed that the rates on the bill are too low, are unjust, and wholly disproportionate.

There appeared before the Committee on Finance when they had this subject under consideration a very excellent and well-known gentleman from southern California, Mr. Hamilton, who represented certain of the growers there, to whose testimony, I am sure, the members of the Finance Committee listened sympathetically and whose argument in favor of very greatly increased rates was quite persuasive. I have carefully canvassed the situation, Mr. President, and whatever might be my views as to the increased rates which were requested by Mr. Hamilton, I find that it would be utterly futile to insist upon them at this time. Therefore I advocate the lower rates that were asked by others who appeared before the committee at the time this question was under consideration. We have asked the Finance Committee for a duty in the one instance of 20 cents per pound upon citric acid, and, in the other instance, on citrate of lime of 12 cents a pound. The proportions that are fixed by the tariff bill as presented are proportions that are not at all exact and that admittedly do not represent the differential between the one item in its raw character and the other that is made from the raw material.

First, Mr. President, as to the question of the protection upon this kind of commodity: This new industry, if I might borrow a phrase that has been used very often in regard to the protective policy, is an infant industry. This is the first time in reality that the Congress has been called upon to provide protection for this industry. Citrate of lime and citric acid are, of course, the products of lemons, and, as both are the product of lemons, the one is the product of the other. Citrate of lime is the intermediate product out of which citric acid is made. Both citric acid and citrate of lime are imported principally from Italy, but also from other countries.

Mr. SHEPPARD. Mr. President——

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Texas?

Mr. JOHNSON. I yield.

Mr. SHEPPARD. What is the present rate of duty on these two commodities?

Mr. JOHNSON. The rate was fixed at 1 cent, I think. However, what I am endeavoring to explain is that this is the first time in reality that these products have come as an American industry seeking protection at the hands of Congress. Originally, when the Payne-Aldrich bill was passed, there was no such thing as a domestic citric-acid industry as an outgrowth of the production of American lemons. When the Underwood tariff bill was passed the industry was of no commercial importance at all; it was then in a merely experimental stage. The consumption of citric acid at that time was 3,000,000 pounds per annum. The pending bill is really the first opportunity that has been afforded to seek protection of what has grown to be a very great industry since the enactment of the Underwood bill. The industry was established commercially in 1915. It developed because of the war conditions thereafter obtaining.

The present production of citric acid from home-grown lemons is one and one-half million pounds, and the present consumption in this country is approximately four and a half million pounds. It will be observed, therefore, that in the very brief space during the World War the industry in this country has risen to such importance that it produces one-third of the entire consumption, and the condition of the lemon industry is such that in a very few years practically all the consumption of this country may be supplied within our own borders. Therefore, we have now first presented the fact that here is a new industry in the United States, an industry which requires for its nurture and its fostering the aid that may be given by a Republican protective tariff; and I may say even from the standpoint of my bretheren upon the other side of the aisle, an industry which from the standpoint of many of them ought to be accorded protection.

As I have stated, citrate of lime and citric acid are produced from lemons. The lemon industry in the State of California now provides a considerable portion of the domestic consumption, and within a very brief period, as our tariff experts say, it will be sufficient and more than sufficient to supply the entire demand of the American market. It is essential, in the first instance, that the lemon industry should be protected; and, in the second instance, that the incidental very important commercial enterprise may be nurtured by adequate protection.

Mr. BORAH. Mr. President, may I ask the Senator from California a question?

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Idaho?

Mr. JOHNSON. I yield.

Mr. BORAH. Who is our chief competitor in the production of these articles?

Mr. JOHNSON. Italy is our chief competitor. Not only that, sir, but let me call the Senator's attention to the fact that not only is Italy our chief competitor in the production of lemons but the Italian Government nurtures and fosters the commercial enterprise engaged in the production of citric acid. In order that Senators may understand exactly what the Italian Government does in that regard, let me read to them a word from what has been stated by the Tariff Commission in the matter:

> An important feature of the industry is the Sicilian method of selling the citrus products. The Italian Government created a citrus chamber or Camera Agrumaria to control and regulate the market for citrus products. This chamber is made up of a certain number of producers and exporters from each of the Provinces, together with representatives from the ministries of commerce and agriculture and a president nominated by the council of ministers.
>
> Citrate of lime and citric acid are handled almost exclusively by the camera, which fixes the prices periodically and through its agents allots monthly deliveries to buyers all over the world. It guarantees the producer a certain minimum price for his product, and the Italian Government levies an export duty amounting to 1 lira per quintal (0.087 cents per pound) on all sales not made through the Camera Agrumaria. The producers deposit their output with the camera, and they are advanced 80 per cent of the value of the citrate of lime, and the balance is adjusted when the sale is made.

So it will be seen, first, that we have a new industry, which has grown from small proportions and which is essential in reality for the prosperous carrying on of the lemon industry in the States of the West. Secondly, we have the product with which we come in contact and with which we compete, fostered by governmental aid in Italy. Therefore it would seem to be but just that the Government should aid the industry here as Italy aids its industry and enables it to compete with us, and more than compete unless adequate protection shall be given to us.

The duty which we ask of 20 cents per pound is equivalent to three-fourths only of the differential in favor of Italy in the labor cost of producing citric acid. The duty of 18 cents per pound, which the Senate Finance Committee has accorded, is equivalent to two-thirds only of such differential. The labor cost of producing a pound of citric acid in the United States

from American-grown lemons is 35.6 cents. The labor cost of producing a pound of citric acid in Italy is one-fourth of the American labor cost, as shown by the Tariff Commission's report before me, or 8.9 cents. The difference between Italian and American costs in the production of citric acid is 26.7 cents. The committee has accorded us 18 cents; we desire 20 cents, and the 20 cents ought to be given to us. If we can get no more than 18 cents, of course we will be glad to worry along as best we may.

It is a fact that originally citrate of lime was made from culls of the lemons. Under the circumstances now existing, however, in lemon culture it is by no means certain that in the future a portion of the crop will not have to be used in like fashion. May I say to the Senate that the largest citric-acid factory in southern California is a cooperative establishment of the growers there. The growers have found it necessary to utilize, if they can, their culls and in some instances in the past even the excess of the crops, in order that they may not be hopelessly lost and hopelessly ruined. So this industry, I insist, calls more loudly for protection than almost any that has been presented here or any that will be presented here.

Mr. WILLIS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Ohio?

Mr. JOHNSON. I yield.

Mr. WILLIS. I have received from constituents, largely drug companies and chemical companies, some complaint about this item on the theory that the price to the consumer would be inordinately increased. I understand the Senator to say that, unless we develop this industry here, we shall be in the hands of what amounts to a Government monopoly in Italy. What is the opinion of the Senator as to the ultimate effect of the two policies on the consumer's prices?

Mr. JOHNSON. I do not believe that it will enhance the prices at all. It will lessen the profits of those who already have made inordinate and extravagant profits.

Let me call attention to just a bit of the testimony that was offered in opposition to the duties that are asked. The testimony was presented to the Finance Committee, and, of course, I assume the Finance Committee is thoroughly familiar with it, but there may be other Senators who are not so familiar with it. There was a gentleman on the stand from the city of Philadelphia who represented the manufacturing interests of the East. He was asked various questions by Senator REED concerning his profits and the like. Let me read a portion of the testimony which he gave. This is the source, I insist, of the opposition to the duties that are asked by the men who are growing lemons in California and by those who are manufacturing citrate of lime and citric acid at present.

Mr. FRELINGHUYSEN. Mr. President, may I interrupt the Senator?

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from New Jersey?

Mr. JOHNSON. I yield to the Senator from New Jersey.

Mr. FRELINGHUYSEN. I do not think the Senator quite appreciates the situation in regard to this duty. As I understand these manufacturers, they do not oppose this duty. What they wish is a proper differential between the rates.

Mr. JOHNSON. I am coming to that. I will reach that shortly. At present I am confining myself to the necessity for a duty and the justice of it.

I want to read a part of the testimony that was given by a gentleman named Rosengarten before the Finance Committee. The Senator from Missouri [Mr. REED] asked him:

Did you bring me the figures in regard to the capital stock of your corporation?
Mr. ROSENGARTEN. No, sir.
Senator REED. Do you know what it is?
Mr. ROSENGARTEN. Yes, sir.
Senator REED. How much is it?
Mr. ROSENGARTEN. I most respectfully decline to answer.
Senator REED. It is a matter of public record, is it not?
Mr. ROSENGARTEN. No, sir; it is not.
Senator REED. You came to this committee and asked to have your business protected, and yet you decline to tell the committee even the amount of your capital stock?
Mr. ROSENGARTEN. Yes, sir.
Senator REED. Will you tell me what the gross profits of your corporation were last year?
Mr. ROSENGARTEN. I must respectfully decline to answer that question.
Senator REED. Will you tell me what the net profits were?
Mr. ROSENGARTEN. I must decline to answer that also.

Mr. KING. Mr. President, will the Senator yield?

Mr. JOHNSON. Yes.

Mr. KING. Is the Senator reading from the testimony of Mr. Rosengarten of the firm of Powers, Weightman & Rosengarten?

Mr. JOHNSON. I do not know what the firm is. The Senator may be right about the firm. I can turn to the beginning of it and advise the Senator.

Mr. KING. I will not ask the Senator to do that.

Mr. JOHNSON. I will turn to the beginning of it. He says:

I am connected with the Powers-Weightman-Rosengarten Co.

That is stated in answer to the first question that was asked.

Mr. KING. That is one of the large corporations.

Mr. JOHNSON (reading):

Senator REED. Will you tell me what the gross profits of your corporation were last year?
Mr. ROSENGARTEN. I must respectfully decline to answer that question.
Senator REED. Will you tell me what the net profits were?
Mr. ROSENGARTEN. I must decline to answer that also.
Senator REED. Will you tell me who the vice president, the secretary, and the treasurer are?
Mr. ROSENGARTEN. I must decline to answer that question also.
Senator REED. Will you tell me whether you paid any excess-profits tax last year?
Mr. ROSENGARTEN. I must decline to answer that question.
Senator REED. Will you tell me the amount carried to your surplus?
Mr. ROSENGARTEN. I beg to be excused from answering that.

We need not worry about what will happen to the manufacturers of the East who deal with this subject or with those who are importing these items.

Mr. NORRIS. Mr. President, may I interrupt the Senator there?

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Nebraska?

Mr. JOHNSON. Yes.

Mr. NORRIS. It would be interesting to know whether that witness was protesting against an increase in this duty.

Mr. JOHNSON. Yes; he was.

Mr. NORRIS. He was opposed to it?

Mr. JOHNSON. Oh, yes.

Mr. KING. Mr. President, will the Senator yield?

Mr. JOHNSON. Yes, sir.

Mr. KING. I think the Senator from New Jersey, if the Senator will pardon me, more accurately expressed it. Mr. Rosengarten and a great many others who are importing do not care what tariff is permitted on the finished product. They are more interested in the raw material if they import the raw material for the purpose of manufacturing the finished product. They want protection per se on their raw material on the finished product. If they can get a high tariff on the finished product there must be a proper differential on the raw material, and vice versa. Mr. Rosengarten, representing a firm that is the beneficiary of the tariffs fixed upon a large number of items here, is wholly indifferent to the amount of tariff which is imposed upon citric acid, providing a proper differential is mantained between citric acid, the so-called finished product, and citrate of lime, the so-called raw material.

Mr. JOHNSON. I take it from what the Senator from Utah says that he is in full sympathy with my endeavor to get these rates, and I am delighted to hear it.

These products, citric acid and citrate of lime, are termed by-products of lemons. That may at times be a misnomer, but nevertheless it is the mode in which the two products are described. The Tariff Commission, speaking of the future of these by-products, in its series of 1920, says:

There is an opportunity for the growth of the by-product industry in California through the more complete utilization of the culls and through the growth of the lemon-growing industry. The acreage of young, nonbearing lemon groves in California is about 75 per cent of the acreage of bearing trees, and much of the latter is in young orchards which have not reached the full-bearing stage. It may, therefore, be predicted that within five or six years the total crop of lemons will be nearly double that produced during 1918. If the same proportion of the crop were treated as culls, and if all the culls were converted into by-products, the production of by-products would be about four times as great as at present (1918). Should it prove difficult to sell the double crop of lemons at profitable figures, the tendency will be to grade more strictly, and thereby to increase the proportion of culls.

Now, let me state to you the comparative wages in Italy and America in the production of these products.

Some questions were asked the other day, during a running debate, as to the difference in the cost of production abroad and that here; and the suggestion seemed to be in the minds of some Members that if that could be established there would be a mode, at least, upon which those who may not think as the rest of us do upon this subject concerning the tariff bill could agree upon the protective policy. In this instance we happen to have the figures of the comparative wages in Italy and in America in this particular line, and these figures show that the general average ratio is as 4 to 1. I want you to keep that in mind in determining what rates should be put upon these products, because we have not asked the full differential in labor

cost alone in the rates that we have asked in this bill. We have asked but a fraction of the differential in labor cost in Italy and that in the United States.

The cost of handling and processing low-grade lemons in the two countries, of course, is vastly different. The freight costs are all in favor of the importer from Italy and against the producer in the West. It costs—and I need not dilate upon that, for it is a subject familiar to all here—infinitely less to ship from Italy into New York than to transport from southern California into New York; and the result is that we are discriminated against in labor costs, in costs of processing, in costs of transportation, and we can only meet those differentials by a protective tariff such as we have suggested.

The cost of manufacturing citrate of lime from lemons is 34.4 cents per pound. The cost of labor alone is 20.2 cents. The cost of manufacturing citric acid from lemons is 66.9 cents per pound, and the labor cost 35.6 cents.

Turning for the moment to citrate of lime, through which citric acid must come, at the time of the passage of the existing tariff act, the act of 1913, there was no manufacture of citrate of lime, as I have said in regard to citric acid. Then there was an existing duty, as was asked by the Senator from Texas, of 1 cent per pound upon citrate of lime, placed there merely for revenue, and for no other purpose, because at that time there was no commercial enterprise or manufacture of this sort. The duty that is asked upon citrate of lime by us only partially equalizes, I emphasize again, the difference in labor costs of manufacture of citrate of lime in the United States and Italy. I gave you, I think, those figures, but repetition will not be amiss.

The labor cost in the United States is 20.2 cents per pound; in Italy, 5.1 cents—a difference in labor cost alone in the manufacture of citrate of lime in favor of Italy of 15.1 cents per pound. That labor cost we do not meet even by a duty such as I request of 12 cents a pound. It certainly is not met in any direction at all by the duty that the Finance Committee has put upon citrate of lime of 6 cents per pound. This duty of 6 cents per pound, as you observe by a computation, is less than 40 per cent of the labor cost alone.

My friend from New Jersey [Mr. FRELINGHUYSEN] speaks of the differential; and the determination of what should be the differential between citrate of lime and citric acid will turn upon the citric-acid content of citrate of lime. The Bureau of Chemistry of the United States Department of Agriculture on two occasions has been appealed to by us for the exact figures. It gave those figures in a letter that I presented to the Finance Committee, and subsequently those figures were challenged by the Senator from New Jersey and certain gentlemen whom he represents. Thereupon Mr. Campbell, the Acting Chief of the Bureau of Chemistry, again investigated, and this is what he says upon the difference between citrate of lime and citric acid—that is, the content of the one included in the other:

> As stated in our former letter, citrate of lime contains the equivalent of approximately 73 per cent citric acid. The citric-acid content of commercial citrate of lime varies, of course, with the impurities which the product may contain. It is our understanding that commercial citrate of lime is sold on a basis of 64 per cent citric acid, but reports are that it may vary from 60 to 72 per cent, as stated in our previous letter, one writer having reported the unusually high content of 72 per cent in a sample of commercial citrate of lime which he had examined.
>
> After writing you the letter of the 21st, we telegraphed our expert on citrus by-products in California for further information. In reply he states that in good factory practice 57 per cent crystallized citric acid is recovered from commercial citrate of lime containing 64 per cent of citric acid

The very minimum, therefore, of citric acid in citrate of lime is 57 per cent. It runs from 57 per cent as a minimum to between 70 and 80 per cent as a maximum. You may take the very minimum if you desire and apply it to the differential between citrate of lime and citric acid; and, applying it, the rates that we ask, 20 to 12, would be exact. These gentlemen insist that they are entitled to a differential for labor cost. Not so; and if they were entitled to any differential for labor cost it could be only the cost of processing the citrate of lime and could not be the entire cost of manufacture that they assert; but they are entitled in a protective tariff duty to no differential of that sort, because the same differential of necessity would then have to be applied to those who are processing and who are manufacturing in the State of California.

I leave to our friend from New Jersey the argument that he may have in that regard. But I do insist that, first, this is a new industry, since 1915 developing into one of the great industries of the country, entitled to the favorable consideration of the Congress. Secondly, when it asks that favorable consideration, it is entitled, too, to have considered what it comes in contact with, what it must compete with, namely, the Italian Government; and surely the American Government should be as generous to Americans producing here as is the Italian Government to Italians producing there, whose goods and whose manufactured products are shipped to this country in competition with ours.

A third reason which entitles us to consideration is the ever-increasing lemon crop in the West, an increasing crop which must be taken care of, and can only be taken care of by taking care of these by-products of lemons. If Senators were familiar with what has transpired in the lemon industry in the last few years, I would not have to ask for duties that are protective upon these two articles. Had they seen, as I have seen in southern California, the great banks of lemons in the roads there, with big signs upon them telling passers-by to help themselves; if they had seen, as I have seen, carload after carload dumped because there was no market for them, they would understand that it was not out of place for these people, who have devoted their all to an industry that is one of the greatest in the country now, to ask to be protected by our Congress in their moment of stress and their moment of adversity.

I leave this case with the Congress, certain and confident that no other case in all this bill presents so clear an appeal to the policy of protection, presents such an appeal to the justice of men upon both sides of this Chamber, as this relating to citric acid and citrate of lime.

Mr. NORRIS. May I ask the Senator a question before he concludes?

Mr. JOHNSON. I yield.

Mr. NORRIS. I want to ask the Senator about the figures he gave us in regard to the cost of production. Were those the Tariff Commission figures?

Mr. JOHNSON. The Tariff Commission figures in the one instance, and the figures which were obtained by the experts in California in the other.

Mr. NORRIS. What was the date of those figures?

Mr. JOHNSON. 1920–21.

Mr. SHEPPARD. Mr. President, may I ask the Senator what would be the effect of the duty he requests on further importations of these two products and on the revenue?

Mr. JOHNSON. It would greatly increase the revenue, of course.

Mr. SHEPPARD. The duty would not be prohibitive?

Mr. JOHNSON. By no means.

Mr. FRELINGHUYSEN. Mr. President, I have no disposition whatever to oppose any proper protection to the great citrus-fruit industry in California. The situation which confronted the committee was this: On the one hand, we had certain industries in this country who were converting citrate of lime into the finished product, citric acid, who had been long engaged in that industry, and who simply asked that the proper protection be given them in the conversion of this product.

Citrate of lime is a product of lemon juice and lime, the lime used as a neutralizer. The further process of manufacturing is the using of acid to make citric acid, the finished product, which is used in flavoring extracts, soft drinks, and for other purposes.

Under the act of 1909 citrate of lime was on the free list. In 1913 the duty was 1 cent a pound, with 5 cents on the citric acid.

In the bill as it passed the House, which we are now considering, the duty was 7 cents per pound on the citrate of lime and 12 cents on the citric acid. Of this citrate of lime we imported 2,961,000 pounds in 1918, 3,864,000 pounds in 1919, 12,490,000 pounds in 1920, and 754,000 in the nine months of 1921. The price declined from 26 cents a pound in 1918 to 15 cents a pound in 1921.

The committee placed a duty of 6 cents per pound on the citrate of lime imported at a cost of 15 cents per pound, equivalent to 40 per cent ad valorem. The Senator from California now asks that the duty be increased to 9 cents per pound. That affects the raw product which is imported.

There are manufacturing chemists in this country who take the citrate of lime and convert it into citric acid. Therefore, it is necessary to have a compensatory duty protecting those manufacturers who convert citrate of lime into citric acid. From the information which the committee had, procured from the Tariff Commission and elsewhere, it was found that the content of citric acid in citrate of lime, the raw product which is imported, is approximately 73.7 per cent. That is the chemically pure; but the commercial article is a crude product produced by treating lemon juice with lime, forming an insoluble citrate of lime, which contains many impurities. The citric-acid content of the commercial citrate of lime imported from Italy—I do not know whether by private concerns or by the

Italian Government—ranges from 60 to 67 per cent. It is sold on the basis of 64 per cent, but usually the shipments run below that strength.

Taking into account the other acids present in the commercial citrate of lime, and the losses which necessarily occur in converting lime, the yield of citric acid is approximately 50 per cent by weight of citrate of lime used; in other words, 2 pounds of citrate of lime are required to produce 1 pound of citric acid.

Commenting on the differential between the 7 cents per pound on the citrate of lime and 12 cents on the citric acid, placed in the bill as it passed the House, the Tariff Commission make this analysis:

The rates of duty between citrate of lime (7 cents per pound) and citric acid in paragraph 1 (12 cents per pound) are maladjusted. Citrate of lime is a raw material used for the manufacture of citric acid, 2 pounds of citrate of lime being required to produce 1 pound of citric acid; hence a duty of 7 cents per pound on citrate of lime is equivalent to 14 cents per pound on the citric-acid content, which is 2 cents greater than the duty provided for citrict acid. Therefore manufacturers engaged in converting citrate of lime into citric acid are placed at a disadvantage of 2 cents per pound in purchasing their raw material, as compared with imported citric acid.

So the Senate committee reduced the rate of duty on citrate of lime to 6 cents per pound, and placed a rate on citric acid of 18 cents per pound, 6 cents covering the duty on the citrate of lime and 12 cents the differential of 2 pounds to 1, making the rate 18 cents per pound, the committee believing that to be a fair differential.

I have no desire whatever to prevent the great State of California from establishing this industry, from producing sufficient culls of lemons, as they are called—it being the second grade of lemons which are taken, neutralized with lime, to make citrate of lime—if the great State of California can furnish sufficient of this product to supply the American demand. But what report have we of the probability of the State of California doing that? I read from the Tariff Commission report:

A comparison of the situation in Sicily and California shows several interesting differences. In California the cultural methods in the lemon groves are superior to those generally used in Sicily, and the proportion of culls is therefore much less than in Sicily. Although the proportion of culls is variable, it may be roughly estimated at 10 per cent in California, against 30 to 50 per cent in Sicily. The Sicilian method of separating the peel and pressing out the oil by hand is not used in California because of the higher American wages. In California the whole fruit pulp is put through a machine which thoroughly shreds it, and the pulp then passes to a filter press, which yields an emulsion of juice and oil.

Mr. KING. Will the Senator yield?

Mr. FRELINGHUYSEN. I yield.

Mr. KING. If I understand the description given there, it would indicate that the labor cost in California was very much less because of the employment of machinery rather than hand labor.

Mr. JOHNSON. The Senator is in error as to that. I gave the labor costs accurately.

Mr. FRELINGHUYSEN. Undoubtedly it is done by machinery, but, as I understand it, in Italy they use the lemon juice with the lime, and in California they make a pulp and mix it with the lime, probably greater in bulk but not as high in citric-acid content. I read further from the Tariff Commission report:

The California by-product industry is, however, still small compared with the American consumption. During 1917 about 6,000 tons of lemons were consumed in California in the manufacture of by-products. This is probably about one-half of the total culls available. The output of citric acid was only about 5 per cent of the American consumption.

The output of citric acid was only 5 per cent of the American consumption.

Mr. JOHNSON. The output of citrate of lime and citric acid is now more than one-third of the consumption of these articles in this country.

Mr. FRELINGHUYSEN. I am quoting from the Tariff Commission report which undoubtedly the Senator challenges.

I read further from the Tariff Commission report:

FUTURE OF THE DOMESTIC BY-PRODUCT INDUSTRY.

There is an opportunity for the growth of the by-product industry in California through the more complete utilization of the culls and through the growth of the lemon-growing industry. The acreage of young, nonbearing lemon groves in California is about 75 per cent of the acreage of bearing trees, and much of the latter is in young orchards which have not reached the full-bearing stage. It may, therefore, be predicted that within five or six years the total crop of lemons will be nearly double that produced during 1918. If the same proportion of the crop were treated as culls, and if all the culls were converted into by-products, the production of by-products would be about four times as great as at present (1918). Should it prove difficult to sell the double crop of lemons at profitable figures, the tendency will be to grade more strictly, and thereby to increase the proportion of culls. It is hardly to be expected, however, that the output of by-products will increase sufficiently to supply the entire American demand.

Now, Mr. President, we have this situation. Citrate of lime was free in 1909. In 1913 under the Underwood law there was imposed a duty of 1 cent per pound which was for revenue purposes. The House bill fixed the rate at 7 cents per pound, while the Senate committee places it at 6 cents per pound, which is 40 per cent ad valorem on the present price of citric acid, the manufactured content, which California wants to produce and of which, according to the best reports we have, the maximum yield is 20 per cent, although the Senator from California has said it is 30 per cent. Taking it at 30 per cent, we would be placing a duty over the 1913 law of 5 cents, or 40 per cent ad valorem, which I claim is sufficient to protect.

I think California ought to be satisfied with that protection, but I want to point out to the Senate that we can not place that duty on this raw product, which amounted to 12,000,000 pounds of importations in 1920, without placing an added cost on the consumer unless California produces 12,000,000 pounds of citrate of lime. Otherwise, whatever proportion California falls below the consumption of the country there would be that proportionate cost added on the product to the consumer.

Mr. KING. Mr. President, will the Senator yield?

Mr. FRELINGHUYSEN. I yield.

Mr. KING. As I understand the position of the Senator from California, he desires to increase the duty on citrate of lime to 12 cents per pound.

Mr. JOHNSON. Originally I asked for 20 cents and 12 cents. After canvassing the situation I decided to accept 18 cents and 9 cents, which is the very lowest that ought to be accorded—that is, the rate fixed by the Finance Committee of 18 cents and increasing the 6 cents fixed by the committee upon citrate of lime to 9 cents. We are entitled to very much more.

Mr. KING. May I suggest to the Senator from New Jersey, with his permission, that if 9 cents a pound were fixed as a rate on citrate of lime it would be the equivalent of a little more than 60 per cent based upon the present price of citrate of lime.

Mr. FRELINGHUYSEN. That is correct, I will answer the Senator from Utah. The committee put 40 per cent duty on citrate of lime. Now it is proposed to increase that duty to 60 per cent. But the Senator from California is getting citric acid confused with citrate of lime. The Senator from California said that originally he had asked for 20 cents, but I think he is in error in that. I do not think he would have asked for 20 cents on citrate of lime, the raw product. I think he meant citric acid.

Mr. JOHNSON. Certainly. My amendment is on file, asking for 20 cents on citric acid and 12 cents on citrate of lime. The amendment is here before me.

Mr. FRELINGHUYSEN. I claim that a differential of 2 cents a pound on citrate of lime, making the duty 12 cents, with 6 cents the present duty on citric acid, making a total of 18 cents, is a proper differential. In other words, it should be 3 to 1 instead of 2 to 1. That is the point I am making, that it should be 3 to 1 if we are going to grant a rate of duty of 9 cents a pound on citrate to enable the Senator from California to protect his great industry. We should increase the duty on citric acid to 24 cents. If we do that, we are giving a compensatory duty on citric acid of 24 cents a pound, 18 cents for the citrate of lime, 2 pounds making 1 pound of citric acid, and 6 cents for conversion cost.

Mr. JOHNSON. Mr. President, I desire to say just a word in response to the Senator from New Jersey. I have read to the Senate the letter from the Bureau of Chemistry with the exact figures as to the amount of citric acid that may be produced from citrate of lime. It is not 2 for 1 at all. The figures I have read are those which were given me only a week ago, when the figures which had been given to the Finance Committee by me, from Mr. Campbell, were challenged by the Senator from New Jersey and certain gentlemen whom he represents.

As to the differential costs, permit me to say that the labor cost of converting citrate of lime into citric acid in California is 4 cents per pound. That is the testimony. The American converters of the imported citrate of lime, so far as I have been able to discover, have failed to furnish their cost figures, and in the absence of any such figures it might be assumed that their cost figures are no greater than the California manufacturer who has been in business a much shorter length of time. Bear that in mind, please, in speaking of the differential. The Italian labor cost for this process is 1 cent per pound. Thus the labor differential in favor of Italy is 3 cents a pound. I am arguing now from the standpoint of the Senator from New Jersey, although I do not think the differential ought to

enter into the calculation at all. Let us from his standpoint take the figures and see what the result is.

A margin of 2½ cents per pound, if it were accorded, is equivalent to five-sixths of the labor differential; that is, five-sixths of the differential between Italy and the United States, if we accorded them 2½ cents per pound. This is a greater degree of protection than the manufacturer using home-grown lemons receives from a 10 per cent rate on citrate of lime. The labor differential between the United States and Italy in the manufacture of citrate of lime from lemons is 15.1, the cost in Italy being 5.1 cents per pound and in the United States 20.2 cents per pound. This 10 cents of duty represents only two-thirds of the labor differential in the manufacture of citrate of lime from the lemon, whereas a 6-cent margin, which the Senator from New Jersey suggests, is equal to double the labor differential. If 9 cents were accorded to citrate of lime, with the ratio of 1¾, as the Bureau of Chemistry asserts, there would be a labor differential between the 9 and 18 of 3 cents for the manufacturer in New Jersey. I insist that he is not entitled to a greater differential. I am insisting that he is entitled to none, but to accord him 3 cents accords him substantially the entire differential in labor cost between Italy and the United States.

Mr. FRELINGHUYSEN. I still claim that the proportion between the citric-acid content and citrate of lime is 2 to 1 in the actual commercial practice. Chemically pure, it may be 73 per cent, but the product that comes to this country from Italy averages 50 per cent. There is wastage, there is loss through conversion, and evidently others have thought so, too, because the differential allowed in the Underwood law of 1913 was 3 cents, the duty on citrate of lime being 1 cent and on citric acid 5 cents, with a differential of 4 cents.

Mr. JOHNSON. That was not a protective duty at all. There was no such industry in this country at that time.

Mr. FRELINGHUYSEN. It makes no difference. When we put a duty on the raw product and then on the manufactured product those two duties, as they are imposed, are imposed on the basis of the differential in the cost of conversion. That is the practice which has been followed in making tariff bills, right straight through all the tariff bills from the beginning. It has been followed by the committee in presenting this bill.

When the House bill carried a 7-cent duty on citrate of lime and a 12-cent duty on citric acid the Tariff Commission called the attention of the Finance Committee to the fact that the differential was maladjusted, and the Finance Committee corrected it. It may be that it is not necessary to protect the manufacturing concerns. I know nothing about their profits, but the pending bill is framed on the theory of protecting American industry, and when we protect American industry we have to protect it fairly, whether it be the citrus-fruit grower of California or the manufacturer of my State. I know there is one plant converting citric acid into citrate of lime in my State. There is a large manufacturing chemist in Philadelphia and another in New York. It is a legitimate enterprise and it should be properly protected. I do not mean that it should be excessively protected, but if they have been importing the raw products and manufacturing them into manufactured products it is right that they should be protected, just as the citrus-fruit growers of California should be protected, and that is all I am asking. When you protect their product you have to give them a margin to cover the conversion cost, including labor; and I therefore say that the differential of 6 cents and 18 cents is proper; but if the Senator from California wants still further to protect the lemon growers of California—and I am for protecting them fairly—the manufacturer should be given a duty of 24 cents on the manufactured content—citric.

Mr. JOHNSON. Mr. President, unfortunately, this is the age-long tariff struggle. I regret that it is so. I recognize that the Senator from New Jersey is entitled to adequate protection for those interests which are in the State of New Jersey, and the State of California is entitled to just protection for what is produced and raised in the State of California. But in this instance, the difference between my friend and myself illustrates some of the difficulties there are in the way of tariff making.

I stand here representing the man who from the soil takes the product and then manufactures it, the man who has devoted 10 years of his life to rearing lemon groves, who has done it under a direct declaration, almost a promise, of the previous tariff bills in this country. I stand here representing the producer—the American producer who has fought an American fight. The Senator from New Jersey [Mr. FRELINGHUYSEN], as is his right, represents the gentleman who imports, and who, importing, transmutes the imported article into something that he sells. There is a conflict between us; there will always be that conflict between the importer who imports that which we raise in this country and the domestic producer. In this instance, apparently the question seems to have narrowed down, Mr. President, to the differential of the labor cost, and that differential I have demonstrated ought not to be more than 3 per cent.

First, remember that, according to the Bureau of Chemistry, citrate of lime produces 57 per cent citric acid; that is the minimum figure. Therefore 1¾ pounds of citrate of lime—and this is a mere matter of computation which, with a pencil, anyone may follow—produces 1 pound of citric acid. The representative of the converters of imported citrate of lime testified before the Ways and Means Committee of the House of Representatives and stated that the correct ratio was 1¾. His testimony is found on page 42, part 1, of the House hearings. Taking 9 cents and the ratio of 1¾, the addition of 3 cents differential in the labor cost, represents the full protection which is asked by the Senator from New Jersey, to cover the differential between the labor cost in Italy and the labor cost here. More than that the importer of New Jersey and the manufacturer there is not entitled to.

Mr. KING. Mr. President, the discussion between the able Senator from New Jersey [Mr. FRELINGHUYSEN] and the able Senator from California [Mr. JOHNSON] relative to citrate of lime and citric acid has been illuminating, but it has emphasized one feature that I sometimes think the exponents of the protective tariff theory and the advocates of high protection forget, if they do not wholly ignore; that is, the interests of the public. I have sometimes thought—but I am reaching the conclusion that it is a foolish thought—that the public should have something to say in regard to the fixing of tariff rates. They have to pay the prices that result from the imposition of tariff rates. If a high duty is levied, the price of the product in the domestic market is enhanced. The beneficiary, of course, is the man who is the domestic producer, but the people who buy the product, the price of which is thus enhanced, have to pay the penalty. So there is a little contest now between the importer of citrate of lime, which might be denominated the raw material or raw product, and the growers of lemons, which are converted—that is, the culls and the wastage—into citric acid.

The Senator from California would not care how high the tariff were fixed upon citrate of lime if a corresponding differential were maintained with respect to citric acid.

He wants a high duty upon the citrate of lime because such a duty will keep it out and permit the producer and the manufacturer of the citric acid out of the lemons of California thus to enhance the prices of what might be denominated the finished product. However, the Senator from California and the Senator from New Jersey, in their able and forceful presentation of their various views upon this matter, never once have alluded to the interests of the great consuming public, the American people. They are to have no voice in this matter; they are to be ground between the upper and the nether millstones. The importer of citrate of lime upon the Atlantic coast, who converts it into the citric acid, does not care how high a tariff is imposed upon citrate of lime if there is a corresponding duty imposed upon citric acid. He would just as soon as not pay 12 cents a pound as a rate upon citrate of lime if a rate of 30 or 40 cents a pound were imposed upon citric acid, because that would then give him, by reason of that apparently discriminatory differential, the control of the market for the product of his Atlantic coast factories resulting from the importation of the citrate of lime; but the poor public would have to pay.

Mr. President, the Senator from Ohio [Mr. POMERENE] suggests, sotto voce, "What difference does that make?" Well, we all recall the statement of Commodore Vanderbilt—and it is so hackneyed that I hope I shall be pardoned for repeating it—"The public be damned." That is about the situation with respect to this bill. Let the public be damned. The public must pay for the enormous increase in prices that inevitably will result from the high rates which have been levied in the bill.

Under the rate fixed by the Underwood law of 1 cent a pound on citrate of lime and 5 cents a pound on citric acid, if I understood my good friend from California correctly, the industry has developed and has reached such a high state of prosperity that it produces one-third of the domestic consumption. In other words, the rate of 1 cent a pound on citrate of lime and 5 cents a pound upon the finished product, citric acid—and by the way, that is a ratio or differential of 1 to 5—the industry has developed in the United States until now we are producing one-third of the amount consumed in the United States. Not-

withstanding that remarkable growth under those low rates, we are now importuned to increase the rates far beyond those now existing; indeed, the increase on citrate of lime, which my learned friend from California asks, amounts to 1,100 per cent. Under the condemned and damned Payne-Aldrich law citrate of lime was on the free list, so that now, with zero as a base under the former Republican policy of protection, we are to rise to infinity by imposing, according to the desires of my friend from California, a duty of 12 cents a pound upon citrate of lime. That would amount to millions of per cent increase above the Payne-Aldrich law. I repeat, however, that it is 1,100 per cent over the Underwood bill. That does satisfy the Senator from California, but some of the witnesses who came from his State wanted 70 cents a pound duty upon citric acid. One of the witnesses, I recall, wanted 70 cents a pound upon citric acid and 30 or 40 cents a pound upon citrate of lime. The cupidity and greed of some of the witnesses can not be justified, Mr. President.

Mr. JOHNSON. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from California?

Mr. KING. I yield.

Mr. JOHNSON. I know the Senator does not wish to do any injustice. The witness to whom he refers is a lemon grower in California, and, if the Senator will read all of his testimony, I think the Senator from Utah will read it sympathetically. The Senator is right about the rates which he suggested; he did ask for exceedingly high rates; but let me call to the Senator's attention, if he please, the fact that this industry is one that, if I may use the term, is a "forced put." The lemon industry reached such a precarious stage that it was absolutely essential that lemon growers who were not operating at a profit should endeavor to utilize everything they had, including culls, excess of crop, and the like. Out of necessity and because of the necessity the industry in by-products developed; it has grown because the necessity has grown, and not, in reality, in the first instance, as a matter of choice at all.

Mr. KING. Mr. President, representatives of the California Shippers' League, the Upland Lemon Growers' Association, and other lemon associations in California and the delegation in Congress from California, not including, however, I think, the able Senator from that State who has this morning addressed the Senate, appeared before the Ways and Means Committee and asked for a duty of 70 cents per pound upon citric acid and 40 cents a pound upon citrate of lime. Mr. President, I leave for Senators and the public to draw their own conclusions as to the cupidity and avarice of those representatives, or their good faith. I shall not characterize them.

I repeat that the Payne-Aldrich law imposed a duty of 7 cents a pound on citric acid and placed citrate of lime upon the free list. The Underwood law imposed a duty of 1 cent per pound upon citrate of lime and 5 cents a pound upon citric acid, and under that law the industry has grown, as my good friend from California has said.

My friend mentioned something about a pledge. I do not know to what pledge he refers. If the industry was started under the Payne-Aldrich law the pledge was nothing so far as the duty upon citrate of lime is concerned, and 7 cents a pound so far as citric acid is concerned. If there was any pledge under the Underwood law it was 1 cent a pound on citrate of lime and 5 cents a pound upon citric acid, under which pledge, to use the language of the Senator from California, the industry has grown from zero until it produces one-third of all of the commodity consumed in the United States to-day. But, Mr. President, I do not understand that a rate which may be fixed in a tariff bill is a pledge that that rate shall be continued indefinitely. I have been told that the rate upon pig iron was approximately $40 per ton at one time. Does anybody insist that the pig-iron industry or the steel industry should have any such rate of duty as that now, when they have made profits that are beyond the computation of a man, except he be an expert in arithmetic, and possibly he might have to employ logarithms or higher mathematics to determine the profits which have been made and the percentage of profit upon the capital actually invested.

Mr. President, I submit that the record shows a remarkable growth of this industry. Then, take into account what the Senator from California says, that this industry has grown up as a sort of a by-product of the lemon industry. The culls, the waste lemons which are thrown aside and ordinarily would be of no utility whatever, have become the basis of a profitable industry. I congratulate the people of California and the people of the United States upon the fact that they have discovered that these culls, which heretofore have been wasted, are valuable, and that from them may be developed two products which are of importance to the people of the United States; but just a word now as to who uses these products. I shall not trouble to read from the Tariff Summary, but will give my own understanding of the purposes for which they are used.

Citric acid is used in the manufacture of beverages and effervescent salts and in the manufacture of medicinal compounds, the most widely used being magnesium citrate. It is also used in textile printing, in the manufacture of a number of dyes, in the production of photographic developers, and in the manufacture of blue-print paper.

Those are important uses, and since we have adopted prohibition, theoretically at least, the growth of the industry has been remarkable, if not phenomenal, and the demand for these products has increased, because with the departure of John Barleycorn the people more and more have resorted to the soda fountains and to the products of the soda fountains and manufacturing institutions which give us the soft drinks of which citric acid is a constituent part. So all of the people are interested—the boys and the girls who go to the soda fountain, the men and the women who formerly drank beverages with a little alcohol and who are now compelled to abandon the habits of a lifetime and to resort to drinks that are milder, if they are not quite so inspiring.

They are to be taxed. They are interested in this product. It is also used, as I said, medicinally; so that our medicines are to be increased by this increase in the tax which we impose upon the raw material as well as upon the finished product.

I wish somebody in the consideration of this tariff bill would speak for the people. Let the people have something to say in the laying of these tariff rates. Do not let the manufacturers and the beneficiaries alone be heard in behalf of these rates which will put more money into their pockets.

I will say very frankly that if people are to be benefited by enormous tariffs, I would rather see the farmers and the horticulturists receive the benefit. My sympathies in the imposition of your tariff rates, if you are to give benefits, go out to the man who toils, and sweats, and digs, and produces, and makes contribution for the public weal. I can not forget, though, that there are many men who are not agriculturists, who work in the factories, upon the street cars, upon the streets, millions of them, who get no benefits from these rates. Look at the millions of what we denominate the middle classes, the clerks, the millions of men who work upon the railroads and in the factories and in the mines and in the mills. They have to pay for these increases in shoes, and in clothes, and in hats, and in medicines, and in drugs, and in the thousands of commodities that enter into their lives. Let us speak for them. When we are enacting these laws let us have an eye that will receive from their humble abodes light and hearts that will respond to their demands and to their wishes—indeed, to their necessities.

Mr. President, I think that the House rate on these products is too high, and that the Senate rate is too high; and if the Senator from California [Mr. JOHNSON] does not offer an amendment, I shall move to amend——

Mr. JOHNSON. Mr. President, it was my intention, upon the conclusion of the remarks of the Senator from Utah, to move, in line 16, page 20, to strike out the numeral "6" and in lieu thereof to insert the numeral "9."

Mr. KING. I apprehended that; and in view of the fact that the Senator in all courtesy ought to be entitled to make the motion to amend first, I shall wait until his motion is disposed of, because I suppose, under the parliamentary procedure, I could not offer an amendment to his amendment.

The PRESIDENT pro tempore. The Chair so understands.

Mr. KING. Mr. President, having indicated what my purpose is, I yield the floor.

Mr. MCCUMBER. Mr. President, the Senator from Utah [Mr. KING] has just made the assertion that the public ought to have something to say upon these rates; and he has supplemented that with the statement that the men who work in the mills ought to have something to say upon the price of the things which they must purchase.

Mr. President, I want to answer for a moment for the public. I will answer first for the men in the mills. I will ask every man who is working in a mill to-day if he is not demanding protection for the thing which his mill produces, and I want to ask him why he wants protection for the thing which his labor produces. In every instance he will answer: "I want it either that I may hold my present wages or that I may secure employment in order to earn a living." That means, Mr. President, that the rest of the public must necessarily pay a little higher price for the things which he produces; and if he is to be given employment that he may earn more dollars, I think

he is hardly in a position to demand that those who produce lemons in California shall not also secure a sufficiently greater price for their lemons that they may continue in business.

Mr. President, the woolgrowers are part of the public. The men who produce wool out in Utah are a part of the public; and they are asking for 33½ cents per pound duty upon the scoured content of their wool, and we are giving them that duty. Why? To enable them to continue producing wool, that they may make a living in their own country.

Will the Senator from Utah deny to-day that that protection is absolutely necessary to maintain the wool industry in the State of Utah? I think it is absolutely necessary; and those people are part of the public. If we are going to let them live, can they say, "While we would like to live on a 33½-cent duty, we do not care a continental whether the producer of lemons lives or dies"? If a man is a good American and a protectionist he will say: "Yes; we will give your wool the necessary protection to allow you to produce it for the American market, and in turn we will give the producer of lemons in the United States, who pays to his laborers a price 3 to 5 times as great as the price in Italy, an opportunity also to live."

Then we turn to the miners of Utah. Is there anything that they produce upon which we do not give them protection? Are we not attempting to open up the mines of Utah again for the benefit of the miner and of the laborer? And is that miner, who is a part of the American public, complaining because the grower of fruit in California is also to be protected?

Let us take the weavers in the mills. Of course, they have to buy citric acid in some form; but are they getting or will they get any better wages because we give a duty that will enable them to keep the mills of New England and the East going? If they do get better wages, if they anticipate that this tariff is going to benefit them, then, in Heaven's name, what complaint have they to make, as part of the great American public, against the little duty upon citric acid?

So, too, of your brickmakers, and so, too, of the men who make earthenware out in East Liverpool, Ohio. They come to us and say, "Our industrial establishments are closing down. We can not compete with Yugoslavia, we can not compete with the labor of Bohemia, we can not compete with the Austrian manufacturer, and we have either to close up or we have to reduce our wages to a point that will enable us to compete." We answer, "We will give you the protection." Is that portion of the American public going to cry out against a duty which allows the American in California to continue to produce lemons and citric acid?

But, Mr. President, I want to say a word about the duty itself, and what governed the committee in fixing the rates as they have been fixed. I want to say to the Senator from California, in all candor, that I do not think the duties which we have given have given you full and adequate protection.

The Senator from California has properly stated that this is one of those cases of irrepressible conflict between the importing interests, who import the raw material, and the interests producing the raw material in the United States, and it is a conflict which finally has to be settled more or less by a compromise. This is something of a compromise between those manufacturing interests of the East who are the consumers of the citric acid and those who produce the lemons in the West.

We appreciate the trouble in the matter of freight rates, which reduce the profits on the lemons, and here we get right back to the root of this whole question, when we get down to the question of the raising of the lemons in the United States.

I was out in California in 1920, and it would have made the heart of any good American sick to see those beautiful trees laden, until the branches had to be propped to save them from breaking off, with lemons which had to rot upon the trees, lemons produced upon land that cost from $2,500 to $5,000 an acre. After the tree is planted, it requires 3 or 4 years in the nursery before it can be taken to the orchard, then it requires intensive cultivation for from 7 to 10 years longer before it begins to bear profitably, and, as has been stated, 75 per cent of the present acreage is still unbearing because the trees are young, though they are soon to come into fruitage.

We were met with this condition, then, with the acres producing in 1920, the western producer was unable to sell his crop for one-half the cost of production. Under our former rates the American grower of lemons on the coast had no market, practically, east of Chicago on which he could rely. That was as far as he could get his product. Three-quarters of the population of the United States were to be found east of that line, and he must content himself by supplying about one-fourth of the population.

We have tried to give him protection upon his fruit in this bill, which will allow him, if the competition is not too great, to have a fighting chance even east of Chicago. I think he is entitled to it, even though it does result in a little higher price for the person who wants a drink at the fountain.

The California producers testified that the difference in conversion costs in California and in Italy in making citrate of lime is about 15 cents per pound. I think they are very nearly right. This figure is based upon the use of a good quality of lemons in producing citrate of lime in the United States; but I want the Senate to understand that the California product gives but little culls. The fruit is generally well developed in ordinary years, and what the California producer wants is a market for some product of his lemons when he can not sell them at all in the East, as he could not in 1920. If he could have converted the good lemons, which rotted on the trees or upon the ground, into citrate of lime and sold that in the United States or converted it into citric acid he would have gotten millions of dollars for his product which went to waste.

The committee thought that 6 cents a pound would be sufficient to equalize the difference in cost, if only the cull lemons were used, and that is why I say to the Senator from California that I do not think we have given enough of a duty in order to give them adequate protection. We must depend upon their ability to reach the American market in some way and to compete with the Italian producer.

We estimated that it takes 2 pounds of citrate of lime to make 1 pound of citric acid, and, in view of the fact that the difference in conversion cost in the manufacture of citric acid from citrate of lime between Italy and the United States is at least 6 cents per pound, it became necessary to impose a duty of 18 cents per pound on citric acid, which is made up of a compensatory duty for 2 pounds of citrate of lime of 6 cents a pound, which would be 12 cents, plus 6 cents for the conversion cost. The Payne-Aldrich law imposed a duty of 7 cents per pound on citric acid and put citrate of lime on the free list. We have only made a differential of 6 cents a pound instead of 7 cents a pound, as was given in the Payne-Aldrich law.

I repeat that I think this is scarcely adequate protection for the American grower of lemons, but taking into consideration the manufacturers' interest and the interest of the public, for whom the Senator from Utah speaks, we felt that that was as high as we should go.

Mr. UNDERWOOD. Mr. President, as this debate goes on we get a very clear view into the workings of a so-called protective tariff. A moment ago the Senator from California [Mr. JOHNSON], in his debate with the Senator from New Jersey [Mr. FRELINGHUYSEN], discussing the question as to whether the relative rates on citrate of lime and citric acid are properly balanced, admitted that there should be a differential. He did not base his argument entirely on what the duty should be, but he said that this is a protective tariff bill, and all industry and all producers should be brought within its fold, and he justified his position on the ground that you are writing a protective tariff bill and that all men have a right to equal terms under the bill—terms protecting their entire industry.

If that could apply to all the American people, if this idea of bringing the terms of this bill into the business life of all the people of the United States, whether manufacturing, agriculture, or production in some other line, giving them equal rights and terms of protection, you might justify your position from the standpoint of equality of taxation, equality of opportunity, and equality of carrying the burdens of business.

Of course, that is impossible. You can not bring the labor of the railroad employee within the terms of this bill, because you can not protect his industry. You can not bring the clerk who works in the department or in the store within the terms of this bill, because his particular line of business is not protected. There are vast numbers of men who are engaged in agricultural pursuits, some of whom you pretend to protect and to others of whom you give no protection at all, who are not within the terms of this bill, because they can not be brought within its terms.

Mr. GOODING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama yield to the Senator from Idaho?

Mr. UNDERWOOD. I do.

Mr. GOODING. I would like to say to the Senator from Alabama that you can feed 30,000,000 people on the products of foreign countries, people who live in great cities which can be reached by water transportation without a single pound of freight being hauled over any railroad in this country. I call the Senator's attention to the fact that the railroad employees and the railroad people generally are interested in carrying this freight across the country to the great consuming centers of America, such as New York City and other great cities,

which can be reached by water transportation from foreign countries. So, if the railroad employees were not interested, we could get along with about one-third the protection we are getting.

Mr. UNDERWOOD. The Senator only shows his ignorance with reference to transportation in this country. The great bulk of the transportation of this country is the carriage of the raw material, which does pay the wages. If the Senator will study the question of transportation he will see that these protected products cut a very small figure in the earnings of the railroads.

For instance, a large proportion of the earnings of the railroads in my home district are due to hauling coal and iron ore to the furnaces. Yet this bill before the Senate to-day puts coal and iron on the free list. I am not complaining at you doing so, but you do not protect them. The wheat which leaves your fields does not leave them primarily for a domestic market. It finds its domestic market in the mills at home. The long haul of the wheat goes to the foreign market. You assume to levy a tax for protection on certain long-staple cotton in the bill, but none on the balance of the cotton. I do not mean to say that you could protect it if you levied a tax, any more than your protection on wheat means anything to the American farmer. But the haul of that freight is not represented by the railroad man who carried——

Mr. GOODING. Mr. President——

The PRESIDING OFFICER (Mr. LADD in the chair). Does the Senator from Alabama yield to the Senator from Idaho?

Mr. UNDERWOOD. I yield.

Mr. GOODING. The statement I made was that the railroad employee is interested, and I make the statement again.

Mr. UNDERWOOD. I realize that.

Mr. GOODING. I say that the great city of New York can be fed and clothed and fuel can be furnished to it from outside of America, and we need not use our railroads at all for that purpose. I make the statement again that the railroad employees and the railroad people are vitally interested in seeing that the American farmers and American producers ship the products of American soil to the great consuming masses of the country. Whether I am ignorant or not on the question, I make that assertion, and I do not think I have shown a great deal of ignorance in the statement I have made.

Mr. UNDERWOOD. I am sure that is the Senator's position; I understood that thoroughly; but I repeat my statement that he has not considered the problem. It may not be ignorance on his part; it may be lack of consideration.

Mr. GOODING. I will say to the Senator again that I have given the matter a great deal of consideration.

Mr. UNDERWOOD. I am sure the Senator has; I am perfectly sure the Senator thinks he has given it consideration; but I contend that the protection which is given in the pending bill, not in one particular like raw wool, which comes from his State, but most of the protection goes to the manufacturers who are at the seaboard and not in the interior. Most of the protection afforded in the bill is at the seaboard, and for the Senator to contend that that protection builds up the wages of those employed in the railroad industry in this country—I will not say it is absurd, but I say it is without a foundation in fact. There is nothing on which to base such an argument as will be apparent if one will study the economic conditions of America.

I recognize the fact that those who believe in the principle of protection become so accustomed to claiming that everything that is good grows out of protection and everything that is bad is because we do not have protection, just as I heard the distinguished Senator assert in the debate in the Senate a day or two ago. I am always glad to hear the Senator discuss questions. As a rule he brings to his discussion a careful consideration, and I listened with much interest to his prepared speech the other day for that reason. His answer to me on the floor a moment ago, I think, was without consideration. But the Senator, in his able speech defending the principles of protection in the upbuilding of America, sought to point out the bad times which had occurred in the days before the Civil War under laws which he contended were not protective laws. He picked out the era of the law of 1824, for instance, claiming there was a protective law at the time, and claiming that the good times which happened to come in that era were due to the enactment of that law. Now, I say to the Senator that if the rates in the law of 1824 were put into effect to-day he would claim that it was a free trade tariff law. Those rates would be far below the rates in the existing law.

I did not interrupt the Senator in his discussion, but I listened to him detailing the good times which have grown out of an American protective law and the panics which he alleged had occurred under an era of so-called free trade, although since the enactment of the first tariff law in this country I have never known of a period when there was absolute free trade. There have been high and low tariff rates, but no era of free trade. But I noticed that the Senator failed to refer to two of the most disastrous panics that ever happened to America, first, the panic of 1873 under an era when the Republican Party was in power, with a Republican President, and with a Republican tariff law on the statute books.

Mr. GOODING. If the Senator will permit me, I did refer to the panic of 1873, and I charged the blame of it partially upon a reduction of the tariff by the Republican Party below the line of protection. Possibly the Senator did not hear me make that statement.

Mr. UNDERWOOD. I overlooked that if the Senator did refer to it, but the tariff was reduced seriously on but one line of commodities, and those were iron and steel commodities, which the Republican Party continued to reduce down to the time of the enactment of the Payne-Aldrich law, without any serious injury to the country, and which the Democratic Party continued to reduce by putting most of those commodities on the free list under the present law. However, under the terms of those laws the country has developed and prospered in recent years as it never did before.

I listened to the Senator carefully, but of course there are many interruptions on the floor of the Senate, and I did not hear, although I may have overlooked it, any reference by the Senator to the panic of 1907, the Roosevelt panic. If he did refer to it, I would be glad to be corrected. That was one of the most acute panics which ever took place in America, bringing about a most depressed business condition, numbers of men thrown out of employment, and all during the Roosevelt panic of 1907. There was a Republican President in the White House and a Republican tariff law on the statute books, and yet disaster came to the country. I do not say that these panics occurred by reason of a Republican tariff law any more than I contend that the panics to which the Senator referred occurred by reason of a different kind of tariff law.

Mr. GOODING. I did not make any statement that all the panics and all the hard times which have come to America have come from free trade or from tariff for revenue only laws, but I did point out very clearly that every time any party, regardless of whether it was the Democratic or Republican Party, reduced the tariff below the line of protection, we had a panic and there was great suffering and distress; and history bears out that fact.

Mr. UNDERWOOD. I do not at all agree with the Senator. Of course the Democratic Party with its theories was in power for some 50 years unbrokenly, so far as continuous power is concerned, before the Civil War. Even when we had a Whig President, as a rule we had a Democratic House, and during that time there were great eras of prosperity.

I have studied the tariff question for many years. A Republican protectionist, as a rule, claims that any law he did not write is a free trade law and any law he writes is a protective tariff law on all schedules. For instance, he will claim that the Payne-Aldrich law is a protective tariff law and upbuilds the industries of America, and yet what became of prosperity under the Payne-Aldrich law and under the Republican administration? The Senator from Idaho might not say it now, but we can find pages of political debate filled with the arguments of that period of Republican prosperity that the Republican tariff law had brought about its success, yet one of the very items which we are now discussing, citrate of lime, the Payne-Aldrich law had on the free list. When I came to function in the writing of the present tariff law I was looking for some revenue, and I put a small revenue tax of 1 cent a pound on citrate of lime, which the Republican Party had had on the free list. Of course, if it was in a Republican tariff law and on the free list, it brought prosperity, but if it was in a Democratic law and had a rate of 1 cent per pound on it, it brought disaster to the industry. That is about the class of argument that we must listen to here in reference to these questions.

Mr. GOODING. Not so far as I am concerned, I will say to the Senator. I thought I made myself very clear on the point that, regardless of which party reduced tariff duties below the line of protection, we had hard times in the country.

Mr. UNDERWOOD. I am sure the Senator agrees to that; I am not questioning the sentiments of the Senator on the question. I simply say that the facts of history do not bear out the Senator's contention. That is where we differ. That is our natural difference. The Senator thinks, for instance, that a tariff of 33 cents on raw wool——

Mr. JOHNSON. Mr. President, will the Senator yield to me just at that point?

Mr. UNDERWOOD. I yield.

Mr. JOHNSON. I simply wish to correct a statement of fact and not to enter into any general discussion of the general problem at the moment. The 1-cent rate in the Underwood tariff law upon this particular item was put upon it when there was not any such industry in the country, and it was done doubtless solely for the purpose of revenue. I wanted to call that to the Senator's attention.

Mr. UNDERWOOD. It was put on for the purpose of revenue solely. That is what I said.

Mr. JOHNSON. There was no such industry at that time in this country. In 1915 there was the first development of it.

Mr. UNDERWOOD. I am not concerned about whether the industry was here or not. I levied the tariff for revenue. From my viewpoint, whether the industry is here or not, I do not believe in a protective tariff; so that is neither here nor there. Of course, if the Senator wants to defend my position and assure the public that I did not levy this tax for protective purposes, I thank him for coming to my rescue.

Mr. JOHNSON. If the Senator will pardon me, I was not attempting to defend his position. It is so indefensible I would not attempt that.

Mr. UNDERWOOD. From the Senator's standpoint.

Mr. JOHNSON. However, omitting that part of it, I was simply endeavoring to correct a statement of fact. I think the Senator misunderstood my reason for interrupting, so we will let it pass at that. I am not endeavoring to enter into a discussion of the general problem at all.

Mr. UNDERWOOD. What I want to say to the Senator from Idaho is that the Senator advocates, I am sure, a tax of 33 per cent on raw wool in the pending bill. When I took part in writing the present law I did not put any tax on raw wool. I put wool on the free list. At that time it was contended that the wool industry would be ruined immediately. The result was that the tax had not been on the statute book very long before, instead of the price going down, it went up; wool increased in price. At certain times it has gone down, and at other times it has gone up. Its price has depended upon the consuming market of the country.

Mr. GOODING. Will the Senator allow me to interrupt him?

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Idaho?

Mr. UNDERWOOD. Of course I yield.

Mr. GOODING. I should like to ask the Senator from Alabama what was the purpose in the Underwood law of putting wool on the free list? Was it to give the manufacturer cheap raw material?

Mr. UNDERWOOD. No; it was to give the American people cheaper clothes, if possible.

Mr. GOODING. Then, why did that bill put a duty of 35 per cent ad valorem upon clothes which the poor man wears?

Mr. UNDERWOOD. It was because it was thought that clothing was an article on which we could raise revenue, and that we might legitimately raise a certain amount of revenue on it.

Mr. GOODING. Is it not the argument of the Democratic Party that raw material should be placed on the free list in order to make it available to the manufacturers at a cheap price? Is not that the argument and the purpose of putting raw material on the free list?

Mr. UNDERWOOD. It is not to give manufacturers a benefit; but the argument has always been made by those who advocated cheap raw material in the industries that it enabled the manufacturers to sell to the American people the ultimate product cheaper, because if the raw material be taxed that tax had to be multiplied into the finished product, not merely put into the price of the finished product, but multiplied in it, just as is contended with respect to the article which it is now proposed to tax.

Mr. GOODING. But the purpose of that policy is to afford cheaper raw material; that is correct, is it not?

Mr. UNDERWOOD. In order that the finished product may be sold to the American people cheaper.

Mr. GOODING. By putting the farmers' product on the free list.

Mr. UNDERWOOD. And the product of anybody else who produces the raw material.

I think the Senator from Idaho is engaged in the wool industry; I am not sure about that; but my understanding is that he is. What little I have invested is in the iron and steel industry—in pig iron. As to the Senator's view—and he is entitled to it; I am not criticizing him, though I differ from him—the people of his State are interested in the production of wool, and he believes in taxing the raw wool. To the extent of my limited means, as I have stated, I am interested in producing pig iron.

Mr. GOODING. Mr. President——

Mr. UNDERWOOD. Wait until I answer the Senator's questions. I can not answer them if he interrupts me in the middle of a sentence. I will yield to the Senator in a moment. I have no desire not to do so.

Mr. GOODING. Very well.

Mr. UNDERWOOD. When the present law was written the eastern furnaces were demanding free raw material in order that they might have cheaper iron to sell to their consumers. They asked for free coal and free iron ore. When the present law was written I reported a bill which not only carried free iron ore and free coal but also free pig iron, because I believed the American people were entitled to obtain the product as cheaply as possible. Every particle of manufacture in which I am interested went on the free list. I believe that is right and I apply the doctrine to myself. The Senator from Idaho believes in protection—which he is entitled to do—and he applies the doctrine not only to his people but to himself by proposing to put a tax of 33 cents a pound on wool. That is where we differ.

Mr. GOODING. I was going to say to the Senator from Alabama that I hoped he would do me more credit than to say or to think that I am here representing only the woolgrowers. I am for protection because I believe in the principle of protection.

Mr. UNDERWOOD. I have said that.

Mr. GOODING. The Senator from Alabama is in favor of free trade on raw materials because he believes in the principle of cheaper materials for the manufacturer. For that reason he favors putting on the free list pig iron, which is a raw material, to some extent, but I would protect it. That is the difference between the Senator from Alabama and myself.

Mr. UNDERWOOD. But the party of the Senator from Idaho has not protected coal and has not protected iron ore in the pending bill. On the product of the great furnaces of New Jersey and New York and New England that compete with those of the South and West it is proposed to put a tax of a dollar and a quarter a ton, and yet to give them free iron ore and free charcoal.

Mr. GOODING. I will say to the Senator that I, of course, did not frame the pending tariff bill, but to any industry that needs protection—I do not care in what State it is located—I will give that protection regardless of whether it is an agricultural product or a manufactured product or the product of a mine.

Mr. UNDERWOOD. I am sure the Senator would. I am not criticizing his position for a moment, and I have not done so; but the only thing I say is that his position is wrong.

Mr. GOODING. The Senator from Alabama and I are 50–50 on that proposition.

Mr. UNDERWOOD. I realize that.

Mr. GOODING. I think the position of the Senator from Alabama is wrong.

Mr. UNDERWOOD. I am not falling out with the Senator from Idaho for thinking that I am wrong because I want to give the American people an opportunity to live cheaper. He is entitled to his opinion, and I am not falling out with him because his principles are that production in America should be behind a tariff wall and that the American people shall pay the price. We differ radically on that proposition; there is certainly no opportunity for us to get together on it. I am perfectly willing to concede to the Senator that he is entitled to his views, and I am not criticizing him personally for his views at all. The only thing that I say is that his views are absolutely wrong and are detrimental to the interests of the great mass of the American people.

It is the same with the Senator from North Dakota [Mr. McCUMBER] in charge of the bill.

Mr. GOODING. Mr. President——

Mr. UNDERWOOD. If the Senator from Idaho desires me to yield to him, I will yield before I take up another branch of the discussion.

Mr. GOODING. Mr. President, I hope to conclude to-day the remarks which I commenced some days ago, and when I do so I am going to prove to the Senator from Alabama that under the present law practically every farm product is placed on the free list or under a revenue duty so low as to give no protection at all, while on every manufactured product in the country a duty is imposed so high that it is a protective duty, although when placed there it was called a revenue duty. There is hardly an exception to that rule in the present law.

Mr. UNDERWOOD. Mr. President——

Mr. GOODING. I will not discuss the matter any further now, because I have previously covered this subject in my re-

marks. I shall, however, try to finish my remarks on the tariff question while the Senator is in the Chamber, if I can, and I want to assure him that I am not going to charge, as has been charged, that the Underwood-Simmons law is an infamous measure; that it is iniquitous, and everything of that sort. I regard too highly the Senator from Alabama and those who wrote that bill to frame such an indictment against him or his bill.

Mr. UNDERWOOD. I am sure the Senator has personally, but even that would not make any difference if I have made a mistake. In that event the Senator should demonstrate it, and I hope he will do so. There are some high rates in the present law, but, so far as I know, they are largely levied on the luxuries of life. The necessities of life carry low rates, I will say to the Senator. More than that, although it did not go as far as I individually would go, there is one thing in that law of which I am proud. I do not believe in taxing the covering of the backs of the poor nor the food that goes into their mouths; so far as I am concerned, I believe in leaving the food of the people untaxed. I admit that there are some items in the present law that do tax food products, but it was not my fault, because I had to agree with the committee, I had to agree with the House, and I had to agree with the Senate; but if the Senator wishes to discuss my theories, I know that great America, with its fertile fields and virgin soils, is able to compete in food products against the world, and it does so compete. There are a vast number of people in this country who are entitled to live, and I do not believe that any scheme of taxation should start by taxing food.

Of course, I know the Senator radically differs from me about that. That is a difference of opinion, and he is entitled to his opinion, but I do not agree with him, and I do not believe that the great majority of the American people agree with him.

Mr. GOODING. Mr. President, I wish to say to the Senator that, so far as necessity is concerned, there is no difference between what are called the vital necessities of life, such as the clothes a man wears and the food which he eats. The clothes the Senator wears are a vital necessity. The Senator might come down here without his breakfast, but he would not come down here unless he were well dressed, I am sure. Clothing is just as vital a necessity as is food; but the farmers of this country grow the raw materials which the Senator and the Senator's party have put on the free list, while the manufacturers of the East and the South manufacture them into what the Senator calls finished products, and on those products duties have been placed by the present law. All require labor to produce. If the Senator can see any difference between the labor on the farm and the labor in the factory, or between the man who owns a factory and the man who owns a farm, he looks at life from an entirely different standpoint from that which I occupy. I think they are all American citizens and all ought to be treated alike.

Mr. UNDERWOOD. I understand that that is essential to the protection theory, but it does not work out.

Mr. GOODING. That is a square deal all the way around.

Mr. UNDERWOOD. Surely; but it is one which you can not give. That is the reason I am against it, for you can not give it. You pretend to give it; you try to build up and foster American industry by levying taxes for the benefit of special interests, and then you levy some other taxes, pretending they are for another special interest, but they never apply and do not affect the price. They are merely imposed to make those interested believe that they are going to get the same thing out of a tax that the special interests are going to realize from the system of protection. If you are going to frame a bill for protection; if you are going to take the taxing power of this great Government and so use it that you will take dollars or dimes or pennies out of the pockets of the mass of the people and put them in the aggregate into the pockets of a few, of course, if you are going to be fair and just about it, you ought to scatter it far and wide. From the standpoint of protection there is no other way to proceed.

Mr. GOODING. Mr. President——

Mr. UNDERWOOD. I will be glad if the Senator will allow me to finish my sentence. I wish to yield to him, but I can not yield all my time. If you are going to put money into the pockets of the special interests, of course, the farmer as well as the manufacturer is absolutely entitled to be in the grab game. You should not make any distinction; but I do not believe in levying taxes for the benefit of anybody. I believe that the only system on which taxes should be levied at all is for the benefit of the Government, and I do not believe in the theory of using the taxing power of the United States to benefit the few against the many. Of course, however, if I believed in the theory in which the Senator from Idaho believes, if I believed in protection and believed we had a right to build a protective tariff wall at the seaboard to benefit the manufacturers of wool and cotton and iron and steel, of course, I would agree with the Senator and say we ought to give some of that benefit, if we could, to the farmer; but mighty little can be given to the farmer. There is where the Senator's theory breaks down. A tax may help the man who produces raw wool temporarily, but in my judgment the tax which it is proposed to levy on wheat is folly. We might discuss the question forever and not agree; but I know the price of wheat is fixed in the market of Liverpool, and any protective tariff in this country merely diverts the Canadian wheat to the Liverpool market and that wheat is kept out of this country. So it is in the case of almost every other agricultural product.

The Senator may say that there are agricultural products taxed under the present law. A few of them are taxed for revenue, and some of them will produce revenue. They produce revenue because of the adjustment of freight rates; but, outside of being levied for revenue, there is no justification for levying them at all.

Mr. GOODING. Mr. President——

Mr. UNDERWOOD. I yield to the Senator.

Mr. GOODING. Mr. President, I want to thank the Senator for the spirit of fairness which he always exhibits in debate. He states the whole situation very clearly.

If all the men who discuss the tariff question will go out before the American people and discuss it as fairly and as honestly as does the Senator from Alabama, the leader of the minority here in the Senate, we will settle this tariff question very quickly. There is not any doubt about that. If the Democratic Party is not in favor of protection, it will not take long to settle it. I want to say to the Senator that any Senator or any Congressman who goes into any western State and makes that statement can not be returned to this body or to the House. He may be returned from the South, but he can not come from the West; and I hope that all the Democrats who go out on the stump this fall will be as fair and as frank and as sincere and as honest as the Senator from Alabama. If they do, there will be no question about what will happen in the election. The American people are for protection.

Mr. UNDERWOOD. I thank the Senator for the compliment he pays me. He is very kind, and I appreciate it. I want to be fair and candid about this matter. I am sure the Senator thinks he is right when he asserts that nobody can be elected from the West if he is not a protectionist, but I am not sure about that. I have seen gentlemen come from the West in my time who were not protectionists; and in part of the West, the nearer West, those who stand for protection in this Chamber are not very violent in their efforts in that direction. Not all of the West has the same viewpoint in reference to protection that the Senator has; and yet I have seen constituencies change, and I have seen their viewpoints change.

For 20 years I represented on the floor of the House of Representatives the greatest manufacturing district in the South; and my viewpoint then, representing the great iron and steel district of the country, was no different from what it is today. I am opposed to protection because I do not believe that the power of this great Government should be used to make one man rich at the expense of the others; and I do not believe that the American people, when they understand the question, whether they live in Idaho, Alabama, or New York, are in favor of using the power of Government for the accumulation of wealth by any man.

I do not say that no taxes should be levied at the customhouse. I never have contended that. We are in need of a large amount of revenue. I always have favored reasonable taxes at the customhouse on competitive articles at competitive rates, so that the Government could get revenue, and so that behind the tax wall special privilege could not raise its prices to exploit the American people; but the whole trend of this debate so far as it has gone, from beginning to end, is either to balance prices at home or abroad, or to protect the manufacturer's or producer's profit. Do either and you not only destroy the revenue features of your bill in competitive articles—because when the rates balance there is no incentive to importation, and certainly when you protect a profit there is no opportunity for foreign production to enter the American market, and therefore your Government gets no revenue—but your wall is lifted high enough for those in the business to raise their prices and exploit the American people.

I know that there are a vast number of distinguished representatives who agree with the Senator from Idaho, and believe that that is correct in theory; and he is sincere and candid about it, and says it ought to apply to all. I really be-

lieve that the Senator from Idaho would go so far as to vote for a tax on raw iron ore and raw coal, that are on the free list to-day.

Mr. GOODING. No; I want the Senator to be fair with me, and I am sure he will when he understands me. What I said was that I would vote for protection for any industry in America that needed protection, regardless of what industry that was, or what State it was in.

Mr. UNDERWOOD. To be sure.

Mr. GOODING. Of course, there may be some things—possibly coal, possibly pig iron, on account of the freight, their cheapness, and all those things—that do not need protection. I would not put protection on an article unless it needs it. I am saying that there is an honest difference between the cost of production in this country and the cost of production in any other country on earth, and that we can not produce in this country unless those who are interested in that production are given that honest difference in a protective tariff. That is my position exactly.

Mr. UNDERWOOD. Mr. President, I know the Senator thinks that there is an honest difference in production, and in some articles there may be—a few. We have the virgin fields of America, from which our crops are raised—lands that within this generation were given to the people by the Government for nothing. The crops of foreign countries are raised on very high-priced lands. We have a home market in which to sell our production at home that is the greatest in the world. Those who try to invade that market have to bring their products over the seas at great expense. There is no difference between the raw wool produced by the cattle herders of Idaho and the raw iron ore produced by the miners of the hills of Alabama; both want to get their final product to the eastern market; both have to pay a freight rate to carry it there. The Senator from Idaho is strong enough with the wool manufacturers of New England to make them yield to what they do not want to yield to, and that is to put a tax on raw wool and carry it on as a burden to the American people. I would not contend for a minute that the manufacturers of pig iron in the South or the West are entitled to tax raw material at the seaboard for the sole purpose of building up a market for themselves and taking that money out of the man who buys the plow and the rake and the wire fencing—not at all. It is a difference of viewpoint.

The Senator contends that he is making this fight for the American farmer. I do not question that he is sincere in taking that position. He believes that levying taxes and putting burdens on the people helps the American farmer. I believe that the great agricultural class of America ought to be built up. It is the backbone of the country. It is the sustaining life of the Nation; but when I had the writing of a tariff bill I attempted to build it up in a different way. Instead of levying burdens of taxation I attempted to cheapen the cost of living. The bill that I had the honor to report to the House put every agricultural implement that I can recall on the free list, untaxed. It put bagging and ties for the southern farmer on the free list. The southern farmer has to carry his cotton into the markets of Europe and compete there with free bagging——

Mr. GOODING. You put a duty on the grain bags of the West that the farmers there have to use.

Mr. UNDERWOOD. We put a duty on some cotton goods, but we gave the farmer of the West free binding twine, which he asked, and many other things that he wanted on the free list; among others, agricultural implements. He is the man who principally uses them. I do not say that we put everything that he bought on the free list, but I am telling you things that we did put on the free list. For a generation the farmers of the South had asked for free jute bagging—we import the raw material from India, largely—and free cotton ties, because they had to go into a free-trade market to sell the bulk of their product. The present law gives them free bagging and ties, as it gives the northern wheat farmer free twine, and in this bill you turn around and put them back on the tax list.

There is where we differ. You want to aid the American farmer by putting a tax on his products and also putting a high, prohibitive, protective tax on everything he has to buy. I do not believe you aid the farmer in that way. I do not believe you build up the farmer in that way. I think you had better take the tax off of what he has to buy. That is my viewpoint of it, and I have endeavored to do it. That is the difference in opinion on this subject.

Mr. GOODING. Mr. President, will the Senator yield to me once more?

Mr. UNDERWOOD. I yield.

Mr. GOODING. I want to make this statement to the Senator, and make my position a little clearer in regard to the people that live in the great cities that can be reached by water transportation from foreign countries.

There are something like 30,000,000 people in America that can be reached by water transportation from foreign countries. There is not a farmer anywhere on earth who can not feed those 30,000,000 people cheaper than the people from the Western States can, as far as freight rates are concerned, with labor costing on an average about one-tenth what a western farmer must pay. If we are going to permit these foreign farmers to feed these great cities because they have largely water transportation, there is only one thing left for the western farmer to do, and that is to go out of business, because we are unbalanced as far as that is concerned. The great producing part of this country is thousands of miles away from the consuming part of this country; but we are all America; we are all one great country just the same. These great cities, the great consuming masses, have been built up by the great West and the Middle West, and they are our markets; and we are first entitled to those markets, and we are entitled to the difference in the cost of production, whether it is freight rates or labor or any other matter, as far as that is concerned, that enters into the cost of production.

Mr. UNDERWOOD. Mr. President, I am glad to yield to my friend from Idaho, because he is bringing this question right down to the issue; and I am sure that at some time he has visualized this vast population that lies along the seaboard, and honestly believes that these people are getting their bread and food and clothes from abroad, and that the American farmer is entitled to that market, and that somebody is taking it away from him. Now, let us see. Let us analyze the question. I am sure the Senator thinks that, but I am sure that he is dead wrong about it.

What do the people eat in these cities? What are their principal foods? I am not talking about olives that they may get from Italy, or a few competitive products like lemons, where in the New York market the California lemons and the Italian lemons compete; but taking the Senator's proposition that the great agricultural interests of the West are entitled to this New York and East coast market—let us analyze that.

What do these people eat, to begin with? They eat bread. Bread is made out of wheat or corn. I know of no importations of corn into America that amount to anything; certainly not from Europe, because Europe is not a corn-producing country, and a tariff would not affect the corn at all.

The wheat from the West is going every day to the eastern seaboard, and they can not eat wheat as such; they eat flour. I would like to have the Senator tell me now any place in Europe from which flour is coming to feed these people on the seaboard. If there is any such importation, I do not know of it.

Mr. GOODING. It is coming in from Canada, as far as that is concerned.

Mr. UNDERWOOD. A little is coming in from Canada, and a little of ours is going over into Canada, but mighty little wheat flour is coming across the Canadian line in proportion to the American consumption. The Senator knows, as I do, that 999 flour bags out of every 1,000 in the grocery stores of the eastern market to-day are of American manufacture.

We are exporters of flour; we are exporters of wheat; we are exporters of corn. Let us take the meats of the West. A little meat is coming from Australia to the California coast towns, and a little meat is coming from South America into the port of New York, but very, very little. I do not think it amounts to one-tenth of 1 per cent of the consumption of that market, and I will tell the Senator why. He may say that on the great plains of South America the herds can be raised cheaper than they can on the plains of the West in this country, where the plow has driven the cattle herds off. But meat can only be imported into this country in refrigerating ships, and you can not build a ship for refrigeration alone, and use it for refrigeration alone, because in order to pay a ship must carry a home cargo. You can devote only a small proportion of your ships to refrigeration, and to that extent your imports are limited.

I know about this proposition, because I have been over it a great many times. No matter what the cost of production of meat is, you can not ship meat from south of the Equator to this country without having it in a refrigeration box, because it will be destroyed if you do. But there is competition on the eastern seaboard to the limited extent of that refrigeration. I venture to say to the Senator that what little meat comes in in that way hardly gets out of New York City, and the great balance of the population on the seaboard to which he referred is being fed to-day by the products of the American farmer, because he has not any competition.

You may go on down the list of the other products. There may be a small amount of food products coming in from Canada, perhaps some little butter and milk, but not one-tenth of 1 per cent of the American consumption.

The market for that butter and milk is not a tributary country of the western plainsman or the western mountain man. It is a local product, grown locally. If you go through New Jersey, you will see a chicken farm every quarter of a mile, nearly, the product feeding the eastern market. That product does not come from the western country, and outside of wheat and corn and meats I know of no products of the great western country which go to the eastern seaboard, because in the East they raise their vegetables and their chickens and their meats and their butter nearer home, and it is idle to try to make the farmers of the West believe, by some hocus-pocus, that this great population, which the Senator says amounts to 30,000,000 people, should pay tribute to them through a protective tariff. Levy your protective tariff as high as you want to; you can not collect tribute, because it does not lie there. It is not within your province to bring those things to them, and they will find it out some day, though they may not have found it out yet.

Mr. FLETCHER. May I inquire of the Senator if it is not true that the prosperity of America depends very much upon the production of a surplus over and above the needs of our own people, and is it not important to find a market for that surplus outside of our own country? Is it not a fact that this surplus of wheat, or corn, or meat, or cotton, is marketed abroad, and that being true, what good will a duty levied on these products do the farmer or the producer?

Mr. UNDERWOOD. I never have believed it would do a particle of good. I think the Senator from Florida is eminently correct in the position he takes. To make the American farmer prosperous, we want the American people prosperous; we want men employed, and not out of work, and we want a condition under which they can sell their surplus products abroad, and bring the money or the returns here.

If the American farmer can no longer export a portion of his wheat production to Europe, it will bring disaster to him. If the American cotton farmer is cut off from the export of half of his cotton crop to Europe, it not only brings disaster to him but to a whole section of the country. But they can not send it abroad unless they have an opportunity to receive pay for it.

To-day America has accumulated the gold of the world in her coffers. We no longer owe Europe indebtedness. Europe is no longer an owner of our securities. Europe has ceased to be the large carrier of our traffic, and there is no way in which we can be paid for the surplus products of our labor, either of our fields or our factories, unless we leave the door open wide enough for some of the products of other countries, either the products of the farm or the products of the factory, to come back into America and pay us in barter for our surplus products.

I saw a cartoon in a paper the other day which very fairly illustrated this proposition. It showed Siamese twins fastened together by nature for life, their bodies grown together, their hands tied behind their backs, marching to the block of the executioner, who stood there with his red gown and his mask on his face, preparing to execute the one called "Imports," and some one rose in the audience and said, "These are Siamese twins. Kill one, and you kill the other."

So it is with our imports and our exports to-day; they are Siamese twins. We can not export our goods to foreign countries unless we are paid for them, and we can not receive any pay unless we allow some products from other countries to come in here. Therefore when you seek by this bill to kill importation entirely on every competitive product, as you do, in the end you are going to kill exportation, because there will be nothing to pay for the exported material.

The Senator from North Dakota [Mr. MCCUMBER], in charge of the bill, defended the bill this morning by saying that he is in favor of the tariff all along the line, that the American people are in favor of it, because the man in Iowa or in Ohio who is making glassware or earthenware wants protection on his product, and the man in Idaho wants protection on his raw wool, and another man wants it on cotton goods. He says they have given protection to all who want it, and he then wants to know if the people in those industries are not in favor of a protective tariff. So far as I am able to judge, I have never seen these protective rates reflected down into the pockets of the mass of the laboring people who are engaged in industries. For 16 years I sat as a member of the Ways and Means Committee of the House of Representatives, and have seen one tariff after another in the making, and I have yet to see the time when the labor in industry was here demanding protection, although it is always claimed that these bills are passed in the interest of labor. It was the special interests of America, who were engaged in a profitable business already, which wanted to increase their profits, or get a greater hold on the markets of America through enactments of Congress, and to make the masses of the American people pay for it.

Mr. KING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Utah?

Mr. UNDERWOOD. I yield.

Mr. KING. I put into the RECORD the other day a very complete and accurate statement showing the cost of labor in all the industries which are comprised in this chemical schedule. It showed that of the more than two billion seventeen million products in a given year only 8½ per cent in 1914 went to labor; all the rest went for other purposes. In 1921 labor got only 8 per cent, though it is alleged, and I think it is true, that labor did get more per man per hour in 1921 than in 1914, but by reason of improved machinery and mechanical appliances the product of labor increased, and the amount which is paid to labor does not bear a proper relation to the increase in the products of the protected industries.

Mr. UNDERWOOD. I am sure the Senator is right in saying that in a vast number of these industries, where the American laborer gets a greater wage, it is due to his efficiency and to American machinery, and that has never been disputed. Where the issue has been raised, I have never known a time when it has not been shown by indisputable facts that American machinery and the efficiency of the American workmen did not equalize the difference in cost of labor at home and abroad in almost all of the industries where competition exists.

Now, let us come down to the items here in issue. Citrate of lime is manufactured from lemons and citric acid is made from citrate of lime. That was an article that was made abroad. When the present rate was made, as far as I know, very little, if any, was made in this country, but a good deal was imported. It was a chance on a small tax of 1 cent a pound to raise some revenue for the United States Government and distribute it, and a tax on citric acid of 5 cents a pound did not prevent its flow into this country, but it did raise some revenue for the Government, and therefore it was levied under the present law.

Now, under that condition, with a tax of only 1 cent on citrate of lime and 5 cents on citric acid, a great industry developed in the country. The business grew to the extent of reaching the point where it is supplying practically one-third of the demands of the American people and continuing to grow. That was not putting a great burden upon it. The industry was absolutely competitive and there was a revenue tariff admittedly, not a protective tariff, and yet the industry developed under those conditions and is still growing. But what do we find? As soon as it begins to develop under these high-tax conditions we find the greed and the avarice of the American producer standing at the door of the American Congress, demanding more and more from the American people, demanding not only that he can go along and develop his business under normal conditions. He is not being destroyed, because he was able to grow up under those conditions. He started in life under those conditions, and he has grown to be so large now that he is commanding one-third of the American market admittedly, and yet this man in business, in order to get all the market, not satisfied with the natural growth of the industry, wants the committee to raise the tariff rate on citric acid from 5 to 18 cents a pound. I will say that he wanted it raised higher than that, I believe. The House rate was 12 cents and the Senate committee makes it 18 cents—and why? Because the producers want to protect the profits; they want to stand behind a wall here which will give them entire control of the American market. They want to control it all beyond the power of the law and make the American people pay the price.

It must not be forgotten that this commodity is used in the hospitals in the land. It is used by those who in the thirsty summer days want a cooling drink. It is the favorite soda-fountain drink of the small boy. Now, it may be said that this does not increase the cost at the soda fountain or at the hospital, but it does. We never increase the tax unless somehow or some way the man who pays it hands it on to the ultimate consumer.

This is just one of the thousands of items in the bill affected by the greed and avarice of the man who has already developed a good business, who must already be making legitimate and fair profits, or his business would not have increased from nothing to one-third of the American consumption under existing conditions, and who now wants to graft on the entire Ameri-

can market and to make the consuming masses of the American people pay the price. That is what the protective-tariff theory means.

The Senator from California [Mr. JOHNSON] wants the raw material—the lemon—protected. He wants to have citrate of lime made only in this country. The present law, under which the industry has had a flourishing existence, levied a tax of 1 cent a pound on citrate of lime, and the industry developed and grew and became established. He now wants a tariff to protect the lemon that is no good for anything else—the waste lemon, the rotten lemon, the lemon that did not grow. I hope before the bill is passed they will be perfectly fair about it and bring in some kind of a proposition here to protect the potato that was left in the mold, that has not grown large enough for anybody to use, to protect the nubbin of corn that did not develop, and to protect the rotten apples that have to be left on the tree. They are just as much entitled to be protected under a tax levied on the American people as are the lemons which are no good.

The Senator from California appeals for the growing lemon trees of California. The man who planted those trees 10 or 15 years ago did not plant them expecting a tax on citrate of lime to enable him to sell his rotten fruit. He expected to make his profits like everybody else does—out of the matured fruit, the real products of the farm—but he discovered, in his grasping greed for American money, a possible opportunity for greater profits, and he is now so greedy that he wants to sell his rotten lemons to the American people under a protective tariff. That is all there is in the item.

I have no doubt that the party which believes in protection, which thinks the salvation of the country depends on protection, is going to erect a tariff wall to tax the sick in the hospitals and the children at the soda fountains in order that the rotten lemons of California may receive the protection they desire.

RECOGNITION OF SOVIET GOVERNMENT OF RUSSIA.

Mr. BORAH. Mr. President, out of order I submit a resolution, and ask that it may lie on the table.

The resolution (S. Res. 293) was read and ordered to lie on the table, as follows:

Resolved, That the Senate of the United States favors the recognition of the present soviet government of Russia.

THE GENOA CONFERENCE.

Mr. BORAH. Mr. President, we are engaged in the consideration of the tariff bill, and if it passes and has the effect that some of its advocates believe it will have it will work some advantage and some benefits to the country. But I am very firm in the belief that we shall not enjoy anything like prosperity or restored normalcy in this country until the conditions which are now prevailing in Europe shall have changed for the better. Until Europe recovers and is in a position to deal with the rest of the world in making purchases, and until she becomes a consumer as in the past, it will be impossible for us to enjoy anything like the prosperity which we are entitled to enjoy. I look, therefore, upon a consideration of the matters which have to do with the restoration of better conditions in Europe as having quite as much to do with the future prosperity of our country as the pending tariff bill or any other measure which it would be possible for us to consider.

The Genoa conference has apparently come to a close. I presume that, as a matter of fact, it has closed. It may for obvious reasons continue its sessions, but probably with no hope upon the part of those who are participating of accomplishing anything in the way of permanent results. Everyone must deplore the unfortunate and fruitless ending of the conference. It has seemed to me the Genoa conference was doomed to failure from the very beginning. The program which was outlined for consideration made it impossible for the conference to accomplish anything in the way of permanent beneficial results. It was determined in advance that no consideration of the reparation clauses of the Versailles treaty should be permitted to come up for discussion. That was a matter which was excluded from the consideration of the conference from the beginning.

It was also practically determined in advance that there should be no recognition of the present Government of Russia. Yet I presume that it is stating a mere commonplace to say that no one well informed of the situation in Europe hopes for anything like a restoration of peace or of economic sanity until those two problems shall have been settled. Until the reparation clauses of the Versailles treaty shall have been rewritten or modified to such an extent as to permit Germany to pay and still live, we can hardly hope for anything like a restoration of normal conditions in Europe. Germany is the greatest economic unit in Europe. Without her recovery Europe can not recover. She can not recover under the treaty as it now obtains. Europe must continue to swelter in her misery and hunger and taxes and debts and armaments curse Europe until the manacles which this treaty placed upon the energy and economic power of Germany are taken off, or at least loosened.

The same proposition is likewise true with reference to the settlement of the Russian problem. There are 180,000,000 people, absolutely essential to the restoration of normal conditions in Europe. So long as the Russian problem is unsettled, the other matters in Europe must remain unsettled.

These things were disclosed anew and in a more extended way and in a more positive way at the Genoa conference. It was the belief of the economists and publicists and informed statesmen of Europe before the Genoa conference met that those two problems had to be met and solved, and yet both of them were practically excluded from the consideration of the conference in advance of its meeting. I say, therefore, that it is not at all surprising that the conference should have failed. It could not succeed without seriously and earnestly grappling with those two propositions.

We are informed now that the Genoa conference is about to adjourn until the 15th of June, at which time it will reconvene, with the hope that the United States will become a member of the conference. Putting aside for the moment the other and larger question of the United States becoming a member of the conference, and assuming for the sake of argument that it should become a member of the conference in June of this year, what could be accomplished if the same policies were to obtain with reference to European affairs which now obtain and did obtain during the Genoa conference? If they should meet in June and the United States should become a member of the conference and it should still be said that the question of the modification of the Versailles treaty should be excluded from consideration and the recognition of the soviet government of Russia should be excluded, what possible progress could be made, even with the presence of the United States at the conference? If the things essential to the restoration of Europe are forbidden, banished from consideration, it would add nothing to simply increase the membership of the conference.

We should be in precisely the same situation as is the conference at Genoa at the present time. Mr. President, the Governments of Europe do not need the United States in their conferences for the purpose of modifying the reparation clauses of the Versailles treaty. That is within their power. They need neither the aid nor the counsel nor the advice of the Government of the United States to do that which is essential for them to do before they can make progress. Neither do they need the United States, nor could the United States be of any aid to them in dealing with the soviet government as a government and in recognizing the soviet people and the kind of government which they have. In other words, if they desire the Government of the United States, it must be for the purpose of carrying out the practically announced policy of dismembering and destroying Germany and of refusing to recognize or to deal with the Russian Government.

Mr. President, when the former President of the United States, Mr. Wilson, went to Paris he was immediately confronted with the same policies and condition of affairs which still prevail with reference to European governments. There is no longer any doubt, since the records are being revealed, that it was the deliberate purpose of some of the powerful influences assembled at Versailles to go much further in the utter destruction of Germany than they finally decided to go. It would now seem clear that only through the efforts of the American delegates were they prevented from actually proceeding, as it were, to dismember the German Government and destroy the German people as a nation.

I have before me a book lately published by Nitti, the former premier of Italy, who discusses the entire subject with great frankness, revealing some facts which were unknown to me, at least, before reading this book. Among other things he says:

> During the conference France put forward some proposals the aim of which was nothing less than to split up Germany. A typical example is the memorandum presented by the French delegation claiming the annexation of the Saar territory. This is completely German; in the 650,000 inhabitants before the war there were not 100 French. Not a word had ever been said about annexation of the Saar, either in government pronouncements or in any vote in the French parliament, nor had it been discussed by any political party. No one had ever suggested such annexation, which certainly was a far more serious thing than the annexation of Alsace-Lorraine to Germany, as there was considerable German population in Alsace-Lorraine. There was no French population at all in the Saar, and the territory in question could not even be claimed for military reasons, but only for its economic resources.

Nitti then goes on to discuss how far they were permitted to go and how far they succeeded in accomplishing their original idea or purpose. He says in the preface of the book:

I believe that Europe is threatened with decadence, more owing to the peace treaties than as a result of the war. She is in a state of daily increasing decline, and the causes of dissatisfaction are growing apace.

On page 7 of the preface it is said:

The recent treaties which regulate, or are supposed to regulate, the relations among peoples are, as a matter of fact, nothing but a terrible regress, the denial of all those principles which had been regarded as an unalienable conquest of public right.

On page 17 of the book is this observation:

The peace treaties imposed on the vanquished are nothing but arms of oppression. What more could Germany herself have done had she won the war? Perhaps her terms would have been more lenient, certainly not harder, as she would have understood that conditions such as we have imposed on the losers are simply inapplicable.

Three years have elapsed since the end of the war, two since the conclusion of peace. Nevertheless Europe has still more men under arms than in pre-war times.

On page 19 it is said:

The treaty system as applied after the war has divided Europe into two distinct parts: The losers, held under the military and economic control of the victors, are expected to produce not only enough for their own need but to provide a superproduction in order to indemnify the winners for all the losses and damages sustained on account of the war. * * *

Europe can only recover her peace of mind by remembering that the war is over and done with. Unfortunately, treaty system not only prevents us from remembering that the war is finished but determines a state of permanent war.

Clemenceau—

Says Nitti—

bluntly declared to the French Chamber that treaties were a means of continuing the war. He was perfectly right, for war is being waged more bitterly than ever; peace is as remote as it ever was.

On page 202 it is said:

The reason why France has always been opposed to a rapid conclusion of the indemnity question is that she may continue to have the right, in view of the question remaining still open, to occupy the left bank of the Rhine and to keep the bridgeheads indicated in the treaty.

On page 210 Nitti says:

In order to guarantee the payments an interallied army—in reality a Franco-Belgian army—occupies the left bank of the Rhine and is stationed at the bridgeheads. Germany is completely helpless and has lost all the features of a sovereign State inasmuch as she is subject to "controls" in a way that Turkey never was. In modern history we can find no parallel for this state of things. These are conditions which alter the very bases of civilization and the relations between peoples. Such procedure has been unknown in Europe for centuries. The public has become accustomed in certain countries to consider responsible for the war not the government that wished it or the German people but the future generations.

Mr. President, these statements are in harmony with the views expressed by practically all publicists and economists who have discussed the situation in Europe. So conferences may continue and the United States may be present or absent, but until the signatories of the Versailles treaty reach the conclusion to readjust the terms and revise the conditions of that treaty there can be no better condition of affairs in Europe. The United States can not redeem or save Europe under this treaty. We could bankrupt our own Government, we could tax the people of our land even unto bankruptcy, we could sacrifice our traditional policy in our effort, but crushed and disabled by this instrument Europe could not come back. On the other hand, without the aid or counsel of the United States it is within the power of these Governments to modify that treaty and thus take the first step in the restoration of economical life to a continent.

Mr. KING. Mr. President, will the Senator yield?

Mr. BORAH. I will yield in a moment. It is perfectly futile to urge our going to a conference unless it is to be an open conference. Until the questions which lie at the bottom of the distress are permitted to come up for consideration, until, as Nitti says, they look upon the future instead of reflecting constantly upon the past, there is no hope. I now yield to the Senator from Uath.

Mr. KING. Mr. President, I agree with the Senator that it is very important for the rehabilitation and stabilization of Europe—and that means it is important for America—that Germany should become a strong economic and industrial factor at the earliest possible moment; but what I rose to inquire about was this: Does not the Senator think he is attributing too much importance to what he denominates the economic features of the Versailles treaty as they affect Germany, particularly that clause which calls for 132,000,000,000 marks of reparations? I concede, of course, that that is an enormous burden upon Germany; but, in view of the manner in which it has been modified or of the extensions granted, it seems to me that perhaps the Senator is attributing too much importance to that as a factor which seems to be a deterrent to the rehabilitation, economically, of Europe.

Mr. BORAH. Mr. President, I do not think that I attribute too much importance to it. I might be disposed to think that perhaps I am doing so if it were not for the fact that outside of one country I do not know of any public man in Europe who does not take the same view, and I do not know of anyone from this country traveling in Europe to make a study of the situation who upon his return has not announced the same conclusion.

It has been said by the able Secretary of State that before we can deal with Russia, Russia must put her house in order. I do not quote that now in connection with the question of the recognition of Russia, but that rule must apply with ten times greater force to the European situation as controlled by the Allies.

The situation is absolutely in their control, so far as modifying the Versailles treaty is concerned; and, if the judgment of the whole world be correct that that is the first essential step, the United States may properly consider that as essential before even considering the proposition of aiding in the restoration of Europe. One of the most interesting, one of the most anomalous propositions in all the history of nations is this constant urging the United States to come in and help, but help under a program which would make the help perfectly fruitless. Certainly, if that stupendous task is to be undertaken, only a madman would urge it should be undertaken under conditions which insure failure and disaster from the beginning.

Mr. HITCHCOCK. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Nebraska?

Mr. BORAH. I yield.

Mr. HITCHCOCK. I sympathize with what the Senator from Idaho is saying, but it seems to me it does not go far enough. In my opinion, if he believes that the question of reparation must be considered before Europe can be restored to anything like its normal conditions, he ought to go so far as to say that the United States should use its moral influence with the nations of Europe to bring them to that consideration. The United States can not exert that influence by holding aloof; the United States can only exert that influence and do its part toward bringing about a reconsideration of the reparations question by participating in the councils of Europe. It seems to me that the thing for the United States to have done was to have accepted the invitation and to have been represented at Genoa, and there at Genoa to have joined those forces in Europe which favor a reconsideration of the reparations question and the restoration of normal conditions so far as may be possible. I entirely agree with what the Senator has said, that the question of reparations as it exists to-day stands in the way of any rehabilitation in Europe; and I think the United States should not only agree to that proposition, but it should become an active force in bringing about a reconsideration. I should like to have the Senator consider that phase of the question.

Mr. BORAH. I have considered it a great deal, and I long ago arrived at a conclusion in regard to it. I have no objection in the world; on the other hand, I think it the duty of the United States to use its moral influence in these matters. It can use its influence and render inestimable service to Europe without sacrificing our traditional foreign policy in any respect, if Europe will permit it to do so.

Mr. HITCHCOCK. The Senator has said very truly that the well-informed economists of Europe in Great Britain, in Italy, in Germany, in every other country of Europe except possibly France have come to the conclusion that reparations must be reconsidered in order that a start may be made toward rehabilitating Europe and saving her civilization. If there is that sentiment in the other countries of Europe outside of France, why should not the United States make itself felt, and organize that sentiment?

Mr. BORAH. The difficulty is that the change of the Versailles treaty is dependent upon the word of France. The United States, whatever it might do, could not do anything except exert its moral influence, and it can use that infinitely better, if it is of a mind to exert it, as a free and independent agent to throw its influence wherever justice lies, far better it seems, too, than if it were tied up in such a contract as those nations have unfortunately found themselves in. In other words, if Lloyd-George were free to-day from the terms of the Versailles treaty, can anyone doubt what course his would be with reference to these fundamental policies in Europe? As Nitti says here in his book, it was most fortunate that the United States refused to become tied into that treaty; fortunate because she may exercise her influence and her moral leadership now, if she desires to, free from the destructive terms of the treaty.

Mr. HITCHCOCK. Assuming that that is a correct statement by Nitti, is not the United States now a mere negative power? It is losing its great opportunity. It is doing nothing to partici-

pate in what that author suggests in his book. We are holding aloof. Now, France is not beyond the power of public opinion of the world. There is some divided sentiment even in France. It is the military element in France which is now in control. The economists of France have begun to realize that they are attempting the impossible; and it seems to me that in this situation the moral force of the United States, if represented at a conference, standing by Lloyd-George and encouraging him and holding up his hands, would be an important factor.

Mr. BORAH. Yes; that is all it could do—stand by him and hold up his hands, with Lloyd-George tied into the Versailles treaty.

Suppose we had gone to Genoa; we could not have participated in any of those matters which relate to or have to do, in my judgment, with the real recovery of Europe, because they were excluded from the consideration of the conference before France would consent to attend. They were not permitted to come up. It was not a question of a vote, or a majority control or extraordinary influence in the conference; but those things were excluded before the conference ever met. The premier of France gave the world distinctly to understand that if that promise was not to be carried out in good faith, France would not attend the conference. We may differ as to just how the United States should approach the subject. I presume the Senator from Nebraska would have us join some kind of a combination. Perhaps he has only in mind now, after observing the result of things for the last three years, simply a moral influence. If he has that in mind and no more, I quite agree with him. But suppose we were to go to The Hague on the 15th of June and France should say before our going that the question of the recognition of Russia or the modification of the Versailles treaty should not come up for consideration; what possible service could we render in the restoration of Europe under those conditions?

I repeat that this policy and this program is within the keeping and control exclusively of the powers which are inviting the United States to the conference. They may correct the Versailles treaty without the aid, moral or otherwise, of the United States. They may modify its terms if they wish to do so. They do not need the United States in order to modify its terms.

They do not need the United States in order to recognize Russia. It must be, therefore, that they desire the United States not for the purpose of recognizing Russia or of modifying the Versailles treaty but to throw its influence and its power to carry out their destructive program in refusing to recognize one or to modify the other.

Mr. HITCHCOCK. Mr. President, if the Senator will permit another interruption——

Mr. BORAH. Yes.

Mr. HITCHCOCK. Of course, if we had gone to the Genoa conference, it might have been no greater success than it has been up to the present time, but at least we would have shown our interest in European affairs; at least the men whom we sent to Genoa could have made their views felt strongly upon the French delegation, as Lloyd-George, no doubt, has made his views strongly felt upon them. If we should go to The Hague at this supplemental conference, we may not be able to force the consideration of German reparations upon the agenda, nor to force the recognition of Russia upon the agenda; but at least the men who should go to the conference would be in a position to force upon the attention of the French delegates the fact that the United States had a public opinion; that the United States believed a certain thing should be done; and the influence of that first step might be quite important.

Consider, however, the position we are in now. We are in the position of declining to participate in the Genoa conference.

Mr. BORAH. Very wisely, in view of the agenda.

Mr. HITCHCOCK. The Senator would have us decline to participate in the approaching Hague conference, if it shall be held?

Mr. BORAH. Yes, indeed; especially if the agenda excludes everything which ought to have consideration.

Mr. HITCHCOCK. There is, therefore, no intimation to France that we believe her policy is wrong. There is no attempt to convert France to the idea which the Senator advocates. His speech here in the Senate on the subject is important, but it has not anything like the importance that a direct demand upon the French delegates, either at Genoa or at The Hague, would have, that there should be a reconsideration of the reparations question.

Mr. BORAH. I think the United States could exert a tremendous influence, but that would be by outlining a foreign policy of its own and advocating that foreign policy before all the world. We do not need to go to Europe to lead. We do not need to join leagues in order to help. Our free and untrammeled position enables us to form a policy and mobilize the moral forces of the world behind it.

Mr. HITCHCOCK. Is not the place to do it at an international conference?

Mr. BORAH. No; the place to do it is at the two ends of Pennsylvania Avenue, right here in this Capitol, where it was designed that the policies of the United States should be formed and framed, where they can be formed and framed free and independent of any influence other than that of the best interests of the entire world, relieved of local prejudice or the local conditions or the local control which would not only be exerted at The Hague but which were exerted tremendously and almost disastrously upon the President of the United States when he was at Paris.

Mr. HITCHCOCK. The Senator has admitted that the President at Paris made a fight against the excessive demands pressed against Germany; and if that fight could have been continued at Genoa, and if it could be continued at The Hague, and could be continued at other international conferences, there can not be a doubt that the great moral power of the United States would ultimately have an influence in bringing about a more reasonable policy in European affairs.

Mr. BORAH. Mr. President, I think the most powerful influence which the United States can exert in the future with respect to the welfare and peace of the world could be exerted as an independent sovereignty, an independent nation. I do not mean by that that we should not cooperate with other nations as one member of a family of nations does with another. I do not mean that we should not consult and confer with reference to these matters, but joining in any conference the program of which is made up in advance, the program of which is outlined in advance, the jurisdiction of which is defined in advance, and all outlined and all defined according to European policies, excluding absolutely American policies, would in my opinion be perfectly fatuous upon the part of the United States; more, it would be disastrous.

Mr. President, there is one thing that the United States can do without going to Europe, and which it is its duty to do, in my humble opinion, and that is to deal with the Russian problem.

I do not know exactly what the policy of the Government is with reference to Russia. I only know that five years have gone by since the Russian people established a government known as the soviet government of Russia. I know that that government has stood, notwithstanding the attacks from within and from without, during the period of five years. We are advised by those Americans lately returning from Russia that it is much stronger and better calculated to endure at the present time than at any time previously in its history. We are advised that that government is making progress in relieving itself from the great difficulties which surrounded it and making progress in solving some of the problems of Russia. There is no other government there. There can be, in my opinion, no other government there without fearful bloodshed and sacrifice, superinduced and supported by the Allies upon the outside. We are face to face with the proposition of either recognizing and dealing with the only governmental power in Russia or of excluding Russia permanently from the family of nations, thereby contributing to the turmoil and the misery of Europe by doing so, or of imposing upon Russia, through outside military force, a government which her people do not want.

It seems to me that the reasonable thing to do is to recognize the de facto government which is there and to deal with it. In saying that I do not advocate nor accept the standards of the soviet government with reference to political questions; neither is it necessary to do so. But it is there and doing business and carrying on the affairs of the government, and has given a reasonable show of its strength; and it is in the interest of harmony, in the interest of stability, and in the interest of progress that the other Governments of the world recognize it.

Two things have been perfectly apparent during the time since the signing of the armistice. There are two fundamental propositions underlying the European policy. The first, as I said a moment ago, is that of utterly destroying Germany, resolving it back into its original parts as Bismarck found it—dismembering and destroying it—not often expressed but many times admitted by acts, and sometimes expressed, upon the part of those who have had to do with the shaping of this policy. The second proposition is perfectly apparent, and that is to force Russia back under the control of the old régime, a thing, in my judgment, utterly impossible and utterly inhuman also. Powerful influences in Europe are determined to bring Russia again under the control of the reactionary forces which tormented and scourged those people for centuries. You may

argue that such would be better than the soviet rule, but I venture the opinion the people of Russia do not think so, and it is for them to say. The peasantry associates the idea of going back with landlords and the loss of their land. So they did not rise and support Kolchak or Denekine. They prefer the soviet rule, believing that it is far better than the bloody, cruel, remorseless tyranny of the old régime. And in that respect they are right.

The Russian people may not be entirely satisfied with the soviet government, but they support it, they stand by it, for the reason that every movement which has been made against it has been an effort to lead them back to the control of the old forces. In that direction they do not propose to go; and, in my opinion, it would be utterly impossible, with all the influence which could be brought to bear upon the matter, to force Russia to take that backward step.

If Russia is recognized, we will have a much better opportunity to deal with her and to bring about a modification of the terms of her government in business and commercial affairs than if we exclude her entirely from the family of nations. When I look over the Russian reply at Genoa, I entertain no doubt that upon the recognition of the soviet government and within a brief space of time we would be able to do business with that government upon lines of perfect commercial safety and security; and if we should be able to accomplish that, it would be the first long, permanent step toward the restoration of Europe.

Mr. POMERENE. Does the Senator believe also that if the soviet government were recognized, they would recognize the debt which the Russian Government now owes to the United States, or other debts of the preceding Government?

Mr. BORAH. Mr. President, I think a recognition of the soviet government would make it possible to deal with those matters in a way which, in my judgment, would lead ultimately to a solution and settlement of them. The Russian note to the conference indicates very clearly, to my mind, that they are perfectly willing to deal with the question of the debt upon the same terms upon which the Allies deal with Russia, and you could scarcely ask for more.

But I do not understand why it is either necessary or reasonable for us to demand in advance of recognition that she shall do those things which are the highest exertion of power upon the part of a government. It may be, sir, that the Russian Government can not do all the things the Russian Government might desire to do without some assistance and without some counsel and without some aid, but we require that she shall do that which is the highest exertion of governmental power before we will recognize the fact that she is a government, which, in my opinion, is a perfectly inconsistent position.

In this morning's Washington Herald there is an article from Sir Philip Gibbs, who is writing upon the conclusion or breakdown, as he calls it, of the Genoa conference. He says:

> First of all, the absence of the United States, for inevitable reasons no doubt, deprived this world council of a power which might have thrown its weight on the side of conciliation and common sense in a spirit of arbitration which would have been respected by all nations.

The complete and sufficient answer to that suggestion is that the influences which it was necessary to supply, and upon which reconciliation should have been had, were excluded in advance from the consideration of the conference.

There may be many reasons why the United States should join an open conference. There are many arguments in support of a proposition that she should confer, if all these questions are to be left open and to be determined by wise counsel and advice; but there is no possible argument in favor of her becoming a member of a conference until the fundamental questions upon which the restoration of Europe depends are thrown open to the consideration of the entire conference. While the former proposition is a matter of debate, certainly the latter can have but one side.

Let these Governments of Europe, which are desirous of having the aid and assistance of the United States, assure the United States and the world that should it come to the conference at The Hague on the 15th of June the continuance of the treaty of Versailles and the recognition of the Russian Government will be matters to be determined, matters upon which it may pass, with the utmost freedom upon the part of all who are members of it.

If they are willing to say that, if they are willing to give the conference unlimited jurisdiction, there are reasons to be adduced why the United States should attend that conference; but I should hope that before we would attend such a conference we would definitely define our own policy toward the Russian people, a thing which we are under obligation to do, and which we may very well do without regard to the views of any other power.

Sir Philip Gibbs continued:

> Thirdly, the decision forced by France to forbid all discussion or consideration of German reparations or general demobilization made any economic or political stabilization of Europe impossible from the outset.

Precisely so. The United States might have been there with all its moral influence and power, but with the program as outlined, and as it is proposed to be outlined in the future, so far as we know, it was utterly impossible from the outset to accomplish anything whatever. He continued:

> Lloyd-George's program of conciliation and cooperation for the sake of world peace and the European family as a whole has forced into the open the political philosophy of the present French Government, which is not based upon the interests of the European family but upon the deliberate intention of using the military strength of France to crush Germany and dominate Europe.

With that policy, as stated by Mr. Gibbs, and as undoubtedly supported by the facts, supported by the history of the last three years, would the Senator from Nebraska or anyone else entertain the hope that the United States could accomplish anything?

Mr. HITCHCOCK. Mr. President——

Mr. BORAH. Just a moment. Was the United States able to modify that policy in the slightest when France was a visitor here in the capital? Was she able to make any impression or to bring about any different opinion upon the part of that conference at the parley at Washington? What we are considering is what appears to be a definite, determined policy upon the part of that Government to permit none of these questions to be considered which must be considered before the United States can be of any service to the people of Europe. I yield to the Senator from Nebraska.

Mr. HITCHCOCK. The Senator has just read, from the article he has read into the RECORD, a very clear evidence of one of the valuable results of the Genoa conference. Sir Philip Gibbs states in that article as the Senator has read it that the fight which Lloyd-George made for conciliation and the adjustment of those difficulties in Europe has forced into the open the policy of France and made that the issue for the future. The United States ought to have been standing beside Lloyd-George in making that fight. That is the issue for the future, and it can not be dodged in the future. It is only a first step that has been made, but it is to be the great issue in Europe from now on, and the United States should have participated in the fight which Lloyd-George made and which has at last defined the issue.

I am agreeing with the Senator in his attitude that the nations of the world ought to consider the reparations question. They should not bar that from consideration in solving the economic problems which confront the world, but I say that the United States should participate in the preliminary discussions and should show its willingness to cooperate. The trouble with the United States at present is that we stand a mere cipher before the world.

In the papers this morning we read of one of the great achievements of the League of Nations just coming to fruition, an achievement which is told of in the Associated Press and United Press articles appearing in the morning papers, which show that the League of Nations has accomplished the almost impossible task of bringing Germany and Poland to an agreement on the Silesian question and the formation of a treaty longer even than the Versailles treaty. That is a great achievement.

Mr. BORAH. It is a great achievement if it is longer than the Versailles treaty.

Mr. HITCHCOCK. That puts Germany and Poland into a friendly attitude, it abolishes the danger of war, and it has been accomplished by the League of Nations without the aid of the United States.

The League of Nations has accomplished other things there, and the United States has done nothing at all. The League of Nations has settled one cause of war in the Aland Island dispute. It has settled another cause of war in regard to the territory of Albania, it has established a great court at The Hague, and done other things, all without the slightest aid, and even without the moral support, of our Government. I go further than the Senator. I say these things should be done by Europe, but I say that the United States should also participate and do its share in bringing about these reforms.

Mr. BORAH. Mr. President, if the League of Nations has accomplished anything toward the solution of difficulties in Europe, I join with the Senator from Nebraska in rejoicing over the fact. I hope that the news item this morning is correct. However, only the latter part of last week I read an extended article by a gentleman writing in an English magazine, stating that the action of the League of Nations in the attempt to settle these difficulties had planted the seeds of war so deeply

that they never could be extricated or eliminated until another war should come. It is a mere matter of difference of opinion. But if they have accomplished something, very well and good. It shows that they can run a League of Nations without the United States, and run it very well, apparently, according to the Senator, and I am anxious for them to do it that way. That should not preclude us, however, of course, from having our definite policy with reference to these affairs, and from exerting, as we have for 150 years, our tremendous moral influence in shaping these affairs.

The only difference between the Senator and myself apparently is that he desires to have this Government bind itself by some written agreement, and I insist that our greater influence and greater power can be exerted as an independent Nation.

Mr. HITCHCOCK. Will the Senator allow me to ask him a question there?

Mr. BORAH. Certainly.

Mr. HITCHCOCK. Were any of the nations which participated in the Genoa conference bound by any written agreement?

Mr. BORAH. Certainly; Lloyd-George no doubt sat up at night cursing the hour when the British nation became a party to the Versailles treaty. He was there bound by the terms of that treaty, which he himself said, almost in so many words, is bringing Europe to utter ruin; and yet, because they are a member of the treaty which they are unable to modify without the consent of the other powers, they are bound. In other words, by signing the Versailles treaty they have made France the autocrat of Europe, because without her consent it can not be modified.

Mr. HITCHCOCK. Mr. President, the Senator has practically stated that Lloyd-George endeavored to get the consent of France to a modification, and the question I asked him was whether the United States should not have been standing with Great Britain on that, in trying to get the consent of France to the modification, and the Senator practically admits it when he says that we should, from this hemisphere, use our influence toward securing a modification, but that we should not go to the conference for the purpose of uniting with other nations in bringing about a modification. It seems to me that is a little inconsistent. He certainly does not go far enough to be effective. This is a world of cooperation, objects are achieved by cooperation, and if the Senator is in earnest, as I have no doubt he is, in wanting to have a modification of the reparations provisions which were set forth in the Versailles treaty, he ought to be in favor of bringing it about by the cooperation of the United States with other nations which demand that modification.

Mr. BORAH. I had not read quite far enough in the Sir Philip Gibbs article to enlighten the Senator when he said that the United States should have been there throwing its moral influence on the side of Great Britain for the modification of the policy of France. Gibbs says:

> But the time has gone by for pretending that the French Government under Poincare is amenable to persuasion or moderation. Men now in power in France are determined at all costs to thwart the British policy which is based upon fair treatment to Germany and generous treatment to Russia for the sake of peace and economic recovery.

I take it, Mr. President, that that policy was not revealed for the first time at Genoa. It has been apparent for the last year and a half or two years that there is a wide division as to policy between Great Britain and France. It does not make any difference what the diplomatists may say, it is apparent to the wayfaring man that their division is pronounced and that it is practically irreconcilable as between them. It occurs to me that the United States can only be of service in this matter by outlining its own policy toward the European powers and pursuing it as a great, powerful, independent Government.

Public opinion will follow the lead of any nation at this time which fights along toward the proposition of reconciliation, of getting away from war conditions, of getting away from war passions, of ceasing to reflect so much upon the past and of contemplating more and more the future and what we must do in order to enjoy something in the way of peace and the cessation of turmoil. If the United States desires to be of influence, it can have that influence by virtue of its policy, and not by virtue of agreements or understandings with nations which have a different policy and a different program and a different object to attain.

Now, Mr. President, I had not intended to occupy the time of the Senate so long. At a later day I am going to discuss in detail the subject of the recognition of the soviet government. I really had not intended to refer to it at all at this time; I had in mind only to make some observations of the Genoa conference and its relation to the reparation clauses of the Versailles treaty.

Mr. KING. Mr. President, may I be permitted a word apropos of the statement just made by the Senator from Idaho? I think we all agree that conditions in Europe are so chaotic that economic revival there will be slow and difficult. The convulsions in Europe, the loss of life and of property, were so stupendous that many years must elapse before the wounds can be healed and peace and prosperity come to the distracted countries of Europe. If all reparations exacted from Germany were forgiven her, there would still be a long journey for that nation and the other belligerent powers of Europe before the summit of prosperity was attained. But I suggest that in viewing the situation of to-day we should not do an injusice to a nation which was once our ally.

Without entering into a discussion of the Versailles treaty and the reparations provisions, we should remember that France was invaded, that she suffered irremediable injury, and has incurred obligations far greater than the monetary indemnity required to be paid by Germany to all of the allied nations.

France entered the war with a prosperous and contented people; with a small debt. She came out of the war with nearly 2,000,000 of her best sons killed and millions wounded and disabled, a large part of her territory destroyed, and hundreds of thousands of her people driven from their homes. She was compelled to incur a debt which now aggregates more than $53,000,000,000 in order to defend her soil and the cause for which she and the allied nations were fighting. She has been compelled to spend annually since the armistice——

Mr. SHEPPARD. Mr. President, does the Senator mean dollars or francs?

Mr. KING. Fifty-three billion dollars. She has been compelled, as I was stating, to expend annually since the armistice billions of francs for the restoration of the destroyed territory and for the building of homes and railroads which were destroyed by the invading armies of Germany. She is taxed to-day higher than any nation in Europe, and her per capita indebtedness is the greatest of any nation in the world. Her population is far less than Germany's, and she still lives in terror owing to the two invasions of her fair land by the military forces of the German Empire. With her limited resources and the frightful destruction which was wrought in her land and the appalling burden of debt resting upon her it can not be wondered that the people of France look with apprehension upon the recrudescence of Germany as a military power.

Mr. WATSON of Georgia. Mr. President——

Mr. KING. I yield.

Mr. WATSON of Georgia. Will the Senator from Utah tell us what the soviets have done that the French did not themselves do in their revolution?

Mr. KING. I was not speaking at the present time of the soviet government or conditions in Russia. I was merely speaking about France.

Mr. WATSON of Georgia. The Senator says France made certain complaints against Russia because she has confiscated property. I would like to have the Senator refresh his memory and tell us whether Russia has done anything more in the way of confiscation than France did.

Mr. KING. I suppose the Senator refers to the French Revolution. Undoubtedly the revolutionary governments led by Danton and Mirabeau and Camille Desmoulins and the Girondists and St. Just and Robespierre and Marat and others confiscated property, both property held by the church and that owned by the nobles. However, a portion was directly or indirectly restored at a later time.

Mr. WATSON of Georgia. The property of the church was never restored. The Senator is in error if he means to make that statement. What was done was merely this: After Napoleon came into power, he reestablished the Roman Catholic Church as the religion of the State and set aside $10,000,000 per year to pay its clergy. But the land, the real estate, and everything that had been confiscated under the act that was introduced by the ex-bishop, Talleyrand, was never restored.

Mr. KING. What I had in mind with respect to the property of the church, was such as was used for religious purposes, such as the cathedrals and religious edifices. They were restored to the church in a de facto manner, if not de jure.

Mr. WATSON of Georgia. The French Government simply allowed them to use the church buildings for purposes of worship, but the property of the nobles was never restored in whole.

Mr. KING. That is what I intended to say.

Mr. WATSON of Georgia. It was divided up and sold, and only in isolated instances was it restored by the French Government—some so late as 1872—but the French Assembly, under the reign of King Louis XVIII, the first Bourbon restoration,

appropriated a large sum of money as compensation to the nobles for the property which had been confiscated.

Mr. KING. With respect to the church property, the facts are substantially, I think, as I stated them. The cathedrals, the church property proper, which was used for religious worship, and many of the homes in which the priests lived were restored to the church for its use. I am not speaking about the title; that is, I am speaking now about the equitable title, not the legal title. The use of the property referred to was restored to the church. As the Senator has said, under arrangements made by Napoleon, contributions were annually made by the State for the support of the clergy. Later a small portion of the property taken from the nobles was restored to them or to their families, and payments were made to some by the Government or the king.

But I was not speaking about Russia or the actions of the soviets in Russia. I was referring to the burdens which have been laid upon France and to the conditions confronting her. It has been reported from time to time that Germany intended to resist the Versailles treaty and to oppose—if need be, by force—the execution of its terms. Undoubtedly her attitude at times has been militaristic, even in the hours of her defeat. Maximilian Harden has called attention to the foolish ebullitions of some of the Pan-Germans. At times there has been fear that war would ensue between Germany and Poland. France has felt insecure and has feared a general conflagration among European nations. Poland was established as an independent State and her integrity guaranteed by the Versailles treaty. Other new States were set up. The war undoubtedy left antipathies and bitter resentments, and even now there are difficult questions still unsettled and which contain the germs of war. France felt that her peace and her future security were involved in the enforcement of the material terms of the Versailles treaty, particularly those dealing with the new States or nations which were established following the war. She was especially solicitous for the preservation of Poland, feeling that if Germany destroyed Poland she would turn within a few years upon France herself.

That France has been sincere in her course, I think all must concede; that her policy has been the wisest presents a different question. She felt when the United States refused to enter the league or to ratify the Anglo-French-American treaty that she was being deserted, or at least was not to expect protection from the allied nations if Germany should resist the treaty. I believe that a more conciliatory attitude by France or a greater confidence in Germany and the allied nations would have avoided much of the recriminations and suspicion that have taken place and been aroused. But I do not think the people of France desire war or are imperialistic, nor do I think that the mass of the German people desire to engage in another sanguinary conflict. We should try to be just to all nations and try to understand their problems and their point of view. But I congratulate the Senator from Idaho upon the fact that he does not follow the orthodox views of the standpat Republicans in dealing with foreign and domestic questions. The Senator evidently believes that the prosperity of the United States is more or less involved in the stabilization of Europe and in her prosperity. He believes that Germany and Russia must be restored and rehabilitated and become potential factors in the economic and industrial life of Europe before we can secure that foreign trade which is essential to American prosperity. I think he is correct. He believes that when the nations are restored to industrial prosperity and are producing and buying and selling that they will contribute to the prosperity of the United States.

That is the view for which some of us are contending in the discussion of the pending tariff bill. The Democrats are insisting that we must find markets in Germany, in Russia, throughout the world, for our surplus products if we would have great prosperity, and that we can not secure such markets until Europe is stabilized and her people are producers. The Senator from Idaho is heretical enough to accept the view that our prosperity will be increased by the prosperity of Germany and Russia and other European nations, that when they can buy our surplus products they will be adding to our prosperity, and that if the markets of the world are closed to us then our productions will be restricted and our industrial progress hampered.

Our Republican friends are doing all they can by this tariff bill to prevent us from trading with Germany and other nations. Why should the Senator from Idaho want Germany rehabilitated? First, because it is right morally and ethically. She is a part of the world, and a big part of the world. He wants her rehabilitated because she needs our commodities and we need a portion of her trade. She wants many of our surplus products and can only purchase them when she produces a surplus of commodities. But our Republican friends who have drafted this remarkable tariff bill want to erect tariff barriers which will prevent the consummation of the plan which the Senator from Idaho clearly sees is so imperative to the prosperity of the American people.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. JOHNSON. Mr. President, in order that the amendment which we have been discussing may be before the Senate, I move, in line 16, page 20, that the numeral "6" be stricken out and in lieu thereof the numeral "9" be inserted.

The PRESIDING OFFICER. The amendment will be stated.

The READING CLERK. On page 20, line 16, the Senator from California proposes to amend the amendment of the committee by striking out the numeral "6" and inserting in lieu thereof the numeral "9," so as to read:

Lime, citrate of, 9 cents per pound.

Mr. JOHNSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The principal legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	Gooding	McCumber	Sheppard
Ball	Hale	McKinley	Shields
Borah	Harreld	McLean	Shortridge
Brandegee	Harris	McNary	Simmons
Broussard	Harrison	Moses	Smoot
Bursum	Hitchcock	Myers	Spencer
Capper	Johnson	Nelson	Stanley
Caraway	Jones, N. Mex.	New	Sterling
Colt	Jones, Wash.	Newberry	Swanson
Cummins	Kendrick	Nicholson	Townsend
Curtis	Keyes	Norbeck	Underwood
Dial	King	Oddie	Wadsworth
Edge	Ladd	Overman	Walsh, Mass.
Elkins	La Follette	Page	Walsh, Mont.
Fletcher	Lenroot	Pomerene	Watson, Ga.
France	Lodge	Rawson	Weller
Gerry	McCormick	Robinson	Willis

Mr. CURTIS. I desire to announce the absence of the Senator from Wyoming [Mr. WARREN] on account of a death in his family. I ask that this announcement may stand for the day.

Mr. NORBECK. I desire to announce the absence of the Senator from Nebraska [Mr. NORRIS] and the Senator from Alabama [Mr. HEFLIN] in attendance upon a hearing before the Committee on Agriculture.

The PRESIDING OFFICER. Sixty-eight Senators have answered to their names. A quorum is present. The question is on the amendment offered by the Senator from California [Mr. JOHNSON] to the committee amendment.

Mr. JOHNSON. I ask for the yeas and nays on the amendment to the amendment.

The yeas and nays were ordered.

Mr. ASHURST. I ask that the amendment to the amendment may be stated.

The PRESIDING OFFICER. The amendment offered by the Senator from California to the amendment of the committee will be stated.

The ASSISTANT SECRETARY. On page 20, paragraph 46, line 16, before the word "cents," it is proposed to strike out the numeral "6" and to insert the numeral "9," so as to read:

PAR. 46. Lime, citrate of, 9 cents per pound.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk proceed to call the roll.

Mr. COLT (when his name was called). I have a general pair with the Senator from Florida [Mr. TRAMMELL]. I am unable to secure a transfer, and therefore withhold my vote.

Mr. HARRIS (when his name was called). I have a pair with the junior Senator from New York [Mr. CALDER], and therefore withhold my vote.

Mr. HARRISON (when his name was called). I have a pair with the junior Senator from Oregon [Mr. STANFIELD]. If the junior Senator from Oregon were present, I understand he would vote "yea," and I should vote "nay." Being unable to secure a transfer, I withhold my vote.

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from Wyoming [Mr. WARREN] which I transfer to the senior Senator from Texas [Mr. CULBERSON], and vote "nay."

Mr. SIMMONS. I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG], who is absent. I

transfer that pair to the Senator from Nevada [Mr. PITTMAN], and vote "nay."

Mr. STANLEY (when his name was called). I have a general pair with my colleague, the junior Senator from Kentucky [Mr. ERNST]. In his absence I withhold my vote. If permitted to vote, I should vote "nay."

Mr. STERLING (when his name was called). I have a general pair with the Senator from South Carolina [Mr. SMITH]. Being unable to secure a transfer, I withhold my vote.

Mr. WATSON of Georgia (when his name was called). I have a general pair with the junior Senator from Arizona [Mr. CAMERON]. In his absence I withhold my vote.

The roll call was concluded.

Mr. McNARY. I desire to announce the absence of the junior Senator from Washington [Mr. POINDEXTER] on account of illness. He is paired with the junior Senator from Pennsylvania [Mr. PEPPER]. If the Senator from Oregon were present, he would vote "yea," and if the Senator from Pennsylvania were present he would vote "nay."

Mr. EDGE. I have a general pair with the Senator from Oklahoma [Mr. OWEN]. I transfer that pair to the senior Senator from Pennsylvania [Mr. CROW] and vote "nay."

Mr. NORBECK. I desire to announce the absence of the Senator from Nebraska [Mr. NORRIS] on business of the Senate.

Mr. NEW. I have a pair with the junior Senator from Tennessee [Mr. McKELLAR]. In his absence I withhold my vote. If permitted to vote, I should vote "yea."

Mr. JONES of New Mexico (after having voted in the negative). I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED] and allow my vote to stand. I make this announcement of the transfer of my pair to stand for the day. If the Senator from Missouri were present, he would vote "nay."

Mr. ROBINSON (after having voted in the negative). I have a general pair with the Senator from West Virginia [Mr. SUTHERLAND]. I am informed that that Senator has not voted. I transfer my pair with him to the Senator from Alabama [Mr. HEFLIN] and will let my vote stand.

Mr. DIAL. I transfer my pair with the Senator from Colorado [Mr. PHIPPS] to the Senator from Ohio [Mr. POMERENE] and vote "nay."

Mr. CURTIS. I am requested to announce the following pairs:

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS]; and

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS].

The result was announced—yeas 28, nays 31, as follows:

YEAS—28.

Ashurst	Harreld	McKinley	Page
Ball	Johnson	McNary	Rawson
Borah	Jones, Wash.	Moses	Shortridge
Broussard	Kendrick	Newberry	Townsend
Bursum	Keyes	Nicholson	Wadsworth
Capper	Ladd	Norbeck	Weller
Gooding	McCormick	Oddie	Willis

NAYS—31.

Brandegee	Frelinghuysen	Lodge	Simmons
Caraway	Gerry	McCumber	Smoot
Cummins	Hale	McLean	Spencer
Curtis	Hitchcock	Myers	Swanson
Dial	Jones, N. Mex.	Overman	Underwood
Edge	King	Robinson	Walsh, Mass.
Elkins	La Follette	Sheppard	Walsh, Mont.
Fletcher	Lenroot	Shields	

NOT VOTING—37.

Calder	Glass	Pepper	Sterling
Cameron	Harris	Phipps	Sutherland
Colt	Harrison	Pittman	Trammell
Crow	Heflin	Poindexter	Warren
Culberson	Kellogg	Pomerene	Watson, Ga.
Dillingham	McKellar	Ransdell	Watson, Ind.
du Pont	Nelson	Reed	Williams
Ernst	New	Smith	
Fernald	Norris	Stanfield	
France	Owen	Stanley	

So Mr. JOHNSON's amendment to the committee amendment was rejected.

Mr. JOHNSON. Mr. President, I give notice that I shall reserve a vote upon the particular amendment in the Senate.

Mr. KING. Mr. President, I indicated a few moments ago that I should offer an amendment to the pending bill striking out "18" and inserting "12."

The PRESIDENT pro tempore. The question now is upon the amendment proposed by the committee.

Mr. KING. Yes. I shall content myself by voting "nay" on the committee amendment.

The PRESIDENT pro tempore. The question is on agreeing to the amendment of the committee. [Putting the question.] The Chair is in doubt.

Mr. KING. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator will state it.

Mr. KING. My understanding is that we are now voting upon the committee amendment changing the House rate from "12" to "18."

The PRESIDENT pro tempore. The Senate is not voting upon that amendment. The Senate is voting on the amendment proposed in paragraph 46, line 16, page 20.

Mr. KING. Then I was in error. I had supposed that we were voting upon the amendment which was offered by the Senator from Massachusetts to the first paragraph of the bill.

The PRESIDENT pro tempore. The present occupant of the chair has been absent for a time, but he is advised by the Secretary that the amendment just voted upon was the amendment proposed by the Senator from California [Mr. JOHNSON] increasing the duty upon citrate of lime to 9 cents per pound. The question now is upon the amendment to that paragraph proposed by the committee.

Mr. KING. I supposed that we were voting upon the first paragraph of the bill.

The PRESIDENT pro tempore. The Senator is in error in regard to that. The question is upon the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDENT pro tempore. The Secretary will state the next amendment of the committee.

Mr. SMOOT. Mr. President, may we return now to paragraph 1 and vote on citric acid, line 10?

The PRESIDENT pro tempore. Without objection, the amendment suggested by the Senator from Utah will be stated.

The ASSISTANT SECRETARY. On page 2, line 10, after the words "citric acid," the committee proposes to strike out "12" and insert "18," to which an amendment is pending, offered by the Senator from Utah [Mr. KING], to strike out "18" and insert "5."

The PRESIDENT pro tempore. The question is on the amendment offered by the Senator from Utah to the amendment of the committee.

The amendment to the amendment was rejected.

The PRESIDENT pro tempore. The question now is upon the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDENT pro tempore. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On page 22, line 25——

Mr McCUMBER. I ask that we may go to page 21, paragraph 50.

The ASSISTANT SECRETARY. On page 21, paragraph 50, "Oils, expressed or extracted," on line 17, the committee proposes to strike out "4½" and to insert "3," so as to read:

Castor oil, 3 cents per pound.

Mr. KING. Mr. President, would the Senator object to taking up olive oil first, and then recurring to castor oil in a few moments? The Senator from New Mexico [Mr. JONES] has just been called from the Chamber, and he will return in a few moments.

Mr. McCUMBER. I should like to ask if the Senator from California [Mr. JOHNSON] is ready to take up the paragraph relating to olive oil?

Mr. JOHNSON. I am ready. I understood, however, that the committee had agreed upon rates other than those that are in the printed amendment. Is not that correct? Has there not been an agreement upon rates other than those that are inserted in the amendment as shown in the bill?

Mr. McCUMBER. There is going to be a motion to increase the rates on the part of the committee.

Mr. JOHNSON. I suggest that that be presented, and then the Senator from Utah can offer his amendment to it.

The PRESIDENT pro tempore. Is there objection to the proposal of the Senator from Utah? The Chair hears none.

The ASSISTANT SECRETARY. On page 21, line 23, occur these words:

Olive oil, not specially provided for, 6½ cents per pound.

The committee proposes to strike out the words "6½ cents per pound" and to insert in lieu thereof "40 cents per gallon."

Mr. McCUMBER. Mr. President, on behalf of the committee, I move to amend the committee amendment by striking out the figures "40" and inserting in lieu thereof the figures "50."

Mr. JOHNSON. Immediately preceding that there is "50 cents per gallon."

The PRESIDENT pro tempore. The modified amendment will be stated.

The ASSISTANT SECRETARY. In lieu of "40 cents per gallon" it is proposed to strike out "40" and to insert "50," so that, if amended, it will read:

Olive oil, not specially provided for, 50 cents per gallon.

The PRESIDENT pro tempore. The committee has modified its proposed amendment. The question now is upon agreeing to the amendment as modified.

Mr. JOHNSON. May I call to the attention of the chairman of the committee the fact that immediately preceding that is "olive oil, weighing with the immediate container less than 44 pounds, 50 cents per gallon"?

Mr. McCUMBER. Mr. President, my amendment was first offered to the "50 cents per gallon" by striking out the figures "50" and inserting in lieu thereof the figures "60," as I gave it, on page 21, line 23. I desire to follow that by striking out the figures "40," on line 24, and inserting in lieu thereof the figures "50," so that it will read "60 cents per gallon" and "50 cents per gallon," instead of "50" and "40."

The PRESIDENT pro tempore. The committee modifies its amendment on line 23 so that it will read "60 cents per gallon," and the question is upon agreeing to that amendment.

Mr. KING. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator will state it.

Mr. KING. With the modification, that places the amendment now merely in the first degree, so that it is subject to amendment, does it not?

The PRESIDENT pro tempore. It is subject to amendment.

Mr. WALSH of Massachusetts. Mr. President, in line 23, I move to amend paragraph 50 by striking out the committee-amended numerals "60" and inserting instead "30," and in line 24 by striking out the committee-amended numerals "50" and inserting the numerals "20."

The PRESIDENT pro tempore. The Chair is of the opinion that the amendments must be considered separately.

Mr. WALSH of Massachusetts. I have not any doubt of that; but I shall first offer the first amendment stated by me, and later I shall offer the second one.

The PRESIDENT pro tempore. The question is on the amendment proposed by the Senator from Massachusetts to the amendment of the committee as modified.

Mr. McCUMBER. Mr. President, unless there is an acceptance as a committee amendment of the figures "60" instead of "50," the Senator's motion would not now be in order; and I do not understand from the Chair whether the Senate has agreed to the substitution or not.

The PRESIDENT pro tempore. The Chair understood the Senator from North Dakota to modify the committee amendment, so that it stands as an original amendment.

Mr. McCUMBER. And is that agreed to by the Senate?

The PRESIDENT pro tempore. And to that amendment the Senator from Massachusetts has offered an amendment, which is now the pending question.

Mr. WALSH of Massachusetts. Mr. President, there is no sound reason for the adoption of the Senate committee amendment. Indeed, there is no justification for any tariff duty upon olive oil, except for revenue purposes. There is practically no question of protection in this item. The record of imports into this country shows that more than 95 per cent of the American consumption of olive oil is imported. In some periods of years the domestic production has been as low as 2 per cent of our consumption, and rarely, if ever, more than 3 per cent.

The Underwood tariff bill, for the purposes of revenue, did fix a duty upon olive oil at the rates named by me in the amendment which I have just offered. The emergency tariff law increased the rates to the amounts named in the original Senate committee amendment.

At the time this item was under consideration, when the emergency tariff bill was before the Senate, I made the following comment:

The duty on olive oil has been doubled, from 20 cents to 40 cents per gallon.

It is now proposed by the committee amendment just offered, the revised amendment, to make it more than double—60 cents in one instance and 50 cents in the other, depending upon whether it is imported in bulk or in small containers.

Our production is only about 5 per cent of our olive oil requirements, 95 per cent coming from abroad, chiefly from Spain and Italy. There is a world shortage of olive oil, a shortage so great that in the countries of origin—where olive oil is extensively used as butter—export taxes and export embargoes have been in force. In view of the fact that 95 per cent of our supply comes from abroad and that it would take fully a generation to develop our industry, if it ever can be developed, to the point of meeting our requirements, no emergency may be claimed. Here again is a proposed tax on 110,000,000 of our people, when 95 per cent of our supply is imported, for the benefit of a few people in America engaged in the production of olive oil.

Facts have demonstrated that so far from following the adoption of the emergency law serving as a protection to the few engaged in this industry the import price decreased. Prior to the emergency tariff act the import price of olive oil was from $2.75 to $3.25 per gallon. The import price of to-day is quoted as between $2 and $2.50 per gallon. Thus it is apparent that the emergency tariff, in so far as this item is concerned, did not serve the purpose of increasing the price and therefore making the business of American olive growers more profitable.

Mr. SHORTRIDGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from California?

Mr. WALSH of Massachusetts. I yield.

Mr. SHORTRIDGE. Do I understand the Senator to state that in spite of the rate on olive oil laid in the emergency tariff act the price of olive oil has not been decreased to the consumer?

Mr. WALSH of Massachusetts. That is what I stated.

Mr. SHORTRIDGE. Then what objection can be offered to continuing that rate of duty as applied to that article?

Mr. WALSH of Massachusetts. The only purpose in fixing these tariff duties at a rate larger than that laid in the emergency tariff act is to further render protection to those engaged in the industry by making the import price higher. The evident purpose of the committee's amendment is to increase the price to the consumer in order that the producers of olives in southern California may be able to raise their prices, and thus obtain, if possible, some further protection. As a matter of fact, the emergency tariff rates have not been a protection, because the olives which are protected in southern California rarely ever find their way to the Atlantic seaboard. The freight rates are so high and the supply is so limited that the Atlantic seaboard depends almost entirely upon the importations of olives and of olive oil from Spain and from Italy. Whatever tariff rates we make can not help California producers, for they do not and can not supply the Atlantic seaboard market.

Of course, in emergencies, when there may be depression in the production of olives available for importation, the tariff rates fixed in the emergency act and fixed by the committee's amendment will undoubtedly tend to raise the price of olives and of olive oil, but as a matter of fact up to date it has not so resulted, because there is no competition between the olive oil produced on the western coast and the olive oil that is imported from Southern Europe to the Atlantic Coast States.

The number of gallons of olive oil imported into this country has varied in the last 10 years from 4,000,000 to 6,000,000 gallons. In the year just closed, 1921, the number of gallons imported was 6,628,099. The production in California is estimated to be about 350,000 gallons, so it is very apparent from the figures presented that our domestic production is exceedingly small, and that our people must, indeed they are compelled, to go into foreign markets for their supply.

Olive oil is a food product, and very large numbers of our people depend upon it for food, particularly the people of Italian origin, and they are very vigorous in their protest against the increase in the tariff rate upon this article. I have in my hand a communication from the Olive Oil Association of America, which is signed by a very large number of wholesale grocers, wholesale druggists, manufacturers, and sardine packers of the United States. I think it worth while to read this communication, which is as follows:

MAY 4, 1921.

To the honorable members of the Senate Finance Committee:

May we bring to your attention that a large percentage of our people have been accustomed since their infancy to use olive oil as an indispensable article of daily diet. Indeed, the bulk of the olive oil consumed in the United States is used by those people, who have always been accustomed to use olive oil as a food and not a luxury.

To further tax this food product is to play into the hands of those who manufacture substitutes, as there is a limit to everyone's ability to purchase any article after it gets to a certain price.

Further, to-day there is invested in plants packing olive oil in cans and bottles imported from the various countries of production an amount approximating $2,500,000.

As I understand it, most of the olive oil comes in in bulk and is shipped to these manufacturing plants, where it is transferred from the bulk cargo to bottles and cans to be sold to the retailers of the country. This letter continues:

We hereby give you the figures compiled from three can manufacturers who manufacture olive-oil cans for the years 1916 to 1920.

I will not take the time to read those figures, but the figures for the year 1920 show that the quantity of cans manufactured and prepared for the market were 8,135,460 and the value of the same was $720,000. The letter continues:

We give you estimated figures for the same period for cases, bottles used, corks, labels, and caps, namely, $500,000.

We are here to state facts; facts that are indisputable. We believe that you are searching for the truth, and that you want to satisfy all classes, no matter in which State they may reside.

The claim being made that $3,000,000 is invested in this industry.

We protest that there should be any duty on olive oil. It would be one of the most beneficent acts of our Government to permit olive oil to enter the United States free, so that all our people may be benefited by the increased consumption that would follow. We understand, however, that for fiscal reasons for revenue it becomes necessary to tax certain products, but a 20 cents per gallon tax on bulk olive oil should be sufficient.

THE OLIVE OIL ASSOCIATION OF AMERICA,
L. J. SCARAMELLI, *President*.

Mr. POMERENE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Massachusetts yield to the Senator from Ohio?

Mr. WALSH of Massachusetts. I do.

Mr. POMERENE. What portion of the olive oil consumed in the United States is produced in the United States? I think the Senator gave the figures, but I did not bear them in mind.

Mr. WALSH of Massachusetts. Less than 5 per cent. The report of the Tariff Commission fixes the production in one of its earlier reports at 2 per cent, but I think the production is certainly below 5 per cent.

Mr. POMERENE. So the purpose is to add 50 cents a gallon, or thereabouts, to 95 per cent of all the oil that is consumed for the benefit of the producers of less than 5 per cent?

Mr. WALSH of Massachusetts. The Senator has stated the situation exactly, and in a moment I will give the Senator some figures showing what opportunity will be given those engaged in the sale of olive oil to increase the price, if the rate is raised as proposed by the committee amendment.

The communication which I have just read is signed by wholesale grocers, wholesale druggists, and manufacturers from all over the United States. My own State of Massachusetts is represented by the names of some 15 of the leading merchants and wholesale grocers of that State. The State of New York is represented by the names of some 25 wholesale merchants of high standing. Nearly every State in the Union is represented among the signers to this document of protest against this increase in the tariff duty on olive oil.

The question here is a very simple one: Where do we propose to draw the line in extending protection to infant industries? Certainly where the American consuming public depend upon the importation of a food product to the extent of more than 95 per cent of the consumption that product should not be subject to a tax—certainly not a tax as high as that fixed in this bill.

Heretofore the only argument in support of any tax on this article has been that it was necessary for revenue purposes; but in view of the great increase—an increase of over 100 per cent—in the duty it appears to be an effort to shut out our imports for the benefit of the few engaged in the production of olive oil on the Pacific coast.

Mr. KING. It is a 300 per cent tariff above zero and 200 per cent over the rate which the Senator referred to.

Mr. WALSH of Massachusetts. The rate in the Underwood law is 30 cents, and the first committee amendment proposed to raise it to 50 cents per gallon, and the last committee amendment proposes to raise the 30-cent Underwood rate to 60 cents; so it is about a 200 per cent increase. The other increase—olive oil in bulk is increased from 20 cents per gallon, the Underwood rate—to 50 cents per gallon now asked by the committee.

Mr. KING. The pre-war price, as I recall, was about $1.05 per gallon.

Mr. WALSH of Massachusetts. That is true.

Mr. KING. So that it is a tax of nearly 50 per cent.

Mr. WALSH of Massachusetts. On the pre-war price.

Mr. KING. Yes.

Mr. WALSH of Massachusetts. Exactly. The present import price is said to be about $2.25, and the importations last year, 1921, were over 6,500,000 gallons; so that the total imports were valued at about $14,600,000. The duty collected has ranged between $1,500,000 and $2,200,000. The tax proposed by this bill would increase the tax burden upon the American consumer to the amount of $2,000,000, if my figures are correct.

Mr. President, there is no necessity of longer discussion.

Mr. POMERENE. Mr. President, what would be the total value of all the olive oil produced in California?

Mr. WALSH of Massachusetts. Less than a million dollars at the present import price of $2.25 per gallon.

Mr. POMERENE. So the Government could pay them the million dollars and still save $1,000,000 to the consumers?

Mr. WALSH of Massachusetts. Yes; in fact, it would be a good deal less than a million dollars. The production is about 350,000 gallons in a year, according to the latest figures I could get of the California production.

Mr. KING. The Senator assumes no larger consumption in the future than in the past, in giving the cost which would be added to the consumers in the United States.

Mr. WALSH of Massachusetts. There has been a very large increase in consumption. In the last year the increase has been from about 4,000,000 in 1920 to over 6,000,000 gallons in 1921. It is becoming a very important food product with a very large number of our people, particularly certain foreign elements living on the Atlantic seaboard. I have received communications from Italian-American societies in my own State and in New York protesting very vigorously against this tax.

There can be no convincing defense made for the committee rates. There has been no development of the olive-oil industry in this country, notwithstanding the fact that there was a rate fixed under the Underwood law to provide some revenue for the Government, and the imports have been constantly and steadily increasing, and will increase, because the domestic raisers of olives are not able to supply the demand, especially for the eastern market.

Mr. KING. The increase has been despite the emergency tariff act, which undoubtedly has been a deterrent to larger importations and a larger consumption.

Mr. WALSH of Massachusetts. Yes. The increases during the last six months of last year were very much greater than during the first six months, showing that imports have increased, notwithstanding the emergency tariff.

Mr. KING. So when the Senator states the additional burden placed upon the consuming public is between two and three million dollars, that is upon the hypothesis that there will be no enlarged consumption of this article. But if the consumption of it increases in the future at the same ratio that it has in the past, then if the high tariff does not prevent its importation and does not prevent the people from buying it, doubtless the consumption will be greater, and therefore the burden, all things else being equal, would be greater upon the people.

Mr. WALSH of Massachusetts. Yes, assuming the tax proposed in the bill should result in an increase in the price of olive oil; and that is the purpose, otherwise it is not protective. There is no explanation for increasing the rate here on the ground of protection, except upon the theory, belief, and expectation that the domestic producer will get the benefit by a higher tariff duty of an increased price for his olive oil. That is the theory of protection. Based upon the duty rates named by the committee in their amendment, the increase in the tax will be about $2,000,000, which the importers will have to pay and which, of course, ultimately will be paid by the American consumers.

Mr. McCUMBER and Mr. KING addressed the Chair.

The PRESIDENT pro tempore. Does the Senator from Massachusetts yield and if so to whom?

Mr. WALSH of Massachusetts. I yield first to the Senator from North Dakota.

Mr. McCUMBER. The Senator, I think, has already made the suggestion that there was considerable of a reduction in the duty from the rates of the Payne-Aldrich law to the rates of the Underwood law. While there was a considerable reduction in the duty, did the consuming public get any benefit of that reduction? Prior to the war, because that is the only true test, they increased the price to the consumer.

Mr. WALSH of Massachusetts. I am unable to state exactly except that the amount of olive oil produced here then was about one-half what it is now. The price increased very rapidly and to a very high mark during the war, but it also is a fact that for some years the production in southern Europe was very much less than the demand, and, of course, that would result in a very great increase in the price of olive oil everywhere.

Mr. KING. Mr. President, I suggest to the Senator from Massachusetts that if the inquiry of the Senator from North Dakota means anything, the implication is that the tariff is of no benefit to the domestic producer. Therefore why does he want the domestic tariff if it is not for the purpose of increasing the rates?

Mr. POMERENE. Mr. President, may I have permission of the Senator from Massachusetts to ask a question of the Senator from North Dakota?

Mr. WALSH of Massachusetts. I yield for that purpose.

Mr. POMERENE. The Senator just put the question as to whether the public was benefited by the reduction in the tariff. I should like to ask how the public will be benefited by the increase in the tariff duty proposed under the pending bill?

Mr. McCUMBER. I am not claiming that the consumer will get it any cheaper because of the tariff, not by any means. But it does not necessarily follow that it is going to be higher

because of the increase in the tariff any more than it necessarily follows that it would be made lower by decreasing the tariff. When we did decrease it, the product did not go any lower to the ultimate consumer at all.

Mr. POMERENE. Of course, there are elements that may enter into the cost, and so forth, but it must be the theory of the distinguished chairman of the committee that by the increase in the tariff duty the price will be increased to that amount.

Mr. McCUMBER. Or will be sustained at the price at which the American producer can produce it.

Mr. POMERENE. But under the bill, if I understand the figures of the Senator from Massachusetts, we are going to increase the price of every 100 gallons of oil which is consumed by the public for every 5 gallons of oil that will be produced in California. That seems to be the situation.

Mr. McCUMBER. The Senator from Massachusetts a short time ago made a statement that a great number of our American citizens of Italian birth consume considerable quantities of this oil. I think that is true, and I call the attention of Americans of Italian birth that while the wages in the home country of their fathers are about 50 to 60 cents a day, they are receiving from $5 to $6 a day in the city of New York; and with a wage nearly ten times as great as they received in their home country, ought they not to be willing to pay a little more for their olive oil?

Mr. WALSH of Massachusetts. If the tariff bill is enacted into law, they will have to pay "a little more" on a great many other things than olive oil. I think the argument of the Senator from North Dakota is unsound. Because wages are higher here than in Europe, the Government must tax our people higher tariff duties. I am willing to consider a tariff duty that will measure the difference between the cost of production in this country and the cost of production abroad, if we are able to develop an industry in this country that can take care of the consumption, but when we have an industry that is only producing 2 to 5 per cent of the consumption it is absurd and ridiculous to attempt to raise tariff rates so high that they amount to an extortion upon the consuming public. That is just what the proposed tariff rates on olive oil illustrate. Many of these other items are illustrating the same thing.

The Republicans seem to have abandoned entirely the old theory of protecting infant industries. The expression "infant industries" is rarely used by Republicans in this debate and will not be used, because they are no longer attempting to protect merely infant industries. They are attempting to protect every producer in the country who has political influence who produces as much as one-half of 1 per cent of anything the American people buy. Anybody who has influence, anybody who has the power to hire an attorney to come here with some figures showing that it costs more to produce a given commodity in this country than to produce it in Europe, is immediately given some tariff protection under the bill.

This course is destructive. We are going to such an extent that we can not help but have a collapse of our whole economic system. There can be no other alternative. The case of the tariff duty on ink the other day, and the case of many of the chemicals, the case of olive oil, where the production is less than 5 per cent, demonstrates the fallacy of the Republican theory. The Senator, I am sure, does not contend for the protection of every industry, regardless of whether it is possible to produce in this country a given article or commodity and sell it at a reasonable price to the American consumer.

Mr. McCUMBER. May I answer that suggestion?

Mr. WALSH of Massachusetts. Certainly.

Mr. McCUMBER. No; I do not contend that; but I do contend that it is not necessary that any industry produce the principal portion of a product that is consumed in the United States in order to entitle it to protection. Let us suppose there were only 100 industries in the United States, and those 100 industries furnished all of the commodities which were wanted in the United States. Now, if we protected one of them we would only be protecting one one-hundredth, of course, at the expense of the other ninety-nine one-hundredths. The Senator might make that argument.

But all of those go to make up the entire American production, and wherever we find a commodity that can be produced in reasonable quantities—I will put it that way—in the United States, and capable of growing, we ought to try to protect that industry. Even though it may be small, it gives employment to a certain portion of our population, and some other small one gives employment to another portion, and so on, until we have a thousand or more of the different industries, small in themselves, but all, taken together, giving employment to an immense proportion of our population.

Mr. WALSH of Massachusetts. I desire to finish the discussion on the subject under consideration, and I will now read from the hearings before the Committee on Finance with reference to this item. I read from a paragraph on page 2579 of the brief presented in opposition to this high duty:

> The olive-oil trade should be encouraged in the interest of public health. The medical profession universally indorses its high medicinal properties. It does not compete with any home industry. California, the only State producing a little olive oil, and being, next to New York, the largest consumer of imported olive oil, is not a factor in the olive-oil trade, as it does not even produce enough for her own consumption, and has to import largely of this commodity, notwithstanding the advantages of a 50 cents per gallon protective duty, of a 22 cents per gallon transcontinental freight, and of freedom from any fiscal restrictions as to trade operating as a further protection.
>
> The present total area of olive groves in California was estimated in 1918 by the State department of agriculture equal to 31,023 acres, of which only 18,801 were bearing fruit and 12,222 had not come yet into bearing. The yield in 1919 was 14,000 tons of olives. It is estimated that with the entire 31,023 acres yielding their full capacity the total would not exceed 24,000 tons, an output, however, which will require many years before it can be reached. As it takes about 1 ton of olives to yield 40 gallons of olive oil, California could not possibly hope to produce in any one year more than 960,000 gallons of olive oil.

We have shown that the importation last year was over 6,500,000 gallons.

> This represents only 11½ per cent of the total annual consumption of olive oil in this country, which is estimated, according to the importations for calendar year 1919, at about 8,302,000 gallons. But, as a matter of fact, less than one-half of the California olive crop is pressed into olive oil, the balance being packed into tins and otherwise prepared. E. F. Woodward, a California olive grower and authority on this subject, estimated the California olive-oil crop in 1908 at about 350,000 gallons, and it can not have materially increased since then.
>
> Developments of recent years cause us to view the olive-oil importation from another angle. It is coming more and more to be imported as a raw material entering into and developing industry in this country. In the past few years packers of fish—especially tuna and sardines—have used vast quantities of olive oil in their packing. This is practically a new industry developed since the war, and increased cost of olive oil would greatly retard if not destroy it.

Mr. President, the facts about olive oil are very simple, and I almost feel like apologizing to the Senate for taking so much time. Here is a food product. Our people demand that we import it in very large quantities. Only a small fraction of our consumption is or can be produced in America. Are we prepared—are we ready—to double the tax upon this food product in view of the fact that we must go to foreign markets to supply the demands of our people? Are we determined to propose an additional burden of $2,000,000 on the consumers of olive oil in this country for the benefit of a few persons in the southern part of the State of California who are engaged in the business of raising olives?

I think we should stop and seriously consider the tremendous tax upon the consuming public which we are piling up here item after item. Before we get through with the bill we will be placing a tax on the consumers of America between three and five billion dollars per annum. I can not understand why the floodgates have been opened so wide, why we are protecting every industry that can produce anything in America and can show that it costs more to produce here than upon the other side of the Atlantic.

I ask again, what is the purpose of a free list except to admit free of duty into this country the commodities which our people need and which we are unable to produce in any substantial quantity in our own country? If this is not one of the items that ought to go on the free list I do not know of any item that ought to go on that list. I say that reluctantly, because I appreciate the development of this industry which has been attempted in the State of California, and I feel that reasonable encouragement ought to be given to those engaged in it; but the fact is that olive oil and olives do not reach even the Atlantic seaboard from California, and in the East we are totally dependent upon the foreign supply.

Mr. POMERENE and Mr. McCUMBER addressed the Chair.

Mr. WALSH of Massachusetts. I yield first to the Senator from Ohio.

Mr. POMERENE. Mr. President, I wish to ask a question, but before I ask the question I wish to make a brief statement as a basis for the question.

In 1890, when McKinley was chairman of the Ways and Means Committee in the House of Representatives and sugar was placed upon the free list, in his district, which is the district in which I live, one of the most telling arguments which he made in favor of that law and which appealed very strongly to the people was that in placing sugar and certain other articles on the free list the law had made the breakfast table of the working man free from tax.

Now, under the leadership of the distinguished chairman of the Finance Committee, the Senator from North Dakota [Mr.

McCUMBER], supported, no doubt, by the other Republican members of that committee, it is proposed to double the tax on olive oil, which is used on many tables, not of Italians alone, but of Americans everywhere. If in 1890 it were a virtue to place the breakfast table on the free list, how can we in this day justify the doubling of the tax on the breakfast table?

Mr. SHORTRIDGE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Massachusetts yield to the Senator from California?

Mr. WALSH of Massachusetts. I yield to the Senator from California.

Mr. SHORTRIDGE. The Senator from Ohio [Mr. POMERENE], in my judgment, should have added that former President McKinley, in reporting the bill which bears his name and which placed sugar on the free list, substituted a bounty in lieu of a tariff on sugar. Perhaps it ought also to be added that then Representative McKenna, now Mr. Justice McKenna, of the Supreme Court, filed a dissenting report, in which he argued against the proposed change, contending that it was a mistake to take the tariff off sugar and to place sugar upon the free list, and in substitution provide for a bounty on American-produced sugar. I think it ought to be added, and I venture to add, that the views of then Representative, now Mr. Justice, McKenna were demonstrated to be economically sound.

I venture to say further, in response to the thought thrown out by the Senator from Ohio, that the placing in this instance of a tariff duty upon imported olive oil is not a tax. If the Senator from Massachusetts will permit me, I desire to ask him a question. He has spoken of the added burden to the American consumer by the imposition of a "tax" on olive oil.

I will ask the Senator, assuming all his statements to be sound and accurate, whether he has calculated and is able to advise us how much that tax would be per capita? I anticipate his answer, but I say that the calculation shows that it would not exceed 4 cents per capita. Assuming all that the learned Senator from Massachusetts has said to be true, assuming that the imposition of the duty will bring about an added price to the consumer of olive oil in America, it would result in the imposition of a tax of only 4 cents per capita.

Mr. WALSH of Massachusetts. Mr. President, that is very enlightening. If the expenditure of 4 cents per capita is to result from the tax on olive oil, I ask, what will be the total figures when we get through with the pending bill and are able to calculate what the tax per capita is going to be on woolen clothing, cotton goods, hosiery, silks, metals, boots and shoes, flour and wheat, and all the other food products and necessities of life which it will be essential for the American people to purchase? I am thankful to the Senator from California for the information that the tax per capita on the American public for olive oil alone—the little item of olive oil—will be 4 cents.

Mr. POMERENE. Mr. President——

Mr. WALSH of Massachusetts. I yield to the Senator from Ohio.

Mr. POMERENE. It might be enlightening also if the Senator from California would state to the Senate how much the olive producers in California are to be benefited by this tax of 4 cents per capita on every man, woman, and child in the country, and whether in his philosophy it is a good thing to tax all of the number of people for the benefit of a negligible number of those who may be engaged in the industry in southern California, blessed as they are with the best climate in God's world.

Mr. SHORTRIDGE. Mr. President, at the appropriate time I shall hope to make answer to those thoughts. I will observe now, however, that olives are produced in other sections of California; their production is not limited to southern California, but they are raised in what is termed northern California and in central California. However, let me ask the Senator from Massachusetts a question.

Mr. WALSH of Massachusetts. Certainly.

Mr. SHORTRIDGE. I understand his philosophy to be that we ought not to impose a tariff duty upon an industry which now produces but a small percentage of the product consumed in America.

Mr. WALSH of Massachusetts. I claim it is not protection but extortion to put a tax upon commodities used by the American people when the production in America is a very small per cent and is not likely, even with reasonable protection, to increase above a small percentage of the domestic consumption.

Mr. SHORTRIDGE. If that be sound, then I should like to ask the Senator, is it not a fact that we were at one time depending upon Europe for our tin plate and also, practically, for our glassware, and is it not an historical fact that by imposing adequate duties upon tin plate, for example, we have developed the great tin plate industry of America, which was once an infant industry, with a very small percentage of production until it has grown to tremendous proportions? If that be so—and I venture to state that it is so—may we not assume that this so-called infant industry in California and Arizona will similarly grow if adequately protected? I should like the Senator in discussing this question to bear in mind, as I am sure the Senator from Arizona [Mr. ASHURST] has in mind, that the State of Arizona is perhaps as vitally interested in this item as is the State of California.

Mr. WALSH of Massachusetts. Mr. President, I am not one of those who believe that the prosperity and greatness of this country depends alone upon building up great industries. I know of industries that have become large, but which have resulted in bringing a blight to the communities in which they have been located and brought about unfortunate conditions which were unknown before they were established. I know of industries which have paid such low wages—protected industries, too—resulting in such poor conditions of living that it has been very evident that the workers and the masses of the people received no benefit from the protection accorded.

In answer to the Senator from California, I think it is only fair to say that protection, in some instances, has helped American industry. I am not one of those who are unalterably opposed to protection, and I hope to be able to vote for some protective items in this bill if they are defensible; but I want some scientific and accurate proof of what constitutes the difference between the cost of the production of the protected article in America and its cost of production abroad. With such proof, I am willing to go as far as any Senator on this floor in giving some protection to such an industry if it can be shown that the commodity can be sold at a reasonable price to the American public and can be produced in sufficient quantity to take care of our domestic consumption. The trouble with the product now under consideration is that there is no evidence that the amount of olive oil being produced in this country is sufficient to take care of our consumption, and there is no likelihood of the industry for years and years to come ever developing to such an extent as to be able to take care of our consumption.

Mr. McCUMBER. Mr. President——

Mr. WALSH of Massachusetts. I will yield to the Senator, but I should like, first, to ask him a question. I should like to ask the chairman of the Finance Committee what information he has received since this bill was reported that has led him to-day on the floor to offer an amendment to the committee amendment raising the rate even above the rate proposed by the committee in the original draft of the bill?

Mr. McCUMBER. I will answer that question, Mr. President, by saying that upon a reconsideration of the matter the committee instructed me to report the amendment for a higher rate of duty because the majority of the committee thought that the rate which had first been proposed was not sufficiently protective.

Mr. WALSH of Massachusetts. Mr. President——

Mr. McCUMBER. The one question necessitates another question that I shall have to ask the Senator, but I will first yield to him.

Mr. WALSH of Massachusetts. I should like to ask the Senator if the Senate committee did not first report an amendment lowering the rate fixed in the House bill after hearing the evidence which was submitted to the committee, and if to-day the committee have not reported to the Senate a rate higher than the rate fixed in the House bill?

Mr. McCUMBER. I think that was the result, although there is very little difference, of course. Now, may I ask the Senator a question? The Senator has just asked a question, and even suggested that he might stand for a rate that would measure the difference between the cost of production at home and abroad.

Mr. WALSH of Massachusetts. Yes; but circumstances other than that fact alone must be clearly proven.

Mr. McCUMBER. If we can establish to the satisfaction of the Senator the fact that the duty proposed can not by any possibility be any higher than the difference between the cost of production at home and abroad, would he vote for the duty?

Mr. WALSH of Massachusetts. No, sir; I would not.

Mr. McCUMBER. I thought not. Now——

Mr. WALSH of Massachusetts. May I answer the question? Because I do not believe that we can extend protection to industries that are producing only 1, 2, 3, or 5 per cent of the consumption. If we do, then let us do away with our free list and let us establish a protective rate upon every industry, no matter how trifling and how insignificant may be the production at home.

Mr. McCUMBER. Now, may I ask the Senator another question, first to ascertain whether I correctly understood him? If I did, he made the statement a short time ago that he favored giving encouragement to the producer of olive oil in the United States. Did I correctly understand the Senator?

Mr. WALSH of Massachusetts. I do not think the Senator did. I said I regretted to oppose the wishes of the producers of olives in southern California, who, I knew, were making a hard effort and a serious effort to raise olives profitably in that section of the country.

Mr. McCUMBER. Then the Senator does not wish to be understood as favoring giving them any encouragement in producing olive oil?

Mr. WALSH of Massachusetts. My study of the question has led me to the conclusion that it is impossible for them to produce sufficient to take care of the home consumption, no matter what tariff rates you fix, and that in 5 or 10 years from now the situation will be the same as it is now; we will have to go to foreign markets and import olive oil; that we are simply putting upon the American people a tax that will not be of benefit to the people of California; that their market is on the west coast anyway, and that they are not now producing enough to take care of the consumption in that section of the country.

Mr. McCUMBER. Even the Democratic tariff is for revenue purposes, and I do not know of any time in the history of the country when we needed revenue worse than we need it to-day, and we have to get it from a great many different sources to meet the requirements of the Government. I think olive oil is more or less of a luxury. It may be that some do not consider it as such, but I think if any food product could bear a duty without great oppression it would be olive oil, and it would bring a very considerable amount of revenue to the Government, and I think it would, incidentally at least, afford some protection and give the encouragement which I think the olive grower ought to have.

Mr. WALSH of Massachusetts. Is this over 100 per cent duty increase fixed for the purpose of revenue and not protection?

Mr. McCUMBER. I have stated that I think it will afford incidental protection. I think it will afford some protection, at least enough to encourage the industry in the United States, and it will give us between two and a half and three million dollars for the Treasury.

Mr. HITCHCOCK. Mr. President, will the Senator from Massachusetts permit me to ask the Senator from North Dakota a couple of questions?

Mr. WALSH of Massachusetts. Certainly.

Mr. HITCHCOCK. Is it a fact that we produce in this country only 3 per cent of the olive oil consumed here?

Mr. McCUMBER. I think that is about right. I am informed by the expert that that is about right.

Mr. HITCHCOCK. And is it a fact that for 37 years we have had a protective tariff on olive oil?

Mr. McCUMBER. Very well.

Mr. HITCHCOCK. Is not that a sufficient evidence that its development can not be promoted by a tariff; that it is a matter of climate and situation?

Mr. McCUMBER. Then in those 37 years we have derived considerable revenue, have we not? We have received a good revenue right along.

Mr. HITCHCOCK. I am asking the Senator whether there is any earthly hope of building up that industry by levying this tax on poor people?

Mr. McCUMBER. Why, Mr. President, we levy the taxes upon the rich people as well as the poor, or anybody else that consumes this article. All I say is that, like everything else, we all pay our part of the duty according to our consumption if it is added to the price, and I think it is worth while to put that much into the Treasury every year, even though it did not operate as a protection at all.

Mr. HITCHCOCK. We need not worry about the rich people. They can buy olive oil as a luxury for their salads and use it.

Mr. McCUMBER. Oh, yes.

Mr. HITCHCOCK. But the fact is that it is a serious burden on the millions of Italians who live in our big cities and who use olive oil in the place of butter, and it is they who are making the complaint. They are the ones who are complaining. This tax is a heavy burden upon them, and you are putting it upon them not with any possible hope of building up an industry, because you admit you only have an industry which supplies 3 per cent of the consumption, although it has been under a protective tariff for 37 years.

Mr. McCUMBER. Oh, no, Mr. President; I do not agree with the Senator. I do not think it is a burden upon the millions of Italian people, or Americans of Italian birth, in the United States to give them a system which will allow them to earn from four to ten dollars a day in this country as against 50 cents a day in their home country, if we impose a little tax on olive oil that may amount to a penny a day difference to them.

Mr. WALSH of Massachusetts. Mr. President, I am going to close by calling attention once more to the rates upon olive oil in the Underwood bill, in the House bill, in the first Senate amendment, and in the second Senate amendment.

The tariff rate on olive oil—less than 44 pounds—in the Underwood bill was at 30 cents per gallon; under the House bill, 7½ cents a pound, equivalent to 57 cents per gallon; under the original committee amendment, 50 cents per gallon. The committee now proposes to fix the duty at 60 cents per gallon, being an increase from 30 cents per gallon, as fixed in the Underwood bill, to 60 cents per gallon.

On olive oil in containers of more than 44 pounds the rate in the Underwood bill was 20 cents per gallon; in the House bill, 6½ cents per pound, equivalent to 49 cents per gallon. The first amendment offered by the Senate committee was 40 cents per gallon. The second amendment, that is now before the Senate, is 50 cents per gallon, amounting to an increase of over 100 per cent in the tariff rate over that fixed by the Underwood Act of 1913.

Mr. President, I ask unanimous consent that annexed to my remarks may be the table of imports which I read in part.

The PRESIDENT pro tempore. Without objection, it will be so ordered.

The matter referred to is as follows:

Commodity, olive oil, edible.[1]

(Rate of duty—Underwood Act, 20 cents per gallon in bulk; emergency tariff act, 40 cents per gallon in bulk.)

GENERAL IMPORTS.

Months.	Quantity (gallons).		
	1914	1920	1921
January	475,393	249,194	170,592
February	438,814	153,705	114,181
March	668,154	494,033	220,326
April	705,186	454,032	574,298
May	548,735	339,621	[2] 549,282
June	599,603	304,381	[2] 730,583
July	502,042	275,437	944,890
August	630,190	443,797	949,935
September	551,858	530,859	650,180
October	624,102	394,457	552,757
November	572,355	263,239	461,600
December	463,500	175,995	689,085
Total	6,780,936	4,078,811	6,028,099

[1] The emergency act is applicable to the edible olive oil only, by a ruling of the customs division of the Treasury.

[2] The emergency tariff act became effective May 28, 1921.

Mr. ASHURST. Mr. President——

Mr. McCUMBER. Mr. President, before proceeding with this I want to put in the RECORD just one little statement as to what this means.

Taking the first nine months of 1921, and the import prices, it will be seen that the duty of 50 cents per gallon is equivalent to 28 per cent ad valorem duty, and that the duty of 60 cents per gallon is equivalent to 25 per cent ad valorem; so in either case it is a small ad valorem duty.

Mr. JOHNSON obtained the floor.

Mr. ASHURST. Mr. President, if the Senator from California will permit me, I should like to propound an inquiry to the Senator from Massachusetts.

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Arizona?

Mr. JOHNSON. I yield for a query to the Senator from Arizona.

Mr. ASHURST. Will the Senator be kind enough to restate the item as it appeared in the Underwood-Simmons bill?

Mr. WALSH of Massachusetts. Olive oil less than 44 pounds per container was 30 cents per gallon. Olive oil more than 44 pounds per container was 20 cents per gallon.

Mr. ASHURST. That is, the maximum was 30 cents per gallon and the minimum was 20 cents per gallon?

Mr. WALSH of Massachusetts. Yes; and the amendment which I have offered, which will be voted upon directly, proposes to fix the tax the same as in the Underwood law.

Mr. SHEPPARD. Mr. President, I should like to ask the Senator from California or the Senator from Massachusetts if this article was included in the emergency tariff act?

Mr. JOHNSON. Certainly. I will explain those rates, if the Senator will permit me. That is one of the things I desire to do.

Mr. ASHURST. That may determine the course of some of us on this side.

Mr. SHEPPARD. I should be very glad to have the rate in the emergency act stated.

Mr. JOHNSON. The rates that are suggested by the chairman of the Finance Committee to-day ought not to frighten the Senate at all, because when the emergency tariff bill was pending here I offered rates of 70 and 60 cents, higher than these that are here offered, and the Senate accepted the rates, and 70 and 60 went into the emergency tariff bill. They were subsequently reduced, it is true, in the conference; but upon the floor of the Senate when the bill was pending here I offered the amendment of 70 and 60. The late Senator from Pennsylvania, Mr. Penrose, the then chairman of the Finance Committee, and the committee itself, accepted the amendment, and the Senate accepted it. It went into the bill, and subsequently was reduced in conference.

Mr. POMERENE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Ohio?

Mr. JOHNSON. I yield to the Senator from Ohio.

Mr. POMERENE. Admitting that that is so, does it not demonstrate conclusively the persuasive powers of the Senator from California, rather than the merits of the case?

Mr. JOHNSON. Oh, no; it demonstrates conclusively that the Senate sat still while those rates were put into a bill; and if there is ever such a thing as an estoppel here it ought to be applied now, it seems to me, to the Senator from Ohio and the Senator from Massachusetts, because if it is such a wicked thing to have 60 and 50 the rates, it could not have been any less wicked to have had 70 and 60 a year ago, when the emergency bill was before us.

Mr. POMERENE. Mr. President, the Senator from California is a great lawyer——

Mr. JOHNSON. Oh, do not seek to prove that by me, please.

Mr. POMERENE. But I think he is extending the doctrine of estoppel entirely too far.

Mr. JOHNSON. Perhaps that is so, sir.

Mr. ASHURST. Mr. President——

Mr. JOHNSON. I yield to the Senator from Arizona.

Mr. ASHURST. In the time of the Senator from California, I ask unanimous consent to have read at the desk a telegraphic dispatch I have just received from the Chamber of Commerce of Phoenix, Ariz., with the consent of the Senator.

Mr. JOHNSON. Yes; I yield.

The PRESIDENT pro tempore. Without objection the Secretary will read as requested.

The reading clerk read as follows:

PHOENIX, ARIZ., *May 15, 1922.*

Senator HENRY F. ASHURST,
United States Senate, Washington, D. C.:

Arizona olive growers invite your support of Johnson amendment asking rate of 50 and 60 cents a gallon on olive oil, as being absolutely necessary to development of olive industry in Arizona and California. Please advise.

HARRY WELCH,
Secretary Chamber of Commerce.

Mr. McCUMBER. I do not know whether the Secretary read that loud enough to be heard on the other side or not.

Mr. JOHNSON. The fact of the matter is that there is a unanimity of sentiment not only in Arizona but in California upon these rates, and they are asked because they are deemed essential by those who are engaged in olive culture to-day.

Mr. President, with just a general observation I will proceed to the figures.

The arguments on the other side are the same arguments always made whenever there is a protective measure proposed. We hear exactly the same thing said; and although said exceedingly well to-day and very eloquently by the Senator from Massachusetts [Mr. WALSH], nevertheless it has been no different during the entire time that I have been connected at all with politics, or have listened at all to the various utterances of different individuals upon the various sides.

On the other hand, there is a determined effort being made to conserve, to foster, to protect, if you will, those industries in which our people are engaged. On the other hand, the argument is invariably advanced that nurturing, fostering, and protecting that in which our people are engaged will of necessity put some burden on the rest who are not engaged in the particular occupation, and thus tax many for the benefit of the few.

Such an argument, it seems to me, in a case like the one now before us is of no weight whatever, for if it is the duty of a nation to conserve its soil, if it is the duty of a nation to produce that upon which a nation should live, if it is the duty of a country which looks out for its own to take care of its own, protection of such a culture as olive culture ought to be had, and is justified not only by a partisan doctrine upon this side of the Chamber but is justified by every rational and economic theory for the upbuilding of a nation and the prosperity of its people.

So, Mr. President, I insist that in a matter of this sort, though it be quite true that but 5 per cent of the consumption of olive oil in the Nation be represented by Arizona and California, nevertheless, if we can conserve, without undue injury to the rest of our people, that 5 per cent production, and if we can foster those who are engaged in that 5 per cent production, it is our duty—our bounden duty—to do so, just exactly as we would conserve and foster citizenship in any other direction for the protection of our country, economically and otherwise, in the days that are to come.

I make no apologies, therefore, for asking a duty upon olive oil of the Finance Committee and of the Senate. I believe it is essential for the benefit of many thousands of people in Arizona and California who are engaged in this occupation.

I believe it is an essential, sir, for the conservation of the soil of the two States, too, and that there is nothing unjust, nothing unfair, nothing that is burdensome to the rest of our people, when we accord to these thousands, who have given their all for the production of something which before we did not possess, a measure of protection which may enable them to produce and to live.

So, sir, with these general observations, in which, I repeat, I make no apology for a duty such as is asked here, I proceed to consider the figures which are presented and to justify them as well.

Whom will we care for? I would have exactly the same affection for our Italian fellow citizens that the distinguished Senator from Massachusetts evinces. I would have for them the same care that our Democratic brethren express when they come to a subject of this character. But, sir, I would have as well a care and an affection for the man who has given 10 years of his life and all he possesses to have an olive grove in Arizona or in California, and to make that olive grow, if he can, produce, and I would first give him the right to live as an American ought to live, under the ægis of protection of the Republican Party, aid under the righteous fostering care of the Nation of which he is a part.

I would care, of course, for your cities, for your towns, for your individuals who deal in this staple, if you call it such. I would care for them in every way you may suggest, just as the Senator from Massachusetts would, but in caring for them do not forget, sir, that even though it be but 5 per cent there are those who have devoted themselves and their all in a hazardous undertaking, in production that has been encouraged by the Government and the States themselves, and who are entitled, in their stress now, to consideration and to some measure of protection in a tariff bill.

Under the emergency law they were given some protection. Under the bill which came from the House the rate, you will observe, was 7½ cents per pound for olive oil in certain containers, first, and then for olive oil not specially provided for, 6½ cents per pound.

The Finance Committee apparently transmuted the mode of computation. The computation I made under what is termed the Fordney bill, the House text, would make the duty levied by that bill, in the first portion thereof, in containers weighing less than 44 pounds, 56.7 cents, and in bulk—that is, the olive oil not specially provided for—6½ cents per pound would be 49.1 cents.

What the Senate committee proposes now is 60 per cent, an increase of 3.3 cents over the Fordney bill, and 50 cents in the second bracket, which is an increase of eighty-six hundredths of 1 cent alone. Those are the only increases the Finance Committee has made by this amendment. They amount to little or naught, so far as that is concerned, and they have made them, I assume, in round figures rather than in the figures which were given to us in the computation had in the original Fordney bill.

What does it cost us in the State of California and in the State of Arizona to produce a gallon of olive oil? I have the statistics before me, and the present factory cost of producing olive oil is $2.10 per gallon. This does not include any profit to growers or manufacturers or any transportation cost to eastern markets. It is 62 cents per gallon more than the present laid-down price of the imported oil at New York. With the 60-cent and the 50-cent rates that are asked added to the $1.48 declared value of the imported oil—I am speaking of declared value at the customhouse now, not the prices at which it sells—added to the $1.48 declared value of the imported oil, as the same is landed in New York, we have a rate which gives us a bare chance to exist, that and nothing more.

How are we trying to exist? Do Senators realize the conditions under which we labor in the West in this olive-oil business? It was not, indeed, a business originally which we designed as a great undertaking. Gradually it has grown, and from the olive crop in the State of California and in the State of Arizona we have developed an edible olive, with which you all are familiar. The black olive which you have upon your table every night is a product of the West. This is something valuable to us, of course, but, unfortunately, in order that you may have a merchantable article, this black olive, the ripe olive which you use in your luncheons and at your dinner parties, must measure nine-sixteenths inch in diameter, and, unfortunately, that requirement of a measurement of nine-sixteenths in diameter results in the rejection of practically 50 per cent of the merchantable part of our crops. Of course, raising crops as they do under the adverse circumstances of high wages in the West, and throughout the country to-day, half of the crop can not be thrown aside because not merchantable, and still the whole be profitable. So the other half of the crop has been put into olive oil, in order that the individual who owns the olive grove may live; that he, an American, with his wife and children, may just exist, under the ruinous conditions which have obtained in the past few years, and it is because he asks a mere existence for himself and his family that this duty is sought in this particular matter, and I thank the Finance Committee for extending to those people the aid, which is very, very necessary.

Certain circumstances have arisen in the last year or two, to which I do not care to advert, which have been most unfortunate to the olive industry. They have made the pathway much more difficult than ordinarily it would have been. These unfortunate circumstances are yet existent, and they must be relieved, or these people, engaged as they are in one of the most beautiful cultures that there is from the soil, must perish, and all their groves must go. It is that they should not go, that they may live as Americans, and that their families may live, just as your urban residents live upon their daily wage, which is now equal, possibly, to their needs, that we are asking what the gentlemen on the other side designate an extortionate tariff.

There are now 40,178 acres of olive trees in Arizona and in California. The production comes close to 20,000 tons per annum. Invested in the industry are some $30,000,000. There are many thousands of people employed in manufacturing and in growing this product, and those who do not own the groves, but work in them or in the making of oil, are paid living wages by those who do own the groves.

Compare what is paid abroad to those who raise olives there to what we pay in the West to those who raise olives in our own country. Let me say in passing that the olive oil that is made in our State has won prizes in expositions, and in the testimony before the Ways and Means Committee in the tariff hearings that oil was pronounced by experts to be equal to and better than that which has been imported.

Let me say, moreover, that that which we make in the West is made in sanitary fashion, something which can not be said for much of that which is imported; and made, as it is, in sanitary fashion, made by Americans, men and women, out there, they are entitled to come to the Congress, even though they be but a small fraction of all our people, and ask for relief.

The labor cost of producing olives in the Mediterranean countries previous to the war was exceedingly low. It has increased somewhat since the war. Let us see what these labor costs are, and in reading them I am reading from reports of American consuls. At Valencia, Spain, first, for instance, the highest rate paid was 77 cents in 1919.

In the Spanish olive factories, where mostly men are employed, the daily wages paid during the various years I have before me was pitifully small, and the highest was that paid in 1919, a wage of $1.16.

In the Catania district, in Italy, before the war, men workers in the olive industry received substantially 58 cents per day, and women were paid 29 cents per day. In October, 1919, those wages had advanced, for male workers, to $1.35 a day, and for female employees to from 77 to 96 cents.

In the district of Nice, in France, producing considerable quantities of olive oil for export in normal times, the same low scale of wages obtained as in Spain and in Italy.

During this period, 1914 to 1919, the labor cost of producing olives in California and Arizona kept pace with the increase in the cost of commodities and labor all over the land. Skilled male workers in the factories received originally $3 per day. Women workers in the factories were paid from $10 to $12 per week, but in 1919 orchard workers were paid $3.50 to $4 per day, skilled help in factories $4.50 to $5.50 per day, and the wages of women factory employees, under the minimum wage law of California, were established at $16.50 minimum for a week of 48 hours.

Compare these wages paid Americans in the olive industry with the wages paid abroad for that which you get in an insanitary condition oftentimes in your importations.

There is a great disparity against us in freight rates, and that is one of the things the Congress of the United States must some time undertake to solve. I do not know its solution, I confess, but it is unjust and unfair that we can not ship across the continent here; we can not ship in any fashion to our markets in the East or even in the Middle West at any price such as those who are competitors ship clear across the Atlantic Ocean. It is unfair and unjust that this should be so, and relief finally ought to be accorded our own shippers.

In the matter of freight rates we are at a distinct disadvantage. From figures showing conditions in the latter part of 1919 it is demonstrated that the average cost, including the items of expense of transporting a gallon of olive oil from the factory in Spain to New York, was about 5.04 cents. Previous to the war it cost but 2.2 cents per gallon to transport oil from Messina, Italy, to New York. The total cost in 1919 of shipping olive oil from Nice to New York, including transfer at Marseille, was practically 8 cents a gallon in 1914, and the total freight charges for transporting olive oil from Nice to New York was approximately 4.3 cents per gallon. It costs us to ship olive oil from California to New York or Chicago, under present rates, in carload lots, $1.665 per hundred pounds, and this expressed in terms of gallons represents a cost per gallon of 15.16 cents.

Thus we see we are at a disadvantage in every way. We first culture our ground more highly than they do abroad. Next we employ our labor at five, six, and seven times as much as they pay abroad for theirs. Next we use only the best of the olives which we grow in making our olive oil. Then we are penalized in finding our market, and we are forced to pay three times as much really to find the market of our own country as our foreign competitors pay to find that market and to beat down our prices.

Now do not worry, my friends, as I said a little while ago when talking about citric acid, about the price that will be charged hereafter. The only thing that will result in the matter of prices from giving this protection will be that those who have made the importations from foreign countries heretofore will make a little less money and Americans who are engaged in this occupation in California and in Arizona will be enabled to live and to live as Americans.

Mr. KING. Mr. President, the argument of the able Senator from California, if I understood the last few sentences of it which I was privileged to hear, is a refutation of the contention so earnestly and eloquently made by Republicans that the tariff is for the benefit of the American producer. I have understood, and it has been conceded repeatedly, that the tariff is imposed for the purpose of augmenting the price of the domestic product. There can be no purpose for the tariff other than to increase the price of the domestic product in the domestic market. We may disguise and camouflage as much as we will the issue before us in this item and in various other items in the bill, but when we get down to the facts, when we get down to bedrock and strip away all of the false issues, the question is, Shall we increase the price to the domestic consumer of the domestic product as well as that which shall be imported, if any is imported? Shall we increase the burden upon the American consumer through the utilization of the taxing power of the Government?

Mr. President, this bill in the aggregate increases the rates above the Payne-Aldrich law from 100 or 150 per cent to 400, 500, and 600 per cent. It increases the rates above the Underwood law in many instances 200, 300, 400, 500, 600, 700, 800 per cent. I called attention the other day to the items of butyl alcohol and ethyl alcohol, the tariff upon which was increased by the rate fixed in the bill 1,100 per cent. That was for the purpose of looking after the State of Indiana. Indiana was interested in the manufacture of butyl alcohol and therefore we must add a tax here which increases the rate above the Payne-Aldrich law 1,100 per cent. The House had raised it 2,300 per cent, but that was too strong for the Senate committee, and they cut it down to 1,100 per cent.

If we were to take up the bill from the beginning and go through it to the end, comparing the schedules in the Payne-Aldrich law and the Underwood law with those found in the House bill and those found in the Senate committee bill, and go before the people and tell them of the increases upon each of the items, we would not only surprise ourselves, but we would astound the people, and their astonishment in the end would culminate in resentment, in anger, and finally in a repudiation

of the iniquitous, inequitable measure which to-day is receiving the approval of the Republicans in this body.

I have had occasion to say to-day, and I repeat, if I may be pardoned, that if we are to give bounties and largess to any class of people let us give them to the agriculturists and the horticulturists. If we are to use the power of the Government for the purpose of putting money into the pockets of the people by raising the prices of their commodities, I can find no complaint if we put the money into the pockets of the farmers and the agriculturists. They do something undoubtedly. They are the builders. We have laborare est orare—labor is worshiped—and it is the farmer, the horticulturist, the live-stock grower, those who build and toil, who transform the desert until it becomes beauteous as the rose—it is they upon whose shoulders rest very largely our entire social and political institutions.

But after all, let us inquire a moment, is it just and is it right? Is that the purpose of the Government? May we use it as an instrumentality to put money into the pocket of any man? Is that why governments are instituted? We give the power to the Government to tax, to raise sufficient money for the Government, which must be economically administered. As a fact, it is not economically administered; it is extravagantly administered, even though our friend General Dawes and the President point with glee to the great savings alleged to have been made under the Budget system. Some time when we have a little time to analyze the statement of the President and of General Dawes we will see that it is just a myth. It is not entitled to the dignity of being called camouflage. It is so tenureless and so absurd that anyone can see that it is meaningless.

But to return, Is that the purpose of government? Is it the purpose of government to tax A, B, and C to put money into the pockets of D? May we tax consumers of the United States to put money into the pockets of those who raise lemons or oranges or anything else? That is not the function of government. It is a prostitution of the power of the Government to utilize its strong arm for that purpose.

Olives were primarily raised in California to be used as a relish upon the table. Olive oil has grown as sort of ancillary to the primary and fundamental purpose of the industry. Now, we propose to seize that ancillary purpose, or use it as an excuse for making that a profitable venture, not only profitable but highly profitable, sort of supplementing the main purpose for which olives are grown. We will no doubt do that. No doubt we will add to the bill the enormous rate which has been suggested by the committee. The committee after due deliberation made a recommendation——

Mr. WALSH of Massachusetts. The first recommendation of the committee was the rate named in the emergency tariff law.

Mr. KING. Forty cents.

Mr. WALSH of Massachusetts. Forty and fifty cents. They have now offered to substitute 50 and 60 cents, which, I think, are the highest rates ever imposed upon olive oil.

Mr. KING. The committee, as I was about to suggest, after due consideration reported the bill, since which time pressure has undoubtedly been brought. I have received a number of telegrams to-day from California from some of my friends, conjuring me to vote for this rate. I have no doubt other Senators have received telegrams conjuring them to support the rate. I ask Senators what the result will be if we impose these high rates upon everything? Are we to use this power which we possess, the taxing power, for the purpose of keeping out all importations, in order that the domestic producer may swell the price of his product to such levels as will suit his greed and his avarice?

The Senator from Massachusetts [Mr. WALSH] pointed out the large number of people who consume this product. Five per cent has been the amount of the domestic product. When there is only a 5 per cent domestic product, we are to tax the American people upon the 95 per cent which may be imported, swelling the price of that product in order to protect the 5 per cent domestic production. I protest against this policy of legislation, against the injustice which results. If it were only olives, we could pass it by and assent to it, but that is only one out of thousands of articles.

If this enormous rate of duty be given to olives, then a similarly high rate must be given to peanuts; it must be given to cutch; it must be given to a thousand other articles that are produced in the United States. There is no end to the list. Finally, we shall, by this policy, have built up an impenetrable wall against which the waves of trade and commerce from abroad will beat in vain; we shall have built a wall which will prevent imports; we shall have built a wall which will prevent exports.

My good friend from Idaho [Mr. BORAH] to-day, with a vision which the troglodytes on the other side of the Chamber do not possess, could see that we must have foreign trade and commerce. We must have Germany as a buyer; Germany which before the World War bought more than $600,000,000 or $700,000,000 of our products, but last year was only able to buy $88,000,000 worth of our products. We must also have Russia as a buyer and Great Britain as a buyer and Canada as a buyer and Spain and other nations as buyers, or, Mr. President, our prosperity will be ended. We can not ship abroad unless we import.

Within a few weeks we are told it is to be the policy of the administration to drive through the legislative branches of the Government a bill to pay bounties, largesses, to our shipping industry. We are to have ship subsidies. Our ships now are rotting or becoming obsolescent; they are tied up to the wharves, because we have no foreign trade or commerce, or, at least, that trade is limited and restricted; and yet we are to appropriate from $35,000,000 to $40,000,000 or $50,000,000 a year as a subsidy for our ships, when we have nothing to ship abroad. Of course, our exports will diminish if we cut off imports. If we have no foreign trade, the $4,000,000,000 which we have spent for our ships will, in part, be wasted and the subsidy which we shall appropriate every year will also be wasted. That, however, is the reactionary, troglodytic policy of our Republican friends to-day.

We are to live to ourselves and by ourselves and for ourselves, and the Lord may take care of the rest of the world. We are not a part of the world; we are cut out, carved out of the world, separated from it. We shall have no trade with Germany, no trade with Great Britain, no trade with any other nation. We are going to build up prices so high that the American people themselves in the end will be the victims of the extortions which will be practiced by those whom they have elevated to the positions where they may extort from the people.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The question is on the amendment offered by the Senator from Massachusetts to the amendment reported by the committee, as modified.

Mr. WALSH of Massachusetts. I ask for the yeas and nays upon the amendment to the committee amendment.

Mr. WALSH of Montana. Mr. President, before a vote is taken on the amendment I wish to say just a word. I have no doubt that the cost of producing olive oil in the countries of southern Europe, in Italy, France, and Spain, is less than the cost of producing it in southern California. I think that proposition was quite clearly demonstrated by the senior Senator from California [Mr. JOHNSON] from the record. If that were all that it were necessary to establish in order to justify the rate for which he asks, it seems to me that there could be no resisting the conclusion which he seeks to have everybody draw. I have the very kindest feeling toward the people of southern California, with whom I have many very pleasant associations. They have a delightful climate there and a magnificent soil, wherever they can get water, and water is necessary for the purpose of irrigation and for the production of olive oil.

Mr. JOHNSON. Will the Senator yield for a moment?

Mr. WALSH of Montana. I yield.

Mr. JOHNSON. I merely want to correct an impression which seems to be prevalent concerning the production of olives, although my colleague [Mr. SHORTRIDGE], I think, corrected it once to-day. In northern California there are beautiful olive groves, just as there are beautiful olive groves in southern California. The section with which the Senator from Montana probably is familiar, about Oroville, has olive groves that are second to none, probably, in the world, and are quite equal to those in the southern part of the State. Then in the State of the Senator from Arizona [Mr. ASHURST] olives are cultivated, though, perhaps, in a small way. I merely desired to correct the Senator's geography.

Mr. WALSH of Montana. It does not affect the matter of my argument at all. I myself have seen olive trees growing in northern California as well as in southern California. I was not aware, however, that the culture was pursued as an industry, to a very great extent, in the northern section of the State; but that is neither here nor there. The point is that in California there is a long season, and the people there have advantages over the people of my State which are so obvious as to make it quite unnecessary to dwell upon them.

In Montana we cultivate what is known as 90-day oats. It is called so because it matures within 90 days from the time it is planted. It is cultivated because the ordinary variety of oats not infrequently does not mature before the frost in the ensuing fall; that is to say, the agricultural season in the State

of Montana does not exceed 120 days—four months—at the outside, while in the State of California the growing season extends the whole year around. So we contend against a climate that is severe in winter and is excessively hot in many sections in the summer.

Montana is in an arid or semiarid section, as is California. Here is a food commodity produced in the State of California which is being extensively consumed in my State, as it is throughout the Union. A few years ago it was used very sparingly by the people of the United States except by those of immediate foreign extraction. It was like green peppers in that respect. I visited the State of Florida some years ago and met very pleasantly a gentleman who was engaged in the production of green peppers, and who cultivated them very successfully. He told me that when he went into the business some ten years ago one carload of green peppers a year would be adequate to supply the Chicago market, but at that time it took 10 carloads a day to meet the demand, so rapidly had the taste for green peppers developed and the habit of consuming them upon the table. It is exactly the same way with olive oil.

Now, conceding everything the Senator says, I ask him how I can justify myself to the people of my State, who are thus put at a disadvantage in the production of their products, as against the people of the State of California, in voting a tax of from 50 to 60 cents a gallon upon olive oil, which they all consume, in the interest of and for the benefit of people engaged in the production of that commodity in the State of California? That is why I can not vote for the amendment.

Mr. JOHNSON. Has the Senator asked me a question, and does he wish a reply?

Mr. WALSH of Montana. I am quite willing that the Senator should reply.

Mr. JOHNSON. I thought perhaps it was an oratorical interrogation, and that no reply was desired.

Mr. WALSH of Montana. I should be very glad to hear anything the Senator can offer me by way of argument that I could advance to the people of my State for my vote in favor of the increase of the tax on olive oil.

Mr. JOHNSON. Is there anything in the State from which the Senator comes upon which there is a duty?

Mr. WALSH of Montana. There is.

Mr. JOHNSON. What is it?

Mr. WALSH of Montana. We produce wool, which is on the dutiable list.

Mr. JOHNSON. Does the Senator from Montana justify that duty?

Mr. WALSH of Montana. No; I do not.

Mr. JOHNSON. The Senator does not justify it?

Mr. WALSH of Montana. No.

Mr. JOHNSON. Does the Senator want any duties at all upon the products of the people of his State?

Mr. WALSH of Montana. Wool and sugar, as I view it, are the only commodities on the dutiable list in which they are interested. Manganese is on the free list.

Mr. JOHNSON. Is the Senator interested in a duty on it?

Mr. WALSH of Montana. On manganese?

Mr. JOHNSON. Yes.

Mr. WALSH of Montana. I should not vote for it; no.

Mr. JOHNSON. Do the people of the Senator's State wish a duty on it?

Mr. WALSH of Montana. I should not think so.

Mr. JOHNSON. Is there anything produced in the Senator's State on which the people of the State wish to have a duty?

Mr. WALSH of Montana. Yes. Those who grow wool want a duty on wool, of course, and those who own sugar factories want a duty on sugar.

Mr. JOHNSON. Are there any minerals in which the people of the Senator's State are interested upon which they desire a duty?

Mr. WALSH of Montana. Not a thing, except manganese and tungsten.

Mr. JOHNSON. The Senator, then, in my opinion, is in a singularly disinterested position, and if I have not been able to make him see by what I have endeavored to present to-day that it is not only to the interest of the olive grower in California that he be permitted to live and continue his grove but that it is to the interest of the men and women who live in Montana and the men and women who live all over the United States, then I have spoken, of course, in vain, so far as he is concerned. However, there is this product of California and Arizona; there is another of Nevada, perhaps; another that affects Washington, Idaho, and Oregon; and there are other products that affect other States, all of which States are a part of one great Commonwealth—the United States. So it does not seem to me that it would be a reproach to the Senator from the people of his State if his State, a member of this great Commonwealth, and its representatives should wish to see every other State prosper and the industries in which men and women have their all invested legitimately nurtured by a doctrine of protection such as is invoked here for that which comes from the soil.

That is my answer to the Senator. If in his State there is manganese and manganese conflicts with the Steel Trust, then manganese ought to have a duty upon it. Am I correct in saying manganese is used in the manufacture of steel?

Mr. WALSH of Montana. Yes; that is where the controversy arises.

Mr. JOHNSON. If there is such a controversy between the Steel Trust and the people of Montana, I justify myself with the people of the State of California by saying that I stand by the people of the State of Montana in protecting that which they have in order to enable them to live a little better, and if such a contest arises here I will be glad to aid the Senator from Montana, if he endeavors to make it, in every possible manner.

Mr. WALSH of Montana. Of course, the Senator merely says to me that we should vote for this heavy duty on olive oil because he will vote for a duty upon some of our products.

Mr. JOHNSON. No, sir; I beg the Senator's pardon; I have said nothing of the sort.

Mr. WALSH of Montana. That is to say, that he proposes a trading arrangement.

Mr. JOHNSON. Excuse me; I did not say that. I am saying that our country must be preserved economically as to those things which may be of value to it economically. There is nothing of greater value to a nation than that which comes from its soil. Olive oil is called a food product, and perhaps it is; but if it is a food product you can not do your country any more good than by nurturing that food product and having it produced in such quantity here——

Mr. WALSH of Montana. We have been nurturing it for 40 years.

Mr. JOHNSON. Oh, no; not as the industry is to-day. If the Senator will go back 40 years in the history of olive culture in the State of California, he will recall, just as I do, what its condition then was.

Mr. WALSH of Montana. My recollection of reading about the missions in California was that it was brought there some 200 years ago.

Mr. JOHNSON. Oh, yes; certainly; but does the Senator mean to say that they constituted great olive groves? Not at all. They are of recent origin; and the manufacture of olive oil in any quantity at all has been a matter of recent origin.

Mr. WALSH of Montana. I merely wanted to ask the Senator, in this reciprocity that he speaks of, just exactly how we get back anything out of the people of California?

Mr. JOHNSON. Will the Senator pardon me?

Mr. WALSH of Montana. I have called attention to the fact that the people of my State must pay for this increased price of olive oil which the Senator seeks to establish by this duty. That goes to the producers of olive oil in California. I desire to know what we get back from the people of California.

Mr. JOHNSON. You get that peculiarly enlightening thing that comes to Americans when they help America. That is one thing; but let me say to you what I said in closing: You are not going to pay, in reality, any very great sum in addition for your olive oil. You will find that that is the story all along the line.

Mr. WALSH of Montana. Let me inquire of the Senator whether he does not expect that the price is going to approximate the amount of the duty, together with the current price?

Mr. JOHNSON. Why, it already does, practically.

Mr. WALSH of Montana. Yes; so that the duty measures approximately the increase in price?

Mr. JOHNSON. Oh, of necessity in some respects that is so, of course; but it does not measure the whole price by any means, as you find from these various articles upon which duty rests. You found, you know, during the time that there has been a duty upon olive oil, before its production was of very great consequence, that notwithstanding the duty the price went down.

Mr. WALSH of Montana. Of course; that was the case always, depending upon the abundance or the relative scarcity of the supply, the increase or decrease in the demand. Naturally, as the foreign price goes down, the domestic price must go with it.

Mr. JOHNSON. Oh, the fact of the matter is, the story of the whole thing is, the importer will make less. That has been the story of this sort of thing. It will be the story of this.

Mr. WALSH of Montana. The foreigner pays the tax?

Mr. JOHNSON. No; the importer will make less, and there will be a market for the goods that come from our particular territory.

Mr. WALSH of Montana. So that really what the Senator intends to tell me is that the people of my State will not be obliged to pay any more?

Mr. JOHNSON. I doubt if they will pay very much more.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Massachusetts [Mr. WALSH] to the amendment of the committee, as modified, on which the yeas and nays have been ordered.

Mr. WALSH of Massachusetts. Mr. President, I simply want to say that I think this is the highest rate which we have yet been called upon to vote on in this bill, and I think the most unjustifiable, because of the absolute necessity of importing such a very large amount of the consumption.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. OVERMAN (when his name was called). Again announcing my pair and its transfer, I vote "yea."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Pennsylvania [Mr. CROW], and will vote. I vote "nay."

The roll call was concluded.

Mr. NEW. Transferring my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Washington [Mr. POINDEXTER], I vote "nay."

Mr. BALL. Has the senior Senator from Florida [Mr. FLETCHER] voted?

The PRESIDING OFFICER. The Chair is advised that he has not voted.

Mr. BALL. I transfer my pair with the senior Senator from Florida to the junior Senator from Oregon [Mr. STANFIELD] and will vote. I vote "nay."

Mr. STERLING. Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Oklahoma [Mr. HARRELD], I vote "nay."

Mr. LODGE (after having voted in the negative). I have a general pair with the Senator from Alabama [Mr. UNDERWOOD]. In his absence, I transfer that pair to the junior Senator from Pennsylvania [Mr. PEPPER] and will allow my vote to stand.

Mr. SIMMONS (after having voted in the affirmative). I have a pair with the Senator from Minnesota [Mr. KELLOGG]. I transfer that pair to the Senator from Nevada [Mr. PITTMAN] and will permit my vote to stand.

Mr. HARRIS. I have a standing pair with the Senator from New York [Mr. CALDER] and therefore withhold my vote.

Mr. GLASS. I have a general pair with the senior Senator from Vermont [Mr. DILLINGHAM]. In his absence, I withhold my vote. If at liberty to vote, I should vote "yea."

Mr. DIAL. I have a pair with the Senator from Colorado [Mr. PHIPPS]. Being unable to secure a transfer, I am obliged to withhold my vote.

Mr. ROBINSON (after having voted in the affirmative). I have been informed that my pair, the Senator from West Virginia [Mr. SUTHERLAND], is not present. I transfer my pair with him to the Senator from Tennessee [Mr. SHIELDS] and will let my vote stand.

Mr. HARRISON. I have a pair with the junior Senator from West Virginia [Mr. ELKINS]. I understand that if he were present he would vote "nay." I am unable to secure a transfer and therefore withhold my vote. If at liberty to vote, I should vote "yea."

Mr. JONES of Washington (after having voted in the negative). Has the senior Senator from Virginia [Mr. SWANSON] voted?

The PRESIDING OFFICER. The Chair is advised that he has not voted.

Mr. JONES of Washington. I have a pair with that Senator for the day. I transfer that pair to the Senator from Iowa [Mr. CUMMINS] and will allow my vote to stand.

Mr. MCKINLEY. I transfer my pair with the Senator from Arkansas [Mr. CARAWAY] to the Senator from Minnesota [Mr. NELSON] and will vote. I vote "nay."

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL];

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY]; and

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN].

The result was announced—yeas 15, nays 40, as follows:

YEAS—15.

Borah	Jones, N. Mex.	Overman	Simmons
Gerry	King	Pomerene	Walsh, Mass.
Heflin	La Follette	Robinson	Walsh, Mont.
Hitchcock	Myers	Sheppard	

NAYS—40.

Ashurst	Gooding	McKinley	Rawson
Ball	Hale	McLean	Shortridge
Brandegee	Johnson	McNary	Smoot
Broussard	Jones, Wash.	Moses	Spencer
Bursum	Keyes	New	Sterling
Capper	Ladd	Newberry	Townsend
Curtis	Lenroot	Nicholson	Wadsworth
du Pont	Lodge	Norbeck	Watson, Ind.
France	McCormick	Oddie	Weller
Frelinghuysen	McCumber	Page	Willis

NOT VOTING—41.

Calder	Ernst	Norris	Stanley
Cameron	Fernald	Owen	Sutherland
Caraway	Fletcher	Pepper	Swanson
Colt	Glass	Phipps	Trammell
Crow	Harreld	Pittman	Underwood
Culberson	Harris	Poindexter	Warren
Cummins	Harrison	Ransdell	Watson, Ga.
Dial	Kellogg	Reed	Williams
Dillingham	Kendrick	Shields	
Edge	McKellar	Smith	
Elkins	Nelson	Stanfield	

So the amendment of Mr. WALSH of Massachusetts to the amendment of the committee, as modified, was rejected.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. KING. I move to amend the committee amendment by striking out "60" and inserting in lieu thereof "50."

The PRESIDING OFFICER. The Secretary will state the amendment.

The READING CLERK. On page 21, line 23, in lieu of the amount proposed by the committee, 60 cents, the Senator from Utah moves to insert "50 cents," so as to read:

Olive oil, weighing with the immediate container less than 44 pounds, 50 cents per gallon.

Mr. KING. That is the rate laid by the Committee on Finance as it was originally reported. It has been amended by the committee and raised to 60 cents per gallon. I will not ask for the yeas and nays.

Mr. WALSH of Massachusetts. What the Senator from Utah proposes was the rate named in the emergency tariff law.

Mr. KING. Yes; as the Senator suggests, it is the rate in the emergency tariff law.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Utah to the committee amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Massachusetts [Mr. WALSH] to the committee amendment in line 24, which the Secretary will state.

The READING CLERK. On page 21, line 24, in lieu of "50 cents per gallon," proposed by the committee, insert "20 cents per gallon," so as to read:

Olive oil, not specially provided for, 20 cents per gallon.

Mr. WALSH of Massachusetts. On the amendment to the amendment I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. BALL (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. DIAL (when his name was called). I make the same announcement as to my pair that I made on the former ballot and withhold my vote.

Mr. GLASS (when his name was called). Making the same announcement as on the former vote, I withhold my vote.

Mr. HARRIS (when his name was called). I transfer my pair with the junior Senator from New York [Mr. CALDER] to the Senator from Montana [Mr. MYERS], and vote "yea."

Mr. JONES of New Mexico (when his name was called). Making the same announcement regarding my pair and its transfer, I vote "yea."

Mr. LODGE (when his name was called). I transfer my pair with the Senator from Alabama [Mr. UNDERWOOD] to the Senator from Pennsylvania [Mr. PEPPER], and vote "nay."

Mr. MCKINLEY (when his name was called). Making the same announcement as before, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as on the previous vote, I vote "nay."

Mr. OVERMAN (when his name was called). Making the same announcement as to my pair and transfer as on the previous vote, I vote "yea."

Mr. ROBINSON (when his name was called). I have a general pair with the Senator from West Virginia [Mr. SUTHERLAND], which I transfer to the Senator from Tennessee [Mr. SHIELDS], and vote "yea."

Mr. SIMMONS (when his name was called). Making the same announcement as to my pair and its transfer as on the last vote, I vote "yea."

Mr. STERLING (when his name was called). Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Iowa [Mr. RAWSON], I vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Washington [Mr. JONES] with the Senator from Virginia [Mr. SWANSON];

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWENS]; and

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY].

Mr. HARRISON (after having voted in the affirmative). I note that my pair, the junior Senator from West Virginia [Mr. ELKINS], has not voted. I therefore withdraw my vote.

The result was announced—yeas 15, nays 38, as follows:

YEAS—15.

Borah	Hitchcock	Overman	Simmons
Gerry	Jones, N. Mex.	Pomerene	Walsh, Mass.
Harris	King	Robinson	Walsh, Mont.
Heflin	La Follette	Sheppard	

NAYS—38.

Ashurst	Hale	McKinley	Shortridge
Ball	Harreld	McLean	Smoot
Brandegee	Johnson	McNary	Spencer
Broussard	Kendrick	Moses	Sterling
Capper	Keyes	New	Townsend
Curtis	Ladd	Newberry	Wadsworth
du Pont	Lenroot	Nicholson	Weller
France	Lodge	Norbeck	Willis
Frelinghuysen	McCormick	Oddie	
Gooding	McCumber	Page	

NOT VOTING—43.

Bursum	Elkins	Norris	Stanfield
Calder	Ernst	Owen	Stanley
Cameron	Fernald	Pepper	Sutherland
Caraway	Fletcher	Phipps	Swanson
Colt	Glass	Pittman	Trammell
Crow	Harrison	Poindexter	Underwood
Culberson	Jones, Wash.	Ransdell	Warren
Cummins	Kellogg	Rawson	Watson, Ga.
Dial	McKellar	Reed	Watson, Ind.
Dillingham	Myers	Shields	Williams
Edge	Nelson	Smith	

So the amendment of Mr. WALSH of Massachusetts to the committee amendment was rejected.

Mr. KING. There may be some upon the other side of the Chamber who think that this article ought to be protected, and that 20 cents per gallon was an inadequate protection. The committee, after a very full consideration, recommended 40 cents per gallon, a very, very high duty, but to-day we have upon their suggestion adopted 50 cents per gallon as the rate. I move to amend by striking out "50" and inserting "40," so that it will read, in line 24, "olive oil, not specially provided for, 40 cents per gallon." Any upon the other side who believe in very full protection ought to be gratified to have an opportunity to vote for the amendment which I tender.

The amendment to the amendment was rejected.

The amendment as amended was agreed to.

Mr. McCUMBER. I would like to go back now to page 21, line 17, where the amendment was passed over.

The PRESIDING OFFICER. The Secretary will state the amendment passed over.

The READING CLERK. On page 21, line 17, after the words "castor oil," strike out "4½" and insert "3," so as to read:

Castor oil, 3 cents per pound.

Mr. McCUMBER. There are several items of oils, and I think my colleague desires to discuss this afternoon the whole paragraph which is before the Senate.

THE TARIFF PROTECTION FOR AGRICULTURAL PRODUCTS—WHY TARIFF ON VEGETABLE OILS MAY FAIL.

Mr. LADD. Mr. President, it would be folly to add, for example, a tariff on vegetable oils—say, on flax and linseed oil—and then permit the introduction into this country of other vegetable oils which could serve as displacement oils in the manufacture of paints, varnishes, and for other purposes for which linseed oil is employed; that is, to tax linseed oil and then let in free soya-bean oil, lumbang oil, perilla oil, and so forth, would ultimately furnish little or no encouragement for the farmer to revive flax production. To protect corn oil, cottonseed oil, and peanut oil by high tariff would benefit no one but the manufacturer unless proper duty was placed against coconut or other oils so cheaply produced in Asiatic countries with the cheapest labor obtainable, since coconut oil is a replacement oil in milk substitutes, as butter substitutes, and for soap manufacture, thus driving out the American farm product which is replaced. Whatever of coconut oil is used, either in milk products, butter substitutes, and for soap production, means foreign competition with our corn and cotton growers.

Enormous quantities of milk substitutes are now produced from skimmed milk, to which is added a vegetable oil, mainly coconut oil, to replace the butter fat. This milk substitute is rapidly on the increase. In 1920 one firm is reported to have produced 84,440,000 pounds of condensed milk in which vegetable oil had displaced a like quantity of milk fat. Since the product contained not less than 7 per cent of fat, there was used not less than 5,880,000 pounds of coconut or other vegetable oils. This would displace a like amount of peanut oil or oil from not less than 4,704,000 bushels of corn.

Again, in 1918 there were used 56,517,000 pounds of soya-bean oil in lard substitutes, to that extent replacing vegetable oils produced in this country. The product is wholly satisfactory for use, but displacing that amount of oil which should have been furnished by American farmers or have been produced as lard from American hogs which consumed American corn and other agricultural products.

Mr. President, the soap manufacturers, through their alleged spokesman, maintain that they must have cheap foreign oils to enable them to compete in foreign markets in the sale of soap. As a matter of fact, the soap makers, under terms of the bill, are permitted to import in bond all the oils they desire to produce soap for export, and on the exportation of the soap are refunded 99 cents out of each dollar paid as duty on the oil when removed from bond. The soap manufacturer, therefore, has no justification to complain, but he does not appear to be willing to accord the farmer a like degree of protection on his products as the soap manufacturer demands and is accorded by the Finance Committee in the bill now before the Senate, and to reasonable protection no farmer is objecting.

I am informed that for the seven years from 1914 to 1920, inclusive, there was produced in this country a total of 9,857,146,000 pounds of cottonseed oil and 915,208,000 pounds of peanut oil, or an average for the two oils of about 1,538,907,714 pounds annually. For the same seven years there was imported into this country of different oils as follows:

	Pounds.
Cottonseed oil	113,752,000
Soya-bean oil	1,086,226,000
Peanut oil	374,345,000
Coconut oil	1,201,015,000
Copra, crushed	915,068,000

And an additional amount of other vegetable oils, or an average of approximately 527,000,000 pounds of vegetable oils annually imported which should and could have been produced in this country.

Our excess of importation for vegetable oils above exports amounts annually for the same period to 292,317,000 pounds. Some of these oils are still left on the free list and the spurious argument made that since these oils are not produced at present in this country they do not come in competition with American-grown products. This is wholly an erroneous idea. The fact is every one of these imported oils are displacing oils produced in this country the amount of which could be produced in most instances might be increased manyfold with a reasonable degree of tariff protection.

TARIFF ON FLAXSEED.

Mr. President, the time-honored practice of acting in haste and repenting at leisure is just now receiving a forceful demonstration in the case of the emergency duty on flaxseed and its effect on the American linseed-oil industry. Incidentally present conditions are clearly proving the absurdity of attempting to protect the producer of any raw material without at the same time providing an equal degree of protection for the manufacturers who constitute his chief market.

The Underwood Tariff Act of 1913 carried a duty of 20 cents a bushel on imported flaxseed, and one of 10 cents a gallon on linseed oil. When the emergency tariff bill of 1921 was passed the duty on flaxseed was increased to 30 cents a bushel, but no change was made in the tariff on linseed oil. This was done ostensibly to protect the farmers against importations of cheap flaxseed from Argentina and Canada.

The American linseed mills found that they could not afford to buy the foreign flaxseed and pay the new duty on it. With them the chief product was linseed oil, the oil cake and meal being of secondary importance; their successful operation depended on their having a reasonably profitable market for oil, for which there is almost always an energetic demand.

The demand has continued, but it has found new ways of being provided for. Abroad, and particularly in Great Britain, the most important flaxseed product is the cake or meal; the oil becomes a by-product, to be sold for whatever it will bring. The British flaxseed crushers, with free access to the Canadian and Argentine supplies, have been able to import the flaxseed, secure the feed their farmers needed, and sell the oil in the United States at prices which the American manufacturers could not profitably meet.

Naturally, 1921 was a record year for the Argentine flaxseed exporters, with total shipments amounting to 53,000,000 bushels, as compared with a previous high record of 40,000,000. In earlier years the United States used to take most of Argentina's surplus flaxseed, but in 1921 the heaviest purchaser was Great Britain. This, of course, was what the farmers' advocates wanted as the result of increasing the tariff on flaxseed; what they did not take into consideration was the return of the manufactured product of this foreign flaxseed in such volume as to compel the American mills either to reduce their activity or altogether to close down.

This is exactly what is now happening. They can not meet the competition of linseed oil imported under the terms of the Underwood tariff while their purchases of foreign flaxseed are restricted by the advanced duties of the emergency act.

That such a situation is obviously disastrous for an industry representing an annual turnover of fully a hundred and twenty million dollars, and with hundreds of employees, many of whom are now facing the necessity of finding new positions, possibly does not greatly worry the farmers for whose ostensible benefit the emergency tariff law was enacted. What will distress them is the fact that the only sure and steady market for their flaxseed is being cut off, and the alleged protection of the 30-cent duty on flaxseed is becoming a sheer illusion.

A similar condition would apply to the wheat raisers if there were no compensatory duty on wheat flour and mill feeds. To some extent they are suffering from it already, for the provisions of the emergency tariff law, with a fixed duty on wheat and a sliding one on flour, have proved altogether unsatisfactory.

The only kind of protection which can ever do the farmers any good recognizes that there can be no distinction drawn between actual farm products and the manufacturers of which they are the basis. To put up a barrier against the importation of raw materials, while favoring the importation of their finished products, is to destroy the farmers' markets just as surely as if there were no protection at all. Indeed, the result is even more disastrous, because, while the farmers are always able to compete with imported farm products in domestic markets, they are powerless if these markets are destroyed.

The flaxseed crushers have at no time asked for any tariff protection on linseed oil disproportionate to the protection afforded on flaxseed, and the higher conversion costs consequent upon higher wages and better living conditions compared with those abroad.

Figures submitted by various crushers to the Finance Committee are before me, indicating that conversion costs range from 46½ cents on a single mill to 50.9 cents on three mills crushing 3,670,000 bushels. These include all costs except freight and drayage, and not including depreciation.

Costs of extracting linseed oil.

(Crushing operation, 1921, 1,274,085 bushels.)

	Per bushel.
Cost, including oil barreled and cake bagged	$0.3420
Cost of office expenses, selling, insurance, not including freight and cartage	.1340
Administration and laboratory	.0167
Total	.4927

Based on figures to October 31, 1921 (10 months), crushing 3,670,000 bushels, or 9,184,214 gallons:

	Per bushel.
Cost of packages, packing, selling, administration, and insurance, but not inclusive of cartage and freight	$0.177
Taxes and interest	.104
Cake and meal	.115
Manufacturing cost as of Buffalo, St. Paul, and Dean:	
Buffalo, 42 presses, or	$0.095
St. Paul, 30 presses, or	.115
Dean, 63 presses, or	.125
Total average of 135 presses, or	.113
Working cost per bushel	.509

Depreciation not included.

This represents about an average for a like period, which is 72 per cent of maximum capacity.

On the basis of these costs, using an average of 50 cents per bushel conversion here and 25 cents per bushel abroad, which latter figure is borne out by sales prices of foreign oil here, the following demonstration is made as of March 24, 1922:

Cost of production of linseed oil in Europe from Argentine linseed.

	Per bushel.
Cost of Argentine linseed calculated the same in Europe as in New York this date—basis 96 per cent purity	$2.18
Four per cent additional to bring cost to 100 per cent seed purity to conform to oil yield calculations	.0872
Duty, none	.00
Manufacturers (European) cost of conversion of seed into oil filled into barrels, sold and ready to ship	.25
	2.5172
Less value of oil cake product (37 pounds) at normal price, $30 per 2,000 pounds f. o. b. steamer New York basis—equivalent in England $36.75 per 2,000 pounds	.68
	1.8372

	Per gallon.
Divisor—19 pounds of oil the yield from 1 bushel of seed equals cost of 1 pound of oil $0.1375, or per gallon of 7.5 pounds	.7275
Plus transportation of oil in barrels to United States of America Atlantic seaports	.0485
Total cost to United States of America Atlantic seaports, per gallon of oil	.7760
Difference in conversion costs per pound of oil	.034

Where international money exchange rate enters in the above, the calculation is at $4.40 per pound sterling, current exchange rate.

Cost of production of linseed oil in the United States from Argentine linseed.

	Per bushel.
Price of Argentine linseed at New York this date for but 96 per cent purity	$2.18
4 per cent additional to bring cost to 100 per cent seed purity to conform to oil-yield calculations	.0872
Duty added to cost of seed	.40
Manufacturers' (United States of America) cost of conversion of seed into oil and oil cake, packed, sold, and ready to ship, not inclusive of plant depreciation nor of trade discount, cartage, and freight	.50
	3.1672
Less value of oil-cake product (37 pounds) at normal price, $30 per 2,000 pounds	.555
	2.6122

	Per gallon.
Divisor—19 pounds of oil, the yield from 1 bushel of seed equals cost of 1 pound of oil, $0.1375, or per gallon of 7.5 pounds	1.03125
Cost of linseed oil manufactured in Europe (including its transportation in barrels to the United States of America Atlantic seaports (see accompanying statement, above)	.7760
Difference per gallon	.25525
Difference in conversion costs per pound of oil	.034

Mr. JONES of New Mexico. Mr. President, will the Senator permit an interruption?

Mr. LADD. I yield.

Mr. JONES of New Mexico. I should like to be advised from what source the Senator gets the data which he has just given us. I am very much interested in the subject.

Mr. LADD. This part of it comes from the American Linseed Oil Co., from their three factories.

CANADA'S EXPERIENCE.

It is not alone in the United States that there is depression in the flax and linseed oil industry, but a letter from Canada clearly shows that their crushing and home oil industry is likewise severely affected by differences in the cost of production in Canada and in Europe as well as seed brought from Argentina. I read here a copy of a letter from one of the large crushers of Canada:

MONTREAL, *April 4, 1922.*

DEAR SIR: Relative to my conversation with you at your office yesterday when I made the statement that we proposed closing down our mills indefinitely when present stock of flaxseed has been crushed, which will be in two weeks; agreeable to promise I now submit below indisputable figures to show why we are compelled to close down. I submit figures based on market prices at close of market to-day. Note also my costs are based on 1 bushel of flaxseed—56 pounds—producing 19 pounds oil and 37 pounds cake, which is a fair average mill operation:

No. 1 N. W. C. flax costs at Fort William per bushel	$2.25
Transportation charges to Montreal do	.26
Crushing cost, including bags and barrels, material and supplies, but excluding interest on capital investment, plant depreciation, or transportation charges on oil to various markets per bushel	.45
	2.96
Less amount realized on sale of 37 pounds cake, at £14 5s., cost, insurance, and freight, Liverpool (per ton), exchanged at $4.50, less ocean freight at 35 cents per 100 pounds, nets us $50 per ton or for 37 pounds from 1 bushel flaxseed	.92
Net cost of producing 19 pounds oil	2.04
Equals per gallon of 9 pounds	.97

English linseed oil can be purchased in the United Kingdom markets to-day at £36 10s. per ton in barrels.

Figuring exchange at $4.50 per gallon of 9 pounds	$0.66
Duty on oil and barrels	.12
Ocean freight at 35s. per ton, exchange at $4.86	.04
Cost of English oil, freight and duty paid Montreal	.82

We would thus have to suffer a loss of over $500 per day if we attempted to operate our two small mills with combined crushing capacity of 2,500 bushels daily in competition with English linseed oil.

I also submit figures showing how we stand by using Argentine seed, which is the only other seed available to us. We were offered Argentine seed yesterday at $2.03 per bushel c. i. f. New York, United States funds (96 per cent basis):

	C. i. f. New York.
Thus cost of 1 bushel flaxseed equals	$2.03
Impurities, 4 per cent, equals	.08
Exchange, 3 per cent, equals	.06
Duty equals	.10
Transportation charge to Montreal, at 34½ cents	.20
Crushing costs, same basis as above	.45
	2.92
Can realize on cake, same basis as above	.92
Cost of producing 19 pounds oil equals	2.00
Cost per gallon of 9 pounds equals	.95

NOTE.—The value allowed for cake, namely, £14 5s. c. i. f. Liverpool, represents last sale made by us on March 23 last. The signer being away from home, and not having any cake to dispose of, has not been in touch with the cake market since, but am of the opinion that we would have to accept a substantially lower price for May shipment.

You also put the question to me as to where the difference comes in, putting us at a disadvantage in competition with English crushers. Briefly, I put them as follows:

Cheaper cost of labor and material	$0.15
Ocean freight on cake to English markets	.13
Cheaper transportation cost on seed from South America to Liverpool, London, or Hull	.20
	.48

Against this we have protection by duty on oil equal to 25 cents per bushel, leaving a difference in favor of the United Kingdom crushers of 23 cents per bushel, which is equal to, say, 11 cents per gallon on oil.

In conclusion, I invite you to check above figures over carefully and tell me if you find anything wrong with them. I'll bet you a "Corona" you won't.

Thanking you for favor extended me during my short and hurried visit with you yesterday, I remain,

Yours truly,

E. LIERSCH,
Managing Director Canada Linseed Oil Mills (Ltd.).

This is the situation based on a duty on flaxseed of 40 cents per bushel. The American crushers have offered their records to substantiate their conversion costs of 50 cents per bushel. These, in my opinion, are not excessive, inasmuch as it is a fact that English and Dutch oil is being sold here at and below the prices indicated in the table just given, where conversion cost is used of 25 cents per bushel, and we all know that labor in European countries is not receiving anything like 50 per cent of wages paid here.

There can be no comparison except to the advantage of the European crusher in items of cost other than labor. The crushers in this country have to arrange their operation with respect to the seasonable nature of the business with regard to periods of heavy demand for cake from the feeders and oil from the consuming trade, and also to buy from the farmer his seed when he wants to sell. Competitive conditions also exist in the business, resulting in the carrying of a multiplicity of small stocks at all jobbing and manufacturing centers affording the small man service but increasing the cost of doing business largely as compared with costs c. i. f. New York, freight, or freight and duty for buyers' account.

The terms of domestic crushers of 30 days net, 1 per cent for cash, 10 days, is an additional cost compared with terms of European producers or brokers of cash against documents net.

In arriving at 26½ cents per gallon as being a commensurate duty on linseed oil with flaxseed dutiable at 40 cents per bushel, no account is being taken of any addition representing profit. It might be well to state that the crushers in the United States have no advantage in manufacturing methods over those used by any European producer of linseed oil, as there are only two methods used at present commercially; one by expression through the use of solvents, the other by use of hydraulic presses.

These facts established, it is illuminating to demonstrate the insincerity of those who are contending for a duty of 20 cents per bushel on flaxseed and 12 cents per gallon on oil.

Using the prices of March 24, 1922, for seed, the relative costs of production are as follows:

Cost of production of linseed oil in the United States from Argentine linseed.

	Per bushel.
Price of Argentine linseed at New York this date for but 96 per cent purity	$2.18
Four per cent additional to bring cost to 100 per cent seed purity to conform to oil-yield calculations	.0872
Duty added to cost of seed	$0.20
Manufacturers' (United States of America) cost of conversion of seed into oil and oil cake packed, sold, and ready to ship, not inclusive of plant depreciation nor of trade discount, cartage, and freight	.50
	2.9672
Less value of oil-cake product, 37 pounds, at normal price of $30 per 2,000 pounds	.555
	2.4122

	Per gallon.
Divisor—19 pounds oil, the yield from 1 bushel of seed, equals cost per pound, or per gallon of 7⅛ pounds	.127
Or cost to produce in United States of America	.9525

Cost of production of linseed oil in Europe from Argentine linseed.

	Per bushel.
Cost of Argentine linseed calculated the same in Europe as in New York this date, basis 96 per cent purity	$2.18
4 per cent additional to bring cost to 100 per cent seed purity to conform to oil yield calculations	.0872
Duty, none.	
Manufacturers (Europe) cost of conversion of seed into oil filled into barrels, sold and ready to ship	.2500
Total	2.5172
Less value of oil-cake products, 37 pounds at normal price, $30 per 2,000 pounds f. o. b. steamer, New York basis, equivalent in England $37.75 per 2,000 pounds	.67425
Yield, 19 pounds	1.84295

	Per gallon.
Divisor: 19 pounds of oil yield from 1 bushel of seed equals cost per 1 pound of oil, $0.097, or per 7⅛-pound gallon	$0.7275
Plus transportation of oil in barrels to United States of America, Atlantic ports	.0485
Total cost to United States of America, Atlantic seaports, per gallon of oil	.7760
Difference in conversion cost per gallon	.1765

With respect to the contention of the paint and varnish manufacturers that duties which are asked for linseed oil are out of line with the proposed duties on flaxseed, attention is called to the paint schedule, paragraph 63, of H. R. 7456, which provides an import duty of 25 per cent ad valorem on mixed paints.

The linseed-oil content of 1 gallon of paint being 5$\frac{8}{10}$ pounds or 74$\frac{7}{10}$ per cent of 1 gallon of oil, the paint manufacturer in the United States is thereby protected with a duty on the linseed-oil content of 1 gallon of high-grade paint by 20⅞ cents.

If linseed oil as such is made dutiable at 26¼ cents per gallon of 7⅛ pounds and the paint manufacturer in the United States uses but 74$\frac{7}{10}$ per cent of 1 gallon of linseed oil to manufacture 1 gallon of paint, the duty of 26¼ cents or 3¾ cents per pound on linseed oil if added in full by the American crusher to the price of linseed oil to the American paint manufacturer the duty on the linseed-oil content of 1 gallon of paint would be 19$\frac{8}{10}$ cents or ½ cent per gallon less than the protection on the oil if imported as paint.

If they contend the duty on linseed oil is adequate and protects the farmer and the manufacturer by a duty arrived at by computing the rate to be expressed by the number of cents per gallon that 2½ gallons bears to the import duty on flaxseed, why, under the present emergency bill, which on their basis would represent 12 cents a gallon as compensatory, have such tremendously increasing quantities of linseed oil been imported during the life of the emergency bill and have been and are being sold at from 23 cents to 27 cents per gallon under the cost of American crushers to produce, figuring that American working and production costs are double those of English and Dutch manufacturers?

COTTONSEED PRODUCERS NEED PROTECTION.

In the brief of the crude cottonseed oil tariff committee before the Ways and Means Committee of the House of Representatives, page 1169, they make the following statement, which is as applicable to flaxseed and linseed oil production as to cotton seed:

> There is no practical way to produce cottonseed oil in this country in competition with oriental oils except behind tariff barriers. Cotton seed in America is not produced nor is the oil expressed therefrom by the half-clothed, half-starved, insanitary, disease-ridden labor, requiring a handful of rice as a daily ration, and living under conditions which no American would regard as tolerable.

It is interesting to observe that Canada, with a flax crop generally of three to six million bushels in excess of their consumptive requirements, is not now nor have they exported linseed oil to the United States during the time the Underwood or emergency tariff bills have been effective, plainly indicating that they could not take advantage of the inequities of our tariff, as their labor costs and other costs of doing business were on a par with ours. As a matter of fact, I am in possession of a schedule showing conversion costs of Canada crushers to be substantially those of crushers in the United States.

BUREAU OF RAW MATERIALS FALLACIES.

It would, in my opinion, take a staff of experts to analyze and refute fallacious statements in detail which have been and are

being made by the so-called bureau of raw materials, in not only recorded hearings before the various committees of Congress which have the tariff in charge, but are spreading broadcast to the consumers of oil these very misleading figures.

In figuring the cost of the proposed duty of 40 cents, they indicate that the crushers have a net protection amounting to $9,262,000, intimating by reciting these figures that this amount goes into the crusher's pocket, representing a profit to him in his business. Nothing can be further from the truth. As a matter of fact, while it is possible that the protection to the American farmer on flaxseed represents possibly a higher cost for the raw products derived from flaxseed to the consumer thereof, it is not a fact that the compensatory duties proposed by them on linseed oil are equivalent to the duty on flaxseed and enhanced labor costs over those abroad, nor is it a fact that the money represented by this protection goes into the pockets of the crushers. On the contrary, it is a fact, and can be substantiated, that the linseed crushers of the United States have sold linseed oil at the cost of production every day in the year. This statement can not be controverted by any consumer in the country, except perhaps for a very slight period during the war, when markets were fluctuating violently and with the trend steadily upward.

VICIOUS PROPAGANDA.

There can be no reason for the vicious activity of the so-called bureau of raw materials directed against the linseed-crushing industry of this country and against the speaker, except a desire of the managers of the so-called bureau to invite foreign importations of linseed oil for the purpose of utilizing their services as brokers in its sale in this country, to their direct gain, with no investment, no factories, no employment of labor, material, and so forth, or anything but a desk and a telephone. Certainly no soap manufacturer in this country is interested, nor is his business menaced by a duty on flaxseed or on linseed oil, as he uses negligible quantities in the manufacture of soap.

Mr. John Aspegren, an authority, before the Senate Finance Committee on December 29, 1921, in a statement which he made with respect to the tariff on foreign vegetable oils and oil seeds, after calling attention to cottonseed oil and its competitors, foreign oils which are imported, at nearly the conclusion remarked—

That in asking for them—

Meaning certain action with respect to competitive oil seeds and vegetable oils with cottonseed oil—

I want to make the following reservations: Linseed oil and castor oil are not in their uses interchangeable with other vegetable oils and we are perfectly willing that should the parties interested want a duty on same that their wishes should prevail and you can disregard us entirely in the making of a duty or tariff on same.

It is a fact that linseed oil is not interchangeable, either in the edible lines nor in the soap lines, with any oils which are used generally in either department.

What, then, can be the particular reason for the bureau of raw materials' persistent attacks on the linseed manufacturers and the flaxseed farmers of the United States? They, in insisting on what they consider a compensatory duty on linseed oil in relation to any proposed duty on flaxseed, make this request, among others, in circular sent out some time between March 6 and now, which was circulated to the paint and varnish manufacturers of the United States:

First. Protest against any duty on flaxseed in excess of 20 cents per bushel.

Second. Protest against any rate of duty on linseed oil in excess of 12 cents per gallon.

THE BUREAU OF RAW MATERIALS PROPAGANDA.

The bureau of raw materials for American vegetable oils and fat industries have been very active, and their spokesman or propagandist sent out recently to varnish manufacturers a circular, which is probably familiar to most of the Senators. I shall therefore not read it, but ask permission to have it printed in the RECORD without reading, merely calling attention to their statement that in suggesting a rate of 20 cents a bushel on flaxseed and 12 cents a gallon on oil they did so for "opposition purposes." That seems to be their only line of argument.

The PRESIDING OFFICER. Without objection, the matter referred to will be printed in the RECORD.

The circular referred to is as follows:

WASHINGTON, D. C., *April 6, 1922.*

CONFIDENTIAL REPORT.

To Members of the National Varnish Manufacturers' Association:

We inclose herewith extracts from the pending tariff bill relating to oils and fats and a number of other commodities and we also inclose comparative table of rates. Please regard all of the inclosures as confidential until the tariff bill is reported to the Senate.

China wood oil has been retained on the free list in spite of representations made by certain Senators representing agricultural interests that this oil was a competitor of linseed oil. As related in our pamphlet on China wood oil, members of your association appeared before the Senate Finance Committee and effectively presented your claim for continued free entry of China wood oil.

Linseed oil: You have suffered a total defeat in the Senate Finance Committee on this item. The Senate Finance Committee adopted Senator LADD'S proposed rate of 40 cents on flaxseed but adopted 3 cents per pound on linseed oil instead of Senator LADD'S rate of 3½ cents per pound. Soon after this action was taken by the committee we were advised that Senator LADD arranged a private hearing for the linseed crushers before the committee, and as a result of this hearing the rate on linseed oil was again revised by the committee to 3½ cents per pound. We understand at this hearing the crushers claimed that it cost 50 cents per bushel to crush flaxseed. This would be about 25 per cent of the value of the products derived from a bushel of flaxseed. Members of our organization who own about 100 cottonseed-oil mills say their labor cost of crushing cotton seed is less than 5 per cent, and cotton seed only yields 15 per cent of oil, so the Bureau of the Census reports showing labor cost of flaxseed crushing to be about 2½ per cent is borne out by all actual evidence obtainable.

The flaxseed crushers by joining the farmers in the beginning contributed to the high duty on flaxseed and this duty on flaxseed in turn imposes a tremendous burden on linseed oil consumers without considering the crusher's differential, but when you add to this the additional 26 cents per bushel for flaxseed crushers, which is the differential between the flaxseed rate of 40 cents and the oil rate of 3½ cents per pound, linseed oil consumers are being exploited in regular Jesse James style. The drawback provisions have not yet been definitely adopted by the Senate Finance Committee, and it may finally appear that the Payne-Aldrich system will be retained, in which case the farmers' 40 cents per bushel will be reduced and the crushers' 26 cents per bushel differential increased by a corresponding amount. Had the paint industry put up a real fight on the flaxseed and linseed oil rates it is probable that nothing higher than the Payne-Aldrich rates of 25 cents on flaxseed and 15 cents per gallon on oil would have been adopted. The Paint Manufacturers' Association tariff committee, to whom we submitted our rates of 20 cents per bushel on flaxseed and 12 cents per gallon on oil early in February, have not yet adopted these rates which we proposed for opposition purposes, and in fact have adopted no opposition rates whatever as yet, and aside from the support of a total of about 40 consumers of linseed oil our hands have been tied. It is not too late, however, to conduct a winning fight. Your association through its tariff committee adopted our rates of 20 cents on flaxseed and 12 cents per gallon on oil, but being minor consumers of linseed oil your opposition has not carried the weight that the united opposition of both associations would have carried.

Rosin: Has been retained on the free list.

Other rates: You will observe a number of oils which we have maintained on the free list which are of interest to varnish manufacturers.

The future course of the tariff bill through the Senate and the conference committee of the House and Senate is full of uncertainty. The demands of agriculturists for high duties on all vegetable oils has been more insistent than on any other commodities, and our opponents propose to continue their efforts on the floor of the Senate. It is therefore most important that you do not permit your interest in the tariff to slacken, but, on the other hand, your continued support and assistance is urgently needed.

Respectfully submitted.

BUREAU OF RAW MATERIALS FOR AMERICAN VEGETABLE OILS AND FATS INDUSTRIES.

Mr. LADD. Mr. President, it will be noted that the above circular says that the rates we have proposed are for "opposition purposes." That is, it was apparently not based on any careful scientific study of data, but was in harmony with all propaganda that has been sent out to the paint and varnish people by this bureau, and only 40 of the paint and varnish manufacturers could they induce to support them in their efforts for cheap vegetable fats and oils for the soap manufacturer and to compete with dairy products.

It is evident, therefore, that the paint and varnish manufacturers have sympathy for the farmers who are trying to produce the agricultural products of this country to supply their needs. The soap manufacturers evidently have no real interest in the upbuilding and protection of the country or of its great agricultural interests so long as they can get cheap fats and oils and have high protection for their manufactured product—soap. The soap manufacturer on perfumed toilet soap asked for and received at the hands of the Finance Committee 50 per cent ad valorem duty, and yet they most bitterly attack and misrepresent with regard to the small protection that is being asked for by the producers of vegetable oils and fats.

Mr. FRELINGHUYSEN. Mr. President, I do not want to interrupt the Senator unless he wishes to be interrupted at this point.

Mr. LADD. I shall be very glad to be interrupted.

Mr. FRELINGHUYSEN. I should like to ask the Senator whether any of the coconut oil or soya-bean oil goes into the high-priced soaps. As I understand this provision, the vegetable oils go into the laundry soap rather than the high-class soap. Is that true?

Mr. LADD. I will refer to that a little later in the record.

Mr. LODGE. Mr. President, would it interrupt the Senator if I should say a word at that point?

Mr. LADD. Not at all.

Mr. LODGE. With regard to the point the Senator made earlier in his speech, which, I take it, relates to the provisos on page 22, I have been reading those provisos, and what the Senator from New Jersey says led me to give attention to them. It seems to me that those provisos are a direct invita-

tion to substitute other and perhaps inferior oils for the linseed oil and really to wreck the whole system—which I have no fault to find with—of duties which the committee has agreed upon. It opens the door to the use of all those other oils free if the manufacturers put them in nonedible products—that is, paint or soap—and it appears to me that those provisos are very destructive.

I know that the Senator has given attention to the subject, and I should like to ask him whether I am entirely wrong in that or whether the Senator thinks there is some point and force to what I have said.

Mr. LADD. I think there is some point; and the introduction of many of those oils, which will be used as substitutes, will cheapen the product and make an inferior grade of product. In the case of paints there will be a tendency to introduce some of the oils that will be inferior. Soya-bean oil may be used in paint to some extent, but it can not be used to exceed 15 or 20 per cent in a paint without very seriously interfering with its quality.

Mr. LODGE. If an inferior oil comes in in that way, free of duty, it is a great temptation to have it used instead of the other oil, it seems to me.

Mr. LADD. It certainly is.

Mr. FRELINGHUYSEN. Mr. President, may I ask the Senator from Massachusetts a question?

Mr. LODGE. The Senator may.

Mr. FRELINGHUYSEN. Does the Senator from North Dakota object?

Mr. LADD. Certainly not.

Mr. FRELINGHUYSEN. The problem that confronted the committee was the injustice to the paint and soap industry in this country of placing a high duty on vegetable oils and increasing the cost of those products when they were not made here. The principal objection of the farmers was in the fact that these oils went into edible products, such as filled milk and butter substitutes, and therefore we framed the proviso so that on that portion of the vegetable oils which were imported for industrial purposes the tariff should be remitted, but where the oils went into edible products the tariff should be imposed. I should like to ask the Senator from Massachusetts if he is in favor of imposing a tariff on all of these vegetable oils, thereby increasing——

Mr. LODGE. If the duties on the oils are now too high, and are unfair to the paint and soap industry, let us lower them.

Mr. FRELINGHUYSEN. They have always been free.

Mr. LODGE. Free?

Mr. FRELINGHUYSEN. As I understand. Coconut oil——

Mr. LADD. Coconut oil has been free.

Mr. LODGE. Coconut oil, yes; but all of them have not been free.

Mr. LADD. I understand that there has been a duty of 2 cents on soy-bean oil under the emergency tariff law.

Mr. FRELINGHUYSEN. That is under the emergency tariff law.

Mr. LODGE. Very well. That does not alter the point of what I was going to say. If the committee comes to the conclusion that it is not fair to the paint and soap industries that there should be duties on these oils, do not put duties on them; but do not put duties on them and then take them away by a proviso.

Mr. FRELINGHUYSEN. If I may continue further——

Mr. LADD. Certainly.

Mr. FRELINGHUYSEN. The principal objection of those who were interested in protecting the farmers' interests was that these vegetable oils went into edible products and displaced the products made here.

Mr. LODGE. If the Senator will pardon me, that is not the point I am making.

Mr. FRELINGHUYSEN. I understand the Senator.

Mr. LODGE. I am objecting to using a proviso to let these oils in free to take the place of linseed in making paints and soaps or the other things that are used in soaps.

Mr. FRELINGHUYSEN. Mr. President, the imposition of a duty of 4 cents upon soya-bean oil, which goes into soap, which is re-refined and exported to the extent of 47,000,000 pounds, simply places an embargo upon that oil, throws it back into Europe, throws the coconut oil back into Europe, throws the peanut oil back into Europe, and shoves back the exports of millions of pounds of cottonseed oil that we produce in this country. That is the mischief of the high duty on these vegetable oils, in my opinion.

Mr. LODGE. Cottonseed oil is our production, and I do not think the duty would affect it materially.

Mr. FRELINGHUYSEN. I do not think the duty affects it, but it does displace——

Mr. LODGE. I failed to make my point clear, and that is that this is doing by indirection what, if it is to be done at all, ought to be done directly.

Mr. LADD. There is no question of that.

Mr. FRELINGHUYSEN. It was in order to meet the protests of the farmers against the coconut oil and soya-bean oil going into filled milk, oleomargarine, and other butter substitutes—soya-bean oil in a small degree into oleomargarine, I believe, and peanut oil—but when that was insisted upon those interested in having that duty imposed also placed a duty on the industries to such an extent that it practically would increase the cost some $15,000,000 in the manufacturing industries of this country, and therefore I opposed the duty.

Mr. LODGE. The Senator refers to soap and paint?

Mr. FRELINGHUYSEN. Soap and paint and other industries.

Mr. LODGE. Have they no protection?

Mr. FRELINGHUYSEN. They have protection against the luxuries, the high-class perfumed soaps, as they should have, but they have very little protection against the laundry soaps, in which coconut oil is used, because in the hard water of the Middle West, I understand, they have to use that in order to get a lather, and rather than have this duty on the raw vegetable oils that come into this country which can not be produced here, which simply increase the cost of production, they would willingly give up any duty on the laundry soap.

Mr. LODGE. I thought the object was to give a suitable protection both to soaps and paints and to the production of linseed. It does not make much difference whether you lower the duty on linseed or whether by a proviso you take away its field of consumption. I am not thinking of the edible part of it at all.

Mr. FRELINGHUYSEN. The linseed duty is very high and a compensatory duty has been directed on linseed oil, so that it balances, and the inequality of the emergency tariff has been overcome; but soya-bean oil does not figure in the paint and oil industry.

Mr. LADD. It figures pretty largely at the present time.

Mr. FRELINGHUYSEN. I understand that only 1 per cent of the importation of soya-bean oil goes into the paint industry of this country. Does the Senator challenge that statement?

Mr. LADD. I can not say as to the total amount, but I know of many paints where from 18 to 20 per cent of the total amount of oil in those paints is soya-bean oil.

Mr. FRELINGHUYSEN. Mr. President, we must deal with this subject as a whole, not with what proportion goes into any kind of paint. I ask the Senator—I have been informed on the subject, and I think my information is authentic—what proportion of imported soya-bean oil he finds goes into the paint industry of this country?

Mr. LADD. Offhand, at this time, I can not say. I will look it up and give it a little later, but I can not give the Senator the exact figure at the present time. From knowledge of paints, however, I know that there are paints that have had up as high as 20 per cent. The paints of one of the largest manufacturers of America for years have contained approximately 20 per cent of soya-bean oil; and soya beans are grown in this country, and can be grown with protection, and the oil furnished. The oil concerns of Chicago are contracting with the farmers to grow the soya bean at the present time. It is one of the best soil enrichers we have for nitrogen in the soil. It is one of the plants that furnish an edible bean that is used as a food, and will be used more and more in this country as a food, both for animals and for man.

Mr. FRELINGHUYSEN. Mr. President, I want to change my statement. I understand that the soya-bean oil used in paints and varnishes in 1918 was slightly over 1 per cent of the linseed-oil production. I understand that that is the proportion.

Mr. McCUMBER. Mr. President, will the Senator yield to me for a moment?

Mr. LADD. Certainly.

Mr. McCUMBER. I want to say to my colleague that the splendid argument and brief which he presented to the Committee on Finance on the question of the proper differential on linseed oil were so conclusive that the Committee on Finance adopted the differential just as it was recommended by him, and I believe we all agree that that was the differential that should be made upon a 40-cent per bushel duty upon the flaxseed itself; but here is one matter that I want to call to the attention of the Senator from Massachusetts: I call his attention to the fact that under the law as it now stands cottonseed

oil is free. Our committee gave a duty of 3 cents per pound upon that, changing it from the free list to the dutiable list.

Under the present law coconut oil is free. Our committee gave coconut oil a duty of 4 cents a pound. Under the present law soya-bean oil is free. Our committee gave a duty of 3 cents a pound on soya-bean oil. We took all of those from the free list and placed them upon the dutiable list. The principal argument that induced us to place those upon the dutiable list was that they come in direct competition with the food products of the farmer, and, therefore, if they were to be used in any manner for food products they were to bear this duty of from 3 to 4 cents per pound.

We all recognize that the main use of those products was in the manufacture of soap, and necessarily the duties on them would eventually increase the cost of the manufacture of soap above that which it would cost if they had these oils free, as they now are having them under the present law; and as soap is not edible, and as there was an immense soap industry in the United States, and as there was an intense conflict between the soap manufacturers, who wanted them free, and the farmers and the dairymen, who wanted to be protected against their use in dairy products, it was finally agreed by the committee that they should pay this rather heavy duty if they went into edible products in any manner, but if they were used exclusively in the manufacture of soap—and soap was the only thing, really, that we had in view—then that by giving a bond against their use in any other manner they might be used as they are now used for the soap industry.

That covered everything but the soya bean. The soya bean could be used and was used, as indicated by my colleague, in the manufacture of paint; but, as was stated by my colleague before the committee, it detracts very much from the quality of the paint, and could not be used at all in excess of 20 per cent without seriously injuring the paint. At the present time the soya-bean oil, I believe, is higher priced than the linseed oil, and so long as its price is higher than that of the linseed oil it is not going to be used for paint as long as it deteriorates, and never will be used unless the value of the soya-bean oil becomes so very much less than the linseed oil that it will justify the manufacturers of paint in using that adulterant and selling it to the American people. I do not think there is any immediate danger. At least, that was the view taken by the Committee on Finance, and that is why they adopted this provision, which would protect the farmer and his product, except, as the Senator has already indicated, in the question of the displacement, that we could therefore very probably make this compromise as between the interests of the manufacturer and the interests of the farmer, protecting the farmer against the use of any of those articles in food, and still allow the soap manufacturer to get those articles, as he is getting them to-day, upon the free list.

Mr. GOODING. Mr. President, I would like to ask the Sentor the object of putting a duty on soap if the fats which go into soap are to be on the free list, and all that is imported is to go on the free list?

Mr. McCUMBER. The principal duty on soap, I understand, is on the high-priced soap, which we use in the most expensive articles, such as perfumes, and not that in which we use the cheaper greases and oils. There is a duty here which amounts to 30 or 40 per cent upon these products, while the duty on the ordinary soap is only 5 per cent.

Mr. LODGE. The Senator from North Dakota yielded to me, and I am sorry to have been the cause of breaking into his speech.

Mr. LADD. That is all right.

Mr. LODGE. I know why this was done. I know about the absence of duties, and I know it was done to reach the edible oils. I make but one single point, and that is the point I understood to be made by the Senator from North Dakota, that it is a displacement of a farm product, and if we are going to do it, let us do it openly, and not through the back door.

Mr. LADD. It has been claimed that the paint manufacturers were opposed to the duty. I insert a letter from one of the largest paint manufacturers of the country, the Sherwin-Williams Co., of Cleveland, Ohio, in which they say:

THE SHERWIN-WILLIAMS CO.,
Cleveland, Ohio, April 7, 1922.

In response to yours of the 1st, relative to the tariff situation on flax and linseed oil, say we have had a number of the telegrams referred to, all of which have had no recognition.

As expressed to you in person, this company would have been entirely satisfied with a split on the duty on flax between that proposed by Senator LADD and that suggested by the committee of flaxseed crushers, but for choice between the high and low, we cheerfully support that of Senator LADD on 40 cents on flax and 3½ cents per pound on linseed oil.

While we have not made a canvass of other makers of paints and varnishes, we have reason to believe that if the paint and varnish makers know their business—and we grant that they do—there never was a period when the price of linseed oil was as much a factor from a psychological standpoint than it is at this moment.

I will see that whatever influence we may have will be in support of the proposed tax of 40 cents, and particularly so as to a 3½ cents per pound on linseed oil to balance that on the flaxseed.

Thanking you for your letter, I am,

Yours very truly,

G. A. MARTIN.

PROPAGANDA BY OTHERS.

Statements have been made by others than the bureau of raw materials, which are even more vicious in their insinuations than theirs. In the hearings before the Senate Finance Committee is a statement of Mr. H. E. Miles, chairman of the Fair Tariff League, Racine, Wis., January 23, 1922, page 5257 of his brief, in the last paragraph of which he makes this statement:

There must be exceptions, you see, Senator, like this Linseed Trust of seven companies—Standard Oil domination, says Moody in The Trusts. It has always been a child of the tariff except for the Underwood law.

The above statement made by a man who poses as representing 1,500,000 farmers is in some respects untrue, inasmuch as there are 14 companies, and in others purely speculative. In making the statement that the Underwood law of 20 cents per bushel on flaxseed and 10 per gallon on linseed oil was more nearly a proper ratio, he deals in pure speculation. There has been no opportunity of judging the operation of the Underwood law in this respect, compared to protective duties that were afforded by previous tariffs, inasmuch as during the entire time of the operation of this law business conditions were affected by the World War, particularly ocean transportation.

With the demonstration which has just been made that a compensatory duty on linseed oil must be placed at 17⅛ cents per gallon with flaxseed at 20 cents per bushel, I can safely state that if the Underwood law had been in force during a normal period it would have caused the farmer in the United States to sell his flaxseed in competition with the farmer in Argentina, and he would have been obliged to accept considerably lower prices for his flaxseed, inasmuch as the Underwood law did not afford compensatory protection on linseed oil compared with the rate of duty on flaxseed expressed therein, and the condition would have approximated that which is now confronting us.

Commencing with May, 1921, importations of linseed oil have been of such a large and increasing volume that the flaxseed-crushing mills in the United States are closing down one after another.

For opponents to contend that a 12-cent duty on linseed oil in relation to a 20-cent-per-bushel duty on flaxseed is compensatory is absurd, and there is no possible way in which the mills of this country can operate with such a ratio.

In my opinion, the interests of the linseed crushers and the interests of the paint and varnish manufacturers and other manufacturing consumers in this country are one and they are very shortsighted, indeed, when they lose sight of the broader aspects of the situation and can only see their near-by selfish advantage in insisting on a course of action by Congress which compels labor of all descriptions in this country to meet the lower wages and lower living conditions of foreigners which will most certainly react on their own business and their own customers.

The production of flaxseed can not be encouraged in this country unless in addition to the duty on imported flaxseed, whatever it may be, we put also a compensatory duty on the oil produced from same to protect the manufacturer against differences in cost of manufacturing, transportation, and exchange.

PROTECTING THE LABORER.

We can not have industrial prosperity by forcing the wage earners, who are a large part of the population, into competition with the low-waged foreigner and low conditions of living. When I speak of wage earners and the differences in labor costs, I do not altogether confine myself to that class of labor which is employed in the actual operation of the mills. These costs are only a part of the costs which go to the operation of business, and costs in European producing countries of all other classes of labor show just as great a disparity compared with the wages paid in this country. All other charges or costs against mills operating in European countries as compared with mills in the United States are in about the same proportion as the labor costs and to the disadvantage of the United States manufacturer.

I doubt if there has been a single argument for the imposition of a duty on any foreign-manufactured article competing with the same kind of an article in this country in which the argument has not been made that the manufacturer in this country is entitled to protection against low foreign wages and low living conditions.

A statement on page 1137 of Senate Finance Committee hearings on Schedule 1 by C. Rogers Brown as to the effect of the emergency tariff bill on the linseed business is enlightening, and I do not understand how, in view of his contentions in other parts of his brief, he could have made this statement, which is very true. The statement is as follows:

> The effect on the linseed business was the reverse of what was intended, and domestic crushers of linseed oil were not given proper treatment in that tariff for the reason that the duty on flaxseed was increased and the duty on oil was not increased, consequently the American linseed crusher could not pay the farmer any more for his flax and the 10-cent increase in the duty on flaxseed did not operate and it was really an unjust burden on the American linseed crushers during that period.

After some questions from Senators REED and MCCUMBER, Mr. Brown made the following statement:

> It just shows there was a discrepancy on the duties on flaxseed and linseed oil and they were not properly adjusted. The crusher had to adjust himself by not paying any more for domestic flaxseed than the differential justified.

In a statement by Barry Mohun, representing the Eldorado Oil Works, of San Francisco and West Berkeley, Calif., on page 1189, the following appears:

> The average daily wage paid by the Eldorado Oil Works during 1920 was approximately $6.25 to each employee, whereas the wages of factory laborers in the Philippines averaged from $1 to $1.50 per day during the same period. It is well known that all labor in Japan, the South Sea islands, and the Philippines is on a very much lower wage scale than in the United States.

This statement was made in reference to his contention that coconut oil should not come in free, but should have a tax of 2 cents a pound whether coming from the Philippines or from any other country.

In the tariff hearings before the Senate Finance Committee was a statement by John F. Conway, representing E. F. Drew & Co., New York City, who were brokers interested only in the importation of oil, and who have since failed, who remarked, on page 1197, with respect to the market on flaxseed, "that the foreign market for flaxseed is very bare, and the production of flaxseed in Russia and Belgium has fallen off greatly, so that we think they—meaning the American crushers—could sell their product readily.

This statement was very true at the time and much more so now, inasmuch as Russia is still not offering flaxseed, and so far as Belgium is concerned she never has been a factor in raising flaxseed for crushing purposes. This year there was a considerable falling off in our domestic crop of flaxseed as compared with the five-year average from 1915 to 1919, the Government estimating that we raised only in the crop year 1921–22 8,000,000 bushels, but at that this represents about 14 per cent of the total produced in the world for crushing purposes. Argentina, who last year raised a crop estimated on the basis of an acreage of 3,482,000 acres—43,280,000 bushels of flaxseed—shipped from that country during the calendar year 54,737,000 bushels. This year, with 3,890,000 acres, they are estimating a total production of 33,232,000 bushels, with an estimated exportable surplus of slightly over 26,000,000 bushels.

There seems no doubt that under these circumstances there is not enough seed to furnish supplies for the normal requirements of the world, and if we are to be dependent upon Europe for our supplies of linseed oil, thus discouraging the planting of flax in this country, it seems to me that we may expect as time goes on a very considerable general rise in the price of linseed oil, inasmuch as the elimination of the United States crop of from ten to fifteen million bushels will have a considerable effect upon the general supply.

A TARIFF TO FOOL THE FARMERS.

A duty on flaxseed which is not accompanied by a compensatory duty on linseed oil calculated to help the production of flaxseed in this country and assuring the farmer a home market is not protection, and future conditions will not vary from those we are now experiencing and linseed oil will come in from foreign countries, displacing the flaxseed which might otherwise be raised by our domestic farmer.

In tariff hearings brief presented by C. Rogers Brown, before Senate Finance Committee, page 1146, it is stated, after citing present and proposed rates of House bill 7456, that the problem involved in constructing a tariff on flaxseed and linseed oil is almost entirely one of—

> First. Establishing a duty on flaxseed that equitably encourages the growth of flaxseed by the American farmer without unduly imposing too great burden on the American consumer who buys the products of flaxseed.
>
> Second. Establishing a rate of duty that equitably protects the American crusher of flaxseed who produces linseed oil from the flaxseed.

I have no fight with either of these statements; on the contrary, I heartily agree with them. From this point on, however, the brief contains so many inaccuracies and misstatements that I am compelled to take issue with the author. In the first place, he draws an entirely erroneous conclusion respecting the flaxseed crop and deliberately seeks to give a wrong impression of conditions governing its growth. The facts are that in the normal period before the war, during the years 1910–1913, inclusive, there was produced in the United States 78,014,000 bushels, an average of 19,503,500 bushels yearly, or more than two-thirds of the flaxseed required for domestic yearly consumption of linseed oil.

THE UNDERWOOD-SIMMONS TARIFF, AND WHAT IT DID.

It will be noted, however, that commencing with 1913, the year in which the Underwood-Simmons tariff bill was first in effect, we produced over 10,000,000 bushels less than the previous year and the yearly production has since continued to decline. Had it not been for the war and the tremendous demand for linseed oil for purposes connected therewith we would have seen considerably less acreage devoted to the growing of flaxseed, because the then tariff bill, Underwood-Simmons, did not provide for a compensatory duty on oil as compared with seed, namely, 20 cents seed, 10 cents oil.

There is no doubt that the smallness of the United States crops consequent upon the reduction of duty in the Underwood-Simmons bill contributed in a measure to the very high price of flaxseed during the later years of the period commencing in 1916 and continuing through 1919.

A contributing factor also to the decrease in planting of flaxseed during the years we were at war was the constant pressure of our Government for increased planting of food crops and the fixing of minimum prices on same.

With normal conditions and compensatory duties on linseed oil as compared to flaxseed, there is no reason to expect smaller acreages devoted to flaxseed than those during the years previous to 1914. As a matter of fact, the average acreage devoted to flaxseed 1904–1913, inclusive, was 2,530,000 acres. The first year of the war, 1914, this dropped to 1,645,000 acres, in 1915 to 1,387,000 acres, in 1916 to 1,474,000 acres, but in 1917 and 1918 it jumped to 1,984,000 acres and 1,910,000, respectively, for a good reason, and that one of price—flax selling at over $3 per bushel, the attainment of this figure being on account of conditions consequent to the war. The Underwood tariff still against us, together with large demand for food crops, resulted in a drop in the acreage in 1919 to 1,683,000 acres. A partial failure of the crop, due to bad growing conditions, ran flaxseed to prices above $4 per bushel, as we only harvested about 9,000,000 bushels; 1920 showed a still further reduction in the acreage from the previous year, only 1,477,000 acres being planted.

It is therefore plainly to be seen that opinions should not be formed or false impressions created in considering the period 1914 to 1921 respecting a flaxseed crop in this country. These were abnormal times, and a condition created by pressure for food crops assisted by the inequitable Underwood and emergency tariffs contributed to the decline in acreage.

The working of the Underwood-Simmons bill is exemplified in the years 1919–20. Our production of flaxseed was less than 9,000,000 bushels in each of these years, making it necessary to import large quantities of flaxseed from Argentina. In addition we imported over 2,000,000 gallons of oil in 1919 and over 4,000,000 gallons in 1920. Had we been under the Payne-Aldrich bill, flaxseed would have been imported instead of oil, giving employment to labor in the industry.

There has been imported, including May, 1921, to date a total of about 15,841,586 gallons of linseed oil from England, Holland, and Belgium, as follows:

1921.	Gallons.
May	58,399
June	488,868
July	405,592
August	661,603
September	1,384,538
October	1,578,600
November	2,078,309
December (lower than November probably for inventory reasons)	1,238,489
1922.	
January	1,543,236
February	1,403,952
March } (estimated) April }	5,000,000
Total (representing the bushels in Europe instead of United States of America)	15,841,586
Crushing of	6,336,634

This represents a considerable amount in wages paid to European instead of United States of America workmen, to say nothing of losses by dead mill overhead.

With the present business conditions in this country current importations represent more than two-fifths of present consumptive requirements. The manager of a paint-manufacturing

concern asked a crusher the other day where, with this condition and domestic mills closing down, he must look for his supplies of oil in the future. The answer was, of necessity, "abroad." "And must we be at the mercy of foreign manufacturers for our chief raw material?" he asked, and the answer was, "Yes; unless we can raise the raw material here or be protected in the conversion of imported flaxseed into linseed oil."

EFFECT ON COST OF PAINT.

Now, I come to the consumer of paint, who is not only the farmer but every other class. Great stress has been laid on the tremendous increase which he must pay in paint if the flaxseed duty is made 40 cents per bushel. This is "bunk."

One gallon of high-grade, ready prepared paint weighs 16 pounds. The linseed oil content of such gallon of paint is 35 per cent in weight; 35 per cent of 16 pounds is 5.6 pounds of linseed oil, which quantity of oil is 74.7 per cent of 1 gallon of oil of 7½ pounds.

The difference between 40 cents and 30 cents duty on flaxseed is the equivalent of 4 cents per gallon duty on oil, 74$\frac{7}{10}$ per cent of which is 3 cents in the cost of such high grade paint now selling by manufacturers wholesale at $2.30 per gallon, or a percentage of cost of but 1$\frac{3}{10}$.

However, the consumer of paint is not the only consumer to consider. The crushing of flaxseed in this country is primarily conducted for its oil content, which is about one-third of the total weight of a bushel, or 19 pounds. Thirty-seven pounds of this 56-pound bushel is linseed cake, ground for domestic consumption and sold to the farmers and dairymen for cattle feeding. In normal times when we were raising 15,000,000 to 19,000,000 bushels of seed annually, $30 a ton was a high price for cake. The average price paid by these consumers for the cattle feed produced by our 1921–22 crop of 8,000,000 bushels of flaxseed was more than $40 per ton, costing over $1,500,000 more than in times when he was adequately protected in his growing of flaxseed.

At 3 cents, the increase in the cost of paint per gallon due to proposed increase of flaxseed duty from 30 cents to 40 cents, this amount—$1,500,000—would pay this added cost on 50,000,000 gallons of paint.

From the consumer's viewpoint it is interesting to note the prices at which linseed oil sold during the years when flaxseed growing was encouraged by proper import duties and with commensurate rates on linseed oil.

Year.	High.	Low.
1904	$0.43	$0.37
1905	.52	.36
1906	.43	.37
1907	.48	.42
1908	.49	.42
1909	.72	[1].51
1910	1.00	[1].77
1911	.95	.72
1912	.77	.45
1913	.52	.48

[1] Crop failure.

Compared with prices, 1914 to 1921, herewith:

Year.	High.	Low.
1914	$0.57	$0.42
1915	.65	.48
1916	.97	.63
1917	1.27	.95
1918	1.87	1.27
1919	2.25	1.45
1920	1.87	.83
1921	.80	.67

We are the largest paint and varnish, and probably the largest linoleum consuming country in the world and we should not be dependent upon foreign sources for our supplies of as an important raw material in these industries as linseed oil, and I feel firmly convinced that a 40-cent duty on flaxseed will produce a crop sufficient to make us independent.

I hold no brief for the crushers of flaxseed in this country, but I realize that in order to protect the farmers of this country against the competition of cheap labor and living conditions of those in Argentina and India that not only must there be protection for the crops which we raise here but that there must be commensurate protection for the products manufactured from these crops. I have no interest one way or the other in those who manufacture linseed oil, but I am convinced, and it seems that the Senate Finance Committee are convinced, that a compensatory duty of 3½ cents per pound must be placed upon importations of linseed oil if the farmer in this country raising flaxseed is to receive the benefit of the duty upon flaxseed of 40 cents per bushel which we propose.

Congress must take the responsibility of giving or not giving the farmer proper protection on his crops, but one thing is certain, if the industries converting these raw materials are not given commensurate duties, you might just as well forget the duties on these raw materials.

One is surprised to note the vast amount of skimmed milk now being reinforced with coconut oil and sold in competition with condensed milk while we are importing large amounts of both casein and milk sugar that might well have been manufactured from the skimmed milk. If this were done there would be an additional market for a large amount of true milk rather than milk substitutes in which vegetable oils replace butter fat. This would tend to increase the dairy interests.

In 1920, from such data as I have been able to gather, I find we imported of vegetable oils as follows:

	Gallons.
Linseed oil	4,693,360
Soya bean oil	14,961,833
China wood oil	9,061,620
Perilla oil (9 months)	879,413
Cottonseed oil	9,457,924
Coconut oil	215,238,516
Olive oil (inedible)	496,118
Olive oil (edible)	30,591,060
Palm oil	41,948,224
Palm kernel oil	1,693,740
Peanut oil	95,124,278
Rapeseed oil	12,912,668
Total	437,058,854

The total amount, therefore, of vegetable oils which have been imported in 1920 is 437,058,854 gallons, and this oil, produced in foreign countries, either comes in through competition with like products produced in America or displaces some of the vegetable oils produced in this country. Every one of these oils displaced an American-produced oil, and so helped to take away from our farmers their market and force down the price for vegetable oils produced in this country.

Aside from china-wood oil, perilla oil, coconut oil, and palm oil, which displace an equivalent amount of other oils, all other oils could be produced in a far greater quantity than at present in this country, and thus the farmer's market for vegetable oils and fat is being destroyed, and only an adequate degree of protection will save the farmer's oil-producing crops. Some of these oils are still left on the free list, and the spurious argument made that since these oils are not produced at present in this country they do not come in competition with American-grown products. This is wholly an erroneous idea. The fact is every one of these imported oils is displacing oils produced in the country, the amount of which in most instances might be increased manyfold by a reasonable degree of tariff protection, not only on oils produced in this country but all of those which are imported into the country as replacement oils.

On one side of this tariff contest we find arrayed the farmer, the wheat grower, the flax grower, the flaxseed crusher, the cattleman, the cottonseed-oil industry as producers, the fruit grower, the sheepman, the hog grower, the dairyman, and all those who are producers of agricultural products, and with them labor is supporting their claims and is demanding a reasonable tariff protection for the agricultural interests. On the other side are the importers, the big packers, the monopolies—as the Standard Oil interests—the exporters, the soap manufacturers, who have arrayed with them the varnish men and a few producers of inferior paints, the woolen mills, and all those who want to engage in world trade even though they may destroy the great agricultural interests of the country. This means little to them so long as they can get easy money, even at the expense of the whole people of our country and with the degradation of our workers.

The first group do not begrudge a reasonable tariff for those who are manufacturers, but they demand equal protection for all of the producers of America's great and basic industry—agriculture.

Mr. President, I wish to call attention to the fact that practically all the linseed crushers of the country have been obliged to close their mills. I have here a letter from Spencer Kellogg & Sons, of Buffalo, in which they say:

> All of our four mills are closed and men unemployed.
>
> This March there was imported into this country 60,000 barrels of linseed oil, equal to 14,400,000 bushels of flaxseed for the year. Last year was a poor year, but we raised 8,000,000 bushels. We have raised 28,000,000 bushels, which about supplies the needs of this country. This amount should be raised by the farmers under favorable circumstances.

I read from a letter from a firm in Rotterdam, Holland, in which they express their desire to export linseed oil to this country. They say:

Herewith we have much pleasure to inform you that we are very well placed with regard to raw Dutch linseed oil, and we should be glad to open relations with your firm by regularly cabling you our quotations and firm offers.

For your guidance we beg to say that our firm belongs to the well-known Stinnes combine, and as to our bona fides we can refer you to Mr. Hugo Stinnes, Muelheim.

We should be very pleased to come into relations with you and are looking forward to your esteemed reply, giving us your cabling address, with interest.

I have a letter from the Toledo Seed & Oil Co., in which they say:

When the emergency tariff was passed there was a desire on the part of the so-called farm bloc to give the farmer protection on his flaxseed, and to do this the duty on flaxseed was advanced 50 per cent, the old duty being 20 cents a bushel and the duty under the emergency tariff being 30 cents a bushel. The linseed crushers, however, labored with the tariff makers, pointing out to them that unless a corresponding advance was made in the duty on import linseed oil the desired protection through the advance in the duty on flaxseed would be useless. The crushers were unable to convince the tariff makers concerning their argument. A year and more has elapsed and the prediction of the crushers has more than been fulfilled.

For the past six months foreign linseed oil made under cheap labor conditions has been entering this country in tremendous quantities, making it impossible for the American crusher to import linseed and crush it in competition with the foreign oil, and any seed bought in this country must be purchased on a basis which will enable the American crusher to compete with the foreign oil. The makers of the emergency tariff overlooked or ignored the fact that the American farmer's outlet for his material was the American crusher. Experience has demonstrated the fundamental soundness of the arguments presented by the linseed industry, and as a result of that experience the permanent tariff has been properly drawn as it relates to linseed oil and flaxseed.

Practically all the mills in this country are now shut down or running so lightly as to be virtually idle, and this condition must exist until the permanent tariff is passed. We might add that this same condition exists in many other lines; therefore, it is highly imperative that no further delay be experienced in the passage of the permanent tariff. The country is beginning to tire of the endless debate in Congress over this tariff, and, as a business man in touch with many interests affected by the tariff, it is my honest conviction that unless the permanent tariff is speedily passed the complexion of our Congress after the next election will be materially changed.

I read from a letter written by a large grain and seed house at Brookings, S. Dak., which views the question from another angle:

We regret to note by your letter of the 5th that you are obliged to close your mill because of the emergency tariff now existing on flaxseed and linseed oil. There is no question but that this discrimination is a very serious matter for the Northwest. I am sure that we are all interested in seeing that industries in the Northwest are maintained; and it also has a more important bearing upon this territory, on the cost of linseed-oil meal, which is becoming quite an important feed. If we are obliged to go to New York or to England for linseed-oil meal, the cost will become so high that it is a question if our farmers can profitably feed it. This would have a serious effect upon the live-stock and hog industry of this great Northwest.

Spencer Kellogg & Sons, in a letter to me, quote a message received from South America, which says:

America—

Meaning the United States—

America is absolutely a dead letter for our linseed at present. The small quantity of seed which they are able to import they buy from India, but they can not crush Argentine linseed in big quantities, as England provides them with the oil very freely.

I read from a copy of a letter which was sent to the Senator from New Jersey [Mr. FRELINGHUYSEN]:

We confirm our morning's message, as follows:

"We own and operate at Edgewater, N. J., one of largest linseed mills in America. More linseed oil imported since emergency tariff from England and Holland than all previous years, making it unprofitable for farmer to raise flaxseed, throwing labor out of employment, causing linseed-oil companies serious losses. If emergency tariff is not suspended in near future every linseed-oil mill in America will be closed down. If permanent tariff bill fixes duty of 40 cents per bushel on flaxseed it should fix duty of at least 4 cents per pound on linseed oil to enable American manufacturer to compete with foreign manufacturer. We hope you will promptly help to remedy injustice caused by emergency tariff."

We fear you do not understand how seriously the emergency tariff is affecting the American manufacturers of linseed, throwing a large percentage of their employees out of employment, permitting importation of a greater quantity of linseed oil from England and Holland than all previous years, reducing the demand for flaxseed produced by the American farmers, causing the last crop to be the smallest acreage of flaxseed in the history of this country, retarding the growth and development to that extent in the agricultural districts.

Mr. FRELINGHUYSEN. Mr. President——

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from North Dakota yield to the Senator from New Jersey?

Mr. LADD. I yield to the Senator from New Jersey.

Mr. FRELINGHUYSEN. Is it not true that the emergency tariff by imposing a duty on flaxseed and not giving a compensatory duty on linseed oil, or the converted product, practically put the crushers out of business, because, as a consequence, the linseed oil was imported?

Mr. LADD. There is no question of that, and that is just what would happen if the oilmen could have the tariff reduced on the oil to the rate for which they are asking.

Mr. FRELINGHUYSEN. The Senator has read a letter from an industry in my State, as well as letters from other crushing industries. He believes the crushing industry in this country should be protected, does he not?

Mr. LADD. Yes.

Mr. FRELINGHUYSEN. It is fair to assume, is it not, that if we impose this duty on the raw material we should allow a compensatory duty to men who make the refined product?

Mr. LADD. That should be the case; yes, sir.

Mr. FRELINGHUYSEN. Does the Senator believe that industries in this country which can bring in raw products not produced here in the crude state and refine them should also be protected?

Mr. LADD. I do, provided they do not displace an industry which we already have established. For instance, if they brought in the flaxseed in competition with our own product so as to convert it in this country, that would be unfair. Generally, however, I agree with the Senator.

Mr. FRELINGHUYSEN. I understand the Senator's position and I know he is perfectly sincere. I have listened to his argument with a great deal of interest; he has made a very able statement, and has undoubtedly studied this question thoroughly; but I fail to find wherein the Senator is convincing in arguing that soya-bean oil and coconut oil and peanut oil should be placed upon the dutiable list because they displace certain of our oils and other products in this country. May I ask the Senator what they displace?

Mr. LADD. Soya-bean oil displaces corn oil, peanut oil, and cottonseed oil.

Mr. FRELINGHUYSEN. In what uses?

Mr. LADD. In dairy products, in filled milk, and in the making of butter substitutes.

Mr. FRELINGHUYSEN. I am very glad the Senator has specified because he is asking that we put a duty upon commodities which are not produced here in order that they may be eliminated from the manufacture of certain edible products, and yet in doing that we penalize 90 per cent of importations amounting to millions of pounds by a duty which, as nearly as I can estimate it, will aggregate $15,000,000, in order that they may be driven out of use as food substitutes.

Mr. LADD. No; I look——

Mr. FRELINGHUYSEN. The Senator is in favor of a duty on coconut oil, is he not, because it goes into edible products such as filled milk?

Mr. LADD. Yes.

Mr. FRELINGHUYSEN. Does he not know that most of the coconut oil comes from the Philippine Islands? Therefore, how will a duty help the situation which the Senator has in mind? The product from the Philippines will not be barred out; it will come here and be used as a substitute, no matter what duty may be put on the remainder of the product that comes from elsewhere. Despite the duty coconut oil will come here and be used in edible products such as butter substitutes and filled milk.

Mr. LADD. In so far as coconut oil will come from the Philippines a duty will not help the situation; but in so far as the oil comes from other countries a duty will help when such oil is sought to replace the oils or other products of this country.

But I wish to return to the soya bean. We can grow in practically all parts of our country the soya bean. We are producing them at the present time, and a crushing industry is just beginning to develop.

The soya bean is a soil enricher and of high food value which we can produce in this country and thereby enrich our soil. Of course, when we import the product, as we have been importing duty free, it can have no such beneficent result.

Mr. FRELINGHUYSEN. I know a little something about farming and I know something of the soya bean situation. I do not think the Senator is correct when he says that we are crushing soya beans in this country to any great extent. The farmers of the Northwest may be able to produce 28,000,000 bushels of flaxseed, but I do not believe they will, although I hope the farmers of the Northwest will do that.

Mr. LADD. They have produced that much.

Mr. FRELINGHUYSEN. They have produced that much, but will they do it now under this protective tariff?

Mr. LADD. I believe they will, and more than that.

Mr. FRELINGHUYSEN. I hope so. I have stood for a tariff on that article and for compensatory duties in order that the foreign article might not replace the flaxseed of the Northwest, but the farmers in this country will not raise enough soya beans

to replace 350,000,000 pounds that we import. It will take them 50 years before they will ever develop the industry to that extent, and more than that before they will ever develop the crushing industry in this country.

Mr. LADD. It has been my good fortune to have devoted considerable attention to the soya bean. The soya bean is grown in the State of the Senator from New Jersey and in nearly every State in the Union. I have studied the physical and chemical qualities of the soya bean, which is now being crushed by a large packing concern in Chicago.

Mr. FRELINGHUYSEN. We plow it under.

Mr. LADD. Yes; because you have had no market for it; but you will have a market for it with the packers in Chicago, who are now preparing to crush it.

Mr. FRELINGHUYSEN. Does the Senator believe that it will pay to harvest the bean and crush it in this country, when we can import it for 11 cents a pound? Will the American farmer be content to furnish the American market with soya-bean oil at 11 cents a pound?

Mr. LADD. Yes; because he will do it to enrich his soil by growing the soya bean, just as he enriches the soil by growing clover.

Mr. FRELINGHUYSEN. If he harvests his crop, will he get the fertilizing effect of the soya bean after harvesting the crop?

Mr. LADD. Not all of it; but he will get a decided benefit, because the roots of the soya bean are covered with the nodules which take up the nitrogen from the air and so enrich the soil. I desire to include as a part of my remarks an article from Farm, Stock, and Home, of Minneapolis.

The PRESIDING OFFICER. The Senator from North Dakota asks unanimous consent to insert a certain document in the RECORD. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

[From Farm, Stock, and Home of April 15.]

DUTY ON LINSEED OIL MUST BE RAISED.

Somebody, in fact, a great many somebodies, in the Northwest, including the writer, was sound asleep when the emergency tariff bill slipped through with only a 10-cent a gallon tariff on linseed oil. We saw the tariff on seed and failed to figure the inadequacy of the oil rate.

The result is our crushers are not in the market for flax. The revival in building, which should have stimulated flax prices, is having no effect. While there are grounds for differences of opinion as to the real benefit of a wheat tariff, there are none when it comes to flax, as we do not produce enough to supply our own needs. The statistical situation in flax is one of the strongest ever known, stronger than when flax was selling at double present figures. Foreign oil is coming into the country, and after paying the duty is being offered from 12 to 25 cents under our oil. The result is there is very little demand for flax from crushers. Many, in fact, have shut down. On an average, the United States uses oil to the equivalent of 26,000,000 bushels of flax yearly. This is a great deal more seed than has ever been produced in this country in a year. The United States 1921 flax production was, in round numbers, 8,000,000 bushels.

If the flax production in the Northwest could be doubled, it would mean, even at present unjustifiably low prices, about $20,000,000 more money for this territory. There would also be the advantage of a larger supply of oil meal and cake for the dairyman. As matters stand now, there is no inducement for the farmers in this, the great flax-growing section, to put in any.

The duty on oil should at least be doubled, but 25 cents a gallon would be better. There is time for this duty to be fixed before flax sowing. We sent the following telegram to northwestern Senators and Congressmen:

APRIL 6.

Duty on linseed oil should be raised to 25 cents a gallon. Strongest statistical flax situation we ever had yet, farm price of the Northwest is below cost of production. Foreigners are benefiting from building boom instead of our flax growers. Foreign oil flooding our markets.

H. N. OWEN,
Publisher Farm, Stock, and Home.

Mr. FRELINGHUYSEN. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from New Jersey?

Mr. LADD. I do.

Mr. FRELINGHUYSEN. Will not the Senator indicate where the soya bean is being crushed for oil at the present time and what the production of the soya bean is in this country?

Mr. LADD. I can not give the figures, but there is one crusher in Chicago, at the plant of Swift & Co., who have arranged with the farmers of Indiana for the purchase of the soya bean. They are making the experiment and putting up a plant for that purpose; at least that is the statement carried by the press.

Mr. FRELINGHUYSEN. Mr. President, I want to say to the Senator that possibly he has overlooked the summary of the Tariff Commission, in which they say that—

Reports of the Bureau of the Census show that no crude soya-bean oil has been produced either from domestic or imported beans in this country from 1919 to September 30, 1921, inclusive. The oil is imported in the crude state and refined in this country.

Mr. LADD. I think, if the Senator will note, I stated that Swift & Co. have experimented and found it successful, and are now beginning to make plans for the extraction for the coming year, and are arranging with Indiana farmers for the production of soya beans.

Mr. FRELINGHUYSEN. It will be a good many years before they will produce 350,000,000 pounds a year.

Mr. LADD. I have a letter from Chicago, from a manufacturer of oil colors and raw materials, in which he states:

Middle western consumers of linseed oil in quantities have come to realize, after receiving many shipments of English and Dutch raw linseed oil, that it is well worth while to purchase this product direct from reliable English houses with permanent, responsible, established branches in this country.

I am representing J. H. Rayner & Co., of New York, whose Liverpool and Hull factories are turning out immense quantities of linseed oil, a good part of which is coming into this country under the present tariff conditions at lower cost than American crushers can produce the same quality of oil.

I desire to close with the statement that the tariff which is asked for is 40 cents a bushel on the flax and 3½ cents a pound on the oil, as agreed to by the Finance Committee, changing that of the Fordney tariff bill as it comes over from the House. This is satisfactory, as far as I have been able to learn, not only to the farmers but to the paint manufacturers and the oil crushers of the country.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee, which will be stated.

Mr. SMOOT. Mr. President, do I understand that the Senator from New Mexico desires to proceed with this schedule?

Mr. JONES of New Mexico. No.

Mr. SIMMONS. Mr. President, I will say to the Senator from New Mexico that I have had some conversation with Senators on the other side in reference to these paragraphs dealing with oils. I will suggest that these paragraphs are very closely related to agricultural products and that the proper time for their discussion would seem to be in connection with the agricultural products out of which these oils are made.

Mr. SMOOT. Mr. President, at the request of a number of Senators, I will ask that paragraphs 50 and 50a go over.

Mr. SIMMONS. So that we will take them up when we reach the agricultural schedules? Is that the understanding?

Mr. SMOOT. That is my idea.

The PRESIDING OFFICER. Does the Senator from Utah include paragraphs 50 and 50a in his request?

Mr. SMOOT. Yes; both paragraphs, in so far as we have not already acted upon them. We have acted upon the item of olive oil in paragraph 50, and of course that will not go over; but the balance of the paragraph goes over.

Mr. JONES of New Mexico. And I suggest also that paragraph 51 go over. It is based on paragraphs 50 and 50a.

Mr. SMOOT. If the Senator wants it to go over, well and good.

Mr. JONES of New Mexico. I think it should go over.

Mr. SMOOT. The castor-oil rate has something to do with this paragraph.

Mr. JONES of New Mexico. Yes.

The PRESIDING OFFICER. Does the Senator request that paragraph 51 be passed over?

Mr. SMOOT. Yes; let paragraph 51 go over, too.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. In paragraph 52, page 23, line 5, the committee proposes to strike out "20 per centum ad valorem" and to insert in lieu thereof "5 cents per pound," so as to read:

Hydrogenated or hardened oils and fats, and other oils and fats, the composition and properties of which have been changed by vulcanizing, oxidizing, chlorinating, nitrating, or any other chemical process, and not specially provided for, 5 cents per pound.

The PRESIDING OFFICER. The question is on the amendment of the committee.

Mr. JONES of New Mexico. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ball	Harrison	McKinley	Shortridge
Brandegee	Heflin	McLean	Simmons
Broussard	Johnson	McNary	Smoot
Bursum	Jones, N. Mex.	Moses	Spencer
Capper	Jones, Wash.	New	Sterling
Curtis	Kendrick	Newberry	Swanson
Dial	Keyes	Nicholson	Townsend
Edge	King	Norbeck	Wadsworth
Fletcher	Ladd	Oddie	Walsh, Mass.
Frelinghuysen	Lenroot	Overman	Watson, Ind.
Gooding	Lodge	Page	Weller
Hale	McCormick	Sheppard	Willis
Harris	McCumber	Shields	

The PRESIDING OFFICER. Fifty-one Senators having answered to their names, a quorum is present. The question is on agreeing to the amendment of the committee.

Mr. KING. Mr. President, may I inquire of the Senator having this item in charge what the reason is for adding to this section, or including within it, vulcanized oils in connection with the hydrogenated or hardened oils?

Mr. McCUMBER. It is simply a process by which the oil is hardened. I am not well enough acquainted with the methods by which all of these oils are hardened to speak intelligently upon it, but the whole idea is to take these hardened oils and give them the same rate that is given lard substitutes and other articles of that character.

Mr. KING. May I inquire of the Senator if 5 cents a pound was not too much for these?

Mr. SMOOT. Mr. President, I will say to my colleague that vulcanized oil is used as a substitute for lard. That is why it is put into this paragraph. Five cents a pound is the same rate as provided in paragraph 703 on all lard substitutes, so we made the rates in paragraph 52 and paragraph 703 the same identical rates, and they should be.

Mr. KING. It seems to me that this rate of 5 cents a pound is pretty high for lard substitutes, even though some of those substitutes may be used for vulcanization.

Mr. SMOOT. I hardly think it is a high rate of duty. I think 20 per cent would be even higher than 5 cents a pound.

Mr. KING. As I remember, they did not specifically mention these oils in the Payne-Aldrich law or in the Underwood law. They must have been in some basket clause, and transferred from the basket clause to this paragraph.

Mr. SMOOT. There was no corresponding provision in either the Payne-Aldrich law or the present law.

Mr. KING. That is my understanding.

Mr. SMOOT. The decision of the Treasury Department was that they were dutiable at the rate imposed on the oil of which they were composed, and therefore it had to be decided, as to every item coming in, of what oil it was made, and then the rate of duty imposed on it depended on what oil it was made of. It was decided that it was best to bring them together in paragraphs, as has been done in this instance.

Mr. KING. Perhaps the largest quantity of production under this paragraph would be cottonseed oil hydrogenated, and it seems to me that 5 cents a pound for the hydrogenated oil is too much. It is much higher than the rate in the basket clause in which it was found, as I figure it, either in the Payne-Aldrich law or in the Underwood law.

Mr. SMOOT. Perhaps there was such an article as the vulcanized, on which the duty would be higher under an ad valorem. As far as I am concerned, I would not care whether it was a specific duty or an ad valorem duty. I may say to the chairman of the committee that we could divide this and have a specific duty upon the hydrogenated and hardened oils and let the balance carry an ad valorem duty.

Mr. KING. That would seem to me to be much more scientific and accurate.

Mr. McCUMBER. I do not think anyone would object to that. I think myself it would be better if we add the 5 cents per pound after the fats on the first line and then allow the other to go in at 20 per cent ad valorem. If that is satisfactory to the Senator, I will suggest that amendment.

Mr. KING. I think it is too high, but it improves it very much, and I should be glad if the Senator would move that amendment.

Mr. McCUMBER. I move to insert after the word "fats" and the comma on line 1 the words "5 cents per pound" and a semicolon, and then strike out the word "and."

The PRESIDING OFFICER. The Secretary will state the amendment.

The ASSISTANT SECRETARY. On page 23, line 1, after the words "hydrogenated or hardened oils and fats" and the comma insert the words "5 cents per pound" and a semicolon.

The amendment was agreed to.

Mr. McCUMBER. I move to strike out the word "and" at the end of line 1 before the words "other oils and fats."

The amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on page 23, line 5, where the committee proposes to strike out the words "20 per cent ad valorem" and to insert in lieu thereof the words "5 cents per pound."

Mr. KING. I move to strike out "20" and to insert "15."

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The ASSISTANT SECRETARY. On page 23, line 5, strike out "20" before the words "per cent" and insert in lieu thereof "15."

The amendment to the amendment was rejected.

The amendment of the committee was agreed to.

The next amendment was, on page 23, line 9, before the word "essential," to strike out "of" and to insert "or mixtures containing"; in the same line, after the word "oils," to strike out "or both," so as to read:

PAR. 53. Combinations and mixtures of animal, vegetable, or mineral oils or of any of them (except combinations or mixtures containing essential or distilled oils), with or without other substances, and not specially provided for, 25 per cent ad valorem.
